PROCEEDINGS AND DEBATES OF THE 91st CONGRESS, SECOND SESSION

SENATE—*Monday, August 17, 1970*

The Senate met at 11 a.m. and was called to order by Hon. HAROLD E. HUGHES, a Senator from the State of Iowa.

The Chaplain, the Reverend Edward L. R. Elson, D.D., offered the following prayer:

O Thou who inhabitest eternity yet makest Thy dwelling in the hearts of men, at the beginning of this new week we open our minds to the beauty and truth of Thy presence and to behold a vision of a world made new according to Thy kingdom.

Refresh all who serve Thee in this place. Arm them with Thy spirit. Guard them in temptation. Protect them in peril. Strengthen them in daily duties. Lift every endeavor to a divine vocation. May they be good men and women in the knowledge of truth and righteousness.

Renew the life of this Nation in godliness, in righteousness, and in morality wilt Thou so pervade the life and conduct of all the people that they may fulfill the law of God and be equipped with righteousness, justice, and compassion to serve all mankind.

Through Jesus Christ our Lord. Amen.

DESIGNATION OF ACTING PRESIDENT PRO TEMPORE

The PRESIDING OFFICER. The clerk will please read a communication to the Senate from the President pro tempore of the Senate (Mr. RUSSELL).

The legislative clerk read the following letter:

U.S. SENATE,
PRESIDENT PRO TEMPORE,
Washington, D.C., August 17, 1970.

To the Senate:

Being temporarily absent from the Senate, I appoint Hon. HAROLD E. HUGHES, a Senator from the State of Iowa, to perform the duties of the Chair during my absence.

RICHARD B. RUSSELL,
President pro tempore.

Mr. HUGHES thereupon took the chair as Acting President pro tempore.

THE JOURNAL

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that the reading of the Journal of the proceedings of Friday, August 14, 1970, be dispensed with.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

ORDER FOR TRANSACTION OF ROUTINE MORNING BUSINESS

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that there be a period for the transaction of routine morning business, with statements therein limited to 3 minutes.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

WAIVER OF THE CALL OF THE CALENDAR

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that the call of the Legislative Calendar, under rule VIII, be dispensed with.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

COMMITTEE MEETINGS DURING SENATE SESSION

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that all committees be authorized to meet during the session of the Senate today.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

PRESIDENT NIXON SHOULD SUBMIT GENEVA CONVENTION BANNING CHEMICAL AND BIOLOGICAL WARFARE TO SENATE FOR RATIFICATION WITHOUT DELAY

Mr. YOUNG of Ohio. Mr. President, 45 years ago, the United States took the lead in drafting the Geneva Convention, the most basic and fundamental international treaty banning the use in war of all poisonous gases and biological methods of warfare.

Today, the United States stands almost alone among the powers of the world in failing to become a signatory to this treaty which we first proposed.

The fact is that the convention was first suggested in Geneva at an international conference by the head of the U.S. delegation, Representative Theodore E. Burton, from my native State of Ohio, with the full support of President Coolidge and Secretary of State Kellogg.

In June 1925, the United States signed the Geneva Convention but it was never ratified by the Senate. This was in large measure because the chemical industries and especially generals of the Army Chemical Service exerted considerable pressure against the ratification of the convention.

The convention was not defeated by the Senate. It was never voted upon, remaining in the Foreign Relations Committee until President Truman withdrew from the committee all unratified treaties prior to 1941.

From then until now, the Geneva Convention has remained in the White House as no Chief Executive has submitted it to the Senate for ratification.

Mr. President, the use of chemical and biological warfare has a long and grisly history.

As long ago as 600 B.C., Solon of Athens is said to have defeated the army of Kirrha by poisoning the enemy's drinking water. The Spartans were said to have besieged satellite cities of Athens in the Peloponnesian War with burning sulfur and pitch to create sulfur dioxide, a gas about one-fourth as irritating as chlorine.

During the American Civil War, Confederate troops once tried to delay the advance of their pursuers by leaving behind water holes polluted with the carcasses of dead animals. This according to the memoirs of Gen. William Tecumseh Sherman.

In the modern sense of chemical and biological warfare, the widest use of chemical agents took place in World War I. By the end of of the war, a total of 28 agents and 16 mixtures had been employed by both the Allies and the Central Powers amounting to more than 124,000 tons.

Mr. President, to date 84 nations, including virtually all the technologically advanced powers have ratified the Geneva Convention.

On numerous occasions, the United States has gone on record in support of the convention.

In 1943, President Roosevelt responded to the rumors of plans for German gas warfare by stating:

> Use of such weapons has been outlawed by the general opinion of civilized mankind. This country has not used them. I state categorically that we shall under no circumstances resort to the use of such weapons unless they are first used by our enemies.

In 1967, the Deputy Secretary of Defense told a Senate subcommittee:

> It is clearly our policy not to initiate the use of lethal chemicals or lethal biologicals.

Most recently, President Nixon last November 25 promised to send the Geneva Convention to the Senate for ratification. Now, 8 months later, the convention still remains in the White House. Although the President said he would submit the treaty and would ask congressional leaders to expedite action, Mr. Nixon to this good hour, has failed to send us this for ratification.

Mr. President, doubtless the reason that the President is withholding the Geneva Convention from the Senate is because the United States is continuing to wage environmental warfare in Indochina. The fact is that our use of herbi-

cides in Southeast Asia clearly constitutes a war atrocity.

Since 1961, 100 million pounds of chemical herbicides have been sprayed on 5 million acres of land in South Vietnam, an area the size of the State of Massachusetts. By the end of this year, more than 23 million gallons will have been sprayed in Vietnam. Most of that in South Vietnam.

Defoliation operations in Vietnam are carried out by squadrons of specially equipped C–123 cargo planes, each with tanks capable of holding a thousand gallons of herbicides. The official code name for the program is Operation Hades but a more friendly code name, Operation Ranch Hand is used. Operation Hades is a better name.

Mr. President, although recently, the Defense Department banned the use of its primary defoliant, "orange," Pentagon is continuing to use the white and blue herbicides which cause crop damage and often irreversible disruptions of the natural ecology of Vietnam. We are destroying the environment and extinguishing the plant life of the area which we claim we are trying to save.

Most appalling, and often lost amid our growing statistics of war dead and wounded and those of the Vietcong and North Vietnamese is the fact that more than half a million Vietnamese civilians—women, children, and old men—have been killed or maimed for life by our napalm bombing, and our use of chemical defoliants.

When I was in South Vietnam in early 1968 as a representative of the Senate Armed Services Committee I personally witnessed the horrible effects of our defoliation program and of our napalm bombing of villages and hamlets. I saw in hospitals and elsewhere women and also little children who had been horribly burned and maimed by our napalm bombing. Many had lost an arm to the shoulder or a leg.

Mr. President, approximately $350 billion of our taxpayers' money has been spent annually for chemical and biological warfare agents during recent years. For many years, the Department of Defense has purchased and stockpiled enormous amounts of toxic and infectious chemical and biological agents.

Today, a comparatively few nations possess these lethal weapons. However, any nation, large or small, can develop contagious bacteria and viruses. If and when they do, the danger of an accident or purposeful use becomes greater. The very survival of man is at stake. The development and stockpiling of these horrible chemicals and germs is a pursuit of armaments far in excess of those needed for our national security and national defense.

The President should immediately submit the Geneva Convention to the Senate for ratification. There is no longer any valid reason whatever for the United States to continue to ignore this most important existing treaty banning the use of chemical and biological weapons. We should put ourselves squarely on record in favor of limiting the use of lethal gases and deadly defoliants in international welfare.

President Nixon should ask the Senate to ratify the protocol prohibiting the use in war of asphyxiating, poisonous, or other gases, and of bacteriological methods of warfare, Geneva, June 17, 1925.

MR. GORE IN TENNESSEE

Mr. YOUNG of Ohio. Mr. President, the St. Louis Post-Dispatch, one of our Nation's greatest, in a recent editorial stated that Senator GORE's distinguished record entitled him to be elected to another term. This conclusion echoes the views of such a large majority of U.S. Senators that I ask unanimous consent that this editorial may be inserted in the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

MR. GORE IN TENNESSEE

The victory of Senator Albert Gore in the Tennessee Democratic primary appears likely to insure a genuinely significant election contest in November. Mr. Gore, a candidate for a fourth Senate term, will face Representative William E. Brock, who won the Republican primary. Mr. Brock, a millionaire candy manufacturer, is a strong backer of President Nixon; Mr. Gore, a liberal with a record of 32 years on Capitol Hill, is a critic of United States policy in Vietnam and voted against Mr. Nixon's two rejected Southern appointees to the Supreme Court. He refers to himself as the No. 1 White House target in the fall voting. So, as the election shapes up today, the issue in Tennessee is unequivocal. Mr. Gore's distinguished record entitles him to another term, and we hope he gets it.

ALL AMERICANS SHOULD KNOW OF THIS HORROR

Mr. YOUNG of Ohio. Mr. President, in the last 6 months the United States has spent more than $115 million on that undeclared, unpopular war in Southeast Asia.

Mr. President, in the last 6 years the United States has spent more than $115 billion on that undeclared, unpopular war in Southeast Asia. For 1969 alone the price tag was $30,400 million—$600 for every American family. This did not include economic aid programs to the Indochinese nations, CIA funds spent in the area, the cost of reductions in stockpiles of strategic materials, or the loss of productivity accompanying war expenditures. In 1969 of each tax dollar 23 cents went to pay for the Vietnam war, 13 cents of each dollar for past wars, and 35 cents in preparation for future wars. The Indochina war in 1969 cost more than the total of Federal spending for domestic goods, 10 times more than Federal outlays for medical assistance, and 30 times more than Federal grants for urban planning and development. It costs $500,000 to kill one Vietcong. This sum would support 3,400 youngsters in school or college or build at least 50 housing units.

One heavy B–52 raid costs about $40 million. This could purchase three 400-bed hospitals, or pay for the construction of 27 elementary schools, or for 4,050 housing units.

President Nixon, while campaigning for President, said he had a secret plan to end the war in Vietnam. Many citizens voted for him because of his claim. That secret plan is still his secret. Now he expanded and extended our involvement by invading Cambodia and by round-the-clock bombing all areas of Laos and Cambodia with our huge B–52's. Also America GI's were killed in combat in Cambodia and in the round-the-clock bombing in Laos, whose neutrality our Government guaranteed. Many thousands of unfortunate civilians, men, women, and children have been killed or maimed by our napalm bombing.

Even White House officials no longer call it the Vietnam war. It is now the Indochinese war. Young Americans of our ground and air forces are being killed daily. In a recent week 85 Americans were killed in combat, 760 were wounded. Many more were killed in what Pentagon terms "accidents and incidents." In World War II when there was no credibility gap" and no attempted deception such deaths were termed combat deaths.

American mercenaries including Thais, Laotians, and South Koreans equipped, armed and paid by American taxpayers with our CIA managing the mercenaries just as King George III and the English paid for the Hessian mercenaries which our patriot forefathers so hated and feared. Yet, with all our casualties and tremendous expenditure of American taxpayers money, President Nixon vetoed the $4,420,145,000 education bill terming this inflationary. When our aggression in Southeast Asia ends then inflation will end and desperately needed domestic programs for the welfare of all our people will be undertaken, we hope. Our domestic needs such as gainful employment, more jobs, better housing, eliminating slums, should have top priority.

Millions of acres of arable land in South Vietnam have been ruined by poison gas sprayed since 1961 by American warplanes and helicopters. Enough chemical defoliants have been sprayed to ruin almost 5 million acres of land in South Vietnam, an area about the size of Massachusetts—12 percent of the entire area of South Vietnam. By the end of this year, an additional 10 million gallons will have been sprayed, enough to cause a total of 7½ million acres to be polluted with deadly chemicals. The fact that these herbicides cost taxpayers more than $160 million deserves mention as well as the evil wrought by them. Now we are wreaking this same destruction on peace-loving Cambodians and also throughout Laos. This in the undeclared war which President Nixon has broadened.

The huge craters made by bombs from our B–52's are usually 35 feet in diameter and 10 feet deep. These fill with water and breed mosquitoes spreading debilitating malaria to men, women, and children of those countries. Far more tons of high explosives have been hurled over North Vietnam and South Vietnam than all of the Allies hurled against the Germans and their allies throughout the entire period of World War II. At the present rate including certain areas of Thailand and all of Laos and Cambodia that total will very shortly double the entire tonnage of bombs dropped by the United States and our Allies in World War II, in destructive power.

CALL OF THE CALENDAR—UNANIMOUS-CONSENT AGREEMENT

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that, beginning tomorrow, the unobjected to items in the general orders of the Legislative Calendar of Business which have been cleared on both sides be considered immediately following the disposition of the reading of the Journal and prior to any transaction of routine morning business and also prior to any special orders recognizing Senators for speeches.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that the same procedure obtain for each legislative day during the remainder of this session unless waived by unanimous consent and that the notice of such procedure appear each day in the Daily Digest and in the statement of the program of proceedings.

The ACTING PRESIDENT pro tempore. Is there objection?

Mr. SCOTT. Mr. President, this is pursuant, I believe, to the colloquy of last Thursday.

Mr. BYRD of West Virginia. It is.

Mr. SCOTT. I have no objection.

Mr. BYRD of West Virginia. Mr. President, this would, of course, not preclude an item on the consent calendar from being called up later during a day if it is cleared by both sides and by unanimous consent.

Mr. SCOTT. That is correct.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

FIND THE ENEMY

Mr. GOLDWATER. Mr. President, Gen. William C. Westmoreland, Chief of Staff of the U.S. Army, said recently in a speech:

> I foresee a new battlefield array . . . Battlefield combat areas that are under 24-hour real or near real time surveillance of all types . . . Battlefields on which we can destroy anything we can locate through instant communications in the almost instantaneous application of highly lethal firepower.

Mr. President, we have already in the last month had brief discussions on part of this whole integrated battlefield program. This concerns what we call ground sensors. There are other items, however, such as the starlight scope, thermal imagery, people sniffers, radar, and other systems and concepts.

Col. C. R. Sniffin, Deputy STANO Systems Manager, Office of the Chief of Staff, Department of the Army, has written a very interesting and short article in the Army Digest on the whole new concept of the Army of the eighties which is entitled "Find the Enemy."

I ask unanimous consent that this article be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

FIND THE ENEMY

(By Col. C. R. Sniffin)

"I foresee a new battlefield array . . . Battlefield combat areas that are under 24-hour real or near real time surveillance of all types . . . Battlefields on which we can destroy anything we can locate through instant communications in the almost instantaneous application of highly lethal firepower."—General William C. Westmoreland

Night is the enemy's ally. In battle areas such as Vietnam, he can lay low and out of sight. When discovered during daylight, he holds out until dark, then disappears along any number of escape routes.

Today, however, technology provides the means to improve our capability of locating and fixing the enemy during darkness or periods of reduced visibility. STANO is the all-including term for this activity—Surveillance, Target Acquisition, and Night Observation.

Since 1965, the Army laboratories and industry have focused a major effort on development of STANO hardware. Their efforts have produced a new family of night vision devices.

The Starlight Scope, an individual weapons sight, amplifies starlight and moonlight reflected from the target thousands of times. Popular in Vietnam, these devices are being supplemented by medium- and long-range night vision systems that extend the range of hardware and lessen eye fatigue. To complement the ground night vision systems, similar aerial surveillance systems are being prepared for the UH–1 and Cobra helicopters.

Thermal Imagery is a new area being explored in the field of night vision. These devices sense the difference in the temperature of objects at a distance; the resulting image on a cathode ray tube presents a TV picture to the viewer.

"People Sniffers." Vietnam veterans are also familiar with the XM–3 chemical detector, often called a "People Sniffer." Detection is accomplished by sampling environmental condition changes caused by body wastes and human effluents.

Radars also have found increased use in Vietnam. The current family of ground surveillance radars, the AN/PPS–4, AN/TCS 25, and AN/PPS–5, are to be complemented by new lightweight radars such as the AN/PPS–9, and AN/PPS–10, which can be carried by the individual soldier on ambushes or patrols.

Ground Sensors are the latest addition to surveillance and target acquisition devices. These detect the movement and presence of an enemy by sophisticated electronic means, and report the information to a distant readout station. This gives the commander a capability of watching over wide areas.

SYSTEMS AND CONCEPTS

The prevailing problem, however, is not just to develop the most promising hardware but also to determine concepts and techniques for using these devices alone, or tied together to form a system. Concepts and doctrine in turn must be converted into techniques for use and then rapidly introduced into the Army's training programs and service schools. Soldiers going into combat must know and understand their capabilities.

The Army's solution to the problem is the Chief of Staff's concept of the integrated battlefield, which reflects the totality of the Army land combat system. This emphasizes the ties that exist between weapons, support, material, and organizational systems found in the differing functions of land combat.

Important on the integrated battlefield are acquisition systems of all types, which will be dovetailed with other intelliegnce sources, such as prisoner of war interrogations, agent reports, and reports from the other services. All will be tied back to the decision maker through a variety of processing means and communications links.

Maximum use will be made of automatic data processing. Analysis, evaluation, and dissemination will be focused at all levels. Each commander will have an increasing capability to manage the collection and assess the product presented to him.

The Battlefield Information and Coordination Center, manned by a small group of intelligence experts who control and manage intelligence collection and surveillance planning, will provide a focal point at each level for these activities. Here, thousands of bits of information accumulated by the many coordinated sensor devices, reconnaissance activities, and other intelligence sources, including human (HUMINT), will be carefully screened, sorted, analyzed, and then displayed for the commander to make his timely decision.

The integrated battlefield, however, does not stop at the command post, for the decision maker will be tied by highly efficient communications systems to his reaction capabilities. At each step, actions taken by the commander will provide the measured firepower or maneuver response needed to assure destruction or neutralization of the enemy, and concurrent support of the forces carrying out these activities.

MANAGEMENT AGENCIES

To insure that the concept of the integrated battlefield becomes a reality, the Chief of Staff in July 1969 directed the establishment of a special, intensive management program for STANO. This program establishes the STANO Systems Manager (STANSM) as a focal point for priorities and resource allocation.

Overall guidance of the program is provided by the STANO Steering Group, a committee of senior general officers headed by General Bruce Palmer, Vice Chief of Staff of the Army. A STANO Executive Committee meets biweekly to solve day-to-day problems. This committee consists of representatives from Army Staff agencies and major commands, principally Army Materiel Command, Combat Developments Command, and CONARC.

The STANSM, the Steering Group, and the STANO Executive Committee guide, support, and control the integrated battlefield concept, which will be tested by the field element of the STANO program, Project MASSTER (Mobile Army Sensor System, Test Evaluation and Review).

Project MASSTER was established in October 1969 at Fort Hood Tex., to test STANO items, organizations, and doctrine. It has a twofold objective—improving the capability to find the enemy, and supporting development of the integrated battlefield.

A staff of combat-seasoned military personnel and technically qualified civilians prepare, direct, and analyze field tests to be conducted by combat elements of the III U.S. Army Corps, augmented by special experimental units.

Items of material in various stages of development are taken to the field for evaluation in a simulated combat environment. Their military potential is analyzed along with their impact on current concepts, doctrine, organizations, training, and logistics.

Elements of the MASSTER test force will initially assess a unit's present STANO capability. After the pilot tests, unattended ground sensors, new light vision systems, and radars will be added to the test force, and the change in unit effectiveness analyzed. Changes in tables of organization and equipment will be effected accordingly. Concurrently, communications and automatic data processing systems will be integrated into the evaluation. At any time, an assessment can be made to determine the optimum configuration and effectiveness of given types of combat units for commitment anywhere in the world.

The STANO effort—encompassing the efforts of the Army Staff, the field commands, and Project MASSTER—will be directed at developing our Army's new battlefield array.

STANO/MASSTER and the integration

of the battlefield provide a basis for departture from today's methods of operation. They give us the test bed from which to adopt new ideas, weapons, and combat organizations.

In any weather, day or night, they will enable us to find the enemy and destroy him—and thereby meet the challenge of tomorrow's battlefield.

SENATE CONCURRENT RESOLUTION 80—SUBMISSION OF A SENATE CONCURRENT RESOLUTION

Mr. BYRD of West Virginia. Mr. President, several weeks ago the news media carried stories of the alleged atrocities committed against prisoners of war held in the South Vietnamese prisoner-of-war camp on Con Son Island.

The outrage expressed throughout America was both swift and just, and, as a result, improvements have reportedly been made at Con Son.

Unfortunately, Mr. President, the same cannot be said concerning the estimated 1,500 captured or missing Americans, most of whom presumably are being held prisoners of war by the North Vietnamese and the National Liberation Front. We can only feel frustration and grief that no apparent improvements have been made in the conditions under which these brave Americans must exist.

Our frustration is only heightened by the fact that the indignation expressed over Con Son did not carry over to North Vietnam, that the outrage expressed over alleged mistreatment of Communist prisoners did not extend to the mistreatment of American prisoners by Hanoi and the Vietcong.

Regarding the reported inhumane treatment of prisoners at Con Son, I said, in a Senate floor speech on July 10:

If the reports are true, the mistreatment of prisoners should be condemned strongly. The United States should withdraw any financial aid that might contribute to prison conditions such as those which have been described in the news media, and our government should use every means at its disposal to compel the government in Saigon to treat prisoners humanely.

Mr. President, the prisoner-of-war issue was not ended with the reported cleanup at Con Son. It gnaws at the moral fiber of the civilized world, and will continue to do so until we are assured that the Americans being held prisoner are being treated humanely—until we are assured that they are receiving proper medical attention, until we are assured that their families and friends know of their whereabouts and of their physical condition and are allowed to communicate with them and until they have been repatriated.

Until we receive these assurances, we must continue to keep the plight of American prisoners of war before the Nation and before the world. We must increase our efforts to arouse public opinion—not only here in the United States, but also throughout the civilized world—against the treatment of prisoners of war by North Vietnam and Vietcong.

On July 30, 13 other Senators joined me in a Senate floor colloquy concerned with the treatment of American POW's. At that time, I said:

North Vietnam, by its treatment of American prisoners of war, has made itself a piriah among the nations of the world, and this fact ought to be driven home to Hanoi in unmistakable terms by the American people and by every civilized nation of the world.

Mr. President, it is incumbent upon us to keep world attention focused on the Americans being held prisoner in Southeast Asia. One week ago today, the distinguished junior Senator from Massachusetts (Mr. BROOKE) and I wrote a letter to the three major television networks, requesting that they do a television documentary on the prisoner-of-war issue.

Today, I am submitting a Senate concurrent resolution on behalf of myself and the distinguished Senator from Massachusetts (Mr. BROOKE) which would establish a joint congressional committee to investigate the treatment of prisoners of the Vietnam war.

The joint committee would be comprised of five Members from each the Senate and the House, to be appointed by the President of the Senate and the Speaker of the House, respectively. Among the duties of the joint committee would be to conduct a study and investigation—as much as it is possible to do so—of the treatment of prisoners of war held by the Governments of North Vietnam, South Vietnam, the United States, and the National Liberation Front.

Mr. President, the committee would hold hearings, at which testimony could be received from Americans who either have escaped or have been released from Communist prison camps; from officials in any way connected with the prisoner-of-war situation in Vietnam or who have knowledge thereof; and from the families of men still being held captive by the North Vietnamese and the Vietcong.

The purpose of the study and investigation, Mr. President, would be to determine as much as possible, whether and to what extent the governments involved have been guilty of inhumane treatment of prisoners, and whether and to what extent the governments involved have been violating the Geneva Convention of 1949 relative to the treatment of prisoners of war. The joint committee would report its findings, along with any recommendations it deems feasible and necessary, no later than December 1, 1970.

I am hopeful, Mr. President, that other Senators will join in cosponsoring this resolution, and that it will be passed; that the joint committee will be established, and that, as a result, some succor and relief will be afforded prisoners of the Vietnam war and particularly American prisoners of war held by the North Vietnamese and the National Liberation Front.

Mr. President, I send the concurrent resolution to the desk, and I ask unanimous consent that it be printed in the RECORD.

The ACTING PRESIDENT pro tempore. The concurrent resolution will be received and appropriately referred; and, without objection, the concurrent resolution will be printed in the RECORD.

The concurrent resolution (S. Con. Res. 80), which reads as follows, was referred to the Committee on Foreign Relations:

S. CON. RES. 80

Resolved by the Senate (the House of Representatives concurring), That (a) there is hereby established a joint committee to be know as the Joint Committee on Treatment of Prisoners of War (referred to hereinafter as the "joint committee").

(b) The joint committee shall be composed of ten members selected as follows:

(1) Five members of the Senate to be appointed by the President of the Senate, three of whom shall be members of the majority party and two of whom shall be members of the minority party.

(2) Five members of the House of Representatives to be appointed by the Speaker of the House of Representatives, three of whom shall be members of the majority party and two of whom shall be members of the minority party.

(c) The joint committee shall select a Chairman and a Vice Chairman from among its members. Six members of the joint committee shall constitute a quorum, except that the joint committee may prescribe a lesser number of members to constitute a quorum for the purpose of conducting hearings. Vacancies in the membership of the joint committee shall not affect the authority of the remaining members to execute the functions of the joint committee, and shall be filled in the same manner in which original appointments thereto are made.

FUNCTIONS OF JOINT COMMITTEE

SEC. 2. (a) It shall be the duty of the joint committee to conduct a complete and comprehensive study and investigation of the treatment of prisoners of war held by the North Vietnamese Government and the treatment of prisoners of war held by the South Vietnamese and United States Governments. In carrying out such study and investigation the joint committee shall obtain testimony from prisoners of war who have been released by the Government of North Vietnam and from the families and relatives of persons being held as prisoners of war by such government.

(b) It shall be the purpose of such study and investigation to determine whether the treatment accorded prisoners of war by all Governments concerned is humane and whether such governments are otherwise complying with the Geneva Convention of August 12, 1949, relating to the treatment of prisoners of war.

(c) On or before December 1, 1970, the joint committee shall transmit to each House of the Congress a report containing the results of its study and investigation. The joint committee shall also include in such report such recommendations for legislative or administrative action as the joint committee shall deem appropriate. Upon the transmittal of such report, the joint committee shall cease to exist.

HEARINGS

SEC. 3. (a) In carrying out its duties under this concurrent resolution, the joint committee, or any duly authorized subcommittee thereof, is authorized to hold such hearings, to sit and act at such places and times, to require by subpena or otherwise the attendance of such witnesses and the production of such books, papers, and documents, to administer such oaths, to take such testimony, to procure such printing and binding, and to make such expenditures as it deems advisable.

(b) The joint committee may make such rules respecting its organization and procedures as it deems necessary. Subpenas may be issued over the signature of the chairman of the joint committee or by any member designated by him or by the joint committee, and may be served by such person or

persons as may be designated by such chairman or member. The chairman of the joint committee or any member thereof may administer oaths to witnesses.

STAFF AND ASSISTANCE

SEC. 4. (a) The joint committee shall have power to appoint and fix the compensation of such experts, consultants, technicians, and staff employees as it deems necessary and advisable.

(b) With the consent of the department or agency concerned, the joint committee is authorized to utilize the services, information, facilities, and personnel of the departments and agencies of the Government, and may employ on a reimbursable basis or otherwise the services of such personnel of any such department or agency as it deems advisable.

(c) With the consent of the chairman of any committee of either House of Congress, or any subcommittee thereof, the joint committee may utilize the information and facilities, and the services of members of the staff, of such committee or subcommittee whenever the chairman of the joint committee determines that such action is necessary and appropriate.

EXPENSES

SEC. 5. The expenses of the joint committee shall be paid from the contingent fund of the Senate upon vouchers approved by the chairman of the joint committee or by any member of the joint committee duly authorized by the chairman.

Mr. BYRD of West Virginia subsequently said: Mr. President, may I inquire to what committee the concurrent resolution I introduced earlier will be referred?

The ACTING PRESIDENT pro tempore. It appears the concurrent resolution should go to the Committee on Foreign Relations.

Mr. BYRD of West Virginia. I thank the Presiding Officer.

Mr. President, I ask unanimous consent to have printed in the RECORD immediately following my remarks earlier, a statement prepared by the able junior Senator from Massachusetts (Mr. BROOKE), who is a cosponsor of the concurrent resolution.

There being no objection, the statement of Senator BROOKE was ordered to be printed in the RECORD, as follows:

CREATION OF A JOINT COMMITTEE ON PRISONERS OF WAR

Mr. BROOKE. Mr. President, I am indeed pleased to join with my distinguished colleague, the junior Senator from West Virginia, in proposing the creation of a Joint Congressional Committee on Prisoners of War.

It has long been a serious concern of ours that so little attention is paid to the plight of these men. We are additionally disturbed that so little factual information has been made available to the American public, in an organized way, about the conditions under which they and their families are forced to live.

It is our belief that if the American people were aware of the facts, they would make their voices heard from here to Hanoi in an overwhelming demand for humane treatment, better communication, international inspection of prison facilities, and an assurance of eventual release.

We believe that a joint committee of the Congress, by focusing continuing attention upon the plight of our POWs, can help to achieve these goals. We urge its creation by this Congress.

ORDER OF BUSINESS

Mr. GOLDWATER. Mr. President, I wish to ask a question of the distinguished acting majority leader.

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that I may proceed for 3 additional minutes.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered. Does the Senator yield?

Mr. BYRD of West Virginia. I yield to the Senator from Arizona.

Mr. GOLDWATER. Mr. President, I was going to suggest that if there is no other morning business, when the Senator has completed his remarks I might fill in with a few remarks on the B–111, which would be outside the morning hour, or perhaps I could take all the time needed to fill the time between now and 12 noon.

Mr. BYRD of West Virginia. It would be my suggestion that we proceed with the morning business for another 10 minutes. Then, if no other Senator wishes to be recognized in the morning hour, the Senator might proceed.

Mr. GOLDWATER. I can wait until later. I wanted to have it appear that we were doing something.

Mr. BYRD of West Virginia. I appreciate the Senator's motive.

The ACTING PRESIDENT pro tempore. What is the pleasure of the Senate?

Mr. BYRD of West Virginia. Mr. President, I suggest the absence of a quorum.

The ACTING PRESIDENT pro tempore. The clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. YOUNG or Ohio. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

Mr. YOUNG of Ohio. Mr. President, if no other Senator seeks recognition, I ask unanimous consent that I may be recognized.

The ACTING PRESIDENT pro tempore. The Senator from Ohio is recognized.

DOES NIXON RISK JAIL?

Mr. YOUNG of Ohio. Mr. President, President Thieu of the Saigon militarist regime, which has been kept in power by the sacrifice of more than 54,000 priceless American lives killed in combat and in what Pentagon terms "accidents and incidents" which in World War II were reported as combat deaths, and suffering of 300,000 American wounded, many maimed for life, plus $115 billion American taxpayers money squandered or spent in this undeclared unpopular war, recently proclaimed:

Anyone who talks about a coalition government for south Vietnam should be put in jail.

General Thieu's statement was made on the same day President Nixon asked Ambassador Bruce, our new Paris negotiator, to seek peace with the Vietcong and North Vietnam by agreeing to a coalition government in Saigon.

So far, however, President Thieu has not followed out his proclamation by suggesting that President Nixon should be thrown in jail.

Also, just recently Vice President Ky said:

The Americans could get out of Vietnam any time they want to. We didn't ask them in in the first place.

This by the way is just about the only truthful statement Vice President Ky has made in recent months. At that, ex-Air Marshal Ky, now Vice President, evidently reflects the sentiment of all the people of south Vietnam, military and civilian.

Recently the U.S. military command in South Vietnam conducted a survey or Vietnam "Gallup poll" to determine the views of South Vietnamese regarding the American presence in South Vietnam. Then on order of Ambassador Bunker and top U.S. Army generals in Saigon, publication of the results of the poll was suppressed and publication denied for all Vietnam newspapers. The American Broadcasting Co. in Saigon reported that 30 percent had no opinion, 5 percent, mostly in Saigon, wanted Americans to stay, and 65 percent of all South Vietnamese polled want Americans to get out.

ORDER FOR RECOGNITION OF SENATOR PROXMIRE TOMORROW

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that tomorrow immediately following the disposition of the unobjected-to bills on the General Orders Calendar, which has been cleared by both sides, the able Senator from Wisconsin (Mr. PROXMIRE) be recognized for not to exceed 45 minutes.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

Mr. BYRD of West Virginia. I suggest the absence of a quorum.

The ACTING PRESIDENT pro tempore. The clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. PROXMIRE. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

ORDER OF BUSINESS

Mr. PROXMIRE. Mr. President, I ask unanimous consent that I be allowed to speak for 15 minutes in the morning hour.

The ACTING PRESIDENT pro tempore. Is there objection? The Chair hears none, and the Senator from Wisconsin is recognized for 15 minutes.

THE ELECTRONIC BATTLEFIELD

Mr. PROXMIRE. Mr. President, I had intended to offer today an amendment to the pending bill which would insure that Congress had the necessary information before authorizing further development of the so-called sensor surveillance system, otherwise known as the automatic or electronic or integrated battlefield.

As I have already pointed out, this program has never been authorized as a

whole, despite the fact that it has already cost the American taxpayer $2 billion.

The hard estimate is at least $1.7 billion by the Defense Department. Speaking of this program, Gen. William Westmoreland has stated that: "It will revolutionize ground warfare." Despite the far-reaching significance of the program, Congress has never conducted a systematic, public review of its cost or effectiveness. The entire program has remained highly classified, and as a result, few Congressmen were even aware it existed until just a few weeks ago. In view of this general lack of knowledge about the implications and effectiveness of the system, there is a real need for additional information before further development proceeds.

Among the many unanswered questions concerning the system is its effectiveness in guerrilla warfare. Despite the optimistic reports released by the Department of Defense, there seems to be considerable question among the men who have used the equipment whether it is really effective. Several days ago I quoted a member of the Special Forces who monitored the sensors in Vietnam. He pointed out that the sensors could not differentiate between friend and foe, women and children.

> All we know is that something is moving out there. It could be the wind, an elephant or an enemy soldier. We really have almost no idea what we are shooting at.

This same individual cited several cases where patrols had searched areas shelled in response to sensor information and found only dead water buffalo.

Just recently I received a letter from a Lt. Jeffrey Belden who was in charge of all sensor operations within the II Corps in Vietnam. To quote Lieutenant Belden:

> During my tour (Jan. '69 to Jan. '70) I became intimately familiar with the functions, capabilities, costs, and effectiveness of these devices. One part of my job was to submit weekly progress reports to MACV headquarters in Saigon on the U.S. and ARVN use of these devices. In addition, I was information recipient of similar reports detailing the use of these devices throughout Indo-China.

These qualifications place him in an excellent position to judge the general effectiveness of the program. The Lieutenant's conclusions are very illuminating:

> The two points which I wish to make is that the system is not cost effective by any stretch of the imagination, nor would it be cost effective at one-tenth the price. The second point is that I have some doubts as to whether anyone could possibly have been given the whole picture about this system and still believe it is cost effective.
>
> While my contention that the system is not cost effective is admittedly a personal opinion, it is based on substantial familiarity with the system and is shared by virtually every person I have ever talked with on this subject including several high-ranking officers.

The Lieutenant went on to support his contention that the system is not cost effective:

> For example, I know that MACV (Military Assistance Command Vietnam) is only interested in the positive aspects of the program. However, statistics were frequently misused to exaggerate the value of the system and other methods were used to make the system look better than it actually was. In one briefing statistics were used to show that the system was 99% effective, when in reality it was not more than 50% effective. Every dead body found anywhere near the devices was counted as a "kill" for the sensors, when in reality these men may have been killed in general air or artillery strikes not all connected with information supplied by the sensors.

What is more, the lieutenant pointed out that:

> The name "the concept of general battlefield surveillance." They are planted in very narrow corridors where suspected enemy infiltration has been reported. These supply corridors are generally only 1–2 miles wide, and yet it takes thousands of these sensors to cover even a small area. Once the enemy discovers their location, they just make new trails around the sensors. To attempt to cover a relatively large area of several hundred square miles would cost a fortune in view of the fact that each sensor costs in the neighborhood of $2,000. This is why they cannot possibly be cost-effective—it would simply not be worth it to cover an entire battlefield with these devices—the number of enemy deaths as a result of the information supplied by the sensors would not warrant it.

While admittedly this is only one point of view, I believe it demonstrates the vital need for additional information regarding the effectiveness of the sensors in combat. This month's issue of the magazine Army contains an article entitled, "Our Widening Military Doctrine Gap," which supports this conclusion. The author, Col. Mark M. Boatner III, prior to his retirement, was chief of the Concepts and Doctrine Division in the Office of the Assistant Chief of Staff for Force Development. He points out that:

> We may be actually lowering our military effectiveness by overloading our combat units and higher commanders with innovations they have not learned to use.

Colonel Boatner, speaking of the electronic battlefield, says:

> They (distinctions between theory and operations) must be grasped by civilian officials of the Department of Defense, particularly the scientific and technological people who keep expressing astonishment over the military leader's lack of wild-eyed enthusiasm about the newest proposal to automate the battlefield.

The Colonel states further that:

> One result, for which only military leaders can be blamed, is that field headquarters have become so fat with the people needed to man these new electronic wonders and so heavy with equipment that they are practically immobilized. Command and communications troops account for almost 20% of the total strength of the division. Additional capability of military communications systems becomes overloaded as fast as it is created.

Mr. President, this point is very well taken. Contrary to the arguments of those who say that the sensor surveillance system will allow us to cut down our Armed Forces. Colonel Boatner points out that these electronic devices require many more support troops. Once again, we have been told the sensor surveillance system will allow us to reduce the size of our Armed Forces, but have not been told the number of new support units which it will necessitate. Clearly, we need much more information in this vital area of manpower demands.

These are just a few of the questions concerning the effectiveness of the sensor system. Perhaps even more important is the question of whether we actually need the system at all. The devices which have been developed so far are largely designed for use in guerrilla warfare. While some of them may have application in conventional warfare, it is questionable whether their potential use after Vietnam warrants the tremendous cost of developing and procuring these devices. The public has made clear—and I think most of us in the Senate agree—that we want no more Vietnams, and yet, by developing the electronic battlefield, we are in fact preparing for future guerrilla wars. The question must be asked, to what extent will such devices, by improving our capability to fight such wars, encourage our involvement in future Vietnams? No one can answer with any certainty, but what cannot be denied is that we will have the technology—we will have the capability, and there will be a constant temptation to make use of it. In view of this, do we want, do we need these sensor surveillance devices? Once again, the Congress has almost no information on which to make a judgment. Once again, there is a clear need for information concerning the potential of these devices and their possible future uses.

The second broad set of questions which must be explored before this system proceeds any further is the potential domestic and foreign applications of the devices. The Department of Defense, in a letter to me signed by John Foster, Director of Defense Research and Engineering, has declared:

> To the extent that the technology may be useful for civilian or other military purposes, it will be made available.

This policy of virtually unrestricted distribution represents a tremendous potential threat to the privacy of millions of Americans. As I pointed out in a speech last week, devices are now under development which will allow the user to literally "see" through solid brick walls and other heavy objects. The threat to privacy is only too obvious. And yet, despite the potential of these devices, the Department of Defense has stated that it will make these devices available to domestic police forces as the technology becomes available. Clearly, there is an immediate need for some minimal restrictions on the use and distribution of these sensors. We cannot allow the Defense Department to provide these devices to domestic police forces, without any controls whatsoever. The potential for abuse is too great.

Equally disturbing is the question of distribution of these devices to other foreign governments for use against indigenous guerrilla movements. Two weeks ago the distinguished Senator from Arizona (Mr. GOLDWATER) stated that sensor surveillance devices had been of incalculable aid to our men in Laos. At the time I pointed out that I doubted whether most Senators even knew we had men in Laos. This is just one example of how the

provision of these devices may lead to deeper involvement in conflicts similar to Vietnam.

Mr. GOLDWATER. Mr. President, will the Senator yield?

Mr. PROXMIRE. I am happy to yield to the Senator from Arizona.

Mr. GOLDWATER. I realize that my remarks relative to Laos could have been and were taken to mean that we had men in Laos. What I added the following day, to correct the mistaken idea, is that they helped our airmen in Laos, and that, in turn, has helped our ground forces in South Vietnam.

The real guts, you might say, of our censor system is in Thailand, where it is used on the Ho Chi Minh trail. This is where the great research has taken place. The ability to detect movement by these devices has resulted in a great many more kills than we would have had had we tried to rely upon daylight sight. That was the point I was making.

We have no men in Laos that I know of, and I do not think we have, but we have a lot of tactical aircraft that fly over Laos, over the Ho Chi Minh trail. They have been doing it for many years. I am always amazed at members of the Committee on Foreign Relations who stand on this floor and express great shock and surprise that we have been attacking the Ho Chi Minh trail, when we have been doing it for the last 3 years, that I know of, and probably longer.

Mr. PROXMIRE. The difficulty here, as the Senator knows, is that this is a very expensive as well as complicated kind of device. It may be that the Laotians have technicians who are able to operate and monitor this equipment and maintain it, and so forth, but there is also considerable suspicion that we may have to send in our own experts and advisers to handle this kind of operation. While the Senator is undoubtedly correct—because he knows what he speaks about, and speaks the truth—in suggesting that there may not be ground troops there, nevertheless, if we are going to have the equipment there, we may have to have experts there to see that this enormously expensive equipment is properly operated, maintained, and deployed.

Mr. GOLDWATER. Mr. President, I say to the Senator from Wisconsin that the center for this operation is manned by our technicians, but it is in Thailand, not Laos. Sensor equipment is dropped by aircraft, and its use is not confined to the Ho Chi Minh trail in Laos and, I suspect, in Cambodia, but it has also been used very successfully down in the IV Corps area, and to some extent in the I, II, and III Corps areas.

But I do not want the impression to be created that the Laotians or Thais are running this very sophisticated computer equipment that receives the signals from the sensors, analyzes them, and says whether they are worthy targets, wrong targets, or go targets.

The chief thing we are interested in, in the sensor field, in connection with this development in Thailand, is to detect trucks coming down the Ho Chi Minh trail. I must say it has been extremely successful. I wish I were permitted to discuss this further, and I hope within a relatively short time—because the staff of the Armed Services Committee is working on hearings on this matter to be held as soon as the current debate is ended—that we will be able to lift the veil of secrecy. I think it is rather falsely placed, because anyone with a meager knowledge of electronics can understand how this whole thing works. I have urged for the better part of a year that the Armed Services Committee expose itself to the sensor idea, so that we will know more about it, and whether the users consider it effective or not. Frankly, my only exposure to it has been in the field, and maybe I learned a little bit through my interest in electronics, but I think and have thought all along that this has tremendous potential. So does General Westmoreland, so does the Air Force, and frankly, so does everyone I have talked with about it, both in the field and in the Pentagon.

Mr. PROXMIRE. I certainly respect the Senator's opinion, and I might say that he has very able people, of course, who agree with him on it. The main thrust of my remarks is that this is controversial. There have also been competent people who have had a chance to observe this system who say it is not worth the tremendous cost involved.

All my amendment would do is try to get information. I am just trying to get the facts, so that we will be in a better position to authorize and appropriate funds, because the amount of funds involved is getting to be very large. It may be one of the best investments we can make, as the Senator seems to feel that it is; or it may be a bad waste of money. We cannot tell until we have the information before us. I agree with the Senator wholeheartedly that the degree of secrecy we have had on this subject, even from the top members of the committee when they try to get information on it, is certainly foolish.

Mr. GOLDWATER. I assure the Senator that if we can end this debate and get it over by Thanksgiving, or some good day like that——

The ACTING PRESIDENT pro tempore. The time of the Senator from Wisconsin has expired.

Mr. PROXMIRE. Mr. President, I ask for 10 additional minutes.

The ACTING PRESIDENT pro tempore. Is there objection to the request of the Senator from Wisconsin? The Chair hears none, and it is so ordered.

Mr. GOLDWATER. As I say, after we conclude the debate, I am sure we can supply the Senate with information that will then be downgraded in classification. I hope all of it will me, because the really exciting part of this the Senator and I cannot discuss on the floor, and it has yet to become the knowledge of the people, but I hope it will be.

Mr. President, because much of the sensor surveillance system equipment is extremely complicated, as the Senator from Arizona has conceded, it is necessary that advisers be provided along with the equipment to demonstrate its use and maintenance to the native forces. These advisers may then become the basis for an expanded U.S. presence should the President or the military seek to increase our commitment. In short, the sensors provide the "foot-in-the-door" which may lead to a much wider and expanded commitment—a commitment which Congress may not want, but may be powerless to prevent. Once again, the need for some limited restrictions is only too clear. Congress has a right to know where these sensors are being deployed and for what purposes. Only in this way, can we avoid future involvement in unwanted guerrilla wars such as Vietnam and Laos.

Mr. President, these are just a few of the questions which need to be answered before we proceed with further development of the electronic battlefield. Clearly, there is a need for much more information before we move to full-scale development of this program. The implications of unrestricted use are truly frightening. At the very least, Congress has the right to know where these devices are being deployed and what restrictions, if any, are being placed on their use. More important is the question of whether the system is actually worth the money—whether it may actually overburden our combat forces, and, as Colonel Boatner suggests, actually lower the military effectiveness of our men. These are serious questions and they deserve thorough study. For these reasons, I had intended to offer today an amendment which would provide for a comprehensive study of the sensor surveillance system by the General Accounting Office. I am not going to offer that amendment because I have run into a situation with the committee in which they seem to adopt the position of not accepting or even compromising any of these amendments in any way.

As a Senator, I have a right to ask the Comptroller General to make this study. I am going to do that, and I intend to rise in the Chamber every time this matter comes up, whether it is on an appropriation or an authorization, and ask detailed questions of the chairman of the committee or subcommittee until we get some answers.

That is all I am asking for in my amendment. If the committee does not want to accept that—and I saw from my experience the other day that they have clout to prevent—they are going to be in for extensive interrogation on the floor. It is too bad that we have to do it that way. It will take much more time in the Senate, but I think the committee must be challenged on this, and I am going to provide that challenge in depth and at length.

Among the questions which the GAO would investigate, first, are: Whether or not the sensor surveillance system has been effective in Vietnam; second, whether or not the Department of Defense will make these electronic devices available to foreign governments under the military assistance or sales program; third, whether or not sensors and other devices can be used effectively by law enforcement agencies and their potential applications in this field.

Other areas which would be explored under the amendment are the manpower implications of widespread use of sensor surveillance devices—that is whether the number of support troops needed may equal or actually exceed the number of

combat units which are replaced. The GAO would also examine the long-range need for the devices after Vietnam and the desirability of developing two new sensor generations. All of these areas deserve careful study in order that Congress may have the information it needs before authorizing further development of this system.

The second part of the amendment is designed to provide Congress with information on the distribution of these devices to both domestic police forces and foreign governments. While placing no specific restrictions on the distribution of these devices, this section of the amendment would require the Secretary of Defense to notify Congress at least 1 month in advance of any plans to make these devices available to domestic police forces. In those cases where the Department plans to make the devices available to foreign governments, the amendment requires the Secretary to inform Congress of all grants or sales within 2 months of delivery. This is sufficient time so that the enemy will not be able to take preliminary countermeasures against the devices. At the same time it will insure congressional knowledge of all those countries who possess the devices and to what extent we have committed advisers or other technical personnel to supervise their use. This will prevent so-called foot-in-the-door commitments where we become deeply involved before Congress is informed of the extent of our commitment.

Once again, in order to make this effective without the committee accepting the amendment, I presume we would have to keep hammering away at the Pentagon and at the committee when they came to the floor for funds, to ask for information as to how widely this is being dispersed throughout the world to other governments, and the implications for our committing advisers, technicians, supporting troops, and so forth.

Finally, the amendment would provide that the sensor surveillance system shall be subject to authorization after December 31, 1970. This provision would give Congress control over the development of new generations of sensors. Two billion dollars has already been spent on this program, most of it without any specific authorization. Some experts predict that the program, if widely adopted by the Armed Forces, could cost as much as $20 billion by the end of the decade. We cannot afford to allow such a huge program to fall outside the authorization process. The program needs to be carefully reviewed—making it subject to authorization will provide the necessary basis for this review. We cannot exempt this program from authorization on the grounds that it is merely a communications, and not a weapons system. The Department of Defense has repeatedly stated that the sensor surveillance system is part of an integrated fire control system. As such, it is an integral component of a coordinated weapons system. The devices detect and target the enemy and then an armed response is made, based on this information. In no way, can it be characterized as a separate communications system. It is an integrated firing system which must be made subject to authorization.

Again, I do not expect to be able to do that on this bill. I will have to hope that as we develop information, as we keep challenging the committee to give us this information, as the hearings—which the Senator from Arizona has said will be forthcoming in the committee—develop information, perhaps at that time it may be possible for us to get information on something which has already cost a great deal of money, hundreds of millions of dollars, and which we expect can cost billions of dollars in the future.

In conclusion, it should be clear that this amendment will not delay further development of these devices. The amendment is designed solely to provide Congress with more information in order that it can make an intelligent decision on further development and deployment of these devices. It will provide Congress with the information it needs to make sure the program does not get out of control.

Most important, it will provide Congress with an independent assessment of the need for, and effectiveness of this system. It will reduce the possibility of overruns and contribute to the development of a truly effective program. Information is the key to control. Once Congress has the information, it can take the appropriate action. The amendment I am introducing today is designed to take this first step—provide the information we need on which to base further decisions.

Under the circumstances, Mr. President, I do not intend to offer the amendment. As I have said, I will have to follow other techniques of trying to elicit information, both through requesting a study by the General Accounting Office and by questioning in great detail the managers of bills that come to the floor in which funds may be included for this system.

I yield the floor.

Mr. GOLDWATER. Mr. President, in the few minutes remaining before the time commences under the unanimous-consent agreement, I want to comment briefly on the remarks of the distinguished Senator from Wisconsin.

I have watched these sensors during their period of development at Fort Huachuca in my State. I have watched them in use in the field. I can assure the Senator that they do work.

They are not as near perfection as we would like to have them, but we are making great progress.

I might say, again, that this is not an electronic battlefield. Let us call it an integrated battlefield, because a sensor is only a part of this overall electronic approach. Radar will be greatly increased in its use.

We have something called a "people sniffer."

Mr. PROXMIRE. A "people sniffer?"

Mr. GOLDWATER. A "people sniffer." Do not get me into details, because we are burying some gas at sea, and I do not want to upset anybody. But this is more like perfume.

We have the AWACS program, which has only gone out to preliminary bid; and before this integrated system can work, we have to tie it in with airborne command posts, which we do not have now, and they are effective for relay purposes.

The cost of this device did run as high as $2,000, and some of them a little more, but the cost of these devices is now running around $700. So, instead of having a great increase in cost—I understand the Senator's concern about a $1.7 billion cost—it is leveling off. While we are going to spend more on it in the years ahead, I think the days of the $2,000 devices are over. The most expensive part of this system is a very comprehensive computer center. As the Senator knows from his experience with computers, they are extremely costly.

As to the application for civilian use, I might say——

Mr. PROXMIRE. Mr. President, will the Senator yield?

Mr. GOLDWATER. I yield.

Mr. PROXMIRE. I think that one of the lessons we have learned in the last few years is that a great deal of the overruns and of the excess costs have been in exactly this kind of thing, in the computer systems. Wherever electronic devices are used, costs just seem to skyrocket.

The Stubbings study of 11 major electronics systems the Defense Department has, bought about 1960, showed that they averaged more than 100 percent in overruns, were delivered late, and performance was very poor. This is another reason why I am suspicious of this. It is another reason why we ought to have this information.

Mr. GOLDWATER. I have more confidence in our American ability to solve these problems.

I recall that a year ago the ABM computer was almost given up by the developer. Now they feel that they have it whipped, and they are on their way. I know of some systems that run as high as $3,000 a day just to run, but maybe we saved twice that much in the training.

AMERICA NEEDS MIDDLE GROUND

Mr. AIKEN. Mr. President, on July 4 an article was published in the Albany Times-Union which may have escaped the attention of most Members of the Senate. The article, entitled "America Needs Middle Ground," was written by Jack Bell, who is well known to all of us.

In this article he refers particularly to the courage and wisdom of our colleague, the senior Senator from Maine, and I ask unanimous consent that the article be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

AMERICA NEEDS MIDDLE GROUND

(By Jack Bell)

Sen. Margaret Chase Smith of Maine was speaking to all of us when she told her colleagues this week that Americans must find a middle way between anarchy and Hitlerist repression.

The voice of moderation is drowned out by the clatter of clubs on Wall Street, the turbulence of hyperbole in the speeches of public men and the lethal gunfire of unruly protest. The reasonable men who have kept

the nation on even keel in crisis before go unheard in an uproar of hysterical antiwar oratory.

My awareness of the critical disturbance we have traveled in dividing ourselves was sharpened by an indictment of president Nixon's military venture into Cambodia in The Progressive magazine. I have known and admired its editor, Morris H. Rubin, for 30 years. In that time I have regarded his magazine as an advanced voice for decent liberalism.

In a current issue—which carries Sen. J. William Fulbright's latest advice to campus peaceniks—the flat statement was made that the fate of all mankind hinges on the answer to this question:

"Does the United States possess the absolute and unbridled power to cross the frontiers of a supposedly sovereign nation, devastate their territory, and murder and maim their citizens as it sees fit?

Is that reasonable? "The fate of all mankind . . . ?" You hang a "murderer" tag on American soldiers sent into an area over which Phnom Penh has had no iota of sovereignty for years.

Yet I find no words of criticism in the magazine or in the speeches of impassioned dissenters of the fact that North Vietnam invaded Cambodia and either drove out or slaughtered the Cambodians in the drive to cache munitions and men to kill Americans in neighboring Vietnam.

There seems to be a feeling among the President's critics that Hanoi had some "constitutional" right to take over that portion of Cambodia. On the other hand, as Sen. Edward M. Kennedy, D-Mass., expresses it, Mr. Nixon is compromising our constitution by "the assumption of war-making power" in trying to clean out this nest of vipers.

In retrospect, Mr. Nixon blundered in not giving congressional leaders a few hours advance notice of what he was up to. As it develops, he need not have feared that, the inevitable "leaks" from such a session would tip off the enemy, because the Communists knew our intentions about as soon as the President made a decision.

Somewhere between Kennedy and Vice President Agnew there is a middle ground where the bulk of Americans must prevail over the extremes of left and right.

It is indeed time, as the courageous Sen. Smith said, "that the great center of our people, those who reject the violence and unreasonableness of both the extreme right and their consciences, mustered their moral and physical courage, shed their intimated silence and declared their consciences."

To express their will, centrist Americans have only to search out men and women of good will, who eschew bitterness and political opportunism, and vote for them in November, regardless of party. Perhaps then, we Americans can reason together.

COMMUNICATIONS FROM EXECUTIVE DEPARTMENTS, ETC.

The ACTING PRESIDENT pro tempore (Mr. HUGHES) laid before the Senate the following letters, which were referred as indicated:

REPORT ON FUNDS OBLIGATED FOR CHEMICAL WARFARE AND BIOLOGICAL RESEARCH PROGRAMS

A letter from the Deputy Secretary of Defense, transmitting, pursuant to law, a secret report on funds obligated for chemical warfare and biological research programs (with an accompanying report); to the Committee on Armed Services.

REPORT OF THE COMPTROLLER GENERAL

A letter from the Comptroller General of the United States, transmitting, pursuant to law, a report on the need for improving the program for use and redistribution of excess materiel in the Pacific area, Department of Defense, dated August 14, 1970 (with an accompanying report); to the Committee on Government Operations.

REPORT ON RESEARCH IN AREA OF SCHOOL FINANCE

A letter from the Acting U.S. Commissioner of Education, transmitting, pursuant to law, a report on all research in the area of school finance (with an accompanying report); to the Committee on Labor and Public Welfare.

REPORT OF THE DIVISION OF COAL MINE SAFETY, BUREAU OF MINES

A letter from the Secretary of the Interior, transmitting, pursuant to law, a report of the Division of Coal Mine Safety, Bureau of Mines, for the calendar year ended December 31, 1969 (with an accompanying report); to the Committee on Labor and Public Welfare.

REPORT ON NUMBER OF INDIVIDUALS IN EACH GENERAL SCHEDULE GRADE EMPLOYED BY THE NATIONAL AERONAUTICS AND SPACE ADMINISTRATION

A letter from the Administrator, reporting, pursuant to law, on the number of individuals in each General Schedule grade employed by the National Aeronautics and Space Administration on June 30, 1969, and June 30, 1970; to the Committees on Post Office and Civil Service, and Appropriations.

PETITIONS

Petitions were laid before the Senate and referred as indicated:

By the ACTING PRESIDENT pro tempore (Mr. HUGHES):

A resolution adopted by the Sixth Illinois Constitutional Convention, relative to the 500th anniversary of the discovery of America; to the Committee on the Judiciary.

A resolution adopted by the Tenth Guam Legislature, praying for the waiving of the statute of limitations in certain claims relating to property in Guam; to the Committee on the Judiciary.

ENROLLED BILL SIGNED

The ACTING PRESIDENT pro tempore (Mr. HUGHES) announced that on today, August 17, 1970, he signed the enrolled bill (H.R. 15381) to amend the District of Columbia Income and Franchise Tax Act of 1947 with respect to the taxation of regulated investment companies, which had previously been signed by the Speaker of the House of Representatives.

BILLS AND A JOINT RESOLUTION INTRODUCED

Bills and a joint resolution were introduced, read the first time and, by unanimous consent, the second time, and referred as follows:

By Mr. BURDICK:

S. 4247. A bill to amend the Bankruptcy Act, sections 2, 14, 15, 17, 38, and 58, to permit the discharge of debts in a subsequent proceeding after denial of discharge for specified reasons in an earlier proceeding, to authorize courts of bankruptcy to determine the dischargeability of nondischargeability of provable debts, and to provide additional grounds for the revocation of discharges; to the Committee on the Judiciary.

(The remarks of Mr. BURDICK when he introduced the bill appear below under the appropriate heading.)

By Mr. MURPHY:

S. 4248. A bill to amend title II of the Social Security Act so as to remove the limitation upon the amount of outside income which an individual may earn while receiving benefits under such title; and

S. 4249. A bill to eliminate the 50-percent fraud penalty against an innocent spouse and to relieve an innocent spouse of the tax liability for stolen or embezzled funds; to the Committee on Finance.

By Mr. SCHWEIKER:

S. 4250. A bill to provide that Flag Day shall be a legal public holiday; to the Committee on the Judiciary.

(The remarks of Mr. SCHWEIKER when he introduced the bill appear below under the appropriate heading.)

By Mr. SMITH of Illinois:

S. 4251. A bill to amend title IV of the Higher Education Act of 1965 to establish a Student Loan Marketing Association; to the Committee on Labor and Public Welfare.

By Mr. MCCLELLAN (for himself, Mr. HART, Mr. BURDICK, Mr. SCOTT, and Mr. FONG):

S.J. Res. 230. Joint resolution extending the duration of copyright protection in certain cases; considered and passed.

(The remarks of Mr. MCCLELLAN when he introduced the joint resolution and when it was passed appear later in the RECORD under the appropriate heading.)

S. 4247—INTRODUCTION OF A BILL TO AMEND THE BANKRUPTCY ACT

Mr. BURDICK. Mr. President, I introduce, for appropriate reference, a bill to amend the Bankruptcy Act.

This bill is a perfected version, which has wide support, of S. 3523 which I introduced on February 27, 1970.

It is identical to H.R. 18871, a similar perfected version, which was introduced in the House of Representatives on August 10, 1970.

The purpose of the proposed legislation is to effectuate more fully the discharge in bankruptcy by rendering it less subject to abuse by harassing creditors. Under present law creditors are permitted to bring suit in State courts after a discharge in bankruptcy has been granted and many do so in the hope the debtor will not appear in that action, relying to his detriment upon the discharge. Often the debtor in fact does not appear because of such misplaced reliance, or an inability to retain an attorney due to lack of funds, or because he was not properly served. As a result a default judgment is taken against him and his wages or property may again be subjected to garnishment or levy. All this results because the discharge is an affirmative defense which, if not pleaded, is waived.

The proposed legislation is meant to correct this abuse. Under it, the matter of dischargeability of the type of debts commonly giving rise to the problem; that is, those allegedly incurred as a result of loans based upon false financial statements, will be within the exclusive jurisdiction of the bankruptcy court. The creditor asserting nondischargeability will have to file a timely application in the absence of which the debt will be deemed discharged. The bill provides that at the same time notice is given to creditors of the date by which objections to discharge must be filed, creditors are

also notified of the date by which applications to determine nondischargeability of their debts must be filled. When timely filed, the matter will be heard in the bankruptcy court and final disposition made of it. The right to trial by jury as it presently exists is retained and the creditors' application does not subject him to the jurisdiction of the bankruptcy court for any other purpose.

The actual focus of the bill is to give greater effect to the discharge for those who need it most, that is, the ordinary wage earner. It is as to this type of bankrupt that the present abuse of the bankruptcy discharge occurs.

Section 4 of the bill is meant to accord greater protection to creditors by expanding the causes in section 15 of the Bankruptcy Act for which a discharge, once granted, can be revoked. Additionally, section 17b of the act will be amended to clarify existing case law regarding the status of debts during two or more bankruptcy proceedings of the same bankrupt, the earlier of which did not result in the bankrupt's obtaining a discharge.

In all, the bill, without changing the policy adopted by the Congress in determining when and as to what debts a discharge may be obtained, is all inclusive in updating the procedural aspects of the discharge to protect more fully the interests of both classes, bankrupts and creditors.

The PRESIDING OFFICER (Mr. RIBICOFF). The bill will be received and appropriately referred.

The bill (S. 4247) to amend the Bankruptcy Act, sections 2, 14, 15, 17, 38, and 58, to permit the discharge of debts in a subsequent proceeding after denial of discharge for specified reasons in an earlier proceeding, to authorize courts of bankruptcy to determine the dischargeability of nondischargeability of provable debts, and to provide additional grounds for the revocation of discharges, introduced by Mr. BURDICK, was received, read twice by its title, and referred to the Committee on the Judiciary.

S. 4250—INTRODUCTION OF A BILL TO PROVIDE THAT FLAG DAY SHALL BE A LEGAL PUBLIC HOLIDAY

Mr. SCHWEIKER. Mr. President, I introduce a bill to provide that Flag Day shall be a legal public holiday.

It is noteworthy that, although the United States is one of the world's youngest nations, the U.S. flag is one of the oldest national emblems. It predates the present Union Jack of Great Britain and the French and Italian flags. Back in 1775, the Continental Congress named a committee composed of Benjamin Franklin, Thomas Lynch, and Benjamin Harrison to develop a design for a new national emblem. As a result, on June 4, 1777, the Continental Congress, sitting in Philadelphia, resolved:

> That the flag of the United States shall be of thirteen stripes of alternate red and white, with a union of thirteen stars of white in a blue field, representing the new constellation.

There is a tradition that the first flag was made by Mrs. John Ross, familiarly known as Betsy Ross, of 239 Arch Street, Philadelphia, at the request of Gen. George Washington. As a matter of fact, the Ross home is now a national shrine and may be visited by citizens interested in seeing where the Stars and Stripes originally came into being.

It is reported that George Washington described the makeup of the new flag as follows:

> We take the stars from heaven, the red from our mother country, separating it by white stripes, thus showing that we have separated from her, and the white stripes shall * * * down to posterity, representing liberty.

According to one story, General Washington himself had a hand in designing the flag. A star with six points had originally been suggested. General Washington, it said, did not like this—perhaps because the British flag contained six-pointed stars—and he folded a piece of paper and cut across it with scissors, making a five-pointed star.

Throughout the years after the resolution, the observance of the anniversary of the original adoption of the flag grew slowly throughout the country. In 1893, the mayor of Philadelphia, after receiving a resolution of the Society of Colonial Dames of Pennsylvania, ordered the display of the flag on the public buildings in the city. A direct descendant of Benjamin Franklin, Mrs. Elizabeth Duane Gillespie, president of the Colonial Dames at the time, offered the resolution which proposed that the day be known thereafter as Flag Day and that the flag be displayed by all citizens on their residences and on all business places as well as on public buildings.

The anniversary, however, has never been designated as a legal holiday. It is customary to hold a celebration in the Betsy Ross house in Philadelphia, and the Patriotic Order of the Sons of America place a wreath on the grave of Betsy Ross in Mount Moriah Cemetery in Philadelphia. Generally the Daughters of the American Revolution observe the day with ceremonies, as do the Sons of the American Revolution.

Mr. President, it is my feeling that in these days of turmoil in this Nation it would be well for us to pause each year to commemorate the anniversary of our national flag. I propose that June 14 be designated as "Flag Day" to honor the flag of the United States of America. The establishment of Flag Day as a national holiday would give us the opportunity to reflect on the ideals of the Founding Fathers which have enabled this country to become the great and strong Nation that it is.

The PRESIDING OFFICER (Mr. BOGGS). The bill will be received and appropriately referred.

The bill (S. 4250) to provide that U.S. Flag Day shall be a legal public holiday, introduced by Mr. SCHWEIKER, was received, read twice by its title and referred to the Committee on the Judiciary.

ADDITIONAL COSPONSORS OF BILLS

S. 3608

Mr. BYRD of West Virginia. Mr. President, on behalf of the Senator from Arkansas (Mr. FULBRIGHT), I ask unanimous consent that, at the next printing, his name be added as a cosponsor of S. 3608, a bill to amend the Consolidated Farmers Home Administration Act of 1961, as amended, to increase the loan limitation on certain loans.

The PRESIDING OFFICER (Mr. DOLE). Without objection, it is so ordered.

S. 3867

Mr. NELSON. Mr. President, I ask unanimous consent that, at the next printing, the names of the Senator from Missouri (Mr. EAGLETON) and the Senator from Rhode Island (Mr. PELL) be added as cosponsors of S. 3867, to assure opportunities for employment and training to unemployed and underemployed persons, to assist States and local communities in providing needed public services, and for other purposes.

The PRESIDING OFFICER (Mr. DOLE). Without objection, it is so ordered.

S. 4074

Mr. BYRD of West Virginia. Mr. President, on behalf of the Senator from California (Mr. CRANSTON), I ask unanimous consent that, at the next printing, the name of the Senator from California (Mr. MURPHY) be added as a cosponsor of S. 4074, to authorize special appropriations for training teachers for bilingual education programs.

The PRESIDING OFFICER (Mr. DOLE). Without objection, it is so ordered.

S. 4154

Mr. BYRD of West Virginia. Mr. President, on behalf of the Senator from New Jersey (Mr. WILLIAMS), I ask unanimous consent that, at the next printing the names of the Senator from New Mexico (Mr. MONTOYA), the Senator from Iowa (Mr. HUGHES), the Senator from Ohio (Mr. YOUNG), the Senator from Texas (Mr. YARBOROUGH), the Senator from South Carolina (Mr. HOLLINGS), the Senator from Nevada (Mr. BIBLE), the Senator from Hawaii (Mr. FONG), and the Senator from Oregon (Mr. PACKWOOD), be added as co-sponsors of S. 4154, to assist in the provision of housing for the elderly, and for other purposes.

The PRESIDING OFFICER (Mr. DOLE). Without objection, it is so ordered.

SENATE CONCURRENT RESOLUTION 80—SUBMISSION OF A CONCURRENT RESOLUTION TO ESTABLISH A JOINT COMMITTEE TO INVESTIGATE THE TREATMENT OF PRISONERS OF WAR IN VIETNAM

Mr. BYRD of West Virginia) for himself and Mr. BROOKE) submitted a concurrent resolution (S. Con. Res. 80) to establish a joint committee to investigate the treatment of prisoners of war in Viet-

nam, which was referred to the Committee on Foreign Relations.

(The remarks of Mr. BYRD of West Virginia when he submitted the concurrent resolution appear earlier in the RECORD under the appropriate heading.)

SENATE RESOLUTION 448—RESOLUTION REPORTED AUTHORIZING THE COMMITTEE ON THE INTERIOR AND INSULAR AFFAIRS TO EXPEND ADDITIONAL FUNDS FROM THE CONTINGENT FUND OF THE SENATE

Mr. JACKSON, from the Committee on Interior and Insular Affairs, reported the following original resolution (S. Res. 448); which was referred to the Committee on Rules and Administration:

S. RES. 448

Resolved, That the Committee on Interior and Insular Affairs is hereby authorized to extend from the contingent fund of the Senate, during the Ninety-first Congress, $10,000 in addition to the amount, and for the same purpose, specified in section 134(a) of the Legislative Reorganization Act approved August 2, 1946.

SENATE RESOLUTION 449—SUBMISSION OF A RESOLUTION SEEKING AN IMPARTIAL INTERNATIONAL INVESTIGATION BY THE UNITED NATIONS INTO THE TREATMENT OF PRISONERS OF WAR BY THE GOVERNMENTS OF NORTH AND SOUTH VIETNAM

Mr. BAYH (for Mr. GRAVEL) submitted a resolution (S. Res. 449) seeking an impartial international investigation by the United Nations into the treatment of prisoners of war by the Governments of North and South Vietnam, which was referred to the Committee on Foreign Relations.

(The remarks of Mr. BAYH when he submitted the resolution appear below.)

Mr. BAYH. Mr. President, on behalf of the Senator from Alaska (Mr. GRAVEL) I submit a resolution (S. Res. 449), and I ask unanimous consent that a statement, prepared by the Senator from Alaska, be printed in the RECORD, together with the resolution itself.

The PRESIDING OFFICER (Mr. DOLE). The resolution will be received and appropriately referred; and, without objection, the resolution and statement will be printed in the RECORD.

The resolution (S. Res. 449) was referred to the Committee on Foreign Relations, as follows:

S. RES. 449

Whereas there are now over 1,500 American military personnel and civilians missing or captured in Southeast Asia; and

Whereas there is also an unknown number of South Vietnamese missing or captured; and

Whereas the actual number of prisoners held by North Vietnam is unknown because of the refusal of Hanoi to release the names of its prisoners which is in violation of the Geneva Convention; and

Whereas allegations have been made against the Government of North Vietnam that American military personnel have been murdered; that U.S. and South Vietnamese prisoners have died of disease and maltreatment, aggravated by inadequate food and medical care; that prisoners being held by the Government of North Vietnam have been publicly humiliated, mistreated, and exploited; and

Whereas allegations have also been made against the Government of South Vietnam concerning the treatment of North Vietnamese military personnel including the recent disclosures of mistreatment of Viet Cong prisoners by the Government of South Vietnam in its Con Son Island prison; and

Whereas all these alleged acts by the Governments of North and South Vietnam are in violation of the Geneva Convention of 1949 relative to the treatment of prisoners of war; and

Whereas the Governments of North and South Vietnam have both ratified the prisoner-of-war agreements embodied in the Geneva Convention of 1949; Now, therefore, be it

Resolved, that the Senate of the United States calls upon the President of the United States to seek an impartial international investigation by the United Nations into the treatment of prisoners-of-war by the Governments of North and South Vietnam.

The statement of Mr. GRAVEL is as follows:

STATEMENT BY SENATOR MIKE GRAVEL ON THE FLOOR OF THE UNITED STATES SENATE

(Submitted by Senator BAYH)

Mr. President, I am sending to the desk a resolution calling upon the President of the United States to seek an impartial international investigation, under the auspices of the United Nations, into the treatment of prisoners of war by the governments of North and South Vietnam.

On July 30, 1970, I participated in a colloquy on the Senate floor concerning the mistreatment of American prisoners of war by the government of North Vietnam.

It was generally felt, by those Senators participating in the discussion, that the American press has been remiss in not providing more coverage of the plight of U.S. prisoners of war. In fact, it was suggested that the major television networks produce some documentaries on the deplorable conditions of captivity in which American prisoners of war are living in Southeast Asia.

I would like to reemphasize what I said on July 30:

"I think the American press has glorified or spectacularized the activities of treatment of prisoners of war in South Vietnam and has avoided information on the more subtle and diabolical treatment of prisoners by North Vietnam in the perpetration of the war."

At the same time, I expressed my belief that a resolution from the Senate requesting the Administration to seek a hearing before a Committee of the United Nations might be helpful in marshalling public opinion in this country and throughout the world against the inhumane treatment of prisoners of war by the North Vietnamese.

If such a hearing could be arranged, I would hope that our government would forcefully lay before the world the evidence that we possess on the mistreatment of U.S. prisoners of war and to do so on a continuing basis until Hanoi changes its unconscionable policy.

In fairness, any investigation by the United Nations should also include the activities of the government of South Vietnam with respect to their treatment of the 35,000 North Vietnamese prisoners of war.

As one of 89 Senators who signed a July 13 letter to North Vietnamese Premier Pham Van Dong insisting that U.S. prisoners of war in Southeast Asia be treated in accordance with the Geneva Convention, I am dismayed that the government of North Vietnam has failed to even acknowledge receipt of our correspondence.

Surely it is in the best interests of North and South Vietnam to abide by the prisoner of war agreement contained in the Geneva Convention. It should be noted and underscored that both countries have ratified this agreement.

I would also associate myself with the remarks of the President of the United States in his foreign policy statement of February 18, 1970 on the prisoner of war issue:

"In human terms, no other aspect of conflict in Vietnam more deeply troubles thousands of American families than the refusal of North Vietnam to agree to humane treatment of prisoners of war or to provide information about men missing in action. Over 1400 Americans are now listed as missing or captured, some as long as five years, most with no word ever to their families. In the Paris meetings, we have sought repeatedly to raise this subject—to no avail. Far from agreeing to arrangements for the release of prisoners, the other side has failed even to live up to the humane standards of the 1949 Geneva Convention on prisoners of war: the privision of information about all prisoners, the right of all prisoners to correspond with their families and to receive packages, inspection of POW camps by an impartial organization such as the International Red Cross, and the early release of seriously sick and wounded prisoners.

"This is not a political or military issue, but a matter of basic humanity. There may be disagreement about other aspects of this conflict, but there can be no disagreement on human treatment for prisoners of war. I state again our readiness to proceed at once to arrangements for the release of prisoners of war on both sides."

Therefore, I ask the Senate to support my resolution and I personally call upon the President of the United States to request a hearing before the United Nations on the treatment of prisoners of war by the governments of North and South Vietnam.

ADDITIONAL COSPONSORS OF AMENDMENTS

AMENDMENTS NOS. 834 AND 835

Mr. NELSON. Mr. President, I ask unanimous consent that, at the next printing, the names of the Senator from Minnesota (Mr. MONDALE), the Senator from New York (Mr. JAVITS), the Senator from Ohio (Mr. SAXBE), the senior Senator from Michigan (Mr. HART), and the junior Senator from Michigan (Mr. GRIFFIN), be added as cosponsors of amendments 834 and 835 to H.R. 18127, the public works appropriation bill.

The first amendment would include $20 million to implement an important new Federal program authorized by the Water Quality Improvement Act signed into law in April for demonstration and preliminary planning projects for pollution removal and prevention in the Great Lakes.

The second amendment would add $18,219,000 to appropriations for section 5 of the Federal Water Pollution Act, as amended, for the purpose of fully implementing the section's authorities for water pollution control research, investigations, and information in the areas of inland lakes, oil, vessel, and pesticide pollution.

The PRESIDING OFFICER (Mr. DOLE). Without objection, it is so ordered.

ADDITIONAL COSPONSOR

AMENDMENT NO. 838

Mr. BYRD of West Virginia. Mr. President, on behalf of the Senator from New York (Mr. GOODELL), I ask unanimous consent that, at the next printing, the name of the Senator from New Jersey (Mr. CASE) be added as a cosponsor of amendment No. 838, to the military procurement bill.

The PRESIDING OFFICER (Mr. DOLE). Without objection, it is so ordered.

ADDITIONAL STATEMENTS OF SENATORS

KIDNAPING TO ACHIEVE A POLITICAL GOAL

Mr. SCOTT. Mr. President, the murder of Mr. Dan Mitrione by Uruguayan terriorists is an offense against universal standards of human decency. There is no conceivable political excuse that can be accepted as a justification for violence against defenseless human beings, and I hope that men of good will in all countries of the world will speak up to say so.

Mr. Mitrione was kidnaped on his way to work, wounded seriously by his captors, denied hospitalization, and—in the end—brutally killed. The kidnapers apparently intended to use him to achieve a political goal: The overthrow of the Uruguayan Government. This was to be accomplished by demanding the freeing of more than 150 so-called political prisoners—many of who had, in fact, been legally tried and sentenced for crimes of violence. The kidnapers apparently believed that the Uruguayan people would not stand for this absurd ransom and that the United States would insist that the ransom be paid.

If the kidnapers had been successful with this strategy, they could have caused the fall of a government which has, in many ways, been a model of peace, order, and social progress. Presumably that is exactly what was annoying the perpetrators of this murder. Like many other extremists, they would prefer to bring about a rule of repression, so that they could have a better chance of gaining popular sympathy for their cause.

I believe that this sort of attempt against democracy is reprehensible in itself. What is more appalling, however, is the willingness of fanatical men to sacrifice an innocent life to their ends. If they really believe that any end could justify these means, I wonder what they think distinguishes them—in human terms—from another fanatic who was called Adolf Hitler.

I think it is clear that our Government could not go along with the kidnapers' plans against their own country. We could and did urge the Government of Uruguay to do everything practicable to bring about Mr. Mitrione's safe release, and I am told that exceptional measures were in fact taken. Mr. Mitrione's own friends in the Uruguayan police were involved in the search for him, and they mounted an unprecedented rescue effort. Though unsuccessful in its primary purpose of saving his life, this effort did result in the arrest of a number of leaders of the terrorists, perhaps helping to spare other lives in the future.

The kidnapers still hold two hostages—a Brazilian diplomat and American agricultural adviser, Claude A. Fly. Our Ambassador, Charles Adair, continues in constant touch with the highest Uruguayan officials on measures to achieve Mr. Fly's release.

The lights have been on all night in the State Department, too. There is no easy answer to this tragic problem. In dealing with problems of human life and representative government, there is very seldom an easy answer. I do think that the massive reaction of world public opinion against Dan Mitrione's tragic death gives some reason for hope, because the kidnapers must see that they have accomplished the opposite of what they intended.

Our first thoughts now go, of course, to Mr. Mitrione's wife and children. They know that he lived for a cause which he always served well. There is no way to ease the pain caused by his absence, but his family must find some consolation in the knowledge that in death he served the same cause he served in life—the cause of peace.

YET SOME SAY LET THE GENERALS RULE

Mr. YOUNG of Ohio. Mr. President, those partiots who drafted the Constitution of the United States provided that in our country civilian authority must always be supreme over the military. Yet there are some dimwitted Americans who assert that the generals should run the war.

A short answer to that stupid claim would be to recall that Gen. William Westmoreland, commanding in Vietnam in 1965, said:

I see the light at the end of the tunnel. The Communists are beaten. We are winning the war.

Also, Maj. Gen. Charles J. Timmes, commander of the U.S. Military Assistance Advisory Group in Vietnam—MAAG—in 1963 said:

The Vietnamese armed forces are as professional as you can get . . . I feel we could wrap this up by the end of the next dry season. We will have driven the Vietcong sufficiently underground by the end of next year that they will no longer be a national threat.

THE MEN IN THE BAMBOO CAGES

Mr. GOLDWATER. Mr. President:

Gentlemen may cry Peace, Peace, but there is no peace. Is life so dear, or peace so sweet, as to be purchased at the price of chains and slavery? Forbid it, Almighty God. I know not what course others may take, but as for me, give me liberty, or give me death!

So spoke Patrick Henry in 1775, in one of those ringing utterances by which mankind sometimes articulates the essential quality of the genius of men. These words have become a part of our heritage. In the broadest sense they are as applicable today as they were when they were first spoken.

Mr. President, our commitment to liberty applies also to our men whom Hanoi has shackled in bamboo cages in Vietnam, Laos, and Cambodia. We must never forget that they exist in a state of living death, contrary to every accepted doctrine of civilized man.

When will the liberty so passionately sought by Patrick Henry apply to them? When will Hanoi abide by the Geneva Convention rules which she herself agreed to? Are we to understand that they apply only to our side—that North Vietnam, because it insists on it, has the right to apply the signed conventions of international law as, if, and when it alone chooses?

THE GROWING U.S. INVOLVEMENT IN CAMBODIAN AFFAIRS

Mr. FULBRIGHT. Mr. President, the Far Eastern Economic Review of July 23 contains three articles concerning the war in Cambodia which deserve to be read carefully by every Senator. Each of the articles paints an ominous picture of growing United States and South Vietnamese involvement in Cambodian affairs.

The report by T. D. Allman ends by quoting a neutralist ambassador in Phnom Penh as saying:

From the beginning Lon Nol and Sirik Matak were absolutely confident that the United States would rescue them. They seem to have been completely right.

Another article, which details the training of Cambodian forces in South Vietnam largely with American money apparently, sums up the situation in these two paragraphs:

How much the training of the recruits and the troops is costing the American taxpayer is a closely guarded secret. But more important is the fact that the U.S. agreed to do it secretly, using ARVN as a front, to further disguise its growing involvement in the Cambodian fighting.

Said one American officer, concerned about possible over-expansion of the U.S. military effort in Indochina: "I am afraid we are on the road to involvement at the worst in another Vietnam, at the best another Laos. Despite what the president says there is a tacit agreement here that we are not going to allow Cambodia to go under. And we are already involved in that. You know how we are 'not involved' militarily in Laos. That's the way we are nearly 'not involved' in Cambodia.

The third article describes the Vietnamese involvement in Cambodia and concludes:

Indeed, the South Vietnamese presence in Cambodia, complete with low profile, an excess of firepower and a built-in callousness toward the villagers, seems all too surely to resemble the first days of the American involvement in South Vietnam.

I ask unanimous consent that the articles be printed in the RECORD.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

CAMBODIA: INTO AN ICEBERG WAR

(By T. D. Allman)

One reason the Cambodian government is increasingly optimistic about its chances for military survival is that the United States and South Vietnam, with US-supplied funds, are on the way to adding approximately three

divisions of trained and equipped troops to the National Khmer Armed Forces.

According to well-informed sources here, American and South Vietnamese officers and soldiers have begun training the first elements of two divisions of Cambodian troops at installations in South Vietnam. Another 10,000 or so South Vietnamese troops of Cambodian ancestry are being trained, and will be stationed permanently in Cambodia.

The programme, which began soon after US ground troops left Cambodia on April 29, apparently in being funded with a mixture of US-supplied South Vietnamese funds, American funds originally allocated for South Vietnamese military assistance, and direct US aid to the Cambodian government. The cost of the programme apparently surpasses publicly announced American aid commitments to Cambodia, which so far total only US $9.9 million.

Elements of the first division to be trained in South Vietnam, according to Phnom Penh sources, are being trucked and flown across the border to South Vietnam in company-sized groups. Sources familiar with the training programme leave little doubt that the US is bearing the major financial and training responsibility, even though the programme technically is part of a bilateral South Vietnamese-Cambodian accord. "The American in charge is on his fourth tour in Vietnam," said one of the sources. "In Korea one time, he killed 29 communists with a shovel. Those Khmers may be going in as gentle Buddhists but they are coming out tigers."

According to other sources, US personnel already have trained several battalions which have moved into Cambodia recently. They are Khmer Krom units—forces made up of members of South Vietnam's Cambodian minority. According to these sources, Khmer Krom troops in Cambodia soon will total about 10,000. About 4,000 belong to the American-trained and financed Mike-force, which long served as an elite mercenary force in South Vietnam. The rest are composed of Khmer Krom troops drawn from regular South Vietnamese units, given intensive training and sent to Cambodia.

Two of these newly-formed battalions arrived here several weeks ago aboard a convoy of US-donated transport trucks. According to one source more Khmer Krom are coming. They will continue to be paid with US funds sent through South Vietnamese channels.

The Khmer Krom soldiers are equipped with American weapons, and have been accompanied by two US-paid Australian mercenary officers. US embassy sources here, asked to comment on the financing of the Khmer Krom units, said they had "no knowledge" that they were being paid by Washington. But Khmer Krom officers say that "we are being paid through US aid".

The mass training programme for Cambodian soldiers was announced here last week. According to official sources, an initial 10,000 troops will be trained, and government sources say they will be followed by an equal number of trainees before the end of the year.

A decline in the level of communist military activity, a protective ring of US air strikes and South Vietnamese ground operations, and the psychological effect of what Cambodian officials here regard as an unequivocal American commitment to the survival of their regime, have combined to produce a semblance of euphoria in this isolated capital.

Only three weeks ago, when communist troops cut most of Phnom Penh's overland links with the outside world, imminent communist attack was expected here. Now, Cambodian Premier Lon Nol feels optimistic enough to predict "victory in the near future".

The optimism reflects significant evolution in the Cambodian situation. Fluidity has given way to a more stabilised situation in which the communists control most of the less densely populated areas, the government, with foreign help, holds the capital and several of the major provincial capitals, and a less dramatic but very debilitating struggle continues in the in-between areas.

The US air force has begun to fly around-the-clock sorties in Cambodia, not only against enemy sanctuaries but in tactical support of the Cambodian forces. Evaluations of the Cambodian situation have adjusted to the realities of war. What three months ago would have been considered a major communist attack is now interpreted as a government success if it does not result in a further dramatic erosion of the situation. By absolute standards, communist attacks have not declined greatly.

Many sources here believe that the partial lull is the result of a North Vietnamese decision to continuing to give priority to the war in South Vietnam. "A lot was destroyed in the sanctuaries," said one intelligence source. "But a lot is still out there. We assume the Vietcong now are infiltrating back in to retrieve their caches and re-establish bases near the South Vietnam border."

If the Cambodian government's optimism that the communists have been checked in Cambodia is therefore unfounded, its confidence in a fundamental American commitment to their cause seems increasingly justified.

"From the very beginning," commented one neutralist ambassador in Phnom Penh last week, "Lon Nol and Sirik Matak were absolutely confident that the United States would rescue them. They seem to have been completely right."

South Vietnam: ARVN-half

Saigon: Some clutched the booty of war. Others played nervously with their ancient weapons. Some, too sick or tired to stand, lay on the parade ground in the hot sun. And others dressed in the tattered remnants of uniforms three decades old, squinted at the neatly-dressed throng of South Vietnamese soldiers who had come to stare at the survivors of the Cambodian Army's Northeast Regional Command.

"This is just like 1964," said one Saigon officer who could not believe his eyes. In front of him were several Khmer soldiers wearing aluminum cooking pots as helmets, brightly-coloured woolen scarves securing the pots to their swarthy heads. A nine-year-old boy with double bandoliers of machine gun ammunition across his chest stood at attention, holding a machine gun. NCOs wearing muddy shower shoes and French battle jackets from the other Indochina War barked instructions in guttural Khmer. And an unidentified Cambodian major, resplendent in new olive fatigues and American jungle combat boots, dashed fowl-like around, spluttering incoherent French, English and Vietnamese.

But looking at what was left of Cambodia's 54th Battalion it was difficult to accept the Vietnamese officer's comment that the Khmers looked like ARVN back in its blackest days. The Cambodians looked far worse.

And now, ostensibly at least, it was up to ARVN to straighten up their troops, dress them in modern army uniforms, and teach them contemporary military tactics. After five weeks of "refresher" training at Lam Son National Training Centre in the mountains near Nha Trang they will be sent back to Cambodia to replace some of the 18,000 South Vietnamese troops fighting across the border and Cambodianise the war.

Yet, despite Saigon's boast that it will be the Vietnamese who will be training the 54th—and four other battalions numbering 577 men each evacuated from Ratanakiri last month by ARVN—it will be the Americans who will be providing the cash and the real meat of the advice and refitting. Washington has not acknowledged this, of course, but then, as it does in Laos, it has its reasons.

Training began simultaneously at Lam Son for some of the 10,000 Cambodian Army recruits scheduled to receive instruction in South Vietnam. Although on the surface it looked as if the ARVN sergeants rounding up the green young men from Phnom Penh were firmly in charge the US was footing the bill. Moreover the large American advisory teams at Lam Son and at two other camps are also actively involved in their training.

Plans for the scheme were drawn up by the Americans at the Military Assistance Command in Saigon and the training began with the South Vietnamese acting as the perfect front for what is in reality a new American investment, and involvement, in the Indochina War.

The United States first showed interest in training Cambodian troops in May when the Lon Nol government, recognising that it could never train, equip and arm enough men in time to meet attacks from its enemies, appealed to Washington again for military aid.

The United States agreed to provide small arms, ammunition, trucks, light military equipment, and servicing for Cambodian Air Force planes as part of a $7 million publicly-acknowledged package deal. The plan to train Phnom Penh's troops also was included in the agreement but because it was thought this might be too large a pill for the American public to swallow it was decided to "allow" the South Vietnamese to do the training, a source close to the project said.

When the five battalions, plus about 4,000 dependents were snatched out of Bo Kheo and Labansiek after fighting off the North Vietnamese for several weeks (some of the battalions had lost as many as 200 men), it was decided to extend the training agreement and for the US to support them too. Transported in US Air Force planes they will undergo extensive schooling and rearming under the training extension.

How much the training of the recruits and the troops is costing the American taxpayer is a closely guarded secret. But more important is the fact that the U.S. agreed to do it secretly, using ARVN as a front, to further disguise the growing involvement in the Cambodian fighting.

Said one American officer, concerned about possible over-expansion of the U.S. military effort in Indochina: "I am afraid we are on the road to involvement at the worst in another Vietnam, at the best another Laos. Despite what the president says there is a tacit agreement here that we are not going to allow Cambodia to go under. And we are already involved in that. You know how we are 'not involved' militarily in Laos. That's the way we are nearly 'not involved' in Cambodia."

The eight weeks instruction add up to a crash course. ARVN recruits get twice that and even ARVN's training is considered hurried by American standards. They will drill with old War War II US carbines and light machine guns in company-sized units (about 100 men each) and then will be shipped back to Cambodia as complete companies with their carbines. At the moment, the Americans are concerned about the Khmers having to face up to the North Vietnamese fully automatic AK–47s with their outdated American equipment. "The feeling here is that they should all get M–16s or at least captured AKs," said one adviser. "We are trying to do something about it."

Southern-Fried Chicken

South Vietnam three months ago sent 40,000 of its American-trained, American-equipped and American-paid troops hurtling into Cambodia in a series of invasions under the codename "Operation Total Victory". The South Vietnamese forces may have per-

suaded many Cambodians that the Vietcong were the lesser of two evils, as they tore up the previously placid Cambodian countryside with orgies of firepower which even their American advisers found impressive.

South Vietnamese senior officers, notably General Do Cao Tri, a former ambassador to Taiwan, made pronouncements reminiscent of early American statements on Vietnam. A score of South Vietnamese military planners noisily took over the general headquarters here, in the process displacing a number of Cambodian counterparts—including the prime minister's brother—from their offices. Initial tension between the Cambodians and their newfound South Vietnamese friends was exacerbated by Cambodian massacres of Vietnamese civilians and the South Vietnamese habit of looting every village they liberated on behalf of the Lon Nol government.

Now all that is changed, officially at least. Like the Americans, the South Vietnamese are engaged in the difficult business of doing a great deal for the Cambodians while trying to appear to be doing very little.

In Phnom Penh, the South Vietnamese low profile is most evident.

The embassy and residence occupy two small villas. Charge d'Affaires Tran Van Phuoc keeps to himself—when not engaged in frequent conferences on policy matters with Lon Nol and Vice Premier Sirik Matak.

Phuoc, indeed, was specifically chosen to blend into the Phnom Penh scene. He was born in 1918 in the south Cambodia provincial capital of Takeo, attended Phnom Penh's exclusive Lycee Sisowath, and speaks Cambodian so fluently that most of his meetings with Cambodian officials are conducted in that language.

The South Vietnamese officer corps, which works on a counterpart basis with the Cambodian general staff, also affects a low posture. "We are simply here for liaison," insists a South Vietnamese colonel. "If you need any information, you should go through Saigon. Or better yet," he grinned, "contact the Cambodians. They are in charge here."

In fact, the South Vietnamese army corps plays as central a role in Cambodia as similarly placed American officers do in Saigon. They have the final say on all Cambodian military plans, provide transport, logistics and munitions for the Cambodian forces, and on many occasions have overruled the entire Cambodian general staff on matters of strategy and tactics.

But no South Vietnamese flag flies at the South Vietnamese military headquarters in Phnom Penh, and no South Vietnamese soldiers or officers can enter the capital without specific permission. "Even General Tri and General Dzu [the two South Vietnamese generals responsible for Saigon operations in Cambodia] must have permission to come here," says a South Vietnamese source, "and they aren't going to get it very often. They've also been told to give up press conferences on Cambodian soil." By whom? "President Thieu has taken a personal interest in this affair."

The low profile extends, less strongly, into the Cambodian countryside. In principle, South Vietnamese troops no longer occupy the territory they secure for the Cambodian authorities. They have orders to stay away from densely populated areas and to turn over to Cambodian troops towns they have taken from the communists.

The South Vietnamese involvement in Cambodia, despite the low profile, amounts to a relationship similar to that of a power over a protectorate. As of last week:

Khmer Khron troops of South Vietnamese citizenship had assured the defense of Phnom Penh, and occupied surrounding villages.

12,000 to 40,000 South Vietnamese troops, depending on the needs of the moment, assumed the major responsibility for patrolling most of the countryside which remains nominally under the Cambodia government's control. Every major battle in Cambodia during the past two months has pitted South Vietnamese troops against the Vietcong and North Vietnamese. The Cambodians have not won a major battle since the South Vietnamese expeditionary force arrived.

Several thousand South Vietnamese logistics and staff personnel provided all logistics and most planning for the Cambodia forces. The logistics range from flying guns and ammunition in transport planes to Phnom Penh to providing helicopters and advisers for Cambodian assault missions.

South Vietnamese helicopter gunships and artillery provided fire support for Cambodian troops on a regular basis.

An unknown number of South Vietnamese troops were moved into the border sanctuaries to continue the task of replacing US troops.

South Vietnam, serving as a funnel for US funds, was providing an undisclosed amount of material and direct financial support for the Cambodian government, according to sources here.

The South Vietnamese presence in Cambodia, therefore, despite its low profile, has become the major Cambodian defense. "This is only temporary," said one South Vietnamese commander, who spoke with an American accent picked up in the US. "It's their war." But the Cambodians, in any real sense of the word, have stopped fighting their own war. A typical episode of the Cambodian war occurred just north of Phnom Penh recently.

An air and water-borne South Vietnamese force of 5,000 men launched a search-and-destroy operation in a densely populated area on the peninsula formed by the Tonle Sap and the Mekong River. Cambodian villagers told reporters that the Vietcong had evacuated the area several days before. But there was no Cambodian liaison officer present, let alone any Cambodian troops. The soldiers spread through the countryside nonetheless and from the bank of the Mekong, smoke could be seen rising from the burning villages. A South Vietnamese artillery battery at 30-second intervals fired random "harassment and interdiction" fire in the Cambodian countryside, despite the fact that there was no longer anyone there to harass or interdict except Cambodian villagers.

A dozen South Vietnamese river craft were spread along the river front; eight American-provided helicopters were parked in a nearby field.

A South Vietnamese helicopter pilot sat in the shade with a basket of chickens at his side. He dressed and talked like an American.

"I didn't steal this chicken," he said anticipating the question. "I paid for it." He then went on to explain the search-and-destroy action in the Texas accent he had learned at flight school in the US. "So you see," he concluded, "this is just like an American operation."

Indeed, the South Vietnamese presence in Cambodia, complete with low profile, an excess of firepower and a built-in callousness toward the villagers, seems all too surely to resemble the first days of the American involvement in South Vietnam.

PRESIDENT NIXON'S STATEMENT ON FEDERAL ECONOMY

Mr. GRIFFIN. Mr. President, in a statement today President Nixon urged Congress to act promptly on measures he has requested that would permit greater economy in the operation of the Federal Government.

The President pointed out that congressional inaction is extremely expensive, with an average of about $2 million a day being wasted.

I ask unanimous consent that the text of the President's statement be printed in the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY THE PRESIDENT ON THE FEDERAL ECONOMY ACT

At a time when the budget must be defended against excessive spending, and when every dollar must be directed to urgent national needs, an unnecessary leakage of two million dollars a day by virtue of delayed action by the Congress is indefensible.

Almost six months ago, I sent to the Congress my Federal Economy Message which listed 57 actions which could be taken to reduce unnecessary Federal spending. The Congress was asked to take 15 of these actions and I was prepared to take those remaining.

My total savings target in the budget was $2,132,000,000, of which $1,150,000,000 could be achieved by Executive action. The remaining $982,000,000 in savings required Congressional legislative action.

In those matters requiring enactment of new laws, the Congress appears to be proceeding on only $449,000,000 of savings, 46% of its goal. Further, the Congress is endeavoring to prevent me from achieving $167,000,000 in savings. In total, the Congress would leave $707,000,000 unsaved in fiscal year 1971, or nearly one-third of the total I proposed.

In those areas where I have been left free by the Congress to act, I am terminating, restructuring and reforming programs. The savings from my actions total $983,000,000 and represent 100% of those savings available to me and not affected by Congressional action.

Because the Congress has not addressed the potential savings with a sense of urgency, an average of two million dollars is being wasted every day on programs that are obsolete, low priority or inefficient. Congressional inaction is extremely expensive.

I urge the Congress to take prompt action, as I have done, to put the public interest ahead of the special interests—to put an end to those costly "sacred cows" that have been allowed to exist long after their original purposes have been served.

LUTHER: DE JURE AND DE FACTO SEGREGATION

Mr. RIBICOFF. Mr. President, I often find that the "comics" do a good job of confronting issues more directly than we often would like.

There has been much talk recently about the importance of the difference between de jure and de facto segregation, but no one has put this issue in better perspective than Brumsic Brandon, Jr.'s comic strip "Luther" in the Washington Post of August 11.

Luther is a black youngster often bemused and perplexed by everyday events in his life. On this occasion, perched atop a convenient garbage can, he is confronted by a black friend of his who begins:

Luther, it's dumb to sit around on vacation time thinking about school.

Luther replies:

But I still can't figure out this de facto de jure business.

Luther's friend has a simple answer:

My uncle said it's like getting hit by a car—what kind of car it is don't make no difference.

The Senate established a Select Committee on Equal Educational Opportu-

nity last spring to study the problems presented by de facto segregation in the North. The temptation has been to continue focusing on the difficult racial situation in the South, but I am pleased to learn that the select committee does plan to begin to hold hearings in the near future on de facto segregation. I hope that its distinguished members will understand what Luther's friend is trying to say.

TELEVISION AS A POLITICAL FORCE

Mr. PROXMIRE. Mr. President, on August 4, the distinguished Senator from Maine (Mr. MUSKIE) testified before the Senate Subcommittee on Communications. The subcommittee was then considering the question of the use of television as a political force and had before it Senate Joint Resolution 209, introduced by the Senator from Arkansas (Mr. FULBRIGHT).

I have just read the transcript of Senator MUSKIE's testimony. I must say that he has set forth with outstanding perspective the far-reaching problems included in this issue and has given us some concrete suggestions. It is clear that Senator MUSKIE understands fully television's impact on today's society. To borrow his own words, he says:

> Used to its fullest, television can determine the outcome not only of every political issue, but more importantly, of each and every national issue.

In short, the use of television is an issue. It is an immense issue—one we must explore in the greatest detail.

I commend Senator MUSKIE for this outstanding statement; and for the benefit of the entire Senate, I ask unanimous consent that it be printed in the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT OF SENATOR EDMUND S. MUSKIE DEMOCRAT OF MAINE, BEFORE THE SUBCOMMITTEE ON COMMUNICATIONS OF THE SENATE COMMERCE COMMITTEE

Mr. Chairman and members of the subcommittee, I appreciate the opportunity to appear before you during your consideration of S.J. Res. 209. The impact of television on our society in general and particularly on our governmental institutions demands the most serious consideration by all concerned citizens. The fact that you, Mr. Chairman, have undertaken such an examination guarantees all Americans the deep and comprehensive investigation that is required.

Television is the overwhelmingly dominant instrumentality in forming public opinion not only in the market place, but on national issues as well.

The dimensions of the problem are graphically framed by Federal Communications Commissioner Nicholas Johnson in opening his book, *How To Talk Back To Your Television Set*. There, he says, and I quote:

"There are 60 million homes in the United States and over 95 percent of them are equipped with a television set. (More than 25 percent have two or more sets.) In the average home the television is turned on some five hours forty-five minutes a day. The average male viewer between his second and sixty-fifth year, will watch television for over 3,000 entire days—roughly nine full years of his life. During the average weekday winter evening nearly half of the American people are to be found silently seated with fixed gaze upon a phosphorescent screen.

"Americans receive decidedly more of their education from television than from elementary and high schools. By the time the average child enters kindergarten he has already spent more hours learning about his world from television than the hours he would spend in a college classroom earning a B.A. degree."

(*How To Talk Back To Your Television Set*, Nicholas Johnson, Commissioner, Federal Communications Commission; Atlantic Monthly Press Book, Little, Brown and Company (1969).)

No longer can television be considered as a plaything, a novelty or as an entertainment device—if ever it could. Television is how the facts are provided, how opinions are formed how judgments are made, how products are sold and—not least of all—television is how politics is played. On the latter score, used to its fullest, television can determine the outcome not only of every political issue, but more importantly, of each and every national issue.

Television can organize public opinion, activate and mobilize public energies and in the end, become the most potent instrument through which the government governs. After all, what happens is largely determined by what people think. And in today's world, television must be regarded as the greatest single influence on people's thought processes. Television has changed totally the whole system of checks and balances. It has changed the nature of the political process, making the value judgment of the people on specific issues far more significant than ever before in history.

Heretofore, the entire governmental process has been largely indirect. This, of course, is the nature of a republican form of government. Its control over the purse strings kept Congress at least in a competitive position in relation to the Executive. Both branches enjoyed the detachment granted by a benign electorate. Television has changed all that. The electorate is now far from detached in its relationship to the issues that emerge at every level of government. That is a good sign. But unless the challenge is met responsibly, rather than providing the greatest rejuvenation to our democratic institutions, this phenomenon called television can virtually destroy the checks and balances so carefully established by our Constitution. The country, the Congress and the industry must accept the awesomeness of this responsibility.

What is the challenge at stake? What is the responsibility involved? Clearly, it goes far beyond retaining the viability of the two-party system. It is also to maintain Congress as a "co-equal branch". But most importantly, it is for Congress to be permitted to discharge its duty to contribute to the dialogue out of which is determined the direction of this Nation on every front, and for television to be structured to contribute to a balanced national dialogue. The responsibility simply cannot be met by techniques of the past. The responsibility requires that we adapt to the present. That is the challenge. For Congress to meet its full constitutional obligations to the electorate, television must become part of the Congressional formula. Today it is not. Tomorrow, it must be.

The very first Article of the Constitution established the Congress. Its clear function was to provide a separate institutional filter through which the Nation's most important decisions must pass. It is important that television aid and not destroy that function. There exists today, however, a distinct imbalance in the use of this medium to communicate with the electorate. In the circumstances, I believe the emphasis should be placed not on restricting its use but in providing wider use of television to inform the American people. That is the legislative goal of S.J. Res. 209. It establishes a door-opening policy for the use of television by the Congress. In a nutshell, S.J. Res. 209 says: The people have a right to be informed of the prevailing Congressional attitude on the significant national issues.

The present disposition of the networks is to allow the President such television time as he requests. To my knowledge, he is never refused. It is given to him because of his office and because a statement by a President is considered newsworthy *per se*. On balance, I think this is a sound policy. It is hard to envision the mechanics of any voluntary system that could refuse a Presidential request. But it should be remembered that when the President addresses himself to the issues, he assumes the role of an advocate. This is a valid Presidential posture, if not a responsibility. A democracy is predicated upon an informed electorate.

In the past, the process of reaching the electorate with the facts and the arguments has been much slower and far less effective. Before the wide use of television, it actually took an immense effort on the part of the electorate to become informed, to obtain the information upon which to base a judgment.

That was especially true when it came to the complicated issues of national and international affairs. A great effort is still involved in the process, but more people are arriving at quicker judgments after an almost exclusive diet of television information. What we must assure is that the viewer receive a balanced diet. And the question is, how to mold television into a medium that presents a balanced picture of national and international issues.

There is no precedent here. The famed fireside chats that dominated the Roosevelt era were different because of the difference in the persuasive capacity of the media involved and more importantly—because television commands an audience of enormous proportions. The televised veto of the HEW appropriations bill in January of this year provides a splendid example. The entire viewing audience of one of television's most popular programs—the "Laugh In" show—sat captured while the President spoke. He rebuked a Congressional action and advocated a position on this issue on that weekday winter evening when Commissioner Johnson states nearly half the American people are watching. The position the President advocated was contested by overwhelming majorities in Congress with equal access to information. That Congressional position was never heard or seen by those Americans. If the President happens to be wrong, there is little that can be done to make that known to the people.

At an evening press conference on January 30, 1970, the President stated that the anti-ballistic missile system against China is now "virtually infallible". As a result, that statement was imbedded in the minds of millions although there is unanimity among scientists and admissions by the Administration subsequently that the statement was dead wrong. The awesome potential of this use of television could be brought home by other less striking examples.

In the circumstances, the question is what steps must now be taken to permit an evolution of television as it affects the national dialogue. A far better balance must be achieved. If differing viewpoints exist, a more competitive position must be assured. Leaving the American people open to the total and unquestioned impact of a Presidential pronouncement is simply wrong. What is missing is the perspective added by public officials representing a co-equal branch of government even if they happen to be of the same political party. The selection of the personalities and the format of the Congressional viewpoint should be left to the Congress. The networks might well

appreciate this exercise of responsibility on the part of the Congress preserving to the networks the detachment they seek.

But the televised response to Presidential pronouncements that is so necessary to provide balance and perspective is not enough. Congress takes many initiatives on national questions that deserve direct electorate participation and involvement. The tax relief and tax reform measure developed last year by Congress would be a recent example. What Congress conceived and achieved single-handedly with that issue was of such importance to the American people that a national airing of its many facets on television would have been highly justified. It was the most significant tax reform act passed by the Congress since the establishment of the income tax. It closed $6.6 billion in tax loopholes. It was conceived in the Congress and weaved its way through a plethora of roadblocks—many imposed by the Executive branch itself. To put it simply—the law would not exist today were it not for a Congressional demand for reform before granting the President's request to extend the income tax surcharge. Tax reform—said the Congress—had to accompany any surtax extension.

The Administration badly needed that surtax. But the country badly needed tax reform. This was the message Congress had for the people. If Congress could have conveyed its message through television to the people, I am convinced that the roadblocks would have tumbled quickly. That this viewpoint prevailed anyway is a fact attributable more to the actions of Senate Majority Leader Mike Mansfield's personal determination and insistence than to the direct insistence and determination of an informed electorate. The electorate deserved to be better informed on such an important issue. All I am saying is that the allocation of television time to Congress should be afforded as the need is justified. The issue will establish that need and when it does, then Congress must have the ability to determine its own format and its own participants. It is the only way. If the American people are to be assured a balanced diet of viewpoints, we must act now.

Of course, there are serious hurdles involved; questions like how much time should be made available; who shall speak for the Congress; what issues justify this procedure—and so forth. But these are problems than can and should be met on an *ad hoc* basis. Clearly the test would be met on any significant national issue where there is a substantial and prevailing viewpoint in the Senate or the Congress that differs from the Executive. In those cases, the opportunity to provide the "Congressional viewpoint" must be afforded and the selection of the "who" and the "how" should be left to the Congress. I am certain in most cases that the differing viewpoint will be shared on a bipartisan basis. On almost every issue, a Congressional majority is composed of members of both parties.

The party identification of a majority of that bipartisan view could provide the identification of the institutional leadership through which the networks could work. In many other cases, the leadership of the prevailing Congressional viewpoint is easily identified. On the recent national debate over the Cambodian invasion, the natural selection in the Senate would have been obvious. The leaders of that prevailing and bipartisan Senate viewpoint were Senators Cooper and Church. So it is no answer to say that making time available to Congressional viewpoints creates too many internal problems for the Congress. Congress is capable of working out these problems and I am sure it will, if afforded the opportunity. Our goal is to assure the American public its right to know—to know in much greater depth and from more varied perspectives the full impact and ramifications of the day's most vital issues. To be sure, the so-called hard news programs of the networks—wherein the world's happenings are compressed into 28 minutes in any one day—attempt to present a fair balance. But the limitations of time prevent in-depth coverage of the complicated national issues. It is the use of television beyond the hard news programs that presents the great imbalance. The American people have a right to know and there is thus a deep and abiding responsibility on the part of the Congress to make every effort to correct the communication imbalance and grant them that right.

In addition, we cannot ignore the special role that must be played by the Senate in setting the tone for the issues as they emerge in the national dialogue. The original concept of the legislative branch with the House of Representatives being elected every two years and the Senate every six, presupposed that the House would remain closer to the pulse of the people and the issues of the day. It was intended, on the other hand, that the Senate have an added degree of insulation from temporary changes in public attitude, precipitous acts of a transient majority or demands based upon the superficial whims of the electorate. Televisions has changed all this.

Toward the end of the 1960's, it became clear that the Senate of the United States was very sensitively attuned to issues, especially the issues that were drawing national attention on television. Perhaps it is because Senators, when they campaign, use the medium of television much more. They must be far more conscious of the tone and response attached to an issue by a larger statewide segment of the population. Senators set the tone of their own elections through the use of television. They in turn respond to the tone set by a national administration. The reaction of the Senate on crime legislation, and the reaction of the Senate on school busing and countless other matters are examples of this phenomenon at work. These were responses to the tone set by the Executive on these issues. They were national responses; not pitched to parochial biases but patterned to answer a national problem in a broad and comprehensive manner. As of now, the Senate has no way to participate fully or fairly in setting the tone to which it responds. I believe that the Senate has a special interest in assuring that the present imbalance is corrected.

One final point, Mr. Chairman. I would like to emphasize a dimension that goes beyond what we have been here discussing. It goes beyond the viability of the two-party system—beyond the maintenance of the Congress as a co-equal branch of government and even beyond our obligation to assure a national dialogue on the great issues that confront society. We must decide here and now that television will not become the *establishment medium* designed to preserve the *status quo*. Providing a fuller expression of the two major parties is not enough; providing a medium through which the Congress may report to the American people directly is a major start but still is not enough. We must guarantee that television can adapt as quickly as the times can change. We cannot always identify what the most pressing challenge will be 3 or 4 years hence. We must not structure our answer today that might conceivably deprive the airing of any viewpoint in the future. I don't know if a structural approach to the use of television can accommodate this most important dimension. I hope it will receive serious attention as these hearings develop.

In conclusion, Mr. Chairman, I must admit that I have raised more questions than I have answered. That is the nature of this subject. I have attempted to speak to the issues raised by S.J. Res. 209. As my remarks should have indicated, the thrust of S.J. Res. 209 is one that I wholeheartedly support. I only hesitate now in endorsing the measure because I would rather evaluate the attitude of the industry to these questions before urging legislative action. The heritage of the equal time and fairness doctrine has made me hesitant about structured solutions. I am not unmindful of the difficulties faced by the networks, competitive among each other both for audiences and revenues. They are asked to reach for the less lucrative public service formats without assurances that the other networks will do the same. The legislative approach embodied in S.J. Res. 209 may be the only answer for a beginning. I believe it must evolve this way to meet the national responsibility for the public to know; for the Congress to fulfill its responsibility; and for the government to assure its viability.

NIXON ADMINISTRATION BACKS DRUG INFORMATION CAMPAIGN

Mr. SCHWEIKER. Mr. President, no elected official today, whether from an urban or a rural area, can avoid coming into contact with the growing drug-use and drug-abuse problems. Therefore, all Senators will be interested in knowing about an outstanding drug education campaign which has been conducted this summer throughout the country, utilizing public service advertising in all forms of media.

Developed by the nonprofit Advertising Council, this public service campaign has been enthusiastically coordinated by the White House and has had the cooperation of three Federal agencies: the National Institute of Mental Health, within the U.S. Department of Health, Education, and Welfare; the Bureau of Narcotics and Dangerous Drugs, within the U.S. Department of Justice; and the U.S. Department of Defense. Charles "Bud" Wilkinson, Special Consultant to President Nixon, has coordinated the campaign for the White House, and a pamphlet distributed by the National Clearinghouse for Drug Abuse Information, operated by the National Institute of Mental Health, has been a focal point for the education campaign.

I commend President Nixon and these various Federal agencies for their interest and cooperation in working out this creative method to focus attention on our drug problems.

I am particularly proud that a Pennsylvanian, Thomas B. McCabe, Jr., vice president and group executive of the Scott Paper Co., Philadelphia, Pa., has been the volunteer coordinator for the Advertising Council on this project.

The pamphlet, entitled "A Federal Source Book: Answers to the Most Frequently Asked Questions About Drug Abuse," is 30 pages long, and contains answers to questions about drug abuse, marihuana, hallucinogens, stimulants, sedatives, narcotics, and other substances of abuse, as well as a three-page glossary of drug terminology. I commend this booklet to all citizens; it can be obtained from the following address: Drug Abuse Questions and Answers, National Clearing House for Drug Abuse Information, Box 1080, Washington, D.C. 20013.

A news release prepared by the Advertising Council, when this program was launched in July, explains the all-media advertisements themselves in greater de-

tail. I ask unanimous consent that it be printed at the conclusion of my remarks.

The PRESIDING OFFICER. Without objection it is so ordered.

(See exhibit 1.)

Mr. SCHWEIKER. Mr. President, as a member of the Subcommittee on Alcoholism and Narcotics, I have been both shocked and distressed by the staggering growth of drug use, particularly among young men and women. As a member of the Armed Services Committee, I have been equally concerned with the growing use of drugs by our servicemen, both at home and abroad.

Greater public education about drugs and awareness about their extensive use must be undertaken on a wide scale everywhere if we are ever to begin to bring this problem under control.

I commend the Nixon administration for its imagination and hard work in bringing about this particular advertising program. I also commend the advertising industry, through the Advertising Council, which sponsored this program, and the various advertising media, who donated the time and space for these advertisements, for their dedication and public service.

Private citizens, private organizations, government agencies, and elected officials must all work together in this serious drug problem area, and I am encouraged by this example of cooperation and public service.

EXHIBIT 1

ADVERTISING COUNCIL

NEW YORK, July 8.—The Advertising Council today unveiled a broad all-media public service advertising campaign on drug abuse information at a presentation held here.

Shown were advertising material for newspaper, consumer, business and employee magazines, radio, television, transit and outdoor media.

The campaign is designed to reach pre-high school youth, youth through college, inner-city residents, parents and military personnel.

The Council is a public service organization which conducts national public interest campaigns with the voluntary cooperation of advertising agencies, national advertisers and media. All advertising space and time are contributed by media.

A key part of the program is the availability of a Federal source book, "Answers to the most frequently asked questions about drug abuse," which gives information on many aspects of the drug problem.

Single copies of the booklet are free and people are urged to write to: Questions and Answers, National Clearinghouse for Drug Abuse Information, Box 1080, Washington, D.C. 20013.

Compton Advertising, Inc., the volunteer agency, developed this program after studying the problems in each of the five target areas. For example, a theme line, "Why do you think they call it dope?", has been incorporated in a number of ads after copy testing of the various campaign materials in Indianapolis, Denver, Buffalo, Los Angeles and New York.

Transit advertising is posting a special three-sheet poster directed at parents, showing the various types of drugs—"pot," "smack," "ups," "downs," and "acid," under the headline, "They might have learned about sex from their friends. They'd better learn about these from you."

Television networks and local stations will be offered initially a series of color film spots running from 10-second to 60-second lengths, covering each of the target audiences with different appeals.

Tom Seaver, Mets pitching ace, gives a pat on the back to kids who don't take drugs when he says, "Hey, you know who number one is? It's a kid like you who doesn't use drugs—that's number one!" This is one of a series of spots in a "hero" segment of the pre-high school youth effort.

In a 60-second film, "Ernie" a NARC (Narcotics Cop) asks parents to help him in his job by discouraging kids from taking drugs. He also asks parents to write for the free booklet so they can learn to talk with their kids about drug abuse.

Magazines are being asked to run a question and answer advertisement with questions for both parents and teenagers to ask one another to stimulate a dialogue on drugs. This ad also offers the booklet. Other advertisements for consumer, business and employe magazines are planned as part of the continuing campaign.

Newspapers across the country started running on July 5, for the next 13 weeks, 250 line (2 col. x 9") advertisements through the International Newspaper Advertising Executives cooperative Council program.

First advertisement is headlined, "Heroin is moving to the suburbs." Others in the series are headlined, "Lysergic acid diethylamide does not go in your car battery," "Can babies be born addicted to drugs?", "Your kid shouldn't know more than you do," and other similar provocative statements. Each advertisement carries a coupon to write for a copy of the Federal source book. A full page newspaper ad will also offer the booklet.

Outdoor advertising, in selected markets, is now contributing a rotating painted bulletin (14' x 48'). The design shows an arm "nailed" to a cross by a hypodermic needle. Other outdoor poster material is now in development for use this fall.

Spots for radio will be released shortly. These will include special songs for younger audiences, among a number of different radio approaches.

LABOR UNIONS SUPPORT RATIFICATION OF THE GENOCIDE CONVENTION

Mr. PROXMIRE. Mr. President, recently, widespread attempts have been made to discredit the genocide treaty and discourage Senate acceptance of it. A number of these have depicted labor union members and their leaders as against ratification of the treaty. I think it should be made very clear that the sentiment of labor unions on this vital issue is quite the opposite. Labor unions, like many other organizations of concerned Americans, realize the need for the United States to keep its word in regard to the Genocide Convention.

The testimony from labor unions that was received by the special Subcommittee on Foreign Relations on the Genocide Convention bears out my point. I ask unanimous consent that two representative letters to the subcommittee, one from the AFL–CIO, the other from International Union, United Automobile, Aerospace, and Agricultural Implement Workers of America-UAW, be printed in the RECORD.

There being no objection, the letters were ordered to be printed in the RECORD, as follows:

AMERICAN FEDERATION OF LABOR AND CONGRESS OF INDUSTRIAL ORGANIZATIONS,
Washington, D.C., May 4, 1970.

HON. FRANK CHURCH,
U.S. Senate,
Washington, D.C.

DEAR SENATOR: Attached are AFL–CIO Convention resolutions and an Executive Council statement urging the ratification of the Human Rights Conventions, including the prevention of Genocide. We would like these documents to be part of the record of the Genocide Conventions hearings and want to register our support for this important measure.

Sincerely yours,

ANDREW J. BIEMILLER,
Director, Department of Legislation.

INTERNATIONAL UNION UNITED AUTOMOBILE, AEROSPACE & AGRICULTURAL IMPLEMENT WORKERS OF AMERICA-UAW,
Detroit, Mich., April 27, 1970.

Senator FRANK CHURCH,
Chairman, Subcommittee on the Genocide Convention, Senate Office Building, Washington, D.C.

DEAR SENATOR CHURCH: This is to reaffirm the position of the United Automobile, Aerospace and Agricultural Implement Workers of America in support of the ratification of the United Nations Convention on the Prevention and Punishment of the Crime of Genocide. We welcome the request for ratification by the President, based upon the recommendations of Secretary of State William P. Rogers and Attorney General John N. Mitchell.

The failure of the United States to ratify the Genocide Convention during the past twenty years is probably our most dramatic omission in the area of international human rights. The crime of genocide, whether committed in time of war or in time of peace, is a monstrous crime which our nation must help prevent. Senate ratification of the Genocide Convention, which declares the planned mass destruction of a national ethnical, racial or religious group to be an international crime, would reaffirm our nation's concern for human rights everywhere.

Seventy-five nations have already ratified the Genocide Convention. The United States, which played a leading role in creating this Convention more than twenty years ago, must no longer delay ratification of the Genocide Convention, and we call upon the Senate to do so at this time.

Sincerely,

WALTER P. REUTHER,
President, International Union, UAW.

GUN CONTROL ACT OF 1968

Mr. DODD. Mr. President, I recently received a letter from the National Rifle Association demanding my answer to three self-serving questions on the 1968 Gun Control Act.

The questions were not only self-serving, but deliberate distortions of the 1968 Gun Control Act, which is the only effective firearms law adopted by Congress in 30 years.

The National Rifle Association, now a registered lobby, dispatched this printed, form letter to all Members of Congress as a part of its 1970 campaign to gut, if it cannot repeal, the Gun Control Act of 1968.

The special interests of this lobby came through clear to me in the letter, designed more to intimidate legislators than to elicit genuine response.

The printed signature on the letter was that of Ashley Halsey Jr., editor, the American Rifleman. The letter subtly threatened that my "substantial response" will "be reflected in due course in the pages of our magazine, circulation slightly over 1 million.'

I am not intimidated by this type of letter, and I do not believe that other Senators will be either.

I am embarrassed for the hundreds of

thousands of members of the National Rifle Association, God-fearing, fun-loving sportsmen, who are being inadequately represented in Washington, indeed their personal views are more often misrepresented.

The sportsmen I know, many of them members of the National Rifle Association, do not personally do their business in the high-handed fashion used by the Washington executives of the NRA.

Mr. President, I ask unanimous consent that the text of the NRA letter be printed in the RECORD at the conclusion of my remarks.

The PRESIDING OFFICER. Without objection, it is so ordered.

(See exhibit 1.)

Mr. DODD. Mr. President, I now address myself to the effectiveness of the Gun Control Act of 1968, and in the process correct the misrepresentations and distortions about that law's effectiveness put forth in the NRA letter to Congress.

For as long as anyone can remember, opponents of gun legislation have insisted that if the traffic in firearms is controlled, only criminals will have guns. Guided by that simplistic slogan, heavy efforts were made against the 1968 Gun Control Act for precisely the reason that gun legislation, any gun legislation, was firmly believed to be ineffective.

Two years have gone by since the 1968 act was passed, sufficient time to allow a dispassionate judgment on its efficacy.

The Treasury Department's Alcohol, Tobacco, and Firearms Division is responsible for the administration of the Gun Control Act.

I have consequently asked the Division for the record of arrests made under the Gun Control Act which became the law of the land almost 2 years ago. The report from the Division should quiet those, in and out of Congress, who daily bemoan the "failure" of this law.

In the 17 months since the effective date of the act, December 16, 1968, the Department's agents have made 1,482 cases resulting in 926 arrests under title I of the act, either alone or in conjunction with other violations of the act.

In the 17 months prior to December 16, 1968, the Department made 335 cases, resulting in 224 arrests under the old Federal Firearms Act.

Expressed in percentages, this is an increase of 342.4 percent in cases and 313.4 percent in arrests.

Because so many crimes are committed with guns, Gun Act investigations by Treasury agents often lead directly to a criminal suspect.

Thus, a recent police investigation of a brutal sex murder case revealed that a suspect might have recently purchased a firearm. The Treasury Department's investigation led to a fraudulently executed Treasury form required under the 1968 act, and led to the arrest of the suspect.

A bomb exploded under an unoccupied vehicle at Emory and Henry College in Emory, Va. Treasury Department examination of the type of explosive led to the arrest of two students who had purchased the material.

After police in Montana responded to a call from a bar where they found a dead body on the floor with customers professing no knowledge of the incident, the Treasury Department traced the German-made gun found next to the body through several States and finally back to Montana. A customer had carried the handgun into the bar that night, was present when the police arrived, and finally convicted in State court entirely through the Treasury agents' efforts.

Opponents of gun legislation will say that these are cases proving that a case can only be made after a crime has been committed; that the 1968 gun law, in effect, closes the barn door after the horse is out.

Nothing can be further from the truth. The files of the Treasury Department have at least as many cases of crime prevention as they have of detection after a crime has been committed.

One of the most spectacular cases is the arrest of Anthony Accardo, the 64-year-old Cosa Nostra leader whose slippery dealings have for years escaped successful prosecution.

Recently, however, he was indicted for a violation of two counts of the Gun Control Act. Since each count carries a maximum sentence of 10 years in prison, we may hopefully look forward to his removal from society. His indictment followed shortly after Felix Alderissio's conviction for violation of title VII, another gun control provision, of the Omnibus Crime Control and Safe Streets Act for which this Chicago Cosa Nostra chief received a 2-year prison sentence.

If the Gun Control Act has been successful in subduing the criminal syndicates, it has been no less so in apprehending criminals operating on their own.

For example, Gary, Ind., police arrested a man for possession of a sawed-off shotgun and sawed-off rifle. The suspect has a criminal record of 47 arrests of which 35 were for felonies. Through information supplied by the Treasury Department, the suspect is now under Federal indictment.

In Minnesota, a man purchasing a gun with a forged check turned out to be a felon convicted of first degree robbery. Through the cooperation of the Treasury Department, the man was arrested on charges of forgery and violation of the Gun Control Act.

Jack Ledbetter, a criminal with a three-page list of arrests, including burglary and robbery, bought a shotgun in Utah while furnishing false information to the seller. He sawed off the barrels the same day, and was subsequently arrested on a burglary charge to which was added his violation of the Gun Control Act. As a result, he was sentenced to two terms of 5 years imprisonment.

The Boston Federal grand jury returned indictments against a man who had made false statements while purchasing a gun; the suspect has a record of seven convictions for bank robbery.

Russel Payne, a felon appealing a manslaughter conviction in Wyoming, was convicted for transporting a registered firearm in interstate commerce and sentenced to 5 years imprisonment. Even though the gun was registered, Payne was transporting it in violation of a special provision of the new act.

In Springfield, Ill., Ronald E. Shafer was convicted in Federal court for 10 violations of the Gun Control Act by selling sufficient components to make a large number and variety of "destructive devices"—that is to say, homemade guns.

In none of these cases had an actual crime of violence been committed yet.

In each of these cases, crimes against persons or property would have been committed but for the existence of the Gun Control Act of 1968. The inescapable conclusion is that gun legislation does reduce crime; that it does contribute to the prevention of crime; that it can be extended to protect the law-abiding citizen.

Mr. President, I ask unanimous consent to have printed in the RECORD my letter to the Department of the Treasury, dated May 12, 1970, and the reply from Assistant Secretary Rossides, dated July 9, 1970, containing statistics, and anecdotal case histories illustrating the progress made under the legislation.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

MAY 12, 1970.

Hon. DAVID M. KENNEDY,
Secretary, Department of the Treasury, Washington, D.C.

DEAR MR. SECRETARY: I am writing to request that you make available to the Juvenile Delinquency Subcommittee information that would be helpful in evaluating the effectiveness of the Gun Control Act of 1968.

Specifically, we would like arrest data for the seventeen month period to and subsequent to the Act's effective date. This information should be broken down according to the various titles of the Act to include both the total number of arrests and the total number of cases for the comparable periods. Summaries of major cases made since the passage of the Act would also be of value.

In addition, arrest data under title VII of the Omnibus Crime Control and Safe Streets Act, as amended by title III of the Gun Control Act, would be of use to the Subcommittee study.

I appreciate the cooperation that you have extended me in the past and look forward to hearing from you as expeditiously as possible.

With every good wish, I am,

Sincerely yours,

THOMAS J. DODD,
Chairman, Subcommittee to Investigate Juvenile Delinquency.

THE DEPARTMENT OF THE TREASURY,
Washington, D.C., July 9, 1970.

Hon. THOMAS J. DODD,
Chairman, Subcommittee to Investigate Juvenile Delinquency, Committee on the Judiciary, U.S. Senate, Washington, D.C.

DEAR MR. CHAIRMAN: I have for reply your letter of May 12, 1970, to Secretary Kennedy in which you requested detailed arrest and

case data for the seventeen month periods prior to and subsequent to the effective date of the Gun Control Act of 1968, and in which you further requested summaries of major cases made since passage of the Act.

The necessary research has been completed.

Treasury's Alcohol, Tobacco and Firearms Division agents made a total of 1,482 cases resulting in a total of 926 arrests under Title I of the Gun Control Act of 1968, either alone or in conjunction with other violations, in the seventeen month period following the effective date of the Act (December 16, 1968).

In the seventeen months prior to December 16, 1968, a total of 335 cases, resulting in a total of 224 arrests, were made under the Federal Firearms Act, either alone or in conjunction with other violations.

A valid statistical comparison of cases and arrests under the Federal Firearms Act prior to December 16, 1968, and those under Title I of the Gun Control Act of 1968 after its enactment cannot be made, as Title I contains 26 unlawful acts as compared to nine unlawful acts contained in the predecessor Federal Firearms Act.

Title II of the Gun Control Act of 1968 incorporated the predecessor National Firearms Act. In the reporting period prior to December 16, 1968, a total of 869 cases resulting in a total of 377 arrests were made under the National Firearms Act, either alone or in conjunction with other violations. In the reporting period subsequent to the enactment of the Gun Control Act, 1,786 cases resulting in a total of 1,184 arrests were made under Title II of the Gun Control Act, either alone or in conjunction with other violations.

Title VII of the Omnibus Crime Control and Safe Streets Act of 1968 became effective on June 19, 1968. This title was amended by the Gun Control Act of 1968 and the amendment became effective December 16, 1968. In the reporting period following December 16, 1968, a total of 1,039 cases resulting in a total of 488 arrests were made under the Omnibus Crime Control and Safe Streets Act of 1968, either alone or in conjunction with other violations.

Summaries of major cases made since the passage of the Gun Control Act of 1968 are enclosed. Also enclosed is a trend chart which depicts criminal cases made versus man-days expended, both before and after the enactment of the Gun Control Act.

Sincerely yours,

EUGENE T. ROSSIDES.

ENCLOSURES

Police investigation of a brutal, sex murder case revealed that a suspect might have recently purchased a firearm. A Treasury Alcohol, Tobacco and Firearms Division Special Investigator was notified and through extensive records search found a record of a firearm sale to the suspect, who was in a prohibited category, and determined that the suspect had fraudulently executed Treasury Form 4473. The suspect was arrested and jailed. The Treasury agent, working alone, developed conclusive and final evidence as to the subject's guilt for the murder.

Ronald E. Shafer was convicted in Federal Court, Springfield, Illinois, for ten violations of the Gun Control Act. This case is significant as it involved the sale of components sufficient to make destructive devices. Shafer is awaiting sentencing.

Treasury's ATFD, IRS National Office Laboratory technology recently came to the aid of Virginia law enforcement officials when, on January 11, 1970, a bomb exploded under an unoccupied vehicle owned by the Dean of Men, Emory and Henry College, Emory, Virginia. An adjacent occupied dormitory was damaged. On January 22, 1970, two individuals, both students at Emory and Henry College, were arrested on State warrants charging felonious use of explosives.

The bomb contained gunpowder identified in the Alcohol, Tobacco and Firearms Division National Office Laboratory as "Hercules 2400." The laboratory examination was conducted on the material recovered at the bomb scene, a piece of burnt safety fuse, a hubcap, a hubcap rim, and a piece of asphalt.

The State prosecution of the defendants will rest solely on evidence developed by the Treasury agents and Treasury laboratory.

Anthony Accardo, the 64 year old alleged Cosa Nostra leader was recently indicted for violating two counts of the Gun Control Act. Each count carries a maximum sentence of 10 years in prison or a $10,000 fine or both.

Accardo's indictment followed shortly after Felix Alderissio's conviction for violating Title VII of the Omnibus Crime Control and Safe Streets Act. Alderissio, La Cosa Nostra's alleged chief advisor in the Chicago area, received a two year prison sentence.

Gary, Indiana, police executed an arrest warrant and seized a sawn-off shotgun and a sawn-off rifle. The defendant's criminal record consisted of 47 arrests, of which 35 were for felonies. In 1958, he was convicted of a violation of the National Firearms Act and was given a two year probated sentence which was later revoked and he served two years in prison. In the instant case, the information was referred to Treasury's Alcohol, Tobacco and Firearms Division, Internal Revenue Service, and Federal prosecution has been authorized.

In Montana, police responded to a call—a shooting in a bar. They found a body, a foreign handgun on the floor, and customers who avowed no knowledge of the shooting.

A request for assistance was made to the Billings, Montana, office of Treasury's Alcohol, Tobacco and Firearms Division, Internal Revenue Service. The ATFD Firearms Control Section traced the foreign handgun from Germany through Mississippi and finally to Montana. A Special Investigator continued the investigation and identified the last known owner—a customer who had carried the firearm into the bar the night of the shooting and was present when the police arrived. The killer was subsequently convicted of homicide in State Court.

In Minnesota, a man purchased a gun with a check. The next day he attempted to return the gun for a refund. The check he had used was stolen and forged. He was a felon, convicted of First Degree robbery. He had also used fictitious identification and furnished false information while purchasing the firearm. A joint investigation by local police and Treasury's Alcohol, Tobacco and Firearms Division, Internal Revenue Service, resulted in his arrest on charges of forgery and violation of the Gun Control Act of 1968.

The arrest record the Federal Bureau of Investigation maintains on Jack Ledbetter is three pages in length and lists arrests for violations including burglary and robbery. Ledbetter bought a shotgun in Utah, furnishing false information to the seller. He sawed off the barrels the same day. He was subsequently arrested by local police on a burglary charge—the shotgun was discovered and the information referred to Treasury's Alcohol, Tobacco and Firearms Division, Internal Revenue Service.

The investigation resulted in Ledbetter's conviction for violation of the Gun Control Act of 1968. He was sentenced to terms of five years' imprisonment on each of two counts.

On February 3, 1970, a Boston Federal grand jury returned a one count indictment charging a defendant with making a false statement to a dealer in the purchase of a firearm. At the time of his arrest Treasury's Alcohol, Tobacco and Firearms Division Special Investigators seized a loaded .38 caliber revolver, stolen from Colt. On February 24, the grand jury returned a second indictment charging an additional violation of the Gun Control Act. He was released on bail and is presently awaiting trial.

The defendant has seven convictions for bank robbery.

Russell Payne, a felon appealing a manslaughter conviction, was convicted in Wyoming District Court of transporting a registered firearm in interstate commerce without the authorization of the Assistant Regional Commissioner, Alcohol, Tobacco and Firearms Division, Internal Revenue Service, in violation of Section 922(a)(4), Chapter 44, Title 18, U.S.C. Payne was sentenced to five years' imprisonment. This is believed to be the first conviction in the Nation under this particular section of the Gun Control Act of 1968.

Alfred Harflinger had been convicted of robbery, assault with intent to kill, and breaking and entering into a United States Post Office—James Nash for concealing stolen postal money orders.

The two felons were spotted driving around an 18,000 gallon LP storage tank. They were stopped and questioned by local police, and a pistol was seen in their car. A subsequent search revealed a 30–30 rifle, a .38 caliber revolver, a .45 automatic and an armed bomb containing ten sticks of dynamite with a timing device that was set and ticking.

A request for assistance was made to Treasury's Alcohol, Tobacco and Firearms Division, Internal Revenue Service. ATFD Special Investigators entered the investigation and perfected the case. Harflinger and Nash were subsequently arrested, tried and convicted of violating the Gun Control Act of 1968, and sentenced to two concurrent ten-year sentences each.

On January 8, 1970, an undercover Treasury Alcohol, Tobacco and Firearms Division, Internal Revenue Service, Special Investigator, on behalf of the Erie County, New York, Sheriff's Office, purchased 100 sticks of dynamite and 100 blasting caps from two members of the "Chosen Few" motorcycle club.

On January 20, the U.S. Attorney obtained arrest warrants for the defendants charging them with violations of the Gun Control Act, in that they illegally possessed and transferred unregistered firearms (destructive devices), and engaged in the firearms business without a dealer's license.

Negotiations for a second "buy" were made and on January 20, 4,000 sticks of dynamite (Dupont), 4,000 blasting caps and 4,000 feet of safety fuse were seized in an "aborted" buy. The defendants were arrested and held in lieu of $20,000 bail each.

In a joint operation conducted by Treasury's Alcohol, Tobacco and Firearms Division, Internal Revenue Service, and by the Justice Department's Bureau of Narcotics and Dangerous Drugs, five firearms were purchased from Carl McFarland at a parking lot in Indianapolis, Indiana. Three of the five weapons had been previously reported as stolen. A search of McFarland's car revealed an additional 36 firearms, 14 of which turned out to be stolen. McFarland pleaded guilty to violations of the Gun Control Act and was sentenced to a total of ten years in prison.

COMMENTS

Overall increase in both cases made and man-days expended.

Cases made: Sept. 30–Dec. 30, 1968—decreased as enforcement personnel performed "compliance" functions during the November 1968 amnesty.

Man-days: Increased as overtime increased during the amnesty.

Cases made: Dec. 30, 1968–Mar. 30, 1970, reflect an initial upsurge and a continuing increase as cases made under the new firearms legislation become evident.

Man-days reflect a steady increase during this period as the result of increased hiring and increased emphasis on firearms enforcement.

EXHIBIT 1

NATIONAL RIFLE ASSOCIATION OF AMERICA,
Washington, D.C., July 29, 1970.

Hon. THOMAS J. DODD,
U.S. Senate,
Washington, D.C.

DEAR SENATOR DODD: Because of intense and growing interest on the part of our readers, we are asking all Members of the Senate and House of Representatives of the United States whether they would care to respond to three questions. These are:

Your position on repeal of the 1968 Gun Control Act in its present form?

Whether you feel that the Act, if not repealed, at least should be modified to eliminate features which are of little use in crime control and apparently serve principally to harass law-abiding sportsmen?

Whether you would support replacement of the Act with some more practical and workable anti-crime measure in 1971?

We would deeply appreciate having whatever views you may wish to express. We hope for a substantial response which can be reflected in due course in the pages of our magazines, circulation slightly over one million.

Thank you, in any case, for your consideration of the matter.

Cordially,

ASHLEY HALSEY, Jr.,
Editor, The American Rifleman.

NO ACTION FROM THE JUSTICE DEPARTMENT ON THE FITZGERALD CASE AFTER 277 DAYS

Mr. PROXMIRE. Mr. President, more than 9 months ago I wrote to the Department of Justice, asking Attorney General Mitchell to investigate the intimidation and firing of A. Ernest Fitzgerald by the Air Force and to take appropriate action. To date, there has been absolutely no sign of any action whatsoever from the Department.

Fitzgerald testified before the Joint Economic Committee in November 1968, and told Congress of the $2 billion overrun in the C–5A project. For his candor, he was rewarded with the cold shoulder treatment, followed by a reduction in his duties, and finally, in November 1969, by outright dismissal.

Such action is a clear violation of the U.S. Criminal Code, which makes it a crime, punishable by up to 5 years in jail, to "injure" anyone on account of testifying before a congressional committee. This is exactly what happened to Fitzgerald. But the Justice Department, for reasons known only to it, has thus far refused to enforce the code.

Is the code for some persons and not for others? Are members of the administration exempt from the code?

Mr. President, what happened to the concept of "Equal Justice Under Law," which graces the entrance to the Justice Department? Is the Department no longer guide by this motto?

OIL CONTINUES TO ESCAPE TAXES

Mr. PROXMIRE. Mr. President, U.S. Oil Week has continued its public service of providing a table of the actual taxes paid by the major oil companies as a percentage of their net income.

Once again, the oil industry has escaped from paying its fair share of the tax burden. Most of the companies shown on the table paid a lower percentage of their net income in Federal taxes than an individual in the lowest tax bracket. Only one company paid about the same as the average for other industries—41 percent—of their net income in taxes.

This means that other taxpayers, far less able to pay than the gigantic oil industry, are going to have to shoulder the burden that should have been borne fellow earning $8,000 to $10,000 a year by the oil industry. This means that the with 4 mouths to feed must pay more in taxes so that the oil barons can continue to sit in their plush offices feeding from the public trough. All this in addition to the oil import quota program that seems so dear to this administration's heart but which costs the average family of four about $100 extra a year for oil and gas.

This outrage cannot continue. We took some small steps to close the depletion loophole last year, but we must do much more. We must take a look at the entire web of Federal subsidies and find out why they are not working. We must find out why the independent producers who traditionally found most of the domestic oil are going out of business. We must find out how to make any Government program cost effective, particularly when it is so expensive and the return presently received is so slight. These steps would go far to allocating the tax burdens equitably and alleviating the pending energy crisis.

I ask unanimous consent that the article be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

TAXES ON BIG REFINERS STILL SMALL

Major oil companies—hit by a lower investment credit and slightly reduced depletion allowance—were still able to pay surprisingly small U.S. federal income taxes.

Gulf had the lowest percentage at 0.43% followed by Texaco with 0.76% of their net income before taxes paid to Uncle Sam.

U.S. Oil Week prints refiner tax figures because marketers are interested in the tax treatment of supplying companies and because no one else puts together the figures.

Major companies lump together in their reports to shareholders their federal, state and foreign income taxes usually under "provision for income tax."

But the U.S. tax figure is usually shown in 10K filings submitted to the Securities & Exchange Commission, our source for this table.

The actual federal income tax figures—and what percentage of the net before taxes they represent—follows:

Standard (N. J.)	$265,789,000	12.84
Texaco	7,250,000	.76
Gulf	4,264,000	.43
Mobil	41,800,000	5.73
Standard (Calif.)	10,900,000	1.84
Standard (Ind.)	64,200,000	15.92
Shell	5,464,000	1.77
Atlantic	4,063,000	1.47
Conoco	3,394,000	1.36
Sun	48,207,000	21.3
Phillips	24,231,000	13.6
Union	8,800,000	5.13
Marathon	3,250,000	1.19
Cities Service	27,254,000	16.7
Getty	11,400,000	8.1
Amarada-Hess	2,406,155	1.8
Standard (Ohio)	42,601,000	42.73
Signal	21,899,000	24.51
Tenneco	13,299,000	
Ashland	27,480,000	33.07

The only large refiner to skip federal income taxes completely this year was Tenneco.

Tenneco not only didn't have to pay anything, but gained a $13,299,000 tax credit available to lower or wipe out federal income taxes in future years.

While most refiners paid more federal income tax last year than they did a year earlier, for most of the companies the increase was small.

Heaviest taxes were paid by the smaller, domestic majors while the lowest percentages were paid by the international companies including the newer internationals such as Marathon and Continental.

This year a few companies have been listed on the table for the first time because mergers had reduced the number originally reported.

Not surprisingly Amarada Hess now pays only $2,406,155 in federal income tax while Hess Oil & Chemical alone had paid $11,913,000 on $40.1 million net income.

This year's tax table has several figures revised from last year when Atlantic, for example, reported no federal income tax in earlier years than 1968.

We checked with Atlantic and asked whether the figures shown in the latest statement of income going back to 1965 reflected taxes paid by companies that Atlantic had acquired.

Marty Connor, deputy comptroller, said changes in tax figures in part showed revisions of taxes based on settlement of the Atlantic-Sinclair merger cases.

The figures we carried for Sinclair—if adopted by Atlantic—would have given Atlantic higher federal income taxes than those actually shown.

Sinclair paid $10,585,000 in 1967, yet Atlantic only reported $6,188,000.

Atlantic reported no federal income tax that year to the SEC.

The lower figure stems from Atlantic's having to sell some of Sinclair's property to British Petroleum, he said.

Thus some of the earlier taxes of Sinclair's can't be shown as having been paid by Arco and subsidiaries.

And the accounting is complicated further by Sinclair's having held stock in Atlantic.

The table only shows companies of interest to marketers.

Thus many oil production firms with little or no taxes aren't shown.

Because companies have been added and subtracted from the table down through the years, total taxes for the table or the percentage shouldn't be compared from 1968 to 1969.

	Net income before tax	Federal tax	Percent	Foreign, some states' tax	Percent	Profit after tax
Standard (N.J.):						
1962	$1,271,903,000	$8,000,000	0.6	$423,000,000	33	$840,903,000
1963	1,584,469,000	69,000,000	4.3	496,000,000	31	1,019,469,000
1964	1,628,555,000	29,000,000	1.7	549,000,000	33	1,050,555,000

ALBERT COADY WEDEMEYER—THE DISTINGUISHED NEBRASKAN OF 1970

Mr. HRUSKA. Mr. President, a great American soldier-statesman, Albert C. Wedemeyer, was presented the Distinguished Nebraskan of 1970 Award last Wednesday night. It was my honor and pleasure to serve as master of ceremonies of the noteworthy occasion.

This award is presented by the Nebraska State Society annually to a Nebraskan who has distinguished himself and his State by particular eminence in his chosen field of endeavor. General Wedemeyer is the ninth Nebraskan to be so honored.

It was most fitting that among those present to honor General Wedemeyer was the Ambassador of China, together with a number of our colleagues in both bodies of Congress.

My distinguished colleague from Nebraska (Mr. CURTIS) introduced General Wedemeyer to the State society in terms which received the overwhelming approval of those in attendance. General Wedemeyer responded with a message of great importance to our Nation in these troubled times.

Because General Wedemeyer has played an important role in decisions that have had a far-reaching influence upon the world today, I commend his remarks to my colleagues.

I ask unanimous consent that Senator CURTIS' remarks be printed in the RECORD.

There being no objection, the speech was ordered to be printed in the RECORD, as follows:

REMARKS BY SENATOR CURTIS

The words "Duty, Honor, Country" are the revered motto of the United States Military Academy at West Point. They are dear to the hearts of every true Nebraskan. They are the hallmarks of General Albert Coady Wedemeyer, whom we honor tonight as the distinguished Nebraskan of 1970.

His name stands for a keen sense of duty, a high sense of honor, and a great love of country. It also stands for leadership, intelligence, and humility. Taken together, these qualities make Al Wedemeyer, not only the distinguished Nebraskan of 1970, but rather the distinguished Nebraskan of every year.

Al Wedemeyer's service to our Nation as a soldier, diplomat, author, businessman, and civic leader are well known to us all. What may be less well known is that he showed great potential at an early age.

While he was still a youngster in school this revealing incident occurred: His brother, Fred, who was two years older than he, usually went with him to and from school. One day, Fred became involved in a fight with Irving Henkle, a boy about his size. After a pounding, Fred ran away from Irving Henkle and rushed home to his mother's arms crying and with his nose bleeding.

"Oh, Mother," he sobbed, "if I could have caught that Irving Henkle, I would have fixed him." His mother was brushing away the tears and consoling Fred, when suddenly she realized that Al had not yet returned. "Where is your brother?" she asked. "Oh," said Fred, "Albert is down the street holding Irving Henkle so that I could get home."

That "The Past Is Prologue" was to be proven by what happened some years later in the Orient.

In 1944, Al Wedemeyer was ordered to China in the dual role of Theater Commander and Chief of Staff to Generalissimo Chiang Kai-shek. He was at that time the youngest Lieutenant General in the Army and the youngest Theater Commander in the War.

Prior to Al's coming to China there had existed an acrimonious situation between Chinese and American commands. There were charges and countercharges between the allies. A high level of distrust prevailed.

Working carefully, Al Wedemeyer brought a change. He announced that a lack of friendliness to the Chinese would not be tolerated in his command. He brought spiritual reinforcement and a faith in humanity that has always been part of his character. He told his American comrades, "If you trust a man, and give him your best, he'll almost never let you down." Two Major Generals, four Brigadier Generals, and twelve Colonels who failed to understand what Al wanted were sent out of the area.

Now, Americans helped the Chinese get efficient truck services rolling to distribute sorely needed American aid. Americans went without PX supplies so the Chinese might have decent clothes.

Chinese troops were inoculated against typhus, smallpox, and cholera. A medical corps and crude hospitals were established. Deaths from disease dropped down a whopping 89 percent, and deaths from wounds dwindled.

Al broke down the tradition that white men do not do manual work in Asia. American officers greased trucks and slid in the mud to teach Chinese officers how to care for equipment and handle troops. Soon, mutual respect had been established between the Chinese and Americans. Chinese homes were opened to Americans. The Chinese saved hundreds of American lives. On one occasion sixty thousand Chinese farmers left their fields to build an emergency airport. And what is more important, the Wedemeyer-trained Chinese troops begin to take on the Japanese and win.

The ultimate sign of confidence came when Chiang Kai-shek, inspired by the Wedemeyer brand of cooperation, offered to let the United States undertake a complete reorganization of the Chinese Government. We can only speculate what the outcome might have been had the State Department in Washington fully understood the changes brought about by Al Wedemeyer.

Humility and a dislike for pomposity are a part of Al Wedemeyer. In September of 1943, he went out to India, where he became the Deputy Chief of Staff of the Southeast Asia Command under Lord Louis Mountbatten.

Upon his arrival in New Delhi, he had occasion to confer with a British Major General—a man who at first meeting seemed to be pompous, with his bushy mustache and a chest full of medals. Al was not pleasantly drawn to him at their first meeting.

During the course of their conference, the word, "schedule" was used frequently by both officers. Everytime the British General used the word, he said "shedyule." Hailing from Nebraska, Al had never heard the word pronounced that way, so he decided that the Englishman was joking. Therefore, every time Al used the word, he pronounced it "skedooly."

Sometime later, when the two officers became better acquainted, Al discovered that the Englishman was a fine individual—not at all pompous. As are most Englishmen, the Major General was shy and diffident when he first met people. One evening at a small gathering, fortified no doubt by a few rum cocktails, the Englishman edged up to Al and said, "I say, Al, you Americans, you really don't say 'skedooly,' do you?"

Prior to the onset of World War II, Al earned the reputation of being an efficient and hard-working staff officer. As a Pentagon planner, he was given the job of accurately assessing America's manpower and materiel needs in a war that was looming over the horizon. Al's report predicted the size of the yet-to-be-created U.S. Army with amazing accuracy. Known as the "Victory Program" of September 10, 1941, this huge job has been hailed as one of the outstanding pieces of staff work during the World War II period.

Since retiring from the Army in 1951, Al has carved out a whole new career himself. He has been active in business, where his counsel is greatly respected. In 1958, he authored "Wedemeyer Reports!" which have been widely acclaimed as a substantial contribution to both the political and military history of World War II.

Moreover, Al has taken a keen interest in public affairs giving of himself unstintingly to those programs and causes in which he believes. He has helped scores of persons get started in life and then helped them over the rough spots. They affectionately call him "Uncle Al." He has done all these things with generosity, grace, and tact. He is truly a man for all seasons.

Because we admire you as a soldier, because we respect you as a citizen, and because we cherish you as a friend; it is my great privilege to present you this plaque—the symbol of the "Distinguished Nebraskan" award of 1970.

Mr. HRUSKA. Mr. President, there are some among us who take delight in holding our military in contempt and scorn. Their calumny even extends to questioning the motives of men who proudly serve our Nation. They accuse, at worst, our military of attempting to foment war. They might well heed General Wedemeyer's well-chosen words on this point:

Men of good will have long dreamed of a world governed by the rule of law. It is a beautiful dream shared by the overwhelming majority of people everywhere. And if that day of mutual trust and cooperation between peoples of every nationality and creed should ever come. I am confident that the American military will rejoice in the process of turning swords into ploughshares.

Mr. President, because of General Wedemeyer's eminent position as a soldier, diplomat, and historian, I ask unanimous consent that his remarks be placed in the RECORD at this point.

There being no objection, the remarks were ordered to be printed in the RECORD, as follows:

REMARKS BY GENERAL WEDEMEYER

Senator Curtis, Senator Hruska, distinguished guests, my fellow Nebraskans, and friends; thank you, Senator Curtis, you have been very kind and extremely complimentary. Your research of my life certainly accentuates the positive and eliminates the negative. I appreciate the honor bestowed upon me by the members of the Nebraska State Society. In accepting the "Distinguished Nebraskan" award, I am aware of the fact that there are many who are deserving and, unfortunately, are never heralded—never recognized—and seldom appreciated. Also I acknowledge with gratitude the loyalty and the dedication of thousands of fellow Americans, who were in large measure responsible for the accomplishments so generously attributed to me.

The famed historian of the American frontier, Frederick Jackson Turner, believed that the western pioneers represented the classic example of the rugged, self-reliant American. It was his thesis that the pioneer invariably looked all men in the eye, fearing none and envying none, working out his life in harmony with nature and with his fellow men—notably honest and industrious. As I look back on my days out west and recall the Nebraskans I have known, it seems to me that Turner's thesis is quite plausible. Surely there is considerable evidence here this evening that the manly ideals he described found

congenial soil and took deep root in our great state.

I had been in the Army only a short time, stationed at Fort Benning, Georgia, when I came in contact with a fellow Nebraskan who was low on the totem pole in rank but high in the esteem and affection of his comrades. Such a man was Sergeant John Cody. I never learned whether he came from the Cody branch of my family, but I would be proud to know that we had the same blood coursing through our veins.

Sergeant Cody was not a physical paragon. He had a red bulbous nose, leathery skin, and drooping shoulders from which long arms suspended like an orangutan. However, he had a certain dignity and a friendly spirit that made him one of the most beloved members of my company.

Cody had built two duck blinds on a river near Fort Benning and he often invited friends to join him. Among his companions were the great and near great of the military service. The late President Eisenhower went hunting with Cody and related this experience: "Sergeant Cody located me in the more favorable duck blind, and he took a position just beyond. It was a cold dawn and we waited patiently for more than an hour. I saw him frequently take a nip from a bottle obviously containing whiskey. I continued to sip hot coffee from my thermos. Suddenly a lone duck flew over, and I raised my gun and banged away. I missed. Then Cody raised his gun. It was waving like a wand. He fired. Down came the duck splashing in the river. I shouted, 'That's damned fine shooting, Cody.' Shaking his head, he shouted back, 'That wasn't nothin', I usually get two or three in a flock like that.'"

Some years later Sergeant Cody lost his life on the sand dunes of Africa in World War II. It was reported that he was dragging a wounded comrade to the rear when a burst from Nazi machine guns killed both of them.

There were worthy Nebraskans in the Far East too. Among them was a prominent member of my staff, Colonel Arthur Dobson of Lincoln, who served with distinction in China. And, of course, there were many others. When visiting the troops near Kweiling, I talked to an American soldier who, although twice wounded, had refused to be evacuated. His Captain reported that his leadership and courage had been an inspiration. I asked the soldier where he lived in the States. Before he could reply, my Chief of Staff who came from Atlanta, Georgia, said to me in a loud stage whisper, "I'll bet he comes from Georgia." But the soldier smiled and replied proudly, "No Sir, I come from Nebraska!"

Today, in a society which is bursting at its seams with revolutionary activities, I like to believe that the cherished values of early Nebraska will be carefully protected and perpetuated. I am not a moss-backed romantic who believes that modern twentieth century America could return to a rural golden age, or that we could somehow arrest the forward momentum of progress. I am convinced, however, that much in the old system of values remains important in the contemporary world, and you and I must use every opportunity to profess and defend those values.

Men of good will have long dreamed of a world governed by the rule of law. It is a beautiful dream shared by the overwhelming majority of people everywhere. And if that day of mutual trust and cooperation between peoples of every nationality and creed should ever come, I am confident that the American military will rejoice in the process of turning swords into ploughshares.

In the period between World War I and World War II—those days of euphoria when pious promises were considered a substitute for bombers and tanks, our military forces were emasculated. In the meantime, military jingoists in Japan, and power-hungry dictators in Europe, were preparing for ruthless conquest. A devastating war, costly in lives and treasure followed, creating power vacua throughout Europe and the Far East, which were quickly filled by the Communists. And now today we hear the same siren song of disarmament.

The United States and the Soviet Union, with vast military and economic forces at their disposal, continue to joust for predominance in the international arena. Each resorts to interventions and counter-interventions. Each is determined to accomplish its avowed purpose, to wit: the *United States*—to protect freedoms and to uphold the self-determination of people everywhere; the *Soviet Union*—to promote Socialism and to communize the entire world.

How can we Americans avoid conflict with the Soviets and yet achieve our objectives? The entire Communist world is organized in conspiracy to deceive, disarm, and destroy those who oppose. We note the loosening of alliances and the reneging of peacekeeping responsibilities by members of UNO, NATO and SEATO. So, under present circumstances, we cannot place too much reliance on collective security measures and the concerted action of so-called friendly nations.

The reasoned approach appears to be negotiation. However, it is axiomatic that we must negotiate from strength—spiritual and material strength. Furthermore, our experience in negotiations with communistic countries since World War II has been tragic in that they have repudiated or betrayed practically every agreement. To insure fulfillment of agreed commitments affecting our military security and economic stability, we must always insist upon foolproof safeguards.

Removing all sham and window dressing, I am convinced that the confrontation in Southeast Asia is primarily a continuation of the free world's struggle with international Communism. Likewise, the situation in the Middle East involving the Arabs and the Israelis could lead to serious confrontations between the United States and the Soviet Union.

I personally believe that we are fortunate in having Mr. Nixon as our President—a man who has been exposed to and successfully coped with the machinations of the leading figures in the Communist world. No President in American history has had broader experience in international relations prior to assuming the responsibilities of Chief Executive. I have no reservations whatsoever concerning President Nixon's dedication and integrity, notwithstanding the invectives and adverse judgments leveled at him by a few individuals in the political and journalistic worlds.

Like the President and many other loyal citizens, the military has recently experienced a good deal of harassment. These are not the most sunny of days for old soldiers. The fair weather of public acclaim which the global victory brought to our military men has given way to darker days of criticism and even mistrust. We soldiers are viewed in some quarters nowadays as men of deficient understanding, of questionable purpose, or of baneful influence in the councils of national policy. We are said to comprise one sinister element of that awful "military-industrial complex." Like all human institutions, the armed forces of the United States are far from perfect, yet I know too well the true heart of the men and women in uniform to be shaken by malicious efforts to discredit the military. Ladies and gentlemen, I am greatly encouraged by the thought that in honoring an old soldier on this occasion, you, too, have found us not wholly without honor.

Mr. HRUSKA. Mr. President, the program for the evening contained an excellent biography of General Wedemeyer and I ask unanimous consent that this biography also be placed in the RECORD.

There being no objection, the biography was ordered to be printed in the RECORD, as follows:

ALBERT COADY WEDEMEYER

Few Americans have distinguished themselves in as many fields as has General Albert C. Wedemeyer (Ret.).

While known primarily as a soldier, General Wedemeyer has been a statesman, industrialist and author as well.

Born in Omaha July 9, 1897, he decided as a schoolboy there that he would like a military career, and the opportunity came when the late Sen. George Norris nominated him for the U.S. Military Academy at West Point, where he was graduated in 1919.

From the time he left West Point with the gold bars of a second lieutenant on his shoulders until his retirement more than 30 years later with four-star rank, General Wedemeyer held assignments all over the world.

He is a graduate of both the General Staff School at Fort Leavenworth, Kansas, and the German War College in Berlin.

With the outbreak of World War II he became one of the War Department's top planners, serving with the general staff in Washington until 1944 when, at a critical period in Asia, he was sent to Chungking to fill a doubly-responsible role as commander of American forces in China and, at the same time, serve as Chief of Staff to Generalissimo Chiang Kai-shek.

In 1946, after the war was over, he returned home to become commanding general of the Second Army, but the following year President Truman sent him back to the Far East, with the rank of Ambassador, as head of a fact-finding mission to China and Korea. From this came the celebrated Wedemeyer Report which became snarled in international politics and was not made public until 1949.

Some thoughtful students of history maintain that had his recommendations been accepted, Communist control of mainland China might have been thwarted and the Korean and Vietnam Wars never made necessary.

Following that mission, General Wedemeyer served as deputy chief of Army staff for combat operations, then became commander of the U.S. Sixth Army, the post he held when, in 1951, he retired.

Retirement from the Army brought no cessation of activity. He served as Vice President and Director of Avco Manufacturing Corporation, director of Rheem Manufacturing Company and National Airlines. He has given up those posts, but remains a director of the Boys Clubs of America, trustee of the Little League Baseball Foundation, and trustee emeritus of the American Economic Foundation.

He has been decorated by his own country—he holds the Distingished Service Medal with two clusters and the Distinguished Flying Cross—and five other nations as well.

General Wedemeyer is the author of one book—"Wedemeyer Reports"—and is currently working on two more.

In 1925 he married Elizabeth Dade Embick. They have two sons, Albert Dunbar Wedemeyer of Potomac, Maryland, and Robert Dade Wedemeyer of Galveston, Texas, and six grandchildren.

He and Mrs. Wedemeyer reside at Friends Advice, Boyds, Maryland.

The Nebraska Society of Washington is proud to make General Wedemeyer recipient of its Distinguished Nebraskan Award as a man who has brought honor to his country and the uniform he wore so long, one who accepted heavy responsibilities in the best American tradition and carried out his duties efficiently and bravely and, always, modestly.

AUTHORIZATION FOR APPROPRIATIONS FOR MILITARY PROCUREMENT AND OTHER PURPOSES

The PRESIDING OFFICER (Mr. YOUNG of Ohio). Pursuant to the previous order, the Chair now lays before the Senate the unfinished business, with the time between now and 3:00 p.m. to be equally divided between the Senator from Wisconsin (Mr. PROXMIRE) and the Senator from Mississippi (Mr. STENNIS).

The Senate resumed the consideration of the bill (H.R. 17123) to authorize appropriations during the fiscal year 1971 for procurement of aircraft, missiles, naval vessels, and tracked combat vehicles, and other weapons, and research, development, test, and evaluation for the Armed Forces, and to prescribe the authorized personnel strength of the Selected Reserve of each Reserve component of the Armed Forces, and for other purposes.

The PRESIDING OFFICER. The question is on agreeing to the amendment of the Senator from Wisconsin.

Mr. BYRD of West Virginia. Mr. President, I suggest the absence of a quorum, and ask unanimous consent that the time be charged equally against both sides.

The PRESIDING OFFICER. Without objection, it is so ordered and the clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. PROXMIRE. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. PROXMIRE. Mr. President, I yield myself such time as I may require.

The PRESIDING OFFICER. The Senator from Wisconsin is recognized.

THE FLY BEFORE YOU BUY AMENDMENT

Mr. PROXMIRE. Mr. President, we have before us the fly before you buy amendment. It is a moderate, information requiring amendment. All it does is to require a report from the Pentagon, when they ask for "production" funds for a weapons system, the degree to which they have followed the "fly before you buy" policy—a policy they say is already in effect. That is all.

EXAGGERATED OPPOSITION

Yet the Chairman of the Armed Services Committee (Mr. STENNIS), the Secretary of Defense, Mr. Laird, and the Senator from Arizona (Mr. GOLDWATER) would have us believe that it would tie up the Pentagon's funds, bring drastic changes, ruin the chances for future reform, put contractors in the dark, and bring the Pentagon and the procurement of major weapons to a sudden halt. This is just not true. The heart of the amendment is that it requires that the Congress be informed without sound, "fly before you buy" principle is violated in any major procurement.

Given the billions in overruns on major weapons systems, the fact that virtually every weapon we have is delivered many months or even years late, and that almost without exception the weapons do not meet their specifications and do not perform those specific functions for which they were designed. This is a limited amendment. There is an old saying that one begins a journey of a thousand miles with a single step. But this amendment, is only half a step.

SIMPLE IDEA

Fly before you buy is a very simple idea. Essentially it means that before we go into production of a weapons system it should be tested and it should work. Its purpose is to get the "bugs" out before spending billions of dollars on production.

GREAT NEED

It certainly is needed. The Comptroller General has just made a report to us that the overruns on 38 major weapons systems are $23 billion more than their original estimates. One can search futilely for a major weapon which was produced on time, met its original specifications, and which did not cost at least 50 percent more than its original estimates, excluding increases for inflation.

COMPTROLLER GENERAL SUPPORTS IDEA

In his report the Comptroller General states:

> The GAO believes that one of the most important causes for cost growth is starting the acquisition of a weapon system before it has been adequately demonstrated that there is reasonable expectation of successful development.

In other words, in the past there has been no "fly before you buy."

FITZHUGH REPORT RECOMMENDATION

Not only does the Comptroller General state that the absence of fully tested and workable systems in being before rushing into production is one of the most important causes of cost overruns, but the blue ribbon Fitzhugh Panel also said so.

They put forward a major recommendation, which is popularly known as the "fly before you buy" recommendation. The recommendation states:

> A new development policy for weapon systems and other hardware should be formulated and promulgated to cause the reduction of technical risks through demonstrated hardware before full-scale development, and to provide the needed flexibility in acquisition strategies.

The recommendation then spells out in 12 short sentences, how this "fly before you buy" policy can be implemented. The report was released on the 28th of July.

PENTAGON SUPPORT FOR FLY BEFORE YOU BUY

In a press conference on July 27, Secretary Laird said this:

> There are many portions of this report that, of course, will be implemented immediately. We have already started on the procurement recommendations of this report.
>
> We will be following the policy that is recommended and is the policy that we have started to implement in the Department of Defense of flying before we buy. Buys that will be made will be made on the "fly before you buy" basis.

The Secretary of Defense announced that "fly before you buy" is now policy. And he announced it in the context of the Fitzhugh report.

When asked in a press conference, "Mr. Secretary, what is this fly-before-you-buy procedure?" he replied:

> Fly before you buy is a characterization of the kind of procurement policies that we will be following in this Administration . . . So, before going forward with a major contract we will be doing more testing and evaluation; we will be checking out the systems well in advance and we will be flying aircraft before we buy the aircraft.

SAYS IT IS IN EFFECT

And in a letter to the chairman of the Senate Armed Services Committee, dated August 14, 1970, the Secretary wrote:

> In a broad sense, the philosophy of the new development policy recommended by the Panel has already been adopted as the Department's policy.

He was speaking there about the fly-before-you-buy policy.

VAST PUBLIC RELATIONS

Not only did the Secretary say that he was for a fly-before-you-buy policy, but the vast public relations machinery of the Pentagon went into high gear. "Fly before you buy" was promulgated the day before the entire Fitzhugh report was released in order to give it maximum publicity. And maximum publicity it got. There were no bones about it. "Fly before you buy" was now the policy.

The Washington Post had a three-column banner, "Fly Before You Buy Policy Set for Weapons Contracts." In a dispatch from San Clemente, Calif., by Ken W. Clawson, it read:

> Defense Secretary Melvin R. Laird said today that future weapons contracts will stress step-by-step testing and evaluation that will permit the Pentagon to cancel troublesome weapons systems before they result in huge cost overruns.
>
> Laird said Pentagon policy now is "fly before you buy."
>
> "We will be flying aircraft before we buy the aircraft," Laid said.

Even the staid New York Times, which leading members of the administration believe is the Bible of the intellectual effect and the handbook of University Machiavelli's, ran a highly favorable story on this obvious Pentagon effort to change its procurement image.

"Future Defense Contracts To Be Awarded in Stage," its two-column headline read. "Laird Adopts 'Fly Before You Buy' Plan for Weapons To Cut Down Losses—Will Stress Testing by Phases," the subhead said. In a story, also from the San Clemente press conference, by Robert B. Semple, Jr., the Times said:

> Secretary of Defense Melvin R. Laird said today that future defense contracts would be negotiated on a "fly before you buy" basis designed to prevent massive losses to taxpayers because of cost overruns.
>
> Under the new system, Mr. Laird said, contracts will be awarded in stage. A contract for actual production, for example, will not be signed until the weapon has been thoroughly tested and evaluated.

TWO-DAY STORIES

Not only did the Post and Times carry these stories on Tuesday, but "fly before you buy" also got a ride, as they say in the public relations firms, on Wednesday when the entire Fitzhugh report was released.

The Washington Post reported on July 29 that among the major recommendations were: "abandonment of contract policies that have led in many cases to huge cost overruns and to weapons that did not work."

This was the story the Nixon panel asked to have top to bottom coverage.

It would split operations into three units. The "fly before you buy" policy was prominently featured. And the New York Times reported on the same date that among the other key recommendations was one:

To rely on a system of procurement that concentrates on first developing and testing a prototype of a weapon before going into production, instead of depending on paper engineering studies.

I hold up these key stories for all to see. They were major, Pentagon, propaganda pieces.

TRAVELED LENGTH AND BREADTH OF COUNTRY

These stories were not limited to the east coast. They traveled the length and breadth of the country. They went into the States of the chairman and leading members of the Senate Armed Services Committee—into Arizona, Mississippi, and the State of Washington. They also were printed in my own State of Wisconsin, which is also the home State of the Secretary of Defense. Let no one say that the $40 million the taxpayers pay each year for the Pentagon public relations organization failed to publicize "fly before you buy." They got a million dollars of publicity for "fly before you buy."

On Tuesday, July 28, the Arizona Daily Star had a banner running across the entire front page of its final edition—"Pentagon To Buy No More Untested Planes." That is what it said. It quoted Secretary Laird as saying:

Future defense contracts would be negotiated on a "fly before you buy" basis designed to prevent massive losses to taxpayers because of cost overruns.

TWO-DAY STORIES IN ARIZONA

The next day the Arizona Republic had a five column front page story on the Fitzhugh report. In the story one of the key "fly before you buy" recommendations was featured in the story—the creation of a new test agency under a civilian head to ride herd on all weapons testing.

Both Arizona papers carried stories on both days in which the fly-before-you-buy and Fitzhugh panel procurement reforms were emphasized.

Similar wire service stories appeared in the Laurel, Miss., Leader Call and in the Clarion-Ledger. These are stories from Mississippi, the home State of the chairman of the Armed Services Committee.

In my own State and the home State of the Secretary of Defense, we read in the Wisconsin State Journal that Secretary Laird had met with the President for an hour and a half "to discuss new defense management techniques Laird claimed will save millions of dollars." I read from that article:

From now on, weapons systems will be bought on a "fly before you buy basis," Laird said in a news conference after the meeting.

In a front page story in the Milwaukee Sentinel, the UPI reported that the proposed changes would "decentralize decisionmaking, unify individual service programs in such areas as supply and testing of new weapons, and radically alter procedures for issuing defense contracts."

The Defense Department had a field day. "Fly before you buy" was in effect. Now we test before we go into production—so we were told.

EXTENSION OF MILESTONE POLICY

Not only that, we were told that "fly before you buy" was merely an extension of the Milestone buying policy—now almost a year old. As the Secretary of Defense said—and I repeat because it is so important:

In a broad sense, the philosophy of the new development policy recommended by the Panel has already been adopted as the Department's policy.

As one who has been concerned about defense waste, overruns, and Pentagon procurement on a day to day basis for a very long time, I took the Pentagon at their word, and I drafted an amendment. That amendment is before us now. And it does some very simple things.

AMENDMENT FOLLOWS FITZHUGH REPORT

It takes the specific Fitzhugh report recommendations for "fly before you buy." All it says is that before the Pentagon goes into the production of a major weapons system, the Pentagon shall report to the Armed Services and Appropriations Committees of the House and the Senate, the degree to which they have complied with the Fitzhugh fly before you buy recommendations.

All the amendment calls for is a report. It does not require that the Pentagon comply with the Fitzhugh recommendation. It merely says that one time—at that time when these billion dollar weapons systems go into production—the Pentagon will report the degree to which they have followed "fly before you buy"?

DO THEY CARRY OUT THE POLICY

What is wrong with that? Why should they not tell us whether they are carrying out their own policy? Is this too much to expect when billions are at stake? What do they have to hide?

Every major newspaper in the United States quoted Secretary Laird that "fly before you buy" is now in effect. All my amendment does is to say that on these weapon systems, the Secretary of Defense will have to report to us the extent to which it is in effect. What could be simpler?

But listen to the outcries this amendment provoked.

Last Friday, here on the Senate floor, the Senator from Arizona spoke against it. He said:

I do not think that it is any way to legislate this drastic change in the Defense Department by amendment (S13469).

"Drastic change?" All the amendment asks for is a report—stating the degree to which the new policy has been carried out. My amendment makes no requirement for change. All it asks is for the Pentagon to tell us, when a weapons system goes into production, whether they followed the "fly before you buy" recommendations which they now claim they are doing.

DOES NOT BYPASS THE COMMITTEE

The Senator charged that I was "bypassing" the committee. But my amendment does no such thing. It requires the Pentagon to report to the Armed Services Committee.

He asks why we are "always picking on the Department of Defense." If this amendment requiring the Pentagon to report to us on the degree to which they have implemented a policy they have shouted, from one end of the country to the other, is now in effect, is picking on the Pentagon, the English language has no meaning. Now the chairman of the committee (Mr. STENNIS) was only slightly more restrained. He charged my amendment was premature, that we have not yet had time to read the Fitzhugh report, that we have not yet had the benefit of a staff analysis and hearings.

He states that to adopt the amendment would spoil the chance for doing something constructive with it later. He said:

The situation would be all jumbled up; the Department of Defense would not be able to deal with it; the contractors would not be able to know how to submit bids.

That might be true if the Department had not announced that the policies are already in effect, and if my amendment did any more then to require a report.

OPPOSITION USES OVERKILL

But I do not see how asking the Pentagon to report to us the degree to which they carry out a policy they say is in effect—not only say, but announced with some of the biggest "whoop de da" in a decade—can jumble up the situation, panic the Pentagon, and make it impossible for contractors to bid.

To use the language of the Pentagon to describe the language of the opponents of this amendment, their words are a pertinent example of "overkill."

And when they say we must not pass the amendment until we have staff analysis and time to digest the report—all the stock phrases used to beat back any amendment—they forget one thing.

PRECEDENT SET ON WILLIAMS AMENDMENT

We have already passed by a vote of 77 to 0 one of the major recommendations of the Fitzhugh report. We have prohibited the Pentagon from leaking the announcement of a contract to a Member of the House or Senate before making it public. That was the Williams amendment. It was a key provision of the Fitzhugh report.

While the Secretary of Defense has opposed my amendment on the flimsy grounds that it is "premature," that "any congressional action, in this regard is premature until a thorough review has been completed," is the way he put it.

But Secretary Laird did not think the Williams amendment was "premature." He did not tell us to wait until the committee examined it. It was not necessary to have a "staff analysis."

This is what the Secretary said about the Williams amendment; and I quote from the transcript of his news conference here in Washington, D.C., on August 6:

Today I implemented the recommendation of the Blue Ribbon Defense Panel as far as the whole question of the announcement of major defense contracts. Many of you are familiar with one of their recommendations,

that we should end the practice of notifying members of Congress in advance of the notification here in the Department of Defense.

The Senate, by the way, voted 77 to 0 to adopt and to implement that recommendation of the Blue Ribbon Panel Report. We are moving ahead on that recommendation prior to any other action as far as the Congress is concerned.

The Secretary did not think that amendment was "premature." He did not claim it would "eliminate flexibility," as he claimed my amendment merely calling for a report on a policy he claims is already in effect would do.

PUBLIC RELATIONS GIMMICK

What is really behind the opposition of the Pentagon to this minor amendment—this amendment merely calling for a report? I think I can tell Senators what is behind it.

"Fly before you buy" is a public relations gimmick and not a get tough policy.

Last year it was the new "milestone" buying policy which was going to cure overruns and procurement waste. This year they found a new name. Next year it will be another. "Fly before you buy" is mostly eyewash. Its purpose is to lull us to sleep. It is designed to delay criticism. We are supposed to wait to see how it works out. That is what they said last year about "Milestone."

This refusal by the Pentagon to permit Congress to know whether "fly before you buy" is in effect and the extent to which it is in effect raises very serious questions whether they really intend to put it into effect. Do they? If so, why not accept the amendment and tell us. Why not?

OVERRUNS GO ON

The overruns go on. They continue. The newest report shows that $3 billion has been added to the overruns for 38 major weapons systems in the last 9 months. The GAO reports that they have increased from $20 to $23 billion in that small period of time. And they would have been higher except that the Pentagon cut back on the numbers of some weapons they were going to acquire. They did not urge more efficient policies. They bought fewer weapons. That should be called the "No bang for a buck" policy.

The Pentagon claims that the policy—fly before you buy—is already in effect, that it is merely an extension of the policy they started a year ago—the Milestone buying policy.

FUNDS REQUESTED IN THIS BILL

But in this bill, there are a dozen or more authorizations for spending on major weapons systems where there was no adequate testing before major production. I have detailed these twice in the RECORD, but I shall name some of them again.

There is money in this bill for the M60AI tank. It has all kinds of bugs in it. There has been a lot of trouble with our entire tank program. But we now are producing them at about 30 a month. Why has it not been fully tested before we go into production?

This bill contains money for the MBT–70. At the same time we are asked for $41 million for "advanced production engineering" we are still providing research and development funds. Why not get the bugs out before we produce it? Where is "Milestone" and "fly before you buy" on the MBT–70?

We are apparently building the F–14 Navy fighter while we are still spending money for R. & D. One-third of the request in this bill is for R. & D. Two-thirds was for production of 26 F–14A aircraft. What about Milestone there? Why do we not fly that one before we buy it?

SHIPS

And what about our new shipbuilding program? Perhaps it is impossible to fly before you buy with ships? But it is not impossible to test the radar, and the weapons, and the sonar systems before we spend hundreds of millions or billions on them. Yet in the DD–963 program, the shakedown cruise of that ship was one of the worst shakedowns in modern history. The components did not work. Many were delivered late. There was no "Milestone" or "fly before you buy" for them.

JUST GIVE US A REPORT

All this amendment asks for is a report. That is all. When the Pentagon asks for funds to go into production—to really spend the money on a new weapons system—this amendment calls for a report. Tell us the degree to which you are carrying out your own policy. Tell us to what extent you applied "fly before you buy." That is all.

The amendment does not cut off funds if you fail to do so carry out the policy. It does not stop a single weapons system even if you rush into production. It does not bring the Pentagon to a screeching halt.

It is a mild, modest, moderate request. Just report.

The Fitzhugh Commission recommended it.

Secretary Laird said it was now policy.

Why not report to us?

C–5A

We have wasted billions on the C–5A. We accepted those planes even with wing cracks. The 42 planes due by next June 30 will cost $85 million each. That is the cost of the Rayburn Building. We are buying 42 flying Rayburn Buildings—the most expensive airplanes ever built because we failed to "fly before you buy."

We have wasted billions on the TFX.

The GAMA boat is in production—and it has gone up from $69 to $438 million.

The Cheyenne helicopter was in production. It was canceled because it did not work.

The Comptroller General reported that the current estimates on the Army's UH–1H helicopter have gone up from $341 million to $1.2 billion. It is in production. The Army failed to "fly before you buy" on that one.

These are examples of major weapons where it is obvious that the bugs were not removed before production began.

MODEST AMENDMENT

I have offered a modest amendment. The arguments made against it indicate that it is either grossly misunderstood or, in the case of the Pentagon, that they just do not mean business.

Billions have been wasted on weapons systems. Our country is weaker because of it. Those funds could have been used for weapons which work, which would have made us stronger. Weapons which fail do not add to the strength or security of the United States. They weaken us.

Those funds could have been used to strengthen our economy, to train our youth, to put the unemployed back to work, to help the disadvantaged, to build homes for the homeless, to buy food for those in poverty, or to reduce the heavy burden of taxation on the people of this country.

The big spenders are the supporters of the Pentagon. That is where the big money goes and that is where the big money is wasted. Yet, on August 6, Secretary Laird said he was determined to see that his funds are not cut. In reply to a question quoting Congressman MAHON that he believes the Pentagon budget will be cut by a billion, Secretary Laird said:

I'm going to do everything that I can to see that it isn't.

I think we have submitted a rock-bottom budget this year.

Let us at least get the facts. Let us find out when weapons have been tested before we go into production. What is wrong with a report?

To vote against this amendment is to vote against securing information for us in the Congress on the heart of a new procurement policy designed to save billions. To vote "no" is to vote for no information. To vote "no" is to say they do not want to be kept informed on the progress the Pentagon is making in cutting down on these colossal overruns.

To vote "no" on this amendment is to show a cavalier disregard of by far the biggest and most conspicuous waste exposed in this Government in the past 10 years.

Our major weapons systems are costing us $23 billion more than their initial estimate. To vote "no" on this amendment means that the Congress does not even want to know about the progress of the principle method designed to overcome this immense waste.

There has been much criticism of former Secretary of Defense Robert McNamara. Many of us admired his great ability. I certainly did. I think he is a much maligned and abused man, but I think all of us recognize that many of the problems that developed did develop in the time that Secretary McNamara and the two Democratic administrations were in control of our executive branch and in control of the Pentagon.

Certainly, one of the problems was that the McNamara procurement policies did not use the "fly before you buy" concept. If this amendment had been in effect in 1961, it could have saved billions of taxpayers' dollars. It would have done so simply by requiring a report which would have alerted the Congress and which would have alerted the Secretary of Defense at that time to the fact that his method of following a procurement policy, of moving into production before the testing was completed, before the

"bugs" were out, could turn out to be enormously expensive.

I am sure that Congress, after some experience with this procedure, some time in 1962 would have made clear to the Secretary that we meant him to follow the "fly before you buy" policy except in extraordinary circumstances when we had to move ahead quickly without complete tests.

I think my amendment represents a sincere test of whether Members of the Senate believe in the "fly before you buy" concept. If we believe in it, I can see nothing wrong with requiring that the Secretary of Defense tell us whether or not he is complying with the principle he has enunciated, that he says he has put into effect. That is all my amendment does.

I reserve the remainder of my time.

Mr. STENNIS. Mr. President, I yield myself 15 minutes.

May I ask the Senator a few questions with reference to terms in the amendment?

The Senator will recall, I am sure, that he and I have discussed the meanings of the various terms used in the amendment, some of which were taken from the Fitzhugh report itself.

I ask these questions now with all deference to the Senator, because there is a difference of opinion as to what the terms may mean, even on the Armed Services Committee itself, to some degree.

I refer now to page 2 of the amendment, paragraph (a), one of the conditions that the report must cover, "that exploratory and advanced development of selected subsystems and components of the weapons system have taken place independently."

Just what does the Senator mean by the term there? I am not trying to take him by surprise. How would the Senator apply the term "advanced development" to some of the weapons systems to which his amendment refers?

Mr. PROXMIRE. I think the best way I can answer the Senator from Mississippi—and I think it is a good question, because he has quoted the amendment verbatim—is to say, as he pointed out, this does represent the specifications spelled out in the recommendation of that particular panel, and it does represent the definition, the best definition we could get, from the expert panel on the meaning of "fly before you buy." It was a reference to this particular section when the Secretary said they intend to support this policy, which the Fitzhugh panel itself has recommended.

In order to take Secretary Laird up on that, we thought the best way to do it was to use the precise language of the Fitzhugh report, which is what I did.

Let me also say that, as far as the "exploratory and advanced development" is concerned, I presume the best way to spell that out would be by example and by going into the "selected subsystems and components of the weapons system." There I would be referring to computers, radar, sonar on ships, and so forth.

Mr. STENNIS. That is an illustration to a degree, but what I was striking at was, just what do the words "advanced development" as applied to "selected systems" mean as used in this amendment?

I think it is fair to say it means different things with reference to different weapons. One stage for one weapon may be advanced development, whereas it would not be for another. A tank as contrasted with a plane would be altogether different.

I think it is largely a budgetary item that is used by the Pentagon in keeping up with the money and in making their cases to the Armed Services Committee. That is the principal meaning it has, if we are going to apply it across the board. They charge this money to research and development, testing, and engineering, and then comes procurement. So "advanced development" is a stage beyond basic research and beyond the preliminary research.

Frankly, however, I think any law that is written on this subject must of necessity define what is meant by the words "advanced development." There is no way around it.

Mr. PROXMIRE. May I say to the Senator from Mississippi that the Pentagon has been using this term, as I understand it, for some time. In the charts they used before our committee, when the Pentagon officials testified, they used it as a specific and key phase in their step-by step procurement procedure in their method. I thought this was a good way to pin it down, especially in view of the fact that this was what the Fitzhugh panel did recommend. I do not see anything that would be awkward in this language. Is the Senator's point that the Pentagon would have trouble in determining what we mean?

Mr. STENNIS. The first ones who would have trouble with it would be the lawmakers, right here on the floor of the Senate. There has been no hearing to show what the term means in the work fraternity, in the Pentagon, or with the contractors or researchers. There is no report on it to show what it means. It is just a term, as I say, that largely means budgeting, the budgeting of items, and applies largely to the bookkeeping. Its meaning varies from weapon to weapon, in a great many particulars.

Mr. PROXMIRE. That may well be. But as far as the Pentagon using it as a method of reporting, I am sure there would not be any question in their minds, because they have done this for years. They have used this term. If there was any ambiguity or any difficulty, it could certainly be worked out.

I do feel, honestly, Mr. President, that on the basis of the fact that this policy has been put into effect that they report to us on the degree to which they depart from it, it would not involve a major or serious problem for them.

Mr. STENNIS. The Senator and I are in agreement, as I understand it, that this term "advanced development"—and I have not just seized upon an isolated instance—that this term "advanced development" does not have a clear-cut definite meaning as far as we are concerned here on the floor of the Senate, as we have worked on this bill and as this amendment is being considered.

Mr. PROXMIRE. Well, as I understand it, it has been used for years by the Pentagon. It has been used, I am sure, before the Armed Services Committee. As I say, it was even used before our Joint Economic Committee. Because it was used by Defense with a firm indication, and they did not give examples of what it meant, I assumed the members of the Armed Services Committee were aware of it. If it requires further definition, I would be happy to modify my amendment to provide that.

But I do think that is an isolated instance. There may be some other phrases and words in here that have some degree of ambiguity, but I would not think that would be a serious problem in requiring the Pentagon to report to the committees.

Mr. STENNIS. I thank the Senator, but with all deference to him, I believe that we both agree, then, that this is a term for which there is no exact meaning so far as we know, and I say that there is no way to get at it except to have hearings and have the words defined, or a meaning, a ceiling and a bottom applied to the phrase by illustrations.

Mr. PROXMIRE. Is the Senator saying that the Pentagon would not know what "exploratory and advanced development of selected subsystems" are?

Mr. STENNIS. I think it is vague and indefinite, that it could be used largely as the Secretary of Defense at any given time might wish. I think that it would be well bottomed if we confined it largely to a budgetary consideration, and let it go at that. I would want something firmer, myself, and I think the Senator would, than a mere budgetary term used here.

To pass on: that same section includes the language, "selected subsystems and components of the weapons system have taken place independently of the development of the weapons system."

The term "weapons system" is used twice there in the same sentence. I raised the point the other day, just what does the phrase "weapons system" mean?

Mr. PROXMIRE. Well, "weapon system" has been used by all of us. Perhaps we should have been more meticulous and precise in defining it; but, as the Senator knows, we asked the General Accounting Office last year to make a study of weapons systems, the degree to which they exceed their initial planning estimates, and so on. No question was raised then as to what we meant by "weapons system." The General Accounting Office had no trouble in determining what a "weapons system" was; in fact, they zeroed in on 38 of them, and we know what they were. We know what the planning estimate on each weapons system was. If there was any real question as to the meaning of "weapons system," it seems to me it would have come up long ago. I do not think the Pentagon would have any trouble. If they do not know what a "weapons system" is, they can go to the General Accounting Office and ask what a "weapons system" is.

I think the Secretary of Defense not only knows now what a weapons system is, but he knew 16 years ago when he was in Congress. I have the report of the General Accounting Office here, in which the various weapons system are detailed.

Mr. STENNIS. Well, I would have to guess what the Senator meant by the

term "weapons systems" as he uses it here.

For instance, take a plane like the F–14, to which the Senator has referred. It is going to be a fighter aircraft, with a capability of a certain kind. It uses missiles, bombs, rockets, and guns. Now, what is the "weapons system?" Does that include the gun, the bomb, and the rocket, or is the Senator just referring to the plane? Ordinarily, I think "weapons system" as used there means primarily the plane, the fighter, the aircraft.

Mr. PROXMIRE. The Senator is correct.

Mr. STENNIS. But you can add all kinds of things to it. There ought to be and there would have to be a definition of "weapons systems" as used here. Otherwise, this thing has no beginning and no end.

Mr. PROXMIRE. May I say to the Senator that in that same clause (a) it refers to "selected subsections and components of the weapons system." In the obvious example the Senator has given, of the F–14 plane, the radar and the weapons that are on the plane are components of the main weapons system, which would be the F–14 itself.

Mr. STENNIS. Yes. Well, that is a generalization that we have both used here, but to really mean something definite and binding on the Department of Defense or anyone else, when we say "weapons system" and use that term in the law, it would necessarily have to be defined as used here. Otherwise there would be confusion compounded.

Mr. PROXMIRE. May I say to the Senator that although Secretary Laird did oppose this amendment, and stipulated several reasons for doing so in his letter, he did not state as one of them that he would have any trouble with the language. He did not say he would not know what a "weapons system" is, or would not know what "advanced development" is. He did not indicate that; and I am sure, knowing Secretary Laird, since he is an able man, he would have indicated we needed a more precise definition if he had felt that was the case.

Mr. STENNIS. Secretary Laird may not be troubled about it, but he is not passing on this legislation. He is not a Member of this body. We are concerned about what it means. I know the Senator is concerned. But there is no common ground of understanding as to what these words mean, and to use them in hard law, they would simply have to be defined.

Mr. PROXMIRE. Does the Senator recall when we passed the amendment last year—in which, as I recall, the Senator was very cooperative and helpful; we could not have passed it without his help—requiring the Comptroller General to make reports on weapons systems? At that time, the Senator from Mississippi did not object to our using that term. Evidently he felt it could be understood by the Comptroller General, and that his report would have significance. Why is this situation different from that of last year?

Mr. STENNIS. Well, there would be a great deal of difference.

The PRESIDING OFFICER. The Senator's time has expired.

Mr. STENNIS. I yield myself 5 additional minutes.

There would be a great deal of difference. The Comptroller General's office is a regulatory body. We were merely calling on him to make reports to use for our interpretation and use, and he would not be making a particular definition that would be binding on us.

We are trying to define things here, now, in a way that ties up money—hundreds of millions, in fact billions of dollars—unless the statute is complied with properly. I think it is fair to say we do not have a common understanding or idea of what these phrases mean. We have no testimony and have no report of a committee to look to, to get their meaning.

So just to throw it in here for whatever usage it is, there are a lot of differences about what usage is. I am not trying to pick flaws. I am illustrating the necessity of defining the terms.

A very noted person of history, the Senator will recall, said:

> When you speak with me, define your terms.

When we speak as a legislative body, it is binding on the President of the United States and it is binding on everyone in Government. So we have to define our terms.

I thank the Senator very much for his willingness to engage in this colloquy. We will return to it at another time.

Mr. FULBRIGHT. Mr. President, will the Senator yield for a question?

Mr. PROXMIRE. Mr. President, I yield myself 5 minutes.

Mr. STENNIS. Mr. President, I had not yielded the floor.

Mr. FULBRIGHT. I am sorry.

Mr. STENNIS. We were speaking on my time. I have the floor.

Mr. FULBRIGHT. Mr. President, will the Senator yield for a question?

Mr. STENNIS. I will yield in a moment. I want to complete the point I am making about the necessity for a better understanding.

I invite the attention of Senators to the report to the President and the Secretary of Defense by the blue ribbon Defense Panel, July 1, 1970. It is the Panel from which this amendment is taken. Item "E" on page 9, at the bottom of the page, refers to major weapons system acquisition process. I turn now to page 20. I read the top paragraph on page 20 of that report:

> Selected staff reports have been identified as Appendices to this Report. The Panel's recommendations are in no case based exclusively on these staff reports, as its studies were broader and more extensive than the staff reports alone. Some of the appended staff reports contain detailed facts and evaluations bearing on specific recommendations of the Panel, while others address subjects, draw conclusions and suggest changes in areas which the Panel as a whole did not choose to address. In some such instances, there was a question as to whether the studies covered all of the particular subject or subjects sufficiently to enable the Panel confidently to make a recommendation. In still other areas of staff reports, the Panel lacked sufficient confidence in its judgmental capability to deal with the detailed, technical or specialized matter. However, they are of sufficient importance to be submitted with this Report as information, without necessarily implying endorsement of each item by the Panel.

This is where the panel frankly says that they have the reports of the staff, which they will identify as appendixes to this report; that sometimes the panel did not go into it far enough to make recommendations; that sometimes they doubted that the staff had sufficient information; and so forth. They say that for our enlightenment, for our assistance, they are going to file these appendixes—the staff reports as appendixes—and this amendment is being taken up before these appendixes have been filed.

The PRESIDING OFFICER. The Senator's additional 5 minutes have expired.

Mr. STENNIS. I yield myself 3 additional minutes.

The appendixes would be some help to us, and if we are going to pass on this matter without hearings, without committee recommendation, we at least ought to have the appendixes here which the panel thought were important enough to call our attention to.

I believe the Senator from Arkansas has a question.

Mr. FULBRIGHT. I am sorry that I was not here earlier, but the Senator referred a moment ago to the letter from the Secretary. I had read what the Secretary, himself, had stated about it being their policy to "fly before you buy." I was amazed to hear the Senator from Mississippi object to it.

Mr. STENNIS. I am not objecting to it. That is a phrase, just a phrase. It does not have any meaning for law.

Mr. FULBRIGHT. Does the Senator mean that the Secretary of Defense used a phrase that has no meaning?

Mr. STENNIS. We have to nail it down here when we incorporate this into the law of the land. It has to be nailed down in specific words, definitions, and mandates, and that is what this amendment fails to do.

Mr. FULBRIGHT. The meaning of the phrase, I thought, was self-evident. It meant you test the weapon before you buy a lot of them. I did not think that the meaning was abstruse.

Mr. STENNIS. That is a general term. These items vary a great deal.

The AX is a new plane. We are going to have two prototypes made by different companies, and they are going to compete with one another; and that is a fine way to do it when it is practical. It is a small plane, and it is applicable, and I think it will be helpful. That is an illustration of how these things vary a great deal.

The term "fly before you buy" does not have a meaning in law nor in science.

Mr. FULBRIGHT. It still seems to me to be commonsense to know what you are buying before you buy it. That is about what it means. If you go to buy an automobile, you do not buy one on some promise that it will do certain things. You usually try it out and run it before you buy it. That is all this means.

I did not assume there would be opposition to this amendment, and I was surprised to hear that the Senator feels that it is so vague and so uncertain that it is impractical.

I never thought of the Secretary of Defense as being a visionary, a man who speaks about things he does not know what he is talking about. He has had a great deal of experience in these matters.

The PRESIDING OFFICER (Mr. RIBICOFF). The time of the Senator has expired.

Mr. STENNIS. I yield myself 1 additional minute.

Mr. FULBRIGHT. I am amazed that the Senator opposes this. All the amendment means is that we should know what we are buying before we make vast contracts for helicopters that will not fly or spend billions of dollars on a plane that is of very questionable design. We have two glaring examples—the TFX and the C–5A.

I thought all this meant was that we were not going to do that any more, that we were going to wait to see what we were buying.

Mr. GOLDWATER. Mr. President, will the Senator yield?

Mr. STENNIS. I think that if the Senator from Arkansas could find time to stay here for the debate, we would be glad to have him.

I yield 2 minutes to the Senator from Arizona.

Mr. FULBRIGHT. So far, it has been very unrewarding to hear this debate. I have not heard a single reason as to why this amendment should be opposed.

Mr. GOLDWATER. Mr. President, will the Senator yield?

Mr. STENNIS. How long has the Senator from Arkansas been here? How much has he heard?

Mr. FULBRIGHT. I have heard enough——

Mr. STENNIS. How many minutes has the Senator been here?

Mr. FULBRIGHT. It is frustrating enough. I am thinking of going to lunch.

Mr. STENNIS. How many minutes has the Senator been here?

Mr. FULBRIGHT. Long enough to know that there is not much to be learned.

Mr. STENNIS. I will withdraw the question. It seems to embarrass the Senator to answer it.

I yield 5 minutes to the Senator from Arizona.

Mr. GOLDWATER. I asked the chairman to yield so that I might say that in part I agree with the Senator from Arkansas that "fly before you buy" is a misleading term. I think the Secretary would have done well to explain what he meant by that.

The Senator's effort to compare an automobile with a sophisticated airplane just will not hold, because the automobile companies do spend millions of dollars in developing their prototypes.

For example, we have withdrawn procurement money from the Cheyenne helicopter because it has not worked. We are not buying any Cheyennes for the inventory. We have approved money to go ahead another year with research and development before we buy. So this is a case of "fly before you buy."

The AX is another example in which there is now design competition. That comes first. The aircraft will be developed by several companies, and we will fly them to see which one the Air Force wants.

The B–1, I think, is a classic example of what we have done under Secretary Laird, in that specifications were given by the Air Force, and we are not buying any for inventory. We are specifying, I think, a total of seven to be delivered around 1977. Then we will determine, one, do we want this weapons system and, two, if we want it, how many do we want of it. Thus, in effect, we are today buying before we fly, although, I think, speaking as one concerned with this matter, the term was an unfortunate one because we are not going to walk into McDonnell or Lockheed or Boeing and say, "Well, here we have several models of advanced bombers. I will buy that one." That is not the way they are developed. I want to make it clear that we are not procuring any questionable aircraft at the present time. I say questionable in the view of their ability to perform. We are no longer just buying blind.

I think this is a good step forward but I will develop my objections to the amendment as soon as I can get the floor. They will not particularly apply to this particular section, of course.

Mr. STENNIS. Mr. President, I yield back the remainder of the time we have taken, and yield the floor.

Mr. GOLDWATER. Mr. President, will the Senator from Mississippi yield me 10 minutes?

Mr. STENNIS. I yield 10 minutes to the Senator from Arizona.

The PRESIDING OFFICER. The Senator from Arizona is recognized for 10 minutes.

Mr. PROXMIRE. If the Senator will yield there briefly, on the point he just raised, he said we are not buying any planes now that have not been tested. How about the F–14? We get what, a third of the money for research?

Mr. GOLDWATER. The F–14 is a fly before we really buy for the inventory. The F–15 is the same way. I have no doubt that we will buy them because, so far, there have been no bugs found in either aircraft. But we are not going to buy those aircraft for the inventory of the Navy until they fly. I think it will fly, either in December or January next.

Mr. PROXMIRE. We are asked to put 26 into production and we have not finished testing yet?

Mr. GOLDWATER. They have not even started testing these 26——

Mr. PROXMIRE. Twenty-six planes for testing?

Mr. GOLDWATER. That is a small amount for the size of the inventory we want to wind up with.

Mr. PROXMIRE. Twenty-six prototypes is an awful lot of prototypes; one, two, or three—but 26?

Mr. GOLDWATER. We used 26 on the C–5A, which is a quite different airplane.

Mr. PROXMIRE. Of course it is. There were not six or 26 C–5A prototypes, there were five.

Mr. GOLDWATER. I objected to passage of this amendment last week at great length. I do not intend to go at it any further today, except to say that I find nothing objectionable to the suggestions from the Senator from Wisconsin, but I think these things can be put into action by the Secretary of Defense.

What the Senator from Wisconsin is doing here is taking a part of the Fitzhugh report, in fact, we might say the innards, an important section of the Fitzhugh report, and making them law where, in my humble opinion, that action is not needed by Congress. I would remind the Senator—really, I do not have to remind him—of article I, section 8 of the Constitution, which provides that Congress shall have the power to make rules for the governing and regulation of our land and naval forces.

In 1947, under that, Congress reorganized the Defense Department. It is logical to assume that after 23 years, it is sensible to look at the Department of Defense again, which President Nixon did under the blue ribbon committee which studied the Department of Defense and which is known as the Fitzhugh report.

I think there are a great many parts of that report that can be put into action by the Secretary. Most of the things involved in the Proxmire amendment can be done at the Secretary's desire. However, I should like to remind my colleague that what we are dealing with here, under procurement, is discussed on page 19 of the Fitzhugh report. This was astonishing to me.

The report states:

> The Department of Defense procurement program involves approximately 12 million project actions a year. These are consummated by the Department of Defense procurement work forces of approximately 46,000 personnel, of which about 91 percent are civilian employees. For Fiscal Year 1968, contracts were awarded totaling about 43 billion dollars for supplies and services.

To go a little further into this and my objection to the amendment, I do not think that any report to the President or the Secretary of Defense which occupies 237 pages covering the largest spending organization in our Government should be just blithely overlooked or blithely passed by in the hope that someone will do something about it. The chairman of the Armed Services Committee of the Senate and the chairman of the similar committee in the other body have both assured us that there will be long hearings on this matter because there are some changes that some of us will object to, and that many will go along with.

For example, on page 211 of the report, under the heading "Organization." It says:

> The functions of the Department of Defense should be divided into three major groupings:

One of these would be a Deputy Secretary of Defense for Management of Resources and should be delegated the responsibility for the following functions, and they are rather numerous, as follows:

> (a) The Military Departments, which should continue under the immediate supervision of their Secretaries;
>
> (b) Research and Advanced Technology;
>
> (c) Engineering Development;

(d) Installations and Procurement (a modification of the present Installations and Logistics);
(e) Manpower and Reserve Affairs;
(f) Health and Environmental Affairs;
(g) Defense Supply Agency; and
(h) Advanced Research Projects Agency.

This calls for the creation of an Under Deputy Secretary of Defense, clearly coming under the purview of the Senate and the House.

Then we have another recommendation that there be a Deputy Secretary of Defense for Operations, and he should be delegated the responsibility for the following functions:

(a) Military Operations;
(b) The Unified Commands;
(c) Operational Requirements;
(d) Intelligence;
(e) Telecommunications (and Automatic Data Processir.g);
(f) International Security Affairs;
(g) Defense Communications Agency; and
(h) Civil Defense Agency (If Civil Defense is to be retained in the Department of Defense).

I call my colleague's attention to that subsection (h), "if civilian defense is to be retained in the Department of Defense."

We do not have the answer to that. I am not saying that this is applicable to the Senator's amendment, but I point out the very deep and serious implications in parts of the report.

Mr. PROXMIRE. Mr. President, will the Senator from Arizona yield?

Mr. GOLDWATER. I yield.

Mr. PROXMIRE. That is my point. None of the items the Senator has mentioned so far has anything to do with my amendment. This is a voluminous report with controversial recommendations, some of them the Secretary of Defense himself will probably oppose and many of which, I am sure, would be opposed by many Members of the Congress.

But this is one part of the report on which there seems to be unanimity. Everyone says we should follow a "fly before you buy" policy. The Secretary of Defense announced that he has. Especially in Arizona—I hold up a headline covering the whole of the page in the Arizona Daily Star with the headline, "Pentagon To Buy No More Untested Planes."

This is discussed as something the Secretary of Defense is promising.

Mr. GOLDWATER. As I said before, that is what we are doing.

Mr. PROXMIRE. We are not doing it.

Mr. GOLDWATER. We are doing it.

Mr. PROXMIRE. We are not doing it in instance after instance after instance. We did not do it with the F–14.

Mr. GOLDWATER. The F–14 is not an example. They are not being built for inventory until tested which will be next year.

Mr. PROXMIRE. The Senator is mistaken on the F–14. We are procuring 26 planes while a third of the money is still being spent on research and development. Tanks are another example.

Mr. GOLDWATER. I am not arguing about tanks. I agree that tanks should be tested. We talked last year about changing that.

Mr. PROXMIRE. Then, may I say to the Senator from Arizona, if the Senator is correct in the case of the airplanes we are testing, then there is no problem. All Defense has to do is report that that is what they are doing. If the tanks are not being tested, then they will report that, and then we will be alerted whether to appropriate funds for production, armed with sufficient knowledge to know that they have or have not been tested adequately.

Mr. GOLDWATER. They will have to go before committees of Congress, and Congress will report. I do not want to fly in an untested airplane. My objection to the Senator's amendment is not so much in the language or the detail, but that it jumps ahead of committee action. This report has only been out since the 1st of July. As I said the other day, as much as we dislike the idea, the Government does not move that fast. I think most of these items can come under the decision of the Secretary of Defense but as I am going to point out next, the third change in the secretariat structure: The Deputy Secretary of Defense for Evaluation should be delegated the responsibility for the evaluation and control-type activities, including:

First, Comptroller—including internal audit and inspection services; second, program and force analysis unit; and some modification of the present systems analysis unit; third, testing and evaluation; fourth, defense contract audit agency; and fifth, defense test agency.

I do not read these to make the point that they apply solely to the amendment of the Senator from Wisconsin.

I do bring out the fact that if we do create three new secretariats and one of them has a responsibility to cover these fields, we will have to have hearings in great depth as to the advisability of the suggestions of the Senator as to whether there is not real confusion created by subparagraph (g), for example, which reads: "that elements of the systems or subsystems do not include goldplating."

I think I have a vague idea of what the Senator means. But if we extend the language as far as possible, I point out that we use quite a bit of gold and quite a bit of goldplating.

I merely cite the use of this language to point out the confusion that can occur if we agree to this amendment. When the next Congress convenes, or even in this Congress if we get through with this legislation in time, I am sure that the Senator from Mississippi and the Senator from South Carolina will hold hearings on this 200-odd page report which for the first time in years undertakes some long overdue changes in the Pentagon.

I would like to see the Senate bill passed and see what we can do in this matter. Possibly we can develop many other protective devices that we can put under this Secretary. But I see no reason for doing it at this time.

Mr. PROXMIRE. Mr. President, the Senator raised the point, as he did the other day, about gold plating. The Senator from Arizona knows that I am not referring to gold and that the Fitzhugh Commission did not refer to gold. We are talking about the term as it has been used by the Pentagon for at least 10 years. It refers to providing for greater performance than needed. For example, if they need a plane that must fly at 1.5 mach, they might make one to fly at 2.0 mach. That costs more money. That is putting in the gold plating, the surplus and redundant kind of engine thrust, in this case, or radar, or sonar when they do not need it. That is the gold plating. That is what the Fitzhugh Commission meant. I am sure that the Senator recognizes it and that we all do.

If they put in something that exceeds the mission requirements in the initial estimates, they ought to tell us.

Mr. GOLDWATER. Mr. President, if the Senator would incorporate in his amendment the precise language he just used, it will do away with some of the confusion that might exist in the minds of a company in the boondocks of Arizona or Wisconsin on gold plating.

I agree with the Senator from Mississippi that the language is so imprecise that we would hope in the hearings that we might spell this matter out.

I am in sympathy with the language of the Fitzhugh report. In fact, I think that in some places I might go further than the Fitzhugh report.

I have not had time to completely read all of the report. Give me another week or two and I hope to get through with it.

I merely wanted to take the floor to repeat my opposition to the Proxmire amendment, not necessarily with the content, but because it is premature. Many of these things can be done without legislative action.

Mr. President, I yield the floor.

Mr. STENNIS. Mr. President, I yield myself 2 minutes and I then propose to yield to the Senator from New Hampshire.

The PRESIDING OFFICER. The Senator from Mississippi is recognized.

Mr. STENNIS. Mr. President, one illustration has been given here about the M–60A–1 tank. There are procurement funds of $60 million in here. That tank is our old workhorse tank. We refer to that as an old tank. It has been in production since 1962. That is the workhorse tank now. They are always trying to make improvements in it. Therefore, there will be something in here for research and development. They are trying to include a device for mounting the weapons sight. The tank has been in production for 8 years. It will doubtless continue to be used for several more years. There was a special turret problem. There is no money in here to cover that.

We have some research and development funds for the M–70 to which the Senator refers. I think that matter is being straightened out by Mr. Packard.

We propose, unless there is an emergency, to follow the long time testing and perhaps have a prototype on that one. But the one the Senator mentioned first, the M–60A1, has been in procurement for a long time.

Mr. PROXMIRE. Mr. President, I was referring to the Shillelagh.

Mr. STENNIS. We discontinued that. That is not in the bill.

Mr. PROXMIRE. The Senator is cor-

rect. The committee took that out, and I think that is a good example.

Mr. STENNIS. Mr. President, I yield 8 minutes to the Senator from New Hampshire.

The PRESIDING OFFICER. The Senator from New Hampshire is recognized for 8 minutes.

Mr. McINTYRE. Mr. President, much of what I have to say here is simply by way of buttressing what I am certain the distinguished chairman of the committee has already said and what our very fine military authority, the Senator from Arizona, said this morning.

Mr. President, I would like to say a few words at this time about amendment No. 816 to the Military Procurement Authorization bill—the so-called Fly Before You Buy amendment offered by my good friend from Wisconsin (Mr. PROXMIRE). As chairman of the Armed Services Committee's Research and Development Subcommittee, I have a special interest in the subject matter of the amendment.

I have no quarrel, Mr. President, with the basic objective of the amendment. Our procurement policies in the past have often been deficient, and their deficiencies have cost our taxpayers untold billions of dollars.

I have no quarrel either with some of the specific practices which the amendment is designed to encourage. I have tried to encourage such practices myself, in my own work on the committee.

Nonetheless, I am forced to vote against the present amendment and to urge my colleagues to join me in doing likewise. Let me explain briefly the reasons behind my position:

First. To begin with, the subject matter of the amendment has not yet been studied adequately by the Defense Department itself. The language of the amendment is drawn almost word for word from the Fitzhugh report presented recently to the Secretary of Defense. It is composed of recommendations contained in that report. The Department is currently hard at work evaluating those recommendations. More time is needed to complete this evaluation, to determine which of the report's recommendations are fit for implementation and then to put them in appropriate directive form. I can sympathize with the desire of the Senator from Wisconsin to put our house in order in this area; we have delayed too long all too often in the past. But this is a time when patience is warranted. The Department should be commended for taking the initiative to request the wide-ranging review which the Fitzhugh panel has presented it. And it should be given a chance to follow through on that initiative.

Second. Moreover, the subject matter of the amendment has not been studied adequately by the Armed Services Committee either. The committee, too, needs further time to consider in depth this complicated area. Its staff is currently at work evaluating the recommendations of the Fitzhugh panel. We are trying to reach our own independent conclusions as to the proper actions to take. Once our conclusions are reached, we want to compare them with the conclusions reached by the Defense Department, and then to hold formal hearings designed to elicit a well-constructed bill.

Third. A further consideration is that hearings of this kind are essential if we are to have legislation which is technically sound.

There is more involved in the drafting of a bill than the putting of policy statements into a bill itself. The statements must be carefully formulated to insure that they apply as intended to all possible situations. And when the area covered is as complicated as this, formulation takes time and is not an easy matter.

At present, there are several aspects of the amendment which make it technically deficient. Many of the matters on which reports are required are ambiguously stated. Take gold plating, for example, which the Senator from Arizona referred to. We all know what this is in general. And we all agree that it should be eliminated. But by what self-applying standard does one determine in a concrete case whether a specific capability is gold plating or not? Perhaps the problem of eliminating gold plating is one that must be met otherwise than with a reporting requirement.

Not only are some of the terms in the amendment incapable of workable definition. Others are, but have yet to be defined. On the most elementary level, what is a "weapons system" for purposes of the amendment? The answer is just not clear.

Mr. President, we have made great strides in the past several years in improving the quality of our procurement practices. One of the best indications of our progress is that made in the procuring of close-in support aircraft. The Cheyenne development contract, written several years ago, made no provision for competitive prototypes, encouraged cost growth, and allowed for much gold plating. The AX contract, on the other hand, was soundly written, emphasized proven off-the-shelf technology, and included a prototype flyoff.

With all due deference to the Senator from Wisconsin, we are on the right path, but we need more time. If such time is permitted us, we will be able to evolve policies of general application which will stand us in good stead in the years ahead. If, on the other hand, we move with undue haste, we may well get results profoundly counterproductive, which could actually undo the progress made to date.

Mr. President, I must vote against the pending amendment.

Mr. President, in closing, I would like to say that earlier this year the Subcommittee on Research and Development took it upon itself to look at the Mark-48 torpedo program. I think the Mark-48 torpedo is one of the "horrible examples" to which the Senator from Wisconsin referred in his statement of Friday, citing the tremendous cost growth associated with the weapon. There has been a great deal of discussion about the cost growth associated with this program. It is too seldom recognized that much of this growth cannot be regarded as a simple cost overrun, which is nothing more than the failure to meet the terms of a specific contract. Several factors have accounted for the increases over initial planning estimates, and some of them are unavoidable.

For example, we were striving far beyond the state of the art to come up with a badly needed weapon in this torpedo. The contractor had a great deal of difficulty, and we had a great deal of difficulty in trying to break through on some of these areas where we did not know quite how to accomplish what we had in mind. At times there is no way to avoid such difficulties.

Moreover, it was decided after the program commenced to add another contractor and to develop competitive prototypes. This greatly increased the overall program costs.

But the tests on the torpedo, which is a tremendous weapon, are about to reach the state of fruition. The companies are making excellent strides now. While it is easy and nice to be able to say, "Look at this horrible example," this overlooks some of the facts involved

With all respect to the Senator from Wisconsin, I urge Senators to reject the amendment as being premature.

Mr. STENNIS. Mr. President, will the Senator yield?

The PRESIDING OFFICER. The Senator's time has expired.

Mr. STENNIS. Mr. President, I yield myself 1 minute.

The PRESIDING OFFICER. The Senator from Mississippi is recognized.

Mr. STENNIS. Mr. President, I thank the Senator from New Hampshire and I commend him for his remarks. No one is better qualified in this body to speak on this subject than the Senator from New Hampshire. That is my humble opinion. The Senator has held hearings through the years on research and development, which includes the period when procurement began. The Senator brought out some very fine points and solid suggestions. It is very helpful to have his opinion and the opinion of his committee.

Mr. President, I yield myself an additional minute.

The PRESIDING OFFICER. The Senator from Mississippi is recognized.

Mr. STENNIS. Mr. President, the Senator from Wisconsin referred to the DD-963 as having the worst sea trials of any ship in modern history. His reference is bound to have been to some other ship. I do not know what it was, but the DD-963 has not even had the keel laid. That is a destroyer, much less having a trial run. That was some other trial production.

Mr. PROXMIRE. That was the DD-1052. We had the wrong number. It was the 1052.

Mr. STENNIS. I yield the floor.

Mr. PROXMIRE. Mr. President, before the Senator from Mississippi and the Senator from New Hampshire leave the Chamber, I would like to reply to both of them.

The Senator from New Hampshire said we need time before we put this into effect, that we need hearings; and the Senator from Mississippi made the same kind of point when he said we have appendixes here not yet filed and they may have an effect on the amendment. I think

we all recognize this is an enormous study and that it covers a great deal. The hearings will require a great deal of study also by the Committee on Government Operations. However, here is one specific limited recommendation that had the wholehearted support of the Secretary of Defense. He favors "fly before you buy." Defense publicized it in every State in the Union, and loudly announced that it is being put into effect.

All I ask is that where they vary from the sound concept, then tell us, and give us the information.

With respect to the argument that we have to have hearings just to define these words in great detail and redefine them, the Secretary of Defense knows what it is. He said he knows. We take the language from the Fitzhugh panel. It is beyond me why, under these circumstances, we cannot require the Department of Defense to make a report.

The Senator from Mississippi says that this amendment would provide that funds would be cut off unless a proper report is filed. Well, the Senator gives the amendment too many teeth. It would not do that at all. It requires that a report be filed. Any kind of report releases the funds. It is true you could insist on a very meticulous report. That would be up to the Committee on Armed Services.

So far as the language required, all we say is a report is required, and that is all. As the Senator from Mississippi indicates, this language is general. It should be general.

The Senator from Arizona (Mr. GOLDWATER) indicated that we should recognize that this Fitzhugh document also will require a great deal of study because it is so long.

He pointed out that new secretariats may be organized as it proposes, and one of the secretariats may be responsible for procurement. The answer to that is that it is a simple concept. If we wait until the Pentagon is reorganized, that could take years. Meanwhile, we lose hundreds of millions, possibly billions, of dollars on procurement because we do not have information on the basis of which we can make intelligent decisions on deciding on funds for a particular weapons system.

In general, I think the opposition to this amendment is one of "Let us take our time. Let us hold hearings. Things are going along pretty well now."

I just cannot be patient under those circumstances. I do not see how other Senators can be, either. If we had had a report such as here recommended, there would not have been the kind of C–5A, overrun we had. There would not have been any TFX scandal, or a whole series of weapons systems that have scandalized the American people and provided an enormous burden on them.

At the present moment, on our major weapons systems, there are overruns amounting to $23 billion. If we did not have that kind of situation, perhaps we could say, "Well, we do not have to worry about correcting this situation. We can go along with things as they are." But we have a situation in which we cannot be patient. I do not think the American people will be patient with Congress if we permit the Pentagon year after year to go ahead and proceed in such a precipitate way to move into production before they finish their testing, and, as a result, cost the American taxpayers billions of dollars.

A good example of that was the question which was raised by the Senator from Mississippi with regard to the so-called workhorse tank that we have. What I was referring to was the Shillelagh missile on the tank, and the fact that the Shillelagh had not been adequately tested and that the money for the Shillelagh was requested of the committee in this bill this year by the present Secretary of Defense, even though the fly-before-you-buy concept is supposed to be followed. It is true that the committee cut those funds, but I believe that the Congress—and I have detailed a list of the conditions—should be informed on whether the Department has complied with the fly-before-you-buy policy. It may be that we will want to go ahead because of emergencies, but we should know of it. My amendment calls for an informed Congress so that we know what we are doing.

Mr. President, I reserve the remainder of my time.

The PRESIDING OFFICER. Who yields time?

Mr. STENNIS. Mr. President, a parliamentary inquiry.

The PRESIDING OFFICER. The Senator will state it.

Mr. STENNIS. How much time do I have remaining?

The PRESIDING OFFICER. The Senator from Mississippi has 33 minutes remaining.

Mr. STENNIS. Mr. President, I am glad to yield 20 minutes to the distinguished Senator from Colorado (Mr. DOMINICK).

The PRESIDING OFFICER. The Senator from Colorado is recognized.

Mr. DOMINICK. Mr. President, unfortunately, I was unable to hear all the argument of the Senator from Wisconsin in favor of his amendment, but I have listened to a good deal of it. I heard it the other day, and I rose then to speak against it off the cuff. I rise again today to oppose it.

The author of the amendment has labeled it the fly-before-you-buy amendment. Just speaking colloquially and off the cuff for a minute, there is no doubt that the "fly before you buy" is a good idea on some occasions. This is what the Defense Department has said it wants to do. This is what we all would like to see it do, so that we do not get into another TFX problem and a variety of others. But my opposition against this amendment is raised on other points, chief among them being the ambiguity of the amendment.

In the 2 days of the debate many questions have been asked as to what is actually meant by certain terms in the amendment, such as "selected subsystems and components," "weapons system," and "gold plating." There is a lack of precision of terminology and an abundance of cliche-type language, and everyone, it appears, has a different definition of what these terms mean.

Again talking off the cuff, I think it is only fair to point out that the amendment itself says that no funds may be even authorized until the Secretary of Defense gives a report to the various committees, indicating the degree to which the Department has complied with some 12 conditions which are spelled out in the amendment.

That would mean the bill on which we are working, which is of tremendous importance to the security of our Nation, could not even be passed until such time as the Secretary of Defense had gone through this very long and very difficult series of conditions which are spelled out in the amendment.

Further, certain requirements called for by the amendment have not been adequately defined and in some cases not defined at all. We need hearings at the very least, probably extensive hearings, followed by deliberation and study by the Armed Services Committee, of which I am a member, before undertaking such a requirement as would be imposed by this amendment.

So the problem, Mr. President, is directly related to the fact the author of the amendment has attempted to transmit into law the language from the Blue Ribbon Defense Panel report which was only intended as policy recommendations by the Defense Department and by the Congress. These 12 recommendations were not written for legislative purpose and are, therefore, not properly composed for that purpose. It is questionable whether such criteria should be applied to all weapons systems even if you define "weapons systems" in its broadest sense. Also, the Senate should remember all of these suggestions by the panel have not been thoroughly studied by the Defense Department, not to mention by Congress, which is being asked to give them the force of law.

In fact, Mr. President—and I think this has some real bearing on it—the appendix supporting the recommendations of the Fitzhugh panel and the appendix supporting those sections dealing with procurement have not even been released at this time, and probably will not be released for another 4 or 5 weeks.

Mr. President, doubtless the Senator from Wisconsin means well in this endeavor. He is correct when he says many of the recommendations are generally recognized as sound by both the Defense Department and the Armed Services Committee. In fact, many of the recommendations are being carried out today and have been carried out in the past.

The Senate Armed Services Committee, of which I am a member, has considered competitive prototypes on certain weapon systems. An example is the Mark–48 torpedo, which is being developed in two different models by two different companies. It might also be well to note that the Mark–48 program has one of the greatest potential overruns of any weapons system program presently underway. Also at present we have a competitive prototype program on a short range air-to-air missile, and it is working well. Thus, I assume the point has been made that competitive protoypes are good on some weapons systems and bad on others. It would be very difficult to require a competitive prototype approach on an expensive and

unique development program, such as the B–1 bomber or the ABM.

The amendment also implies the need for a "fly before buy" policy on all weapons systems. This is practical in some cases, unwise in others. It is necessary to strike a balance between completion of research and development and beginning of production. In the past, we may have had too much concurrence, joint development and production, in our weapons programs—and I, for one, think we have had too much. One of the most glaring examples was the Inter-Continental Ballistic Missile program.

These two examples I have just cited, competitive prototype and "fly before you buy," illustrate my point that while these recommendations are generally sound, varying circumstances dictate flexibility in their application. Adoption of this amendment would restrict that flexibility. That is why the Senate Armed Services Committee has hearings, briefings and investigations on the various requests of the services and would need further extensive hearings before these proposals should be made hard and fast law.

Another point which concerns me, Mr. President, is that the distinguished Senator from Wisconsin stated very recently on the floor that he had very little confidence in the findings or conclusions of the Blue Ribbon Defense Panel chaired by Mr. Fitzhugh, which developed the general recommendations on which the amendment is based. He indicated that the members of the panel "did not inspire faith that they would arrive at an objective critical review of procurement." If the distinguished Senator from Wisconsin has such significant reservations about the members and their findings on procurement, why does he submit their major recommendations on this important subject as an amendment to the pending authorization bill, particularly when the appendix supporting these recommendations has not even been released.

Further, some of the recommendations imply the need for action which I could not necessarily endorse. One is the requirement of amendment No. 816 that the Armed Services and Appropriations Committees of Congress be advised about the degree to which the Defense Department has complied with the recommendation "that production schedules will be selectively lengthened" and "long range production will be contracted for." This may be found in paragraph "d" on page 2 of the amendment. Apparently this means that the next knowledgeable way in which to build a weapons system is to extend its production over the longest period of time possible. This is almost always the most expensive way to produce a weapons system. It ignores the speed with which that threat should be met. After all, the weapon is being built in the first place because of the threat we are facing.

Mr. President, it should be noted that in the first paragraph of the panel's report giving these procurements recommendations the panel stated that the purpose of these recommendations was to "provide the needed flexibility in acquisition strategies." It should be realized that passage of the pending amendment would reduce if not eliminate such flexibility. Also, based on my committee service during the past years, I feel strongly that improvements in these complex procurement matters can be better achieved without hard and fast rules which apply across a broad range of weapons systems. Many theories adopted in past years as intelligent approaches have proven unwise in practice. A perfect example is the TFX case where commonality was to save us millions and despite the best efforts of some of us in the Congress, it cost us hundreds of millions.

Finally, Mr. President, I wish to stress again my initial point that the ambiguity of this amendment alone should justify its rejection. The lack of a definition in the amendment of a weapons system brings into play considerable confusion. There are hundreds of programs which may or may not qualify as weapons systems. Some cost only a few thousands of dollars while others run into the millions. If reports covering all of the recommendations are to be submitted on even half of these programs, the Pentagon and the Congress will be covered up in a pile of paper.

It seems to me some feel they have have discovered an elixir to our procurement problems. The desire for solution has become so great they are seizing upon the latest study as being a magic remedy which, if written into law, will rub away our problems and bring out eternal sunshine. Unfortunately, this is not true.

Mr. President, I could go on at great length relative to each of the conditions cited in the amendment by the distinguished Senator from Wisconsin. The conditions laid down are very vast in scope and magnitude. They are conditions that require searching inquiry and should not be decided upon on the basis of a short debate on the floor of the Senate. Thorough and comprehensive hearings are required before this type of legislation should be brought to the floor for consideration by the Senate.

I, therefore, oppose vigorously amendment No. 816 as part of the military authorization bill.

Mr. PROXMIRE. Mr. President, will the Senator yield, on my time?

Mr. DOMINICK. Yes, I am happy to yield.

Mr. PROXMIRE. Mr. President, I yield myself 10 minutes.

Mr. President, I have a high regard for the Senator from Colorado. He knows a great deal about armed services procurement. He has served on the committee for a number of years, and is an extraordinarily able man. But I am very much concerned about his opposition to this amendment. He seems to feel, as so many of the opponents seem to feel, that this would somehow inhibit effective procurement, that it would somehow commit us to a particular policy, that it would somehow require the Pentagon to act in a particular way.

Mr. President, it would not do anything of the kind. All it does is ask for information. It asks for a report. The amendment itself does not even come down on the side of "fly before you buy." All it says is, "If you are going to depart from the principle announced by the Secretary of Defense all over the country, in headlines from here to Arizona—Pentagon to buy no more untested planes—if you are going to depart from that, you let us know."

The Senator from Colorado has complained about the imprecise language, in addition to saying we need more hearings on this kind of thing to refine the language.

Once again, if we were putting into effect a policy and saying, "Henceforth we are only going into production after complete testing," I would agree wholeheartly, and I would also agree that that would be a very bad policy.

Certainly, if we were going to do anything like that, I would agree that we would have to have extensive hearings. But when we simply require a report from the Pentagon as to when they depart from a policy announced by Secretary Laird, it would seem to me that to wait for hearings would mean we could not proceed with this until next year, which would likewise be undesirable in that it would result in the withholding of information desirable for Congress to have.

The Senator says that competitive prototypes are good in some systems in and bad in others. I agree wholeheartedly. That is correct. All I am saying is that when they adopt a policy of not having competitive prototypes, they can tell us. All they need to say is, "It is not appropriate here; it is not feasible. We have tried this kind of thing before, and it does not work well."

The basic thesis of the Senator's criticism, that we would compel the Pentagon to follow a particular "fly-before-you-buy" policy, I think, is mistaken, in that the thrust of the amendment would simply require reporting if they do depart from it.

Mr. DOMINICK. I thank the Senator from Wisconsin. I realize that the amendment simply imposes a requirement on the Defense Department to make a report to Congress. The point I made originally, and the one I made last week when we were discussing this issue, is that under the wording of the amendment, we cannot even pass this bill until such a report has been submitted. We are talking about $20 billion worth of procurement here, much of it for long range items. If we do not even know what the weapons systems are, and the degree to which the Defense Department will be involved, we do not have the faintest idea as to when we might be able to get a report on all the subjects we are considering right now in this bill, not to speak of others that may come up later; and we would not be able to act on this bill. That, I think, is the fatal flaw in the Senator's amendment.

Then, taking subsection (g), which I did not any more than mention in passing——

Mr. PROXMIRE. Mr. President, if the Senator will yield, that is a very important point. Let me say that this amendment, if adopted, would not be retro-

active. That is not the law for the Pentagon now. And the House of Representatives would have to either accept, reject, or modify the requirement in this bill to some extent.

At any rate, it would not require that we could not free funds for this year. If the Senator feels that that is the case, I would certainly be happy to modify my amendment to make clear that this is prospective; because I would agree wholeheartedly that we should not have a retroactive provision of this kind that could have an adverse effect on the Defense Department, although I do think that they could file these reports within a matter of days. They have thousands of people, and hundreds of them are capable of filing the reports that are required.

Mr. DOMINICK. I appreciate the apparent flexibility that the Senator from Wisconsin is now placing on the interpretation of his amendment. In my opinion, it does not read that way, but he can interpret it so; and that will help so far as the record is concerned, in the event that the amendment should be agreed to.

Let me just take subsection (g), on page 3, which I did not really do more than just comment on in passing. It reads:

That elements of the systems or subsystems do not include "gold plating";

What is "gold plating"? It is a cliche, a popular phrase that has been used. It is a little like "gilding the lily" or something of that kind. It is something that many of us are concerned with, even in the aviation field, where we feel that perhaps the sophistication of the avionics and new aircraft is getting beyond what is necessary to make an efficient system.

But many people do not agree on what is "gold plating," and believe that whatever is being put in is necessary in order to accomplish the mission.

So we do not have a definition of "gold plating" and we do not know what it means. How is the Defense Department going to submit a report showing what is done with respect to "gold plating" when no one knows what it is?

Mr. PROXMIRE. The Defense Department knows what "gold plating" is. It has been used by Secretaries of Defense for years. Secretary McNamara used it at least 8 years ago. It has been used by witnesses before our committees again and again. It is when you have a situation where there is provided in a weapons system a greater performance than is required to meet the mission which the weapons system is assigned.

A good example of that would be if you have a fighter plane and all you need is a particular speed—say, a Mach 1.5; and in order to get greater speed, the Air Force acquires some powerful engines and redesigns the plane to give it a Mach 2.0. Under those circumstances, the Defense Department would have to report that the performance will exceed the definition of the mission that was originally recognized when the weapon was authorized. Perhaps it would be desirable to go ahead under those circumstances. This kind of "gold plating"—redundant, additional performance—should be made known to Congress so that we know we are paying for something that originally we did not think was necessary.

Mr. DOMINICK. I say to the Senator that if he says that Secretary McNamara knew all about "gold plating," I think the Senator from Wisconsin and I will agree that we spent more money and got less under McNamara than probably at any other time in the history of the country.

All we have to do is to look at the commonality feature he kept building into the TFX, which was going to make a fighter and a bomber and an all-weapons system, and none of them worked. He said that all this was not "gold plating" and that it all was necessary, and it was a total disaster so far as the country was concerned.

Mr. PROXMIRE. There can be a difference in understanding of "gold plating," but I think the Secretaries of Defense have always had a common recognition that whenever you build a weapon that exceeds in performance the original mission that was required, you are "gold plating"; and we should be told about it and informed that we are paying for something beyond what we originally intended. We might go ahead with it, anyway, but we should have the information.

The thrust of this amendment is simply to require information, not to impose a particular policy or to require the Defense Department to buy or not to buy a particular item, but so that Congress will be informed, so that we will know whether or not they are going beyond what was enunciated.

The Senator said in his speech that I have been critical of the Fitzhugh panel and that therefore it did not seem to be consistent for me now to ask the Senate to adopt a major recommendation of that panel. I have been critical of the makeup of the panel, which consisted of a majority of members who were defense contractors, and the head of the staff was Fred Buzhardt, who was formerly with Senator THURMOND and then became assistant to the Assistant Secretary of Defense and got his check from the Pentagon. I felt that this panel would not be sufficiently critical of procurement or any other practice of the Pentagon.

However, I think this commission does consist of able men. They have made some good recommendations and have failed to make some I think they should have. It seems to me perfectly proper to feel that they have not done a good job in some respects and, where it is universally accepted that it is a good recommendation, I can accept that and incorporate it into an amendment and ask the Senate to support it, especially when the Secretary of Defense, himself, agrees that this is a good policy.

Mr. DOMINICK. I would say, in response, that of course, it is totally proper for the Senator from Wisconsin to put in any of the things he wishes. I am not criticizing him. I just think it is ironic that the Senator from Wisconsin and the Senator from Arkansas suddenly find themselves in the position of sponsoring a recommendation made by the very panel about which they have been extremely critical. So I have no hesitation in putting that into my speech and repeating it. It is perfectly proper for the Senator to go ahead and do it, anyhow.

I repeat that, under the wording of this amendment, it would appear that we would not be able to pass this bill unless and until a report had been given on each one of the weapons systems that may be included, if anybody can figure out what "weapons systems" means in terms of this bill. We would not be able to pass the bill until that had been sent in. I do not know how long that would take.

The definitions are very ambiguous. Some are really derogatory in tone, I think, and may not result in getting the same information we need in committee.

Third, it would seem to me that this is not the time to put into firm legislative language what in effect were recommendations for further study by both the Defense Department and the committees of Congress.

I thank the Senator from Mississippi for having yielded me this time, and I yield the floor.

Mr. PROXMIRE. Mr. President, I yield myself 5 minutes.

Mr. FULBRIGHT. Mr. President, will the Senator yield?

Mr. PROXMIRE. I yield.

Mr. FULBRIGHT. Mr. President, the argument that we are necessarily inconsistent because some parts of the Fitzhugh report may not meet our approval is a superficial argument.

The President of the United States is doing many things in the Middle East and elsewhere of which I approve. I do not feel that I am inconsistent in saying that he is doing a good job there because I, for one, disapprove of what he is doing in Vietnam.

It seems to me ridiculous to say that, because one had some criticism to find of the report, he is now inconsistent in trying to improve on it and put it into the law.

All the Senator is doing is taking what the Secretary of Defense said and what is in the report and putting it into legislative language, taking them at their word. I do not see what else the Senator is doing. He is doing what the Secretary of Defense has widely publicized all over the United States. Is that correct?

Mr. PROXMIRE. The Senator is correct.

The Secretary last year said that they were following the milestone policy, which meant they would complete one particular phase of procurement—research, development, and so forth—before they proceeded to the other. This year, he reinforced it by saying that they are having "fly before you buy." There were headlines all over the country. There was a great deal of publicity on it. Everybody said it was recognized that this was a new policy of the Secretary of Defense.

All I am saying is that if this is their policy, they should let us know when they depart from the policy; because departures from this policy have been enormously expensive in the past. The Comp-

troller General found that, and the Secretary of Defense, himself, found it. Unless we have that information and are informed on it, Congress will not be in a position to make intelligent decisions as to whether to proceed with production.

Mr. FULBRIGHT. They want to take the decision to proceed with production, and they want to take it on faith, without any proof that it will work. Is that correct?

Mr. PROXMIRE. That is exactly right.

Mr. FULBRIGHT. We have been taking it on faith now, to the detriment of the public treasurer, which runs into the billions of dollars. I think the Senator is entirely correct.

I want to ask the Senator about the argument, if there is anything to it, in the areas alluded to briefly by the Senator from Arizona, where we deal with sophisticated instrumentalities of destruction and death as compared to an automobile. He suggested that a company is not inclined to tool up for a prototype, unless it is agreed in advance that the Government will buy X number of planes, or whatever it may be. Is that a serious argument? Does the Senator think, that we have to make a contract for a certain number of C–5A's or TFX's long before they are really proved out, in order to get a company even to make a prototype?

Mr. PROXMIRE. When we have something like 26 prototypes, and that was the argument of the Senator from Arizona on the F–14, that is ridiculous. It makes sense for 1, 2, 3, 4, or perhaps even 5 or 6, under extraordinary circumstances, but 26 is ridiculous.

Mr. FULBRIGHT. What I was leading up to——

Mr. PROXMIRE. As I understand it, in that particular case, 19 of the 26 were supposed to go into inventory, but this was before they had finished their research and they are still asking for money in this bill for additional research on the F–14.

Mr. FULBRIGHT. But they claim they have 19 of the prototypes to go into inventory?

Mr. PROXMIRE. They certainly are not ready to be taken into inventory. This is a buy before we fly principle, I think.

Mr. FULBRIGHT. Yes; buy first, then see if it will fly. In view of the experience the Senator has had with Lockheed, as I understand it, they are still demanding between a $200 million to a $400 million grant to make up for their deficiencies on the C–5A?

Mr. PROXMIRE. The report says that they want $200 million right away, and if we are going to keep the 81 planes needed, they want $800 million in addition to what the contract calls for.

Mr. FULBRIGHT. I was going to say, if this is to be the practice of this Government—I cannot support it. But, anyway, I gather that they do not like to build a prototype unless we give them a large purchase order—even before it is proved out. If that is so, why would it not be better for the Government to build the plant and make the plane?

Mr. PROXMIRE. The Government owns the Marietta, Ga., plant. That is owned by the Government.

Mr. FULBRIGHT. If the Government has to pick up whatever the deficit is from a private company on a deal like that, why would it not be more likely to control the deficit or to control the costs if the Government did it all? The Navy built its own guns, at least some of them, in a gun factory here on the Anacostia River. We used to have Government arsenals all around. We were sold on the idea of these private enterprises, on the theory that they would be efficient and would not cost as much; but from the reports the Senator from Wisconsin has had and the very revealing hearings he has held over the past several years, it strikes me to be a very inefficient way to go about it. The way we are now proceeding is costing us a lot more.

If the Government would do its own research from the beginning, then it would not be under the pressure to commit itself to inefficient, unworkable systems after spending an awful lot of money. In that case, we could fly before we buy, because it would all be our own operation. Why would not that meet the situation? If these contractors object to this system, why not let the Government do it with a Government plant?

Mr. PROXMIRE. I am not so sure. I do not know. I do not feel that we have to have Government-owned defense plants. We have had a lot of trouble with anything the Government owns. There seems to be politics involved in it and problems with pay——

Mr. FULBRIGHT. That Marietta, Ga., plant—the Senator does not think there was any politics in that?

Mr. PROXMIRE. I would feel much better if instead of the kind of system we have now, we would try to do what we did in procurement in World War II, where there was a much greater effort to break down procurement into smaller units so that it would be more competitive, to standardize the procurement we had so that we could ask for competition and have participation by many more contractors, which would be on a prime basis, so that if we could get more competition into it, it would make for a stronger American economy. The strength of the American economy is not in gigantic corporations or any kind of governmental operation, it is where we have competitive and relatively modest, small operations.

Mr. FULBRIGHT. What percentage of procurement of these major weapons systems is today competitive?

Mr. PROXMIRE. Of all our procurement, only 11 percent is competitive.

Mr. FULBRIGHT. About 90 percent——

Mr. PROXMIRE. About 90 percent is negotiated. About 90 percent.

Mr. FULBRIGHT. I am not sure we would get anything Government owned to be competitive. But the present system seems no more competitive than if it were Government owned. I think, if we continue to have a private system as extravagant and as expensive as it is, we might save money and go ahead and have the Government operate the plants. After all, these plants are disguised as private enterprises. Their stock is sold on the New York Stock Exchange and when they get into trouble and lose money, they come around and ask the taxpayers to bail them out. What kind of private enterprise is that? That does not seem like private enterprise to me.

Where is the incentive to efficiency in a company where, after it makes a blooper, it asks the taxpayers to bail them out with more money? That does not strike me as being private enterprise. It is the worst of both private enterprise and socialism. We are subsidizing inefficiency. I am not for socializing such businesses, either, but this kind of business, it seems to me, has all the ills and the bad part of socialism and none of the good parts. We have people here trafficking in shares and stocks in a business which they expect the taxpayers to support. They expect to pay dividends and get big salaries. I do not see that there is any future to that kind of operation.

Mr. PROXMIRE. We now have the worst part of private enterprise, not the best, because we have a concentrated, monopolistic operation with no incentive for efficiency. Admiral Rickover testified for example, as did other experts, that the cost of negotiated procurement was 30 to 40 percent higher than competitive procurement. What we should have is more competitive operation, and break down procurement into smaller lots—units.

Mr. FULBRIGHT. The Senator's objection to consideration of this other approach is that there must be politics in it?

Mr. PROXMIRE. Politics would not be removed. I would put it that way. It would not solve the problem.

Mr. FULBRIGHT. What about the recent contract for the destroyers? Was that free of politics? How does the Senator feel about that program?

Mr. PROXMIRE. I understand that there were some distinguished political figures very much interested in the awarding of that contract.

Mr. FULBRIGHT. Was there any real competition in bidding for those ships or were awards made on other grounds?

Mr. PROXMIRE. I guess political competition.

Mr. FULBRIGHT. I thought the Senator said it was not to have politics in it.

Mr. PROXMIRE. I did not say that.

Mr. FULBRIGHT. The Senator said if the Government went into this, it would be. The implication was that there was not any politics in the present system.

Mr. PROXMIRE. The kind of proposal now being made, I think, by the colloquy I have just had with the Senator from Arkansas, dramatizes how modest and limited my amendment is.

Mr. FULBRIGHT. Exactly.

Mr. PROXMIRE. It would not provide a radical or drastic change in procurement. All it would do would be to provide that Congress would get the information, that we would be informed as to when we departed from policy which the Secretary of Defense has announced is a policy of the Defense Department, and we would know that and the extent to which they would depart. That is all

this amendment provides. If the Defense Department wants to depart from that policy, then they would go ahead and do it, but let us know about it and then we can determine whether to fund the program.

Mr. FULBRIGHT. But the vigor of the opposition to the Senator's amendment cannot help raising the question that those opposing the amendment do not really believe the Pentagon means what it says, that they do not really believe the Pentagon will fly before it buys. That is what it means to any ordinary observer. If they accept the policy and believe it will work, why would they oppose this amendment? I cannot imagine why.

Mr. PROXMIRE. The Senator's logic is absolutely unanswerable.

There is no reason in the world why the Secretary of Defense should not have said, "That is all right. I will support it, and we will take it." The chairman of the Armed Services Committee certainly would have said, "Fine. We will get these reports."

Otherwise, there must be something that they are hiding. They must not want us to know the extent to which they are departing from fly before you buy.

Mr. FULBRIGHT. They do not intend to fly before they buy. It is just a matter of public relations.

Mr. PROXMIRE. I am afraid the Senator is correct. If they had to report to us when they depart from the policy, it would be a different matter. The pressure on their following this wise policy would be very great. If they had to report to us, they would follow the policy of fly before you buy in many cases before they purchased.

Mr. President, I yield the floor.

Mr. DOMINICK. Mr. President, will the Senator yield?

Mr. PROXMIRE. How much time does the Senator require?

Mr. DOMINICK. I would like to have 3 minutes.

Mr. PROXMIRE. Mr. President, I yield 3 minutes of my time to the Senator from Colorado.

The PRESIDING OFFICER. The Senator from Colorado is recognized for 3 minutes.

Mr. DOMINICK. Mr. President, I thank the Senator from Wisconsin. I have already used the time of the Senator. I appreciate his giving me this time.

What I want to do at the moment is to deny most emphatically some of the implications which the Senator from Arkansas and apparently the Senator from Wisconsin indulged in making charges that when the Secretary of Defense says that he is going to try to improve the procurement processes and look at this as he goes along and do the best he can and get into the "fly before he buys" in as many cases as it proves prudent to do so, he is not telling the truth. This is what the Senator from Arkansas implied.

I wanted to say that there is no evidence of that whatsoever, that most of the contracts he is talking about were let under McNamara, long before this Secretary of Defense ever came in. As a matter of fact, most of them were under a Democratic administration. We might as well be frank about it.

I think the motivation that has been assigned to this matter does not help the debate, and it certainly does not help the Senator from Wisconsin.

Mr. MURPHY. Mr. President, who controls time on the opposition?

The PRESIDING OFFICER. The Senator from Mississippi.

Mr. MURPHY. Mr. President, may I ask the Senator for 3 minutes?

Mr. PROXMIRE. Mr. President, I would be glad to yield 3 minutes to the Senator from California if he would promise to support the amendment.

Mr. MURPHY. I have an idea that the amendment will be permitted to die before it is permitted to fly.

Mr. STENNIS. Mr. President, I yield 2 minutes to the Senator from California.

The PRESIDING OFFICER. The Senator from California is recognized for 2 minutes.

Mr. MURPHY. Mr. President, I assure the Senate that the members of the Armed Services Committee have gone into all of these matters quite thoroughly. I know from long experience that it is quite easy to get up on the floor and make a broad, sweeping statement that it would be much more efficient to do it in the Government.

I can only think of one bureau in the Government that operates with what I would consider to be a high degree of efficiency. That is the Passport Office, and that Office is gradually being destroyed by attacks made upon them.

Reference was made to the Marietta facility. I wonder if the Senator knows how that facility came into being and when and why.

The Marietta facility was the most efficient facility of its kind ever conceived and built in our history at the time. It is a mile-long facility line where the material would come up on railroad sidings and by a continuous assembly line would never stop until a B–47 aircraft rolled out.

I know something about it. I was there during production. I was there when the first B–47 rolled out. It does belong to the Federal Government. The Federal Government built it because it was badly needed at the time. It has been leased to the manufacturers. The Federal Government does not say, "Go down and help yourselves to the Marietta facility." It says use it well but pay rent.

I find a great deal of complaint with the operation of the Department of Defense, particularly over the last several years when weapons systems were researched and developed and got up to the point where production was to start and were then canceled. Billions of dollars were spent and wasted.

I will cite one example, the Sky Bolt. It was a good weapon. It was canceled. We were told it was inefficient and did not operate properly. That is not true. I happen to know that it was efficient and it did operate properly.

This is only one case of many weapons systems.

These are the things that bother me when the impression is given that somehow or other these companies have an idea that they will somehow or other fool the public, that there is some collusion between the companies and the Department of Defense, to be inefficient or cheat.

I can say with all frankness that I think one of the greatest department leaders in Washington is Assistant Secretary of Defense Packard.

Here is a man who started business in a garage with $600 of his own money. This is one of the greatest success stories in American history. We are most fortunate to have him on the job and we are also fortunate to have a man with the experience of the Secretary, Mr. Laird, who is most capable and experienced in these matters.

I am not now concerned that there will be too much money wasted. I think we are coming into an era in the Department of Defense where the American people will be getting the most for the American tax dollars spent. The rights of the American people and the needs of national security will be uppermost in the minds of the Department. I think the need for this amendment no longer exists.

Mr. President, I thank my friend, the Senator from Mississippi, for yielding.

Mr. STENNIS. Mr. President, I yield myself 5 minutes.

The PRESIDING OFFICER. The Senator from Mississippi is recognized for 5 minutes.

Mr. STENNIS. Mr. President, I think the issues here with reference to the amendment have been fairly well covered for the Senators, or at least in the RECORD. I say that with all charity to the Senator from Wisconsin as a legislator, and a very active one. I think that to write a report of this important provision into the law not only requires time, but the only sound way to approach the matter is by more study than has been given.

It is more or less admitted here that these terms do not have definite meaning in law or in science. It is shown here that some of them are merely budgetary terms. No one knows what advanced development means, for instance, the way it is used here, at least. There is no way to get around the fact that the idea would have to be defined.

This report has been filed for only a few weeks. By the way, I was at least one of those who discussed the matter with Mr. Laird soon after he came into office. We talked about the idea that a panel study ought to be made. I told him that the executive was the one to kick it off. In this vast enterprise that spends many billions of dollars every 12 months it is awfully hard to keep up with it. I know that it is very difficult for the committees to keep up with it.

I point out that in the past year the appropriation bill for the Department of Defense was completed by the Senate and the President signed it into law on December 20. The calendar year was virtually gone before we were ever able to get the appropriation bill finished and to the President so that he could sign it into law.

This panel study is valuable, but it is just a start. To become a part of the law

of the land requires further analysis by competent staff members and recommendations of some kind on the part of both the House and the Senate and on the part of our standing committees that work in this field all the time.

What I have in mind as chairman of that committee is to get started on the matter as soon as we can.

If we have a session following the November elections I would hope to get some hearings started during this calendar year. My idea was to ask Mr. Laird to come in and give us a statement in writing as to what he proposes to do about the suggestions raised by the entire panel, and we would be ready then to ask proper questions of Secretary Laird and other witnesses. Our staff would be ready to define any terms we saw fit to use in writing a report or writing any proposed legislation. I am sure the House of Representatives would follow the pattern I have outlined. Although I have not conferred with them that would be the logical approach. Then, we would have before the Senate and the House some proposed legislation that had been studied, developed, analyzed, and defined, and we would be able to advise this body of the impact of the legislation upon the Department of Defense with reference to contracts and with reference to every phase of this vast military program that is covered by whatever we recommended. In addition, there would be further facts developed.

If anyone did not agree with the committee he would have the facts and have something upon which to rest his position. As it is, here nobody knows just what this means. They do not know where to turn for further facts. Here is the panel report which states that they have not been able to complete all the information which backs up these recommendations.

That refers to the appendices I have referred to this afternoon. So I do not believe Senators want to just take the bit in their teeth and plunge on, even though there are good and meritorious points in the amendment.

To show how things look when they are viewed on the surface, this M–60A1 tank shows $56 million for procurement. The Senator from Wisconsin has been led to believe that was premature, whereas, in fact, that is the standby tank which has been in production for 8 years. It has a little research money here for making improvements.

The PRESIDING OFFICER. The time of the Senator has expired.

Mr. PROXMIRE. Mr. President, will the Senator yield on my time for a question?

Mr. STENNIS. Yes. But I would like to yield on the Senator's time for the question.

Mr. PROXMIRE. Mr. President, I yield myself 2 minutes.

The PRESIDING OFFICER. The Senator from Wisconsin is recognized.

Mr. PROXMIRE. On the tank matter, I was talking about the Shillelagh. This is the weapon, rather than the tank itself, on which we felt testing had not been completed before they moved into production.

Mr. STENNIS. In that case, the A–1 is the one the Senator referred to, but they attempted to put the Shillelagh on what was essentially the M–60A1 tank. It took some time in research and development, but it would not work so we just abandoned it. That was the whole story there, and they put the money on this regular tank, A–1, and they put the advance money in.

Mr. PROXMIRE. In reading from the committee report, it states:

> Work on the M60A1E2 started in 1965 and was to be a product improvement to the M60A1, primarily by adding a new turret and the 152 mm gun Shillelagh main armament system. Funds were provided in 1966 and 1967 for production, but the tanks were never assembled because of technical problems. The Army has requested $12.1 million to continue effort towards solution of the problems. The current investment in 300 tanks and 243 turrets totals almost $260 million and the Army estimates that about $110 million more is required.

My point is they went ahead with production of Shillelagh before they finished testing, before the bugs were worked out. That is what I was referring to.

Mr. STENNIS. I thank the Senator.

Mr. PROXMIRE. Mr. President, I yield myself such time as I may require.

Mr. President, earlier today the distinguished Senator from Colorado (Mr. DOMINICK) implied that this administration is not following the policy followed by the previous administration; and not following policies followed by Secretary of Defense McNamara, and that Mr. McNamara was primarily responsible for following a policy of moving precipitately into production before testing was completed.

I was referring to some of the requests that are contained in this bill by the present administration.

For example, at page 46 of the committee report, the committee recommends reduction in funds for the AIM–7F, stating that "the quantity is half that requested to permit additional development effort prior to a significant buildup in production."

It looks as if the Navy asked for production funds before it was fully tested. The committee refused to go along. I commend the committee. This is an example where the Pentagon was not following the "fly before you buy" principle.

On the Condor, the committee knocked out $28 million in procurement because the weapon needs more research and development. The Navy apparently asked for these funds before research and development was completed.

This amendment would provide assurance to Congress that we knew whenever the Department of Defense intended to proceed with production before testing had been completed. Although the Department of Defense objects to giving us this information, they never objected to the language of the amendment and never said they could not give us the information the amendment requires. They do say it would be premature and that they would prefer for various reasons not to have this requirement. But this requirement for information seems a minimum discipline the Congress should impose on a Department of Defense, regardless of the administration, a Department of Defense which has had a bad record of procurement and which has cost us billions of dollars.

Mr. MURPHY. Mr. President, will the Senator yield?

Mr. PROXMIRE. I yield.

Mr. MURPHY. In the event of the acceptance of the amendment, and if the report came to Congress and Congress considered it and decided that possibly there should be more research and development, or something else done, with regard to a certain weapon, what would be the procedure under the amendment?

Mr. PROXMIRE. That is a very good question. Simply filing the report would free the funds, regardless of the attitude of Congress; Congress would have the opportunity to cut the funds or permit them to go through; but Congress would be on notice that they are departing from the "fly before you buy" principle and Congress could take whatever course it saw fit. As the Senator from Colorado pointed out the notice of fully testing would not be appropriate in some cases, but we would know the situation and decide if we should appropriate funds for production or hold them up.

Mr. MURPHY. We have the example before us of the C–5A, and there has been a great deal of discussion about it. The report identifies it as a good airplane. The aircraft does everything it is supposed to do. In fact, I think its first exhibition was a remarkable demonstration. But we are now contending we want to cut back production of the airplane for all sorts of reasons.

We have an amendment I am told which would cut back money for the B–1. The distinguished chairman of the Subcommittee on Research and Development even suggested that with some rebuilding the B–52 would be reusable into the 1980's, and we should not proceed with the B–1. This, of course, is unthinkable in my opinion.

This is like saying, "We can get along with that old apple; just cut out the bad spots and there will be a little left to eat." We will be able to get by, maybe.

If this gets into a game where Members of Congress, are involved, many with expertise on this matter, but most of whom do not have expertise, who would decide if we go ahead or stop or how long should we hold it in obeyance while the Senate debated the matter?

In the meantime, what would happen to our national defense posture, which at this moment in history leaves a great deal to be desired?

Mr. PROXMIRE. The fact that we get this information does not mean we would delay the report. We would have information to determine whether or not we were going to go ahead. If a Senator were interested, he could ask his staff to study it in order to determine whether a departure from the "fly before you buy" principle was a right one. If it were not, he would make a motion to delete the funds. At the present time we are flying blind; we do not know. All I am asking is that we have the information. It would inform the country that in this

particular case the Pentagon was not following the "fly before you buy" policy.

The Secretary of Defense has announced to the country that this is the policy of the Department. He did so in a press conference. On the basis of that press conference and press releases lasting several days, it was announced that the "fly before you buy" concept was the Department's policy. If it is our policy, fine, but we ought to know when we are departing from that policy.

Mr. MURPHY. I do not think the actual statement was "fly before you buy." I think that was intended as a figure of speech. I think it was to indicate that the old inefficient policy was not going to obtain any more. But at the present time—regardless of the semantics involved or what the Secretary of Defense said, and I do not think the entire national security depends on what he may have said at a press conference—there is for instance total disagreement of opinion with regard to the B–1 program between the Senator from New Hampshire, chairman of the Research and Development Subcommittee, and the Senator from California. We are absolutely in disagreement. If the production of any weapon system were to be held up or have to wait until some date when one could convince the other who is right in these matters, it might become even more unfortunate than some of the experiences we are uncovering now.

Mr. PROXMIRE. As far as whether this is the policy of the Secretary of Defense is concerned, here is the story in an Arizona newspaper, which I am sure the Senator from Arizona will agree is a good and responsible newspaper. What does the headline say? "Pentagon To Buy No More Untested Planes." It is that plain and simple. That is what the Secretary of Defense said in a press conference in San Clemente. The article states:

> Secretary of Defense Melvin R. Laird said Monday that future defense contracts will be negotiated on a "fly before you buy" basis designed to prevent massive losses to taxpayers because of cost overruns.

That is what Secretary Laird said. That is his policy. If that is the policy, let us not depart from it. I suspect the Defense Department would like to depart from that policy rather often. We should insist that Congress and the public should know about it if they do depart from that policy. That is the only way to get efficient procurement. Let us find out what the deficiencies are and criticize them when they are wrong.

If we say, "No" to this amendment, we are saying "No" to information, and we are saying "No" to being informed and knowing what is going on.

I am certain that the Senator from California does not want to be in that position. I am sure he does not want the people of California to believe he does not care what the Pentagon is doing. We should know what it is doing.

Mr. MURPHY. I do not think the Senator from California has had any surprises in the matter of overruns or some of the unfortunate experience with some of the buys in the past. As I said earlier——

Mr. PROXMIRE. If the Senator from California has not had that kind of surprise, he is in an unusual position, because if what I am sure are sincere and honest people in the Pentagon who made the estimates and who were proved to be wrong—in some cases $1.5 billion wrong; in the case of the Mark–48 torpedo, it was estimated to cost $682 million and is now going to cost $3.5 billion—those Pentagon officials were not surprised by that, they were telling lies. They must have been surprised. They were the experts. They should have known. We authorized funds for those weapons systems on that basis.

I think we were all surprised when we learned the cost had so enormously increased.

That is what we are trying to get at, by picking out one of the principal elements that the Comptroller General and the Pentagon people themselves say is one of the primary reasons for the overruns—not the whole reason, but certainly one.

Mr. MURPHY. Do I understand that during the development of that particular torpedo the information was not available to Members of Congress and the members of the Armed Services Committee, that would indicate that a tremendous overrun would be expected?

Mr. PROXMIRE. I am sure that in the course of the years between the time the original estimate was made, in about 1963, and the time when the latest estimate was made, which is $3.5 billion, a few informed people knew somewhere along the line; but I am sure that there was a determination on the part of Members of Congress to go ahead with the system in part because they thought it was a good buy at that price.

The C–5A is the best example of this. As recently as April 1968 the Air Force told the Appropriations Committee that the costs were "right on target," and that it was not going to exceed the upper limit of the estimated cost. They were wrong by $2 billion. It was a plane that was in research and development a number of years. The Air Force should have known.

It was their best estimate. They must have been very surprised, if they were telling the truth, when they saw it. Certainly, the members of the Appropriations Committee were surprised, and I am sure they were later when they found out how they had misunderstood it.

Mr. MURPHY. It was my understanding that Congress at all times had been informed that there would be overruns.

Mr. PROXMIRE. Not in this case.

Mr. MURPHY. And that the C–5A was going to exceed the contract cost.

Mr. PROXMIRE. In the hearing before the House Appropriations Committee in March or April 1968 the Air Force assured the Appropriations Committee that the costs were "right on target," in response to a question by a member of the House Appropriations Committee.

Mr. MURPHY. I would like to see that. Both the question and the answer within the context of the examination.

Mr. PROXMIRE. I shall be happy to show the Senator that.

Mr. McINTYRE. Mr. President, will the Senator yield?

Mr. PROXMIRE. I yield.

Mr. McINTYRE. I get a little confused about the terms "cost overruns" and "cost growth."

How does the Senator see them? As both the same thing?

Mr. PROXMIRE. Yes. The difference between "cost overrun" and "cost growth" is that the Pentagon uses the term "cost growth," because "cost overrun" has had what the Pentagon considered an unfortunate connotation of inefficiency, incompetence, and poor estimating, and so forth. They felt that "cost growth" would more precisely reflect the argument that there is inflation involved and that there are other elements involved. It is strictly and wholly a matter of public relations semantics. We had their matter out before our Subcommittee on Economy in Government. It was discussed at great length. When this matter came up, it was pointed out that "cost overrun" was the term used by the Pentagon for years. Then they shifted to "cost growth" as a policy determination in 1969. As a matter of fact, they sent a memorandum out ordering members of the Defense Department, when they appeared before Congress and were talking to the press, not to use the term "cost overrun"; to use the term "cost growth."

Mr. McINTYRE. As the Senator from Wisconsin uses the terms, he seems to regard them as interchangeable. In my own mind, I think of "cost overrun" as applying to a contractual situation, such as the C–5A, where we find we have to go above the contract price. But when we talk about a weapons system, say the Mark 48, and the initial planning estimate turns out to be low for a series of reasons, that is "cost growth." The former deserves a negative connotation, the latter necessarily does not.

Mr. PROXMIRE. I am not saying that if there is an overrun it is not justified. It may well be justified. The Senator from New Hampshire knows a great deal about research and development. He has been a specialist in that subject for the past few years.

He may very well be right, that there is a technological problem involved that makes it almost inevitable that we have this colossal cost growth. But the term "cost overrun" has been used to apply to the difference between the original planning estimate, which for the Mark 48–Mod O initially was $628.4 million, and the current estimate, which is $3.89047 billion. That was a growing comparable cost increase of more than fivefold.

Mr. McINTYRE. Mr. President, I am going to end it here, but in the paper in which it was indicated that some 38 weapons systems had a substantial cost growth, it was called a "cost growth," and that made sense to me. A lot of things have happened; changes have been incorporated, new routes have been taken, and a higher degree of sophistication bred in.

But I notice that in the Senator's paper he talks about these 38 weapons systems, not as "cost growths" but as "overruns." That puts it, in the mind of the hearer, in a class something like the C–5A, and I do not think that is fair.

Mr. PROXMIRE. Well, you can explain the increases in either way; I do not think it matters. As the Senator knows, inflation has been allowed for in the initial estimate. Furthermore, the increase in wholesale prices and manufacturing prices has not been as large as in the cost of living.

I do think this cost overrun can be disputed in specific and individual situations. But we have had an enormous cost growth or overrun on weapons system after weapons system, and the Comptroller General and the Secretary of Defense say one principal reason for it is because we have moved into production before we have adequate testing. He says his policy is now to the contrary, and I say we should say to him, "If you depart from that policy in the future, let us know."

I do not want to be on record before the American people as having said to the Pentagon, when this amendment came up, "I do not care; you can do whatever you want to in that situation," and that seems to me to be what the argument against the amendment would imply.

Mr. President, I reserve the remainder of my time.

The PRESIDING OFFICER. Who yields time?

Mr. STENNIS. Mr. President, how much time remains for those in opposition to the amendment?

The PRESIDING OFFICER. The Senator from Mississippi has 10 minutes.

Mr. PROXMIRE. How much time do I have, Mr. President?

The PRESIDING OFFICER. The Senator from Wisconsin has 8 minutes.

Mr. STENNIS. Mr. President, I do not have notice of any other Senator wishing to use any time in opposition to the amendment.

Since we started this debate, some additional Senators have come in, and I want to repeat some points I made heretofore, Mr. President, specifically with respect to the situation about the F–14B.

The F–14A is the new Navy plane that has been criticized here as having gone too fast. But let us keep clearly in mind, Mr. President, that this F–14, the A version, was put together to take the place of the Navy version of the TFX, that never did work satisfactorily. So we found ourselves, years after the beginning, and at the time when it had been hoped to have gone into procurement, with an unsatisfactory plane, and Congress deleted that money, and, instead, put in money to begin the F–14.

It was really a kind of rush order, in a measure, by Congress, that the F–14 proceed as rapidly as possible. They moved into the A version, and we have almost completed whatever we will have to buy for the A version; on the F–14B, which is quite an improved version, they are already ahead of schedule on a revised and improved engine, and that is moving forward very rapidly, and almost all future F–14 planes will be the B version.

This illustrates very well that when you have emergency matters in connection with weapons, you have to move forward more rapidly than otherwise. At the same time, this tank weapons that was used as an illustration in favor of the Senator's amendment, I think, turns out to be very explainable, indeed. I shall not go over that again.

The major objections that have not been explained, to this amendment in its present form, are two. The first is that the mission, the panel that put all of these recommendations together, have not even had time yet to file with us the appendixes to their report, which give the benefit of their staff studies and staff recommendations.

Moreover, Congress has not had time to make any study of this panel report. The report has not been here but 5 or 6 weeks, and everyone knows what has been going on here during that short period of time. There has been no opportunity, even for staff members who were put to work on it immediately after it was filed, to complete their work on it. They need these appendixes, too. So, of course, we have not made any study or any recommendation. We have not had time to have hearings.

The committee already has in mind—and has had since the beginning, because committee members recommended this study—that just as soon as he can, Mr. Laird be called before the committee to testify with respect to the panel and what recommendations he proposes to make, and he will have to define his terms then, when he makes those recommendations. Our staff members will then have time to study the matter and go into questions that go to the very vitals of it, and they will have had time to define many of these terms, and then, for the first time, the legislative branch of this Government will be on its way.

We are not particularly trying to please Mr. Laird or the panel or anyone else. What we want is sound legislation in a field where I think some is needed, and that is what we will try to bring to the Senate floor: Sound recommendations that are explained, that are documented, where there will be analyses and definitions to back them up. There will be material, if we did not go far enough, where someone who wishes to push it farther will have a record to work on and testimony to support him; and those who think we go too far, if we do, will have a record to support them in efforts to cut it back. But it is through a process like that, and only through a process like that, that you get sound legislation.

We are not talking about making pitchforks or wheelbarrows, or even as simple a thing as an automobile. We are talking about many matters here as delicate as a Swiss watch, as to some of their components—all kinds of avionics and technical matters, all kinds of involved advanced methods, as exemplified by some of the marvelous weapons we now have, and some of the marvelous achievements of NASA in the moon shots and many other things they have done.

All of these things cannot be just stereotyped and set up as if we were sawing logs in a sawmill, or producing some of the ordinary instruments we are familiar with. It takes people who know the subject.

I want to make one further illustration. The term "weapons system" is used in this amendment a great many times. I am not being critical of the language, but this is legislation we are talking about now. These panel writers were talking about a report—just a Presidential report. We are talking about legislation, although the wording is the same. It is taken literally from this panel report, as I said, without explanation of meaning, without a report to back it up, without a legislative history, and without the good, fine points that the Senator from Wisconsin would be capable of if he had the time, of writing into this language and into the legislative history all the other things that go to make up a sound package or sound legislation.

I do not think that we are concerned here with what Mr. Laird believes or what Mr. Laird said, particularly, or what his predecessor said.

I know that the record does not look good with respect to some of these weapons systems. The so-called overruns in many cases, as the Senator from New Hampshire has said, are nothing but cost increases. Some of them are based upon figures that were improvidentially given in the first place, back in the early stages, when a weapon of a certain type was just a dream and no one could give anything that was an estimate of what it would cost.

Much later, after research and some development has transpired, is the first time, in my opinion, that one can make any figure in dollars that has the decency of being an estimate; and then, in times of inflation, increased wages, and everything else, one would have to tie to it certain well defined addenda that are part of those estimates.

When those tests are applied, a great many of these weapons come within the boundaries of estimates that were made after we had approached it.

The PRESIDING OFFICER. The time of the Senator from Mississippi has expired.

Mr. STENNIS. I thank the Chair.

I yield the floor.

Mr. PROXMIRE. Mr. President, I thank the distinguished chairman of the committee. He has a very great responsibility and discharges it extremely well, and he is always very fair and accurate in his statements.

I disagree strongly with the Senator from Mississippi. One of his arguments is that the Commission has not had time to file the appendices of the report, that Congress has not had time to study the report, that there has been no time for hearings, and that they would like to have Secretary Laird appear before the committee.

Mr. President, all these would be very good arguments if I were providing that we move into a particular kind of procurement, if I were imposing anything on the Pentagon except a report. What I am

doing is taking a principle of which the Secretary of Defense says, "This is what I am going to follow." He has told this to the country. He has told it as the New York Times headlined it: "Future Defense Contracts To Be Awarded in Stages." He has told it to the country in the Washington Post headlines: "Fly-Before-You-Buy Policy Set for Weapons Contracts." He has told them and every major newspaper in the country: In the Arizona Daily Star: "Pentagon To Buy No More Untested Planes." This is his policy. This is what he says he intends to do. He has assured the country of this, and the country believes that he is following that policy.

Mr. President, under these circumstances, it seems to me that we have a policy which is relatively simple. It is not a matter of being able to get a complex avionics system, as the Senator from Mississippi tells us. It is simply a matter of asking whether or not the Pentagon is following the policy it has announced as its policy. It would seem to me that this is the very least we can do in the mildest and most modest kind of discipline of a procurement system that obviously has gotten out of control. This amendment would not stop a single weapons system or delay it. All it does is call for a report at a time the production of a weapons system is funded, stating the extent to which the fly-before-you-buy policy has actually been applied to the particular system. Any Pentagon problem ends when the Pentagon provides this one-time report. They just report. Then the money is freed. Then we have information, however, on which we can determine whether or not we want to cut off funds for production, if we feel that the testing has not been adequate. But we have the information.

Senators who vote on this amendment should realize that if they vote "No," they are telling their constituents that they do not care whether the Pentagon has followed the fly-before-you-buy concept.

The Fitzhugh Commission strongly recommended this policy. It was one of their major recommendations. All it means is that testing and research should be finished before production begins. Get the bugs out before spending billions.

The Pentagon immediately embraced the recommendation. In fact, it claimed that it was already in effect. In a press conference on July 27, Secretary Laird said:

> Fly before you buy is a characterization of the kind of procurement policies we will be following in this administration . . .

But in the bill before the Senate, the Pentagon requested money for the production of weapon after weapon after weapon while research and testing were still going on.

Mr. President, procurement is still in a mess. The overruns on 38 major systems as of the latest report were $23 billion. Too much is spent on weapons which do not meet specifications, are years late in delivery, and cost far more than originally estimated. All this amendment does, as I have said over and over again, is to require a report. Are we afraid to get that information? Is the Pentagon refusing to give us this information on the ground that if they did, we might find that they are not following that policy and that we would be in a better position to criticize them? I do not blame the Pentagon for not wanting to be criticized. If I were Secretary of Defense, I would feel the same way.

I think that our job as Senators is to recognize where the waste is—and the waste has been enormous in going into production before finishing testing—and insist on the information, on the basis of which we can make an intelligent, informed decision on voting funds on these weapons systems.

I realize that when we have the opposition of the committee and of the committee members—and it is a very good committee—the Members of Congress have to be very careful in deciding whether to vote for an amendment which the committee opposes, particularly when they say, "All we want is time." But I do plead with the Senate to recognize that this is one very simple matter, this is not a matter of ratifying a comprehensive report which covers many enormously complicated things. I expect Secretary Laird to testify whether the Joint Chiefs of Staff, for example, should be removed, as the Commission recommends, from much of the power area and policy area which they have had in the past. There are many other recommendations in this report which are very profound and which require perhaps years, certainly many months of testimony and of study and of debate and discussion. But this amendment goes to one, only one principle which is simple, direct, and clear—one that the Secretary of Defense says that he, himself, has adopted.

It seems to me in this case that if we are going to move ahead with any kind of demonstration of concern, we ought to act promptly on an amendment that simply gives us information.

Mr. STENNIS. Mr. President, I ask for the yeas and nays on the amendment.

The yeas and nays were ordered.

Mr. STENNIS. Mr. President, a parliamentary inquiry.

The PRESIDING OFFICER. The Senator will state it.

Mr. STENNIS. What is the question now before the Senate?

The PRESIDING OFFICER. The question is on agreeing to the amendment of the Senator from Wisconsin (Mr. PROXMIRE).

The clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. RIBICOFF (when his name was called). On this vote I have a live pair with the Senator from Florida (Mr. GURNEY). If he were present and voting, he would vote "nay." If I were at liberty to vote, I would vote "yea." I therefore withhold my vote.

The rollcall was concluded.

Mr. BYRD of West Virginia. I announce that the Senator from Virginia (Mr. BYRD), the Senator from Nevada (Mr. CANNON), the Senator from Missouri (Mr. EAGLETON), the Senator from Mississippi (Mr. EASTLAND), the Senator from Tennessee (Mr. GORE), the Senator from Alaska (Mr. GRAVEL), the Senator from Oklahoma (Mr. HARRIS), the Senator from Michigan (Mr. HART), the Senator from Indiana (Mr. HARTKE), the Senator from Florida (Mr. HOLLAND), the Senator from Massachusetts (Mr. KENNEDY), the Senator from Montana (Mr. MANSFIELD), the Senator from Minnesota (Mr. MONDALE), the Senator from New Mexico (Mr. MONTOYA), the Senator from Utah (Mr. MOSS), the Senator from Maine (Mr. MUSKIE), the Senator from Georgia (Mr. RUSSELL), the Senator from Missouri (Mr. SYMINGTON), and the Senator from Maryland (Mr. TYDINGS) are necessarily absent.

I also announce that the Senator from Nevada (Mr. BIBLE) and the Senator from Wyoming (Mr. MCGEE) are absent on official business.

On this vote, the Senator from Nevada (Mr. CANNON) is paired with the Senator from Alaska (Mr. GRAVEL).

If present and voting, the Senator from Nevada would vote "nay" and the Senator from Alaska would vote "yea."

On this vote, the Senator from Florida (Mr. HOLLAND) is paired with the Senator from Oklahoma (Mr. HARRIS).

If present and voting, the Senator from Florida would vote "nay" and the Senator from Oklahoma would vote "yea."

On this vote, the Senator from Mississippi (Mr. EASTLAND) is paired with the Senator from Michigan (Mr. HART).

If present and voting, the Senator from Mississippi would vote "nay" and the Senator from Michigan would vote "yea."

Mr. GRIFFIN. I announce that the Senator from Tennessee (Mr. BAKER), the Senator from Oklahoma (Mr. BELLMON), the Senator from Arizona (Mr. FANNIN), the Senator from Hawaii (Mr. FONG), the Senator from New York (Mr. GOODELL), the Senator from Florida (Mr. GURNEY), the Senator from Oregon (Mr. HATFIELD), the Senator from Maryland (Mr. MATHIAS), the Senator from Vermont (Mr. PROUTY), the Senator from Alaska (Mr. STEVENS) and the Senator from South Carolina (Mr. THURMOND) are necessarily absent.

The Senator from Wyoming (Mr. HANSEN) is absent on official business.

The Senator from South Dakota (Mr. MUNDT) is absent because of illness.

If present and voting, the Senator from Hawaii (Mr. FONG), the Senator from Wyoming (Mr. HANSEN), and the Senator from South Dakota (Mr. MUNDT) would each vote "nay".

The pair of the Senator from Florida (Mr. GURNEY) has been previously announced.

On this vote, the Senator from New York (Mr. GOODELL) is paired with the Senator from South Carolina (Mr. THURMOND). If present and voting, the Senator from New York would vote "yea" and the Senator from South Carolina would vote "nay".

On this vote, the Senator from Oregon (Mr. HATFIELD) is paired with the Senator from Arizona (Mr. FANNIN). If present and voting, the Senator from Oregon would vote "yea" and the Senator from Arizona would vote "nay".

The result was announced—yeas 22, nays 43, as follows:

[No. 258 Leg.]

YEAS—22

Aiken	Metcalf	Smith, Maine
Bayh	Nelson	Smith, Ill.
Case	Packwood	Spong
Cooper	Pastore	Williams, N.J.
Fulbright	Pell	Williams, Del.
Hughes	Proxmire	Young, Ohio
McCarthy	Randolph	
McGovern	Schweiker	

NAYS—43

Allen	Dominick	McIntyre
Allott	Ellender	Miller
Anderson	Ervin	Murphy
Bennett	Goldwater	Pearson
Boggs	Griffin	Percy
Brooke	Hollings	Saxbe
Burdick	Hruska	Scott
Byrd, W. Va.	Inouye	Sparkman
Church	Jackson	Stennis
Cook	Javits	Talmadge
Cotton	Jordan, N.C.	Tower
Cranston	Jordan, Idaho	Yarborough
Curtis	Long	Young, N. Dak.
Dodd	Magnuson	
Dole	McClellan	

PRESENT AND GIVING A LIVE PAIR, AS PREVIOUSLY ANNOUNCED—1

Ribicoff, for.

NOT VOTING—34

Baker	Gurney	Montoya
Bellmon	Hansen	Moss
Bible	Harris	Mundt
Byrd, Va.	Hart	Muskie
Cannon	Hartke	Prouty
Eagleton	Hatfield	Russell
Eastland	Holland	Stevens
Fannin	Kennedy	Symington
Fong	Mansfield	Thurmond
Goodell	Mathias	Tydings
Gore	McGee	
Gravel	Mondale	

So Mr. PROXMIRE'S amendment (No. 816) was rejected.

Mr. STENNIS. Mr. President, I move to reconsider the vote by which the amendment was rejected.

Mr. GRIFFIN and Mr. DOMINICK moved to lay the motion on the table.

The motion to table was agreed to.

SENATE JOINT RESOLUTION 230—INTRODUCTION OF A JOINT RESOLUTION EXTENDING THE DURATION OF COPYRIGHT PROTECTION IN CERTAIN CASES

Mr. McCLELLAN. Mr. President, I introduce and send to the desk a joint resolution, and ask unanimous consent for its immediate consideration.

The PRESIDING OFFICER. The joint resolution will be stated by title.

The legislative clerk read as follows: A joint resolution extending the duration of copyright protection in certain cases.

The PRESIDING OFFICER. Is there objection to the present consideration of the joint resolution?

There being no objection, the Senate proceeded to consider the joint resolution (S.J. Res. 230) which was read the second time by its title.

Mr. McCLELLAN. Mr. President, as chairman of the Subcommittee on Patents, Trademarks and Copyrights of the Committee on the Judiciary, I introduce for myself, the Senator from Michigan (Mr. HART), the Senator from North Dakota (Mr. BURDICK), the Senator from Pennsylvania (Mr. SCOTT), and the Senator from Hawaii (Mr. FONG) a joint resolution extending the duration of copyright protection in certain cases.

The purpose of this legislation is to continue until December 31, 1971, the renewal term of any copyright subsisting on the date of approval of this resolution, or the term as previously extended by Public Law 87-668, Public Law 89-442, Public Law 90-141, Public Law 90-416, or Public Law 91-147. The objective of this resolution, as well as the preceding interim extensions, is to temporarily continue the renewal terms of copyright pending the enactment by the Congress of a general revision of the copyright law, including a proposed increase in the copyright term.

It is now apparent that this Congress cannot complete action on the legislation for general revision of the copyright law, regardless of whether the session is resumed in November. The subcommittee reported the revision bill on December 10, 1969, to the Judiciary Committee, but the committee has yet to act. After consultation with the other members of the subcommittee it has been decided that no useful purpose would be served by seeking further action in the Senate on the bill during this session. Accordingly, all the members of the subcommittee are joining as cosponsors of this joint resolution.

The failure of this Congress to enact the copyright revision bill can be attributed in part to the many ramifications of the cable television issue. Section 111 of S. 543, the copyright revision bill, relates so the copyright liability of secondary transmissions by cable television systems. This section reflects a middle ground within the subcommittee and, in my opinion, represents a reasonable balance of the interests of the public, copyright proprietors, conventional broadcasters and the cable industry.

Prior to the drafting of this section I requested the Federal Communications Commission in 1969 to advise the subcommittee as to the Commission's recommendations. The Commission responded on February 17, 1969, that the CATV section of the copyright bill should be a meld of both copyright and communications policies. On March 11, 1970, the Commission announced that they were opposed to the inclusion in the copyright bill of provisions on the very subjects, such as the relationship between the copyright law and adequate television service to the public, which they previously said must be included in the copyright bill.

On June 24, 1970, the Commission adopted a notice of proposed rulemaking covering certain of the issues involved in section III as well as a number of CATV communication issues. The Commission has set November 23 as the final date for comments on the proposed rules. The Commission apparently now recognizes its responsibility to proceed expeditiously toward the adoption of appropriate rules so that the public may more fully enjoy the benefits resulting from cable television. The Chairman of the Federal Communications Commission has assured me that the Commission will make every effort to complete the rulemaking process by the end of this calendar year. The Commission has also indicated, however, that the implementation of certain of the rules, including those relating to improved television service to the public and the importation of certain distant signals, must await action by the Congress to resolve the CATV copyright question.

Accordingly, it is anticipated that by the time the 92d Congress convenes the FCC will have promulgated the necessary rules relating to the carriage of broadcast signals by cable systems, and associated matters. This should facilitate action by the next Congress on the CATV provisions of the copyright bill.

I have reviewed the proposed rules contained in the Commission's public dividend plan. It appears that the Commission now is seeking the same objectives sought by the subcommittee in section 111. I believe, however, that the subcommittee proposal is more workable and equitable. Section 111 recognizes that in certain situations it is desirable to protect the interests of broadcasters who have acquired the exclusive right to perform a particular copyrighted work in a certain market. Accordingly, it grants limited protection to such broadcasters and places certain restrictions on cable systems importing such programs. The Commission's proposed rules would give no protection to broadcasters who have acquired exclusive rights but proposes as an alternative a complex scheme whereby the commercials on the imported programs would be deleted and replaced by the commercials appearing on the local UHF stations. The purpose of this plan is to produce revenues for UHF stations which it is claimed may be harmed by the competition with imported signals carried by a cable system. Many experts in the communications industry who have commented on this provision of the public dividend plan have described it as unworkable. It is said that the costs of the necessary equipment and other expenses would absorb much of the anticipated revenues. I believe the Commission would be better advised to adopt rules based on the concepts contained in section 111.

I also have serious reservations concerning those provisions of the proposed rules requiring operators of cable systems to pay 5 percent of their subscription revenues to the Corporation for Public Broadcasting and local public broadcasting stations. It is not clear why cable television should be required to subsidize public broadcasting.

The FCC has indicated that the amount of copyright fees to be paid by cable systems should be determined by the Congress but the Commission has suggested a fee schedule for the consideration of the Congress. The payments provided under this schedule are generally in accord with the fee schedule contained in section 111. The Commission has attached great importance to the necessity for periodic review and possible adjustment of any statutory CATV-fee schedule. The subcommittee

had previously come to the same conclusion and, therefore, added to the copyright bill a new chapter 8 establishing a Copyright Royalty Tribunal to periodically review not only the CATV rates but all the statutory fees specified in the bill. This is a very useful provision which will permit adjustment of royalty rates to reflect changed conditions.

I stated in the Senate last August 5 that the failure to act on the pending copyright bill "would raise a very real prospect—that the entire revision effort may well collapse." I regret that this is a real possibility. The Copyright Act of 1909 is clearly inadequate to the country's needs. Authors, composers, recording artists, and other creators have the right to expect the Congress to enact a viable and progressive copyright law that will promote the constitutional purpose of encouraging and rewarding their contributions to the well-being of the Nation.

When I was initially elected to the House of Representatives in 1934, I served on the Committee on Patents. One of the first committee hearings in which I participated was on legislation to repeal the copyright exemption of the jukebox industry. In 1970 the Congress is still debating that issue.

The Subcommittee on Patents, Trademarks, and Copyrights, despite many difficulties, reported a comprehensive copyright bill which, as a whole, warrants the support of the Senate. I intend to introduce a successor bill in the next Congress, and it is to be hoped that it can be promptly processed by the subcommittee. Consideration can thus resume in the Committee on the Judiciary at the point where proceedings are now being suspended.

The subcommittee, with the cooperation of all the members, has discharged its responsibilities. The House of Representatives has passed a bill. The fate of copyright law revision in the next Congress rests to a considerable extent with the Committee on the Judiciary and the Senate.

Mr. President, I have talked with the leadership on both sides of the aisle about the joint resolution. It simply extends again the protection of copyrights for another year, until such time as, hopefully, we can pass a copyright bill. I know of no opposition to the joint resolution.

The PRESIDING OFFICER. The joint resolution is open to amendment.

If there be no amendment to be proposed, the question is on the engrossment and third reading of the joint resolution.

The joint resolution was ordered to be engrossed, and to be read a third time.

The joint resolution was read the third time, and passed, as follows:

S.J. RES. 230

Resolved by the Senate and House of Representatives of the United States of America in Congress assembled, That in any case in which the renewal term of copyright subsisting in any work on the date of approval of this resolution, or the term thereof as extended by Public Law 87–668, by Public Law 89–442, by Public Law 90–141, by Public Law 90–416, or by Public Law 91–147 (or by all or certain of said laws), would expire prior to December 31, 1971, such term is hereby continued until December 31, 1971.

MILITARY USE OF HERBICIDES

Mr. NELSON. Mr. President, on July 16, I introduced the environmental warfare amendment to the pending bill before the Senate, the military authorization bill for procurement. The amendment would terminate our tactical military use of herbicides in Vietnam and elsewhere. It would also prohibit the transfer of chemical agents and requisite equipment to any other nation for such use.

Yesterday, an article appeared across the Nation on the U.S. herbicide program in Southeast Asia. The author, Mr. Seymour Hersh, Pulitzer Prize winner, raised a question of grave concern over the acknowledged defoliation of 173,000 acres in the Fish Hook area of Cambodia in 1969. In essence, the author has accurately stated that the State Department has declared that the United States was not responsible and that they did not know who was responsible. Yet, the article quotes Mr. Thomas R. Pickering, Deputy Director, Bureau of Political-Military Affairs, Department of State, as declaring before a House of Representatives subcommittee that the "damage was caused by a deliberate and direct overflight."

One must wonder how the State Department can determine the intent of the defoliation incident if it has officially declared that the origin is unknown. This presents significant contradiction on an important matter that ought to be resolved by appropriate congressional hearings.

Also, in an article appearing in the Philadelphia Bulletin, Mr. J. Regan Kerney pointed up other issues on environmental warfare which I intend to discuss when the environmental warfare amendment is called up for a vote. He states:

> Through its (herbicidal warfare) psychologically demoralizing effects, defoliation may have created more Viet Cong than it has destroyed.

Mr. Kerney, who has studied the U.S. defoliation program in Vietnam for 10 months, also pointed out—

> In Ho Nai Village, which has been sprayed at least twice since 1967, the reporter (Mr. Kerney) found reports that 30 percent of the people became sick with migrane headaches and nausea, classical symptoms of reactions to herbicides, following an accidental spraying in 1969.
>
> Villagers also reported six stillbirths and mortality in one third of their animals following the spraying. He said the dogs were puny and stunted for two months before death, another herbicide symptom.

These two columns raise several important issues about environmental warfare.

Mr. President, I ask unanimous consent that the articles of Mr. Hersh, published in the Washington Star, and Mr. Kerney's published in the Philadelphia Bulletin, be printed in the RECORD at this point.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the Washington Star, Aug. 16, 1970]

CAMBODIAN DEFOLIATION LAID TO UNITED STATES

(By Seymour Hersh)

A mysterious American defoliation attack on a group of Cambodian rubber plantations in 1969 may emerge as a pivotal issue in the upcoming Senate debate on America's much-criticized anti-crop chemical warfare program in South Vietnam.

The incident suggests, once again, a great disparity between what commanders think is going on in the field and what actually happens.

No U.S. official has admitted that the spraying took place, although the State Department is now in the process of settling a multimillion dollar damage claim resulting from the attack.

UNCONTESTED FACTS

The uncontested facts, now being studied by a number of anti-war senators, are these:

In April and May 1969, the U.S. Air Force carried out a number of extensive defoliation missions in South Vietnam's Tay Ninh province bordering the Fishhook area of Cambodia.

On May 5, 1969, the U.S. Government became aware of a charge by Cambodia that about 173,000 acres, many containing rubber trees, had been severely damaged by defoliation spread by U.S. planes.

Much of the damage was centered on three French-owned rubber plantations about 12 miles from the South Vietnamese border. At the time of the attack U.S. policy explicitly forbade any defoliation missions outside South Vietnam.

PROBE ORDERED

A four-man U.S. investigating team, including top defoliation expert from Ft. Detrick, Md., the U.S. biological warfare center, was sent to make an on site investigation in July 1969. Their report, filed with the U.S. Embassy in Saigon on July 12, concluded that crop-spraying had damaged about 70,000 acres, about 35,000 of them fertile rubber and fruit tree acreage.

Along with its formal complaint, the Cambodian government sought reparations of $8.6 million (later raised to $12.2 million).

The U.S. advisory team's report make clear that drifting of defoliants stemming from the spraying in Tay Ninh could not be the cause of the heavy damage to the rubber plantations.

DIRECT OVERFLIGHT

"The evidence we have seen, though circumstantial, suggests strongly that damage was caused by direct overflight," the report said. It did not suggest who might have sprayed the defoliants.

Six months later, an ad hoc international scientific commission composed of French and American scientists visited the damaged areas and reported that the herbicide used was a mixture of 2,4–D and 2,4,5–T, a chemical with the code name "Agent Orange" that had been widely sprayed by U.S. planes in South Vietnam. It noted the reduction of as much as 40 percent of the rubber yield in affected areas.

The commission reported that "there is, of course, no question that the responsibility for the extensive herbicidal damage we have observed in Cambodia rests upon the United States. Only the United States has the ability and material locally to carry out such operations."

SEVEN PLANES

The scientists estimated that a direct low-level overflight of at least seven planes, each carrying a payload of 7,900 pounds of Agent Orange, took part in the mission. They quoted local residents who had watched the planes spray the plantation during an early morning attack.

"We conclude," the scientist said, "that it is highly likely that the overflights were a deliberate violation of the Cambodian frontier." All sources interviewed agreed that rubber plantations are easily distinguished from the air and could not have been sprayed by accident.

The scientists' conclusions were buttressed by a high State Department official during testimony before Congress in December 1969. Thomas R. Pickering, Deputy director of the Bureau of Politico-Military Affairs, told the House Subcommittee on National Security Policy and Scientific Developments that "the damage was caused by a deliberate and direct overflight of the rubber plantations."

NO MISSIONS TARGETED

Pickering added, however, that "there were no U.S. missions targeted for the Cambodian areas involved, nor were the investigators able to determine that any U.S. aircraft were directly involved in spraying these areas."

But many officials on Capitol Hill and in the State Department have concluded that a group of U.S. airplanes staged the attack and that it was unauthorized—at least at higher headquarters.

The Pentagon has repeatedly denied any knowledge of the attack. U.S. headquarters in Saigon made a detailed investigation that lasted several months in 1969, but the Pentagon later said there was no evidence that U.S. planes were involved.

THREE REASONS

A State Department source suggested that there might have been three reasons for the military to stage the attack—to defoliate a known Viet Cong sanctuary; as a purely punitive action against Prince Sihanouk, who was then in power, and as a puntive action against the French plantation owners and operators, who were believed to be cooperating with the North Vietnamese.

The incident is sure to be cited when the Senate considers an amendment to the pending military procurement bill that would prohibit the use of herbicides and defoliants by the military. The amendment, offered July 16, is authorized by Sens. Gaylord Nelson, D—Wis., and Charles Goodell, R—N.Y., and sponsored by at least nine other anti-war senators.

One source said the Senate Foreign Relations Committee might be interested in "looking into who did this, and why. If the State Department is willing to pay reparations so quickly, why can't we say we did it?"

[From the Philadelphia Bulletin, Aug. 16, 1970]

DEFOLIATION IN TROUBLE; SENATORS WANT TO KILL IT

(By J. Regan Kerney)

(EDITOR'S NOTE.—Bulletin reporter J. Regan Kerney has studied the U.S. defoliation program in Vietnam for 10 months. Following interviews with officials, scientists and civilians in the U.S. and South Vietnam, here is his analysis of the program and its fate in the Senate this week.)

The U.S. defoliation program in Vietnam is in trouble.

This week, eight years and 50,000 tons of chemical herbicides after its birth, herbicidal warfare may receive a fatal blow on the floor of the U.S. Senate because of a three-sentence amendment to the Military Authorization Bill for Procurement, which has passed the House.

If the amendment is passed, it would go back for approval to a joint conference of members of the Armed Services Committees of both branches of Congress, when the House reconvenes. But passage in the Senate is expected to mean final approval, according to a Senate aide.

The amendment, sponsored by Sens. Gaylord A. Nelson (D-Wis) and Charles E. Goodell (R-NY), would eliminate herbicidal warfare, direct or indirect, anywhere in the world by U.S. forces. The Pentagon is expected to fight hard for the program.

Ranch Hand—or Haedes, as defoliation was once known—has sprayed over 5,070,800 acres of Vietnamese rice paddies and jungles to deny food and cover to Communist forces.

Defoliation was hindered toward the end of the Cambodian operation, in June, when much of equipment used by the 12th Air Commando Squadron's Operation Ranch Hand was used for transporting arms.

But defoliation has continued, and this year the Pentagon wants more money to buy defoliants.

Its critics have several strong arguments:

That defoliation has upset Vietnam's ecological balance.

That spraying rice crops has denied food not to the Viet Cong, but to neutral civilians.

That through its psychologically demoralizing effects, defoliation may have created more Viet Cong than it has destroyed.

And that one of Ranch Hand's herbicides has caused hundreds—maybe thousands—of stillborn or malformed babies.

EVIDENCE AGAINST THEM

The Pentagon denies the charges and argues that removing the thick cover from Vietnam's dark jungles has increased visibility, prevented ambushes and probably saved thousands of GI's lives.

But the evidence is stacked up against Ranch Hand. Two studies within the past year have shown that an impurity in one defoliant, 2, 4, 5-T, causes birth defects in mice and rats. One estimate holds the impurity to be a million times more powerful than thalidomide, a tranquilizer that malformed fetuses of pregnant women.

Use of 2,4,5-T was suspended in April, and a Pentagon official told congressional sources last week that its use would not be resumed but the damage is done.

Now other studies reportedly are finding similar defects caused by another defoliant, 2,4-D, and Ranch Hand's critics are asking what will happen if other herbicides turn out equally disastrous, but, like thalidomide, go unnoticed until it is too late.

This week, the Pentagon may fall back on a new study, being prepared jointly with the South Vietnamese Ministry of Health, that reportedly shows no increase in stillbirths or malformations due to defoliation.

SKETCHY RECORDS

The problem with the report is that it is based on birth and health records in Vietnamese hospitals near Saigon, where accurate health files seldom are kept. Few Vietnamese women go to hospitals to have their babies anyway, and fewer report stillbirths.

Two of the Pentagon's main defenses of Ranch Hand are that populated areas are never sprayed and that all damage is compensated for.

But in several villages 20 miles north of Saigon, near Bien Hoa Air Base, surveys last spring by The Bulletin and The New York Times indicated severe health problems due to herbicides.

In Ho Nai Village, which has been sprayed at least twice since 1967, this reporter found reports that 30 percent of the people became sick with migraine headaches and nausea, classical symptoms of reaction to herbicides, following an accidental spraying in 1969.

ANIMAL DEATHS

Villagers also reported six stillbirths and mortality in one third of their animals following the spraying. A liquid vendor reported two of his dog's puppies had died after another alleged spraying. He said the dogs were puny and stunted for two months before death, another herbicide symptom.

The vendor, and others, said herbicides often drift over Ho Nai when the Air Force sprays its security perimeter at the nearby air base. Ranch Hand officials say they check wind conditions before each spraying, and contend there is no spray drift.

The villagers of Ho Nai, mostly fiercely anti-communist North Vietnamese Catholic refugees, say they have received no compensation for their lost crops and animals. They are bewildered and say the spraying is hurting them.

That is one reason why Ranch Hand's congressional critics will stand a good chance this week to end what one called herbicidal genocide.

AUTHORIZATION OF APPROPRIATIONS FOR MILITARY PROCUREMENT AND OTHER PURPOSES

The Senate resumed the consideration of the bill (H.R. 17123) to authorize appropriations during the fiscal year 1971 for procurement of aircraft, missiles, naval vessels, and tracked combat vehicles, and other weapons, and research, development, test, and evaluation for the Armed Forces, and to prescribe the authorized personnel strength of the Selected Reserve of each Reserve component of the Armed Forces, and for other purposes.

Mr. GOLDWATER. Mr. President, at the outset of this discussion on the military authorization bill I said that from time to time I would discuss different weapon systems, particularly those which I feel more competent to discuss, weapons systems of the Air Force. I should like to discuss briefly today the aircraft that started out known as TFX and then became known as the F–111, which will now carry a designation of B–111 as that aircraft moves into the Strategic Air Command inventory.

I think we have to recognize the difficulties that this weapon system has gone through, I might say through no fault of its own. It started out wrong when the contract was given to the highest bidder. I say that without any reflection on General Dynamics or Boeing, because they are both well recognized in the field of aviation and aviation development and manufacture. But right from the start, Mr. President, there was a question raised, I might say not by the Armed Services Committee but by other committees, as to the propriety of that award. But let us forget about that. We have gone through a number of years now having this airplane in our inventory, and it has suffered some real damage in the minds of the public because of spectacular accidents.

Not facetiously, I suggested to the Chief of the Air Force some time ago that if they changed the identification of the aircraft, the public would forget the troubles it has had. But the truth is that this airplane, the F or B–111 has had as good an accident rate—in fact, for a long while it was running better—than any other jet fighter or jet bomber, and it still maintains an accident record that is equal to that of any other aircraft in the field.

Mr. President, the worst of these accidents occurred last December when a wing came off, and it was then decided by the Air Force—a decision concurred in by the Armed Services Committees of both Houses, after discussion—that it would be wise to take the aircraft out

of inventory, develop astatic and other sophisticated test systems, and test every aircraft in the program.

Mr. President, as I go along I intend to discuss the testing program for the benefit of my colleagues.

The original primary function was that of a multipurpose fighter. Since that time, this original or primary function has been changed to one of interdiction by the Tactical Air Command and strategic bombing by the Strategic Air Command.

The prime contractor, as I noted, was General Dynamics. Its powerplant, which has since been modified to a small extent and will be modified more, consists of two Pratt and Whitney PF 30–T–3 turbojet engines, that put out a little more than 20,000 tons of thrust each. The dimensions of the airplane are as follows: Its wingspan is 31 feet 11 inches retracted, and 63 feet extended. The length of the airplane is 73 feet 6 inches, and it stands 17 feet high.

Its speed originally was to be mach 2.5, or two and one-half times the speed of sound, which gets us up to around the 1,600 or 1,700 mile range, but it has since been reduced to 2.3. It was to have had a service ceiling of about 60,000 feet, and I feel confident this will be achieved. It has a long range, and the capability of being refueled.

Its armament is conventional weapons, including air-surface tactical missiles and rockets. The crew is of two—one service will use two pilots, another service will use two rated personnel. One will be a pilot, the other does not necessarily have to fit that description.

The status is that all of the aircraft came out of inventory and were returned to General Dynamics at Fort Worth for testing. They are now coming out of the tests, but I shall return to that later.

As I have done on other weapons systems, Mr. President, I assigned myself the sometimes unpleasant task, but a task that I think must be accomplished, of criticizing the report on military spending by Members of Congress for Peace Through Law, which was released on July 15 of this year. I now address myself to that report.

The report suggests that we discontinue our present emphasis on deep interdiction—enemy airbases—because of the relatively low payoff and the high attrition.

Admittedly, the disadvantages of fighting over enemy territory may include increased loss rates; however, there are also distinct advantages in carrying the air battle to the enemy territory. Mounting offensive air strikes over enemy territory tends to force the hostile air force into a defensive role. Attacking the enemy aircraft on the ground keeps those enemy aircraft from attacking friendly ground forces. Thus, the influence of enemy air on the ground battle is reduced.

In a counter air battle it is preferable to kill the enemy aircraft on the ground where they are in a purely passive posture. The F–111 can fly far enough to strike virtually all the targets in the European theater. This advantage can be used either to strike airfields well beyond the ground battle or to base the F–111 beyond the effective range of enemy tactical aircraft.

Attrition is an important consideration, but it should be viewed in the context of the expected exchange ratio, which is derived from losses which might occur to each side. An Air Force study shows that a highly favorable exchange ratio can be expected when hostile airfields in Europe are attacked, even using current conventional weapons. This exchange ratio can be substantially improved using certain new weapons specifically designed to destroy enemy aircraft in shelters.

Attacking enemy airfields at night and in bad weather can be an important factor in a counterair campaign. In many parts of the world, weather conditions are likely to constrain daylight, visual attacks on airfields. In eastern Germany, for example, daylight visual attacks requiring an 8,000-foot ceiling with 5 miles visibility are possible only 37 percent of the time. This calculation is based on a yearly, 24 hour average basis with a corresponding figure of approximately 20 percent if the requirement for daylight conditions is added. Night and bad weather affect the posture of enemy air forces as well. Because the majority of the enemy fighters are equipped only for day visual flight conditions, these fighters will be, necessarily, on the ground during night and bad weather. In addition, the enemy fighters with night and all-weather capability will be restricted to operating from major airfields where instrument approaches are available.

Thus, an even more lucrative target system—that is greater number of aircraft per airfield—occurs during nighttime and bad weather conditions. The enemy has recognized this vulnerable aspect of his air forces and has made significant efforts to improve the defense of his airfields and provide sheltering for his aircraft. The United States, in turn, has designed the F–111 to emphasize penetration of advanced defenses and is developing weapons to cope with the shelters.

The demonstrated F–111 radar bombing capability is more than adequate to strike airfields at night and during bad weather. This capability is unique to the tactical air forces of the United States. That is, the F–111 has the capability to strike at enemy airfields at night and bad weather but the enemy would be restricted to striking our airfields during that fraction of the time when visual attacks can be made. The F–111 can penetrate enemy territory at low altitude beneath the hostile radar coverage, thus denying the enemy usable knowledge of its exact location. In addition, bad weather and darkness preclude effective use of visually aimed antiaircraft weapons.

Mr. President, the reason we can say this with the degree of confidence that we do is a relatively new development called terrain-following radar, or, as we sometimes hear it, TFR. To our knowledge, this has never failed; if it has failed in actions not yet reported, we have no knowledge of it.

All it is, in effect, is a radar coupled with the automatic pilot system, that will fly the aircraft at any altitude above the terrain from 200 feet to a thousand feet, in increments chosen by the pilot. It is a very effective instrument. The low radar visibility of this airplane traveling at high speeds at 200 feet makes it almost impossible for it to be picked up by enemy radar.

In summary, by capitalizing on capabilities not possessed by the enemy—night, all-weather strike—and on capabilities where we possess a significant advantage—range and payload—we can seize the initiative in a counter air campaign. By being able to strike at will at the enemy air forces we can control the air battle. The F–111 is key to providing this capability for our future tactical air forces. I might say, also, that it will make a fine carry-on bomber for the period of time when the B–52 is beginning to show signs of giving out and the time when we will receive the B–1 into our total inventory.

So much for my comments on the Committee for Peace Through Law.

I should like now to remind the Senate that in the committee report, in section 503, we have this language:

> Prior to the obligation of funds, the Secretary of Defense must determine that the aircraft has successfully completed a comprehensive structural integrity test program. In approving a program for the procurement of such aircraft, the Secretary must certify in a written report to the Committees on Armed Services of the House and Senate that the structural test determination was made and indicate the basis for his determination and approval of the program. In other words, there must be sufficient testing to assure that the aircraft is completely airworthy and structurally sound.

Mr. President, I certainly do not pose as an aviation expert by any manner, shape, or form, even though I have been at it for more than 40 years. But it is my privilege to have flown this aircraft—the early model about a year and a half ago, before testing, and the other just a week ago, which plane was being tested for the Strategic Air Command and will be delivered to them. I have to say that even though I was most enthusiastic about the ride a year and a half ago, I would compare the ride this year to driving a Cadillac and a Model T Ford, the improvements have been so great.

During the time this aircraft was hauled in for static testing and other exotic testing, the Air Force and General Dynamics had an opportunity to modify it, to improve many systems that would have had to be improved later; and, in general, I think the airplane is much better off for having had the decision made to test it, even though at the time I felt that the waste of four aircraft to pay for the static test system would prove to be a rather hard to accept loss on the part of the Air Force.

Mr. President, they were on contract for 540 of these aircraft. The factory has completed 358, 262 have been flown, 233 were contractually accepted, and flight test aircraft in operation number 20. Delivery of the last of the 540 aircraft calls for accomplishment in July of 1972.

Now, to report on the special inspection and cold proof test program. I might say that this is a static test which imposes a positive G force of 7.3, which is 7.3 times the total weight of the aircraft. The cold or frigidly cost test—in fact, both of these static tests—is done in extremely cold conditions of 3.2. There are 374 aircraft in the program. As of August 10 of this year, we had completed the cold proof test on 67, had flown 20, and had delivered six, and the schedule for completion is March 1 of next year.

Other significant tests are as follows:

Preproof test No. 1, 68 inspected; no forging defects have been found.

Postproof test No. 1, five have been inspected; no forging defects have been found.

Postproof test visual inspection, 51 have been tested; no forging defects have been found.

It is very, very encouraging to realize that not a single evidence of a forging defect has been found in the number of aircraft tested. I might state that we do not subject other aircraft to this type of static test. As I said earlier, I had some doubts as to the wisdom of it. I think that now that we have had such success with the program, the Air Force might well consider going to spot testing, which would mean that we would not have to submit every airplane to this test.

I ask unanimous consent to have printed in the RECORD two charts, one on delivery status and one on significant results of testing.

There being no objection, the charts were ordered to be printed in the RECORD, as follows:

F–111 delivery status

Aircraft quantities:	
On-contract	540
Factory complete	358
Flown	262
Contractually accepted	233
Flight test aircraft in operation	20
Delivery of last (540th) aircraft	July 1972
Special inspection and cold proof test program:	
Aircraft in program	374
Cold proof test complete	67
Flown	20
Delivered	6
Scheduled completion	March 1971

NDI SIGNIFICANT RESULTS (ON AIRCRAFT)

NDI	Aircraft inspected	Forging defects
Preproof test NDI	68	0
Postproof test NDI [1]	5	0
Postproof test visual inspection	51	0

[1] Programed for 1st 5 aircraft only.

Mr. GOLDWATER. Mr. President, nine aircraft have been through the inspection and cold proof cycle and have been returned to operations. They include two SAC, six TAC, and one flight test airplane. Fifty-eight others have finished inspection and cold proof and are in prepartion for flight acceptance and delivery.

The FB–111A was programmed to replace the B–52 "C" through "F" versions. Plans were laid to produce 263 of these aircraft, yielding a tactical strategic force strength of 210. These were in the planning from September 1965, until October 1968, when the number was reduced to 112. In April of 1969, this was further reduced to 76 FB–111A's, providing a strategic force strength of 60.

In authorizing the fiscal year 1971 buy, the House Armed Services Committee endorsed the program heartily. They cited that the Defense Department has made a decision that the money available for aircraft procurement will be reduced by the amount required to finance the inspection and proof test program. They cited this "as an unprecedented procedure" and stated:

> The Defense Department should review this decision to assure that the needs of the Tactical Air Command are met, if necessary, by procurement action beyond the fiscal year 1971 period. The committee doubts that any other aircraft in the inventory can adequately substitute for the F–111 in its mission.

They also referred to the Air Force's firm requirement for six wings and stated that the fiscal year 1971 buy would complete only the fourth wing.

The Senate Armed Services Committee approved the fiscal year 1971 buy to fill out the fourth TAC wing. However, they stated that the fiscal year 1971 buy is to be the last and that the Air Force has given assurance to that effect. They also, as I mentioned earlier, required the Secretary of Defense to certify the F–111 structural soundness.

As I mentioned earlier, I do not want to pose as an aeronautical expert, but how the Secretary of Defense can fail to certify this aircraft, in view of its phenomenal success on probably the toughest testing ever given an airplane in the history of the United States, I do not know; and I look forward with great anticipation to the remarks the Secretary will make when he has to reach the conclusion as to whether or not the aircraft will fill the bill.

The amazing thing about this airplane—I speak now as a pilot—is the fact that it can fly at 120 knots an hour very comfortably. You cannot overcontrol it, but it will fly at 120 knots. It will also fly at Mach 2.3 or 2.2, which I think is the standard practice now. In fact, I know from personal experience that it will fly at 58,000 feet without any problems at all. It will make high "G" turns better than the other model would and has a very decent, comfortable landing pattern and a very easy-to-learn final approach pattern. I think the test results have been phenomenal. I believe that because of this we are going to find the country accepting this airplane. We are being extremely careful in checking our pilots out in it, but I have yet to find a pilot in the Air Force who does not enjoy flying this airplane.

In conclusion, Mr. President, on July 29 29, the Senator from Nevada (Mr. CANNON) reported to the Senate as chairman of the Special Committee on Tactical Air Power, that this was a favorable report and again cited that the Air Force still plans six operational wings. He also pointed out that the cost of the airplane is currently estimated to be $6.2 billion. Congress has already approved $5.5 billion. Therefore, only $700 million is required to complete the program, which includes six tactical air wings.

The FB–111F strategic version of the TACS 111F can provide Strategic Air Command with strategic bombers with added range and flexibility. The 111 production line is producing a greater number of modern weapons systems. It is in the Nation's vital interest to keep this production capability in being.

Mr. President, I have to remind my friends in the Senate and the House that the B–52 is now over 15 years old. If we are talking about flying this airplane into the 1984's, we are talking about an airplane that will be in the neighborhood of 25 to 30 years old, and in the subsequent discussion of the B–1, I hope I am able to show that trying to do that will result in an airplane more costly than the B–1 itself.

Mr. President, I ask unanimous consent to have printed in the RECORD the F–111 force structure table.

There being no objection, the table was ordered to be printed in the RECORD, as follows:

F–111 force structure

Air Force Requested
TAC—6 wings
129 F–111A[1]
94 F–111E
96 F–111D
219 F–111F
SAC—7 wings
263 FB–111
(210 Unit Equipment Airplanes Available For Strike)
Currently Authorized
TAC—4 wings
129 F–111A[1]
94 F–111E
96 F–111D
82 F–111F
(Fiscal year 1971 not yet firmly authorized)
SAC—2 wings
76 FB–111A
(60 Unit Equipment Airplanes Available For Strike)

[1] Excludes test airplanes.

THE DEFENSE DEPARTMENT COST OVERRUN CONTROVERSY

Mr. GOLDWATER. Mr. President, we have heard a great deal on the floor of the Senate from our Democratic friends who say that the Republicans are causing the high cost of Government, inferring that Secretary of Defense Laird has done nothing toward solving the almost insurmountable problems he found when he took over from Secretary McNamara.

It is no secret that I consider Mr. McNamara to have been the worst Secretary of Defense this country ever had. As the days go by, we are finding that to be the case. I only hope he does not do as much damage to the World Bank as he was able to do to the Defense Department during the time he was there.

Mr. President, the staff of the Senate Republican Policy Committee has prepared a memorandum showing some of the problems that Secretary Laird inherited. I ask unanimous consent to have it printed in the RECORD.

There being no objection, the memorandum was ordered to be printed in the RECORD, as follows:

[From Newsweek, Aug. 10, 1970]

DEFENSE COST OVERRUN

(From the staff of the Senate Republican Policy Committee)

Defense Secretary Melvin Laird knew when he moved into the Pentagon nineteen months ago that he was taking over the hottest seat in Washington outside the White House. Accordingly, Laird . . . launched a carefully crafted campaign designed (1) to strengthen his own control over the Defense establishment's labyrinthine chain of command and (2) to dissociate himself from some of the more expensive mistakes chalked up against his . . . predecessor, Robert S. McNamara.

At their July 28 Policy Luncheon the Republican Senators requested the Policy Committee staff to prepare a study of the defense cost overrun controversy. This paper is in response to that request. Its purpose is to provide background information on the issue, to present the arguments currently being made, and to set forth the figures on which opposing claims are based.

INTRODUCTION

On November 13, 1968, Defense Department efficiency expert A. E. Fitzgerald testified to the Joint Economic Committee's Subcommittee on Economy in Government that the C–5 transport plane would cost at least $2 billion more than Defense Department planners had originally estimated. The Fitzgerald testimony catalyzed criticism of defense contract procurement practices, and precipitated investigations which led to the current controversy over the Military Procurement Act.

Today's cost overrun issue first arose in 1968, when hearings by the Subcommittee revealed alleged examples of waste, inefficiency, mismanagement, and excessive profits in defense contracts. Subsequent investigations disclosed similar instances, and called into question the system by which DOD estimates weapon costs and awards contracts. These hearings highlighted Congressional difficulties in obtaining information which would enable the legislature competently to oversee the DOD budget and programs.

THE SELECTED ACQUISITION REPORTING SYSTEM OF 1968

Before February 23, 1968, there existed no consistent reports of cost estimates at various stages of weapons production. On that date DOD established the Selected Acquisition Reporting System (SAR) showing the costs of fifty selected weapons systems at various stages of production. The current debate revolves around the latest SAR's, which appear in the Appendix.

While these SAR's are the best evidence currently available, their shortcomings are the source of much of the present argument. Four inadequacies may be mentioned:

The SAR's do not compare technical performance actually demonstrated with that specified in the contract.

They do not report the cost incurred in relation to the cost that should have been incurred for the physical progress of the work at a given point in time.

They do not outline pending decisions that may have an impact on the program, such as changes in quantity ordered or scope of the weapons system.

They do not determine the cause of increased costs, whether it be increased orders, technical modifications, inflation, poor planning or underestimation.

THE CRITICS' ARGUMENT

Pentagon critics make two main arguments: (1) DOD, through mismanagement, inefficiency, and deliberate underestimation, has paid amounts far in excess of those Congress contemplated when it authorized major weapons programs in the 1960's. (2) Many weapons were either obsolete when completed or fell short of design specifications which were part of the procurement package. Two glaring examples which document their case are:

The C–5A transport plane. Originally authorized in 1965 at $3.4 billion, the estimate grew by 1969 to $4.8 billion, according to DOD's own figures. (Fitzgerald's testimony before the Economy in Government Subcommittee projected the cost at $5.3 billion.) Tests revealed wing cracks and other structural defects, and in 1969 the Air Force cut its order from 115 planes to 81. Even so, the revised, smaller, program is expected to cost $4.3 billion, or $.9 billion more than the entire original program. Yet, when the C–5A contract was awarded, on September 30, 1965, Secretary McNamara had described it as "a model method of doing defense business . . . a damn good contract."

The F–111 fighter bomber. The Air Force originally contracted, in 1962, for 1726 planes at a cost of $5.5 billion. Today it expects to buy only 547 planes—but at a cost of $7.5 billion. Tests revealed that the F–111 needed more runway to take off, had a lower ceiling and speed, and needed refueling more frequently than specifications had envisioned. In one flight test, a wing fell off.

The critics, relying on the figures in the Appendix, also make the claim that because of poor management *every major weapons system without exception contracted under the previous Democratic Administrations has overrun its initial estimated cost.* In fact, they assert, the overruns are even larger because initial cost figures in some programs, such as the DE 1052 destroyer escort and Poseidon systems, were erroneous or did not include various post-delivery expenses. While the latter assertion may be true, the Appendix figures do not support the claim that all cost increases can be traced to mismanagement, since the tables do not isolate their causes.

Critics nevertheless see several manifestations of the inefficiency and waste to which they attribute the cost increases:

Noncompetitive bidding. Over 85 percent of defense contracts are negotiated by the DOD and the contractor.

The practice of "buying in". When two producers are negotiating for a contract, one will often deliberately bid below what he knows it will cost to produce the system, expecting to recoup in other ways. Since contracts must, by law, be awarded to the company which offers the lowest bid, this company is said to have "bought the business".

Mistake-perpetuating budgets. Robert Benson, a former employee of the Defense Comptroller asserts that the DOD budgeting process virtually concedes last year's amount and focuses on whether increments have been requested subsequent thereto. The result is uncritical acceptance of most past expenditures.

Nonuniform cost accounting. DOD does not require its contractors to keep uniform and consistent cost accounts. In one case, reported by Admiral Rickover, the Navy in the early 1960's allowed a shipbuilder to charge salaries and other pay directly to Government contracts, while similar costs on commercial contracts were charged as general shipyard overhead and allocated on a pro rata basis to both Government and commercial work. The Government thus paid directly for costs done on Government work and indirectly for work done on commercial contracts.

High profits among defense contractors. The critics argue that defense industry profits, 12 percent higher than those of American industries as a whole, indicate waste of money by the Pentagon, since the contractor's profit is a negotiated item in defense contracts. Suppliers of propulsion turbines, for example, are now insisting on a 20–25 percent profit as a percentage of cost.

Contractor inefficiency. Critics argue that $200,000 of the $430,000 per engine overrun on the jet engines of the F–111 could only be attributed to slipshod purchasing procedures, poor scheduling of men and machines, ineffective work standards, or other managerial deficiencies. They claim similar unverifiable examples in other programs.

THE PENTAGON'S ARGUMENT

The Pentagon and its defenders do not deny the existence of serious mistakes such as the C–5A or F–11 overruns under McNamara and Clifford. They do deny the cost increases in the Appendix tables are caused primarily by mismanagement. Using the $3.653 billion difference in the amount of the overrun between June 30, 1969, and March 31, 1970, as an example (see summaries of Tables I and II in the Appendix), they find a number of explanations for the cost increases:

$1.008 billion reflected the cost of increased capabilities for the Minuteman II and Minuteman III.

$365 million indicates inclusion of construction costs in the program cost estimate of the Minuteman II and III. These costs were in the original planning estimate, but did not appear as part of the June 30, 1969, SAR's. They were first included in the September SAR's as part of DOD's efforts to improve the scope and coverage of the reports.

$506 million was caused by schedule changes and stretch-outs in the Safeguard, P–3–C, and Minuteman III programs.

$285 million (7.8 percent) was due to economic change and inflation, a figure similar to that for the economy as a whole.

$1.345 billion of the difference was due to a Presidential decision to add a third site at Whiteman Air Force Base to the Safeguard program.

$144 million (5.4 percent) reflects increases in estimates and refinements in the estimates themselves.

In short, the Pentagon's defenders argue that only 5.4 percent of the cost overrun increase in the nine months between June and March could properly be called "overrun" or "miscstimation." The remainder can be traced to policy decisions raising the quantity or quality of weapons ordered, or changing the method of reporting, or to general economic conditions. They further claim that analyses of previous periods would reveal similar increases for similar causes.

CONCLUSIONS

Shortcomings in the current SAR's have been mentioned. Because of them, it is impossible for Congress to discover and respond to defective performance (except in glaring cases such as C–5A and F–111), to determine and oversee the cost progress of the work, or to assign precisely the causes of increased costs.

The Pentagon itself admits that SAR figures must be further refined. Much of the current controversy can be traced to different interpretations of the figures in the Appendix.

The present quarrel raises two additional questions:

(1) *Which figures are the proper base from which to evaluate subsequent costs?* Pentagon defenders asserts that planning estimates are little more than educated guesses, prepared when a new system has sprung from an imaginative head, and in the process of securing approval for it, DOD needs to determine a cost figure. They insist that it is unreasonable to hold the Pentagon to this figure forever, or to blame the Pentagon when more definite plans disclose a different figure.

The critics reply that the planning figure is the one Congress contemplated when it authorized the system. One major purpose of this estimate is to enable legislators to determine whether the program is sensible.

Care and accuracy should be required of DOD officials in preparation of this figure.

(2) *What is a cost overrun for which DOD can rightly be blamed?* The Pentagon insists that high-level policy decisions on quantities and qualities of systems, improved methods of cost reporting and general economic changes cannot be called cost overruns, and do not indicate inefficiency or obtuseness on the part of DOD officials.

The critics reply separately to the first two of these points: (1) The approval of new phases or sub-systems, such as the additional Whiteman ABM site, is automatically an overrun because it is an enlargement of a program which Congress did not contemplate in authorizing the original one. In the case of ABM, for example, they claim Secretary Laird implied that the new phase would not be initiated until the first one had been tested completely. (2) The inclusion of new costs is an overrun because they were present when Congress first approved the program, even though they were not then identified.

In short, critics seem to define "cost overrun" as any increase over the amount Congress initially authorizes for a weapons system. They assert that other Government and private planners would be accountable if their products eventually cost more than first planned. The Pentagon defines the term more narrowly and indefinitely, and insists that rapid technological change in the area of weapons systems makes more definite planning impossible.

TABLE I

A. SUMMARY OF ESTIMATED COST DATA AS OF MAR. 31, 1970

[In millions of dollars]

Number of systems	Planning [2] estimate	Contract [6] definition estimate	Earlier [7] estimates adjusted for quantity changes	Current [8] estimate through program completion
Army (8)	5,933.2	6,087.2	7,206.5	9,654.0
Navy (22)	18,278.4	21,998.8	26,245.8	31,948.1
Air Force (8)	18,479.0	22,136.9	17,386.8	24,877.2
Total (38)	42,690.6	50,222.9	50,839.1	66,479.3

B. SCHEDULE OF PROGRAM COST DATA APPEARING ON MAR. 31, 1970, SAR'S FOR 38 SYSTEMS [1] INCLUDED IN GAO REPORT ON STATUS OF THE ACQUISITION OF SELECTED MAJOR WEAPON SYSTEMS, B-163058 DATED FEB. 6, 1970

[In millions of dollars]

	Planning estimates	Contract definition cost estimates	Earlier estimates adjusted for quantity changes	Current estimates through program completion	Year [11] contract let
ARMY

Titan III [1]	932.2	745.5	745.5	1,130.5	1962
F-111A/C/D/E	4,686.6	5,505.5	2,924.2	6,380.8	1962
FB-111A	1,781.5	1,781.5	738.2	1,260.9	1962

[1] These systems are not on the SAR system. The figures appearing in this schedule are therefore the June 30, 1969, figures prepared on a one time basis for GAO by the Department of Defense.

[2] These estimates represent those reported as of Dec. 31, 1969, due to the fact that the Mar. 31, 1970, SAR was not approved as of the time this schedule was prepared.

[3] These estimates represent development costs only. Due to pending litigation, the Army's production liability is unknown.

[4] The Mar. 31, 1970, Air Force SAR's did not reflect the planning estimates. These figures were obtained for comparison purposes from the June 30, 1969, SAR's. The planning estimates for the Minuteman II, Minuteman III, and the C-5A were increased to include the military construction costs not originally reported.

[6] Formal estimate, prepared by military department, of cost anticipated to acquire system in the quantities needed. It is prepared prior to initiation of the formal acquisition cycle.

[6] Established during phase in which preliminary design and engineering are accomplished and system management planning is performed.

[7] If no new quantities had been ordered, this figure would be the same as either col 1 or 2, depending upon stage of the acquisition process at which new orders were placed.

[8] Cost expected to finish program. It is adjusted for such items as changes in quantity, current estimates of cost due to inflation, changes in scope, capability increases, and program stretchouts. Figure does not indicate which portion of the increased cost is attributable to each factor.

[9] Date of contract letting not available.

[10] Safeguard began as the Nike X system in 1959; it was renamed "Sentinel" in September, 1966 and "Safeguard" in March 1969.

[11] This is year in which first research and development contract was awarded. Date of production contract, which Pentagon prefers, is 1 or 2 years later in some cases.

TABLE II.—SUMMARY OF ESTIMATED COST DATA AS OF JUNE 30, 1969

[In millions of dollars]

Number of systems	Planning estimate	Contract definition estimate	Earlier estimates adjusted for quantity changes [1]	Current estimate through program completion
Army (8)	5,914.2	6,087.7	7,679.9	8,654.4
Navy (22)	18,042.4	21,444.0	23,220.9	28,758.9
Air Force (8)	18,009.9	22,309.6	18,166.8	25,475.9
Total	41,966.5	49,841.3	49,067.6	62,889.3

[1] The SAR heading for this column is Planned Costs at Current Quantity.

MESSAGE FROM THE HOUSE

A message from the House of Represenatives, by Mr. Hackney, one of its reading clerks, announced that the House had passed a bill (H.R. 17133) to extend the provisions of title XIII of the Federal Aviation Act of 1958, as amended, relating to war risk insurance, in which it requested the concurrence of the Senate.

HOUSE BILL REFERRED

The bill (H.R. 17133) to extend the provisions of title XIII of the Federal Aviation Act of 1958, as amended, relating to war risk insurance was read twice by its title and referred to the Committee on Commerce.

ONE HUNDREDTH ANNIVERSARY OF THE BIRTH OF A DISTINGUISHED ALABAMIAN—RICHMOND PEARSON HOBSON

Mr. ALLEN. Mr President, today marks the 100th anniversary of the birth of a distinguished Alabamian, the late Richmond Pearson Hobson, born in Greensboro, Hale County, Ala., August 17, 1870.

Having attended private schools and Southern University, he was graduated from the U.S. Naval Academy in 1889 and from the French National School of Naval Design at Paris in 1893. In recognition of an illustrious career in the Navy, he was commissioned rear admiral by act of Congress in 1934.

Admiral Hobson is perhaps best known in history for heroic actions in the Spanish American War when he, with a crew of seven volunteers, sank the Merrimac in Santiago Harbor. He was later awarded the Congressional Medal of Honor in recognition of valor in placing the welfare and considerations of his country above that of his life. In this action he was captured and held prisoner in a Spanish fortress from June 3 to July 6, 1898.

Mr. President, this is but one aspect in the long and distinguished career of Admiral Hobson. He was also a man of brilliance and uncommon dedication to the cause of country and humanity. He received the LL.D. degree from Southern University in 1906; a M.S. degree from Washington and Jefferson College in 1898, and later became a noted lecturer, speaker, writer and an eminent authority on Naval construction.

Admiral Hobson was a staunch advo-

cate of naval supremacy and of American leadership in the international movement for world peace.

As is characteristic of great men of "many parts" his interest and commitments led him into other fields of endeavor. In 1904, he served as presidential elector on the Democratic ticket of Parker and Davis. He was elected a Representative to Congress from Alabama and served in that capacity with great distinction from March 4, 1907, to March 3, 1915.

Thereafter, his consuming dedication to the welfare of his fellow man led him to organize the American Alcohol Association in 1921, and the Internatoinal Narcotic Association in 1923, which he served as president. In 1926, he organized the World Conference on Narcotic Education and served as secretary-general and as the chairman of its board of governors. He was also founder of the World Narcotic Defense Association which he served as its president. In addition, he was founder and president of the Constitutional Democracy Association.

Mr. President, Admiral Hobson's sincere convictions with respect to the harm and dangers of alcohol and narcotics led him to the distinction of being the first Member of Congress to introduce and advocate the prohibition amendment to the Constitution.

I might say, parenthetically, that these two interests of Admiral Hobson have placed him in the forefront of the effort to control alcohol and narcotics and to provide some method of treatment for addiction to alcohol and narcotics. They are two of the interests which have been debated right here on the floor of the Senate in recent days, weeks, and months. Certainly, he was the forerunner of the great effort for reform that occupies so much of our time and thought these days in the Senate.

Mr. President, Admiral Hobson lived a rich, full and distinguished life characterized by heroism and selfless dedication to world peace.

Admiral Hobson died in New York, N.Y., on March 16, 1937. Most appropriately, his body rests in Arlington National Cemetery. Needless to say, his memory and the inspiration of his life live on in the hearts and minds of Alabamians and others throughout the Nation who find inspiration in the life of great men and true patriots.

In this connection, Mr. President, the people of Alabama have preserved the home of Admiral Hobson as a State shrine. Countless thousands of visitors from throughout the United States have visited the beautiful and gracious antebellum home and gardens known as Magnolia Grove, located at Greensboro, Ala.

In conclusion, let me say that few things we do are more important than paying deference to the memory of our honored dead.

We believe that on the occasion of the 100th anniversary of the birth of Admiral Hobson, the issuance of a commemorative stamp would be most appropriate. We fervently hope that his memory may be perpetuated and honored by authorization and issuance of a Richmond Pearson Hobson commemorative stamp.

We salute his memory.

Mr. SPARKMAN. Mr. President, will the Senator yield?

Mr. ALLEN. I will be delighted to yield to my distinguished senior colleague, the able senior Senator from Alabama (Mr. SPARKMAN).

Mr. SPARKMAN. Mr. President, I am pleased that my colleague has taken this occasion to mark the centennial of the birth of one of the great citizens of Alabama, Adm. Richmond Pearson Hobson.

I remember when I was a little boy hearing about this great hero who sank the Merrimac and did it with a very small band of men, all of whom were volunteers. No one believed that they could come out of that alive. They managed to push the ship into the mouth of the harbor and sink it.

They were discovered and brought under hostile fire. Those who survived the sinking of the ship themselves were captured and taken prisoners.

I suppose that looking at it from our standpoint, we would say that unfortunately the ship managed to swing around and instead of blocking the mouth of the harbor, as they had hoped to do, it went in lengthwise and, therefore, even though it helped to cover the Spanish fleet—although they had hoped to bottle it up—the fleet was able to come out in such a way that our fleet was able to administer utter defeat to the Spanish fleet and break their back in that short-lived war.

Admiral Hobson was a great man. If I recall correctly, not only did he call the attention of this country to the danger of strong drink and drugs, but he also warned us against the yellow peril.

Mr. ALLEN. The Senator is correct.

Mr. SPARKMAN. Admiral Hobson pointed out in those days that Japan was a growing country and that it consisted of a military imperialism that hoped some day to dominate the world, and he warned that we ought to be on guard against that threat.

I have visited Admiral Hobson's town. I remember some of his great political feats. He was a great hero. When he first ran for Congress from Alabama, he succeeded in defeating a man who had been in Congress for many years, a Confederate general, the older Representative, John Hollis Bankhead, who was the father of Senator John Bankhead. There was also Speaker William B. Bankhead, another member of that distinguished Alabama family.

There is another interesting story in connection with that. A seat became vacant in the Senate at the time Representative Bankhead was defeated. John Bankhead ran for the office and was elected. He served in the Senate for many years and was the man who succeeded in getting passed through Congress the first bill authorizing an appropriation for what we would call today the Federal highway system. If I recall correctly, it was $75,000 to help build a small coast road which was authorized under the Constitution. Out of that grew our highway program and, we might say, the tremendous highway interstate program we have today. That is a bit of the interesting history of the two families. I believe that later William B. Bankhead became Speaker of the House and defeated Admiral Hobson for Congress.

That is when the two congressional districts were thrown together.

Mr. ALLEN. Admiral Hobson, I believe, ran against Oscar W. Underwood.

Mr. SPARKMAN. That was for the Senate. I remember that race. It was a very hot, strong race. That must have been in 1914.

Admiral Hobson died a few months after I came to Congress. I attended his burial in the Arlington Cemetery.

I join with my colleague and fellow Alabamian in marking the memory of this great and distinguished Alabamian and American.

Mr. ALLEN. Mr. President, the distinguished Senator has recalled so many interesting things about the life of Admiral Hobson that I wonder if he can remember a campaign tactic that Admiral Hobson used in his campaigns. After he had gotten through with his speech at the political rallies, he would offer to kiss all the young ladies.

Mr. SPARKMAN. And did.

Mr. ALLEN. And he got a lot of votes in that way.

Mr. SPARKMAN. Later, we had a Governor that was known as Kissing Jim.

Mr. ALLEN. The Senator is correct.

Mr. SPARKMAN. Admiral Hobson was the one who set the pace.

Mr. ALLEN. Certainly Admiral Hobson was a distinguished patriot.

Mr. SPARKMAN. And a distinguished character.

Mr. ALLEN. Yes, indeed. And the American people loved heroism and loved a hero at that time, just as we today love heroism.

When we think of Admiral Hobson, we think of a man of great foresight and perspicacity and a man of great heroism and high ideals.

He was a son of that great section of Alabama known as the Black Belt of Alabama, a section known for its gracious living, its culture, and charm.

We do take great pride in the fact that Admiral Hobson came from Alabama.

It gives me great honor to speak on the floor of the U.S. Senate and observe the 100th anniversary of the birth of Adm. Richmond Pearson Hobson.

Mr. SPARKMAN. I join in the Senator's remarks.

Mr. ALLEN. I thank the distinguished Senator.

Mr. President, I yield the floor.

ORDER FOR RECOGNITION OF SENATOR MURPHY TOMORROW

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that, at the conclusion of the remarks of the able Senator from Wisconsin (Mr. PROXMIRE) on tomorrow, the distinguished Senator from California (Mr. MURPHY) be recognized for not to exceed 30 minutes.

The PRESIDING OFFICER. Without objection, it is so ordered.

ORDER FOR RECOGNITION OF SENATOR DOLE TOMORROW

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that, upon the conclusion of the remarks of the able Senator from California (Mr. MURPHY), the distinguished Senator from Kansas (Mr. DOLE), who presently presides over this august Chamber, be recognized for not to exceed 15 minutes.

The PRESIDING OFFICER (Mr. DOLE). Without objection, it is so ordered.

ORDER FOR ADJOURNMENT TO 11 A.M. TOMORROW

Mr. BYRD of West Virginia Mr. President, I ask unanimous consent that when the Senate completes its business today, it stands in adjournment until 11 tomorrow morning.

The PRESIDING OFFICER. Without objection, it is so ordered.

THE PRESIDENT'S VETO OF THE OFFICE OF EDUCATION APPROPRIATIONS BILL

Mr. PELL. Mr. President, it is my understanding that, tomorrow, the Senate will act upon the President's veto of the Office of Education appropriations bill. It is my intention to vote to override this veto, for I believe that the Senate must clearly state that there is no greater priority than the education of our children.

What to me is most fascinating is the fact that this administration constantly states its support of more funds to local and State governments. We are told that this is called creative federalism, and that we must share our tax revenues with State and local governments. Mr. President, I submit that the Office of Education appropriations bill as sent to the President does just that. The allocations of grants to State and local governments in the Senate bill total $954 million more than the amended budget request of the administration.

Therefore, it can be seen that the beneficiary of the increased funding will not be some Federal entity, but will be State and local schools and colleges, which are experiencing such difficulty in the present inflationary spiral.

I ask unanimous consent to have printed in the RECORD at this point a table showing the increases in grants by State, so that it can be clearly understood how the veto affects local budgets.

There being no objection, the table was ordered to be printed in the RECORD, as follows:

OFFICE OF EDUCATION—ALLOCATION OF GRANTS TO STATES AND LOCAL GOVERNMENT—COMPARISON OF 1971 AMENDED REQUEST AND 1971 CONFERENCE REPORT

[Budget request included nothing for impact aid although President recommended $425,000,000 by message. Report included $536,000,000]

State and outlying areas	1971 amended request	1971 conference report	Difference
Total	$2,446,535,189	$3,400,819,218	$954,284,029
Alabama	63,239,784	84,252,949	21,013,165

NONVOTING DELEGATE TO THE HOUSE OF REPRESENTATIVES FOR THE DISTRICT OF COLUMBIA

Mr. BYRD of West Virginia. Mr. President, last Monday the other body, by a vote of 300 to 57, passed H.R. 18725, a bill granting the people of the District of Columbia an elected nonvoting Delegate to the House of Representatives. The legislation provides an opportunity for the people in the District of Columbia to choose their own spokesman in the Congress, and the measure should be promptly enacted by the Senate and sent to the President, whose support for it is already a matter of record. Quick action by the Senate would make it possible for the city to elect its Delegate in November of this year.

The bill provides that such a Delegate shall have a seat in the House of Representatives, with the right of debate, but not of voting, and shall have all the privileges granted a Representative by section 6 of article I of the Constitution. The Delegate would be required to be a qualified elector of the District of Columbia, at least 25 years of age, and a resident in the District of Columbia continuously for the 3 years preceding the date of his election. The term would be for 2 years, as in the case of Representatives.

There are some Senators who would prefer a constitutional amendment to give the city full voting representation in both Houses of Congress. I am not among those, and I would vigorously oppose such an amendment.

In the first place, article I, section 2, of the Constitution provides that the House of Representatives shall be composed of members chosen by the people of the "several States." Likewise, article I, section 3 of the Federal Constitution, and the 17th amendment provide for two Senators from "each State." I stress the word "State." The District is not a "State" and was never contemplated to be by the authors of the Constitution. Quite to the contrary, in paragraph 17, section 8, of article I, they specifically designated the seat of the Government of the United States as a "district—not exceeding 10 miles square."

Apart from the Original 13 States, the only territories and areas which have achieved voting representation in Congress have done so by becoming States as a result of the exercise by Congress of its power to create new States pursuant to article IV, section 3, paragraph 1 of the Federal Constitution.

Hence, District residents cannot be given voting representation in Congress except by constitutional amendment. Statutory action will not be sufficient.

And may I remind those who press for a constitutional amendment to provide for voting representation in the Congress, no such amendment would likely be enacted in this Congress or in any Congress in the near future. Moreover, ratification by the States of such an amendment would require years and could fail of ratification entirely. Thus, to delay action on the House bill in the hope that Congress may be persuaded to go the constitutional amendment route would be to lean upon a false hope and would push representation in Congress for District residents far into the unsure and inscrutable future. Now is the time for the Senate to act, while the iron is hot. The House has acted, the remaining weeks

before the November election are few, the 91st Congress is about to enter the final one-sixth of its 2-year period, and the propitious opportunity which is now before us to provide a nonvoting Delegate may not soon return.

There are today four-fifths of a million people in the District of Columbia. Their fiscal affairs, their transportation and other needs, their responsibilties to government—all of these dictate the necessity and the justification for their having an elected voice in that Congress which, under the Constitution, "shall have power to exercise exclusive legislation" over them.

A Delegate of the people of the District of Columbia in Congress—even though the Delegate were without a vote—would be in a position to more effectively speak for, and to articulate the needs of, the people of the city than can any mayor or city council. In other words, the people of the District, if this bill is promptly enacted, will have a duly elected person to represent them "on the inside" rather than on the outside of the Federal Legislature. And they are entitled to such an elected voice in their own everyday affairs. This would in no way contravene the powers granted to Congress by the Constitution to "exercise exclusive legislation" over the District, nor would it convey to the District the status of a "State" under the Constitution—which it is not.

I, therefore, urge my colleagues not to let this opportunity slip through their hands. To delay action now is to greatly endanger the prospects for any kind of District representation in Congress over the foreseeable future.

The old saw that "a bird in the hand is worth two in the bush" was never more appropriately applicable than in this instance and in this matter.

Mr. BAYH. Mr. President, will the Senator yield?

Mr. BYRD of West Virginia. I yield.

Mr. BAYH. Mr. President, I compliment the distinguished Senator from West Virginia for his remarks recognizing that the legislation relative to a nonvoting delegate is a step forward for the District of Columbia. I share his feeling in this regard.

The Senator is one of our most active and attentive members on the Subcommittee on Constitutional Rights. He and I have had an opportunity to discuss what I hope will be the next step which would be to give the District not just sitting representation but also voting representation.

I wonder if the distinguished Senator from West Virginia would give me his opinion. Is there some inconsistency with voting for this measure and still feeling strongly, as I do, that this is only the first step? The Senator from Indiana would like to see the District of Columbia have a voting Representative as well as an observer.

Mr. BYRD of West Virginia. Mr. President, in response to the question by the able Senator from Indiana, I would have to say that I would be opposed to voting representation in Congress for the people of the District of Columbia. I do not see any inconsistency in this position. The District of Columbia was not intended to be a State by the founders of our Republic and the authors of the Constitution; and I think only when an area or territory has the status of a State should it be given voting representation in the House of Representatives and the Senate.

I do believe the people of the District of Columbia are justified in asking for some type of representation in the Congress, and a nonvoting delegate in the other body would give them a voice in debate, which I think they should have, although they would not have a vote on decisions.

Mr. BAYH. I am sure it is possible for my friend from West Virginia and I to disagree on the next step. I salute him on his support of this first step. As the Senator knows, we have had a chance to discuss this in private.

The Senator from Indiana feels very strongly that there is something unjust about the fact that there are now between 700,000 and 800,000 citizens of the District of Columbia who are affected by national legislation, legislation that affects their sons and daughters, over which they have no command. I am hopeful we will have a chance to discuss this matter. At that time the Senator and I can offer differing thoughts, and perhaps similar thoughts; but I certainly concur with him that we should move as rapidly as we can to get as much as we can. The Senator from Indiana may want more than the Senator from West Virginia, but this is a step forward in the measure on which the Senator spoke so eloquently.

Mr. BYRD of West Virginia. I wish to say to the Senator, as he will recall, I am sure, that in the subcommittee meetings, which he so ably chaired, I took the position that I would support a measure which would provide for a nonvoting Delegate in the other body for the District, although I was opposed to our reporting such a measure prior to action by the House of Representatives in that regard, I felt that action on our part ahead of action on the part of the House with respect to a matter affecting that body might be misunderstood in the other body and might disturb the comity between the two bodies.

The other body has now acted, however, and I believe the Senate should promptly give its support to the proposal. Such a nonvoting Delegate, of course, can be provided by statute, whereas a voting representation in the Senate and in the House would require a constitutional amendment.

I stated in the Senator's presence in subcommittee meeting that I was unalterably opposed to such a constitutional amendment, and I would have to repeat that statement here. So, I do not view the provision of a nonvoting Delegate in the House as a "step forward" toward full voting representation in the Senate and House. But it is, in the overall sense, a step forward.

As I have already indicated, the only territories and areas which have achieved voting representation in Congress have done so by becoming States as a result of the exercise by Congress of its right to create new States under Article IV of the Federal Constitution. I do not look on the District of Columbia as a State. It is not "a" seat, but "the" seat of the government of the United States, and I do not think that the Founding Fathers contemplated that it should ever be a State or that it should ever have voting representation in the Senate and in the House.

As far as I am concerned, I cannot offer the Senator any encouragement as to another and succeeding step following the enactment of the House bill.

The people of the District of Columbia, of course, under the 23d amendment, already vote for President and Vice President.

So I think this is a very reasonable bill, and it accords with justice and fairness to the people of the District of Columbia.

Mr. ALLEN. Mr. President, will the Senator yield?

Mr. BYRD of West Virginia. I yield.

Mr. ALLEN. I want to commend the distinguished Senator from West Virginia on a portion his remarks on a nonvoting delegate or member of the lower body for the District of Columbia. The Senator from West Virginia takes the position, apparently, that there should be a nonvoting delegate in the House of Representatives for the District of Columbia, but that we should stop there. The distinguished Senator from Indiana, on the other hand, seems to adopt the position that we should vote for the nonvoting delegate as a step toward a voting Representative in the lower body and a voting delegate in this body. That would seem to represent two thoughts with respect to this bill.

The junior Senator from Alabama would take a third position, however, and that is that we do not have any type of Delegate for the District of Columbia other than the system that we now have. We have a very able Senate Committee on the District of Columbia and a very able House Committee on the District of Columbia, and it occurs to the junior Senator from Alabama that the District of Columbia is well represented through the District of Columbia Committees in the two bodies and through the 435 House Members and the 100 Senators.

It occurs to the junior Senator from Alabama that if we had a speaking Delegate, though nonvoting, in the House of Representatives we would have someone there who would seek to gain much publicity through the use of the House of Representatives as a forum, as a political stump, from which to voice all sorts of propaganda and complaints about problems respecting the District of Columbia.

So apparently the Senator from West Virginia agrees with the junior Senator from Alabama in one respect, and that is that we have no such delegate in this Chamber.

The junior Senator from Alabama is glad that he can find an area of agreement with his distinguished friend from West Virginia, because he would dislike very much not to be able to find a common ground.

So, as respects the effort to put a Delegate, whether voting or nonvoting, in the U.S. Senate from the District of Columbia, the junior Senator from Alabama would oppose any such effort. He would oppose any effort to provide a Delegate, voting or nonvoting, in the House of Representatives.

So we have at least three schools of thought with respect to this measure. The junior Senator from Alabama is delighted that he can agree with the distinguished Senator from West Virginia in the fact that there should be no voting or nonvoting Delegate from the District of Columbia in the U.S. Senate, other than the committee that we have and the 100 Senators, all of whom are charged with a responsibility with respect to the District of Columbia.

Mr. BAYH. Mr. President, will the distinguished Senator from West Virginia yield to me so I may make an observation to my good friend and esteemed colleague from Alabama?

Mr. BYRD of West Virginia. I yield.

Mr. BAYH. I am glad he feels a sense of gratitude and camaraderie because he agrees at least partially with the distinguished Senator from West Virginia, but it sort of makes the Senator from Indiana feel like a second-class citizen, because I do not feel there is any area of agreement which the Senator from Alabama has with the Senator from Indiana. I would like to think that we would have some area of agreement in this important matter.

Mr. ALLEN. Mr. President, the Senator from Indiana is correct in his feelings that in this particular area the junior Senator from Alabama finds no area of agreement with the distinguished Senator from Indiana; but the junior Senator from Alabama would suggest that if the distinguished Senator from Indiana would make a motion to adjourn today's session of the Senate, the junior Senator from Alabama would find himself in agreement with the distinguished Senator from Indiana on that point.

Mr. BAYH. Mr. President, will the Senator from West Virginia yield?

Mr. BYRD of West Virginia. Mr. President, I yield further to the Senator from Indiana, without losing my right to the floor.

Mr. BAYH. I appreciate the degree to which the Senator from Alabama would go to try to find some ground of common purpose with his friend from Indiana. I would just like to say, if I may, in a more serious vein, for the record should show that the last comments in the colloquy between the Senator from Alabama and the Senator from Indiana may not have been in a serious vein, that I am certain we recognize that in this body we have the opportunity to disagree and yet respect each other's judgment. So I would hope that before this session is over the Senate will look very carefully at the opportunity we have.

Of course—disagreeing, with all respect to my two colleagues, with the Senator from West Virginia and the Senator from Alabama—we have the opportunity to clear up an inconsistency which I suggest exists when here we are, in the Capital of the world's most powerful Nation, the Capital of the free world, and yet the citizens who live in the Nation's Capital do not have a free voice in some of the major national political issues which affect those who live here and their sons and daughters.

I recognize, with the Senator from Alabama, what the Senator from West Virginia has pointed out: We are in a unique piece of territory. Our Founding Fathers made this the Nation's Capital. So I think a reasonable argument can be made that the type of representation for the District can be differentiated, in a way, from that of the State of Alabama, the State of West Virginia, or the State of Indiana. But for us to tolerate a situation in which 700,000 or 800,000 people—and I point out that there are several States which have fewer people, and yet have full and complete representation—can continue to have a situation exist where they have no voice, not even that of an observer, is, I think, unconscionable. I say, with all respect to those who disagree with me, that I, of course, am in a camp 180 degrees away from my friend from Alabama and at least 90 degrees away from my friend from West Virginia. It hurts me that I am not in agreement with either of my fine colleagues; but I feel that the District is entitled to full representation, that they should have a say in how their tax dollars are spent, their sons are sent to battle, their aged are cared for, and their young are educated.

I am willing to accept, let me suggest, the best I can get. So if I can get representation and a voting voice in one House, that is better than none at all; or if, as the Senator from West Virginia suggests, I can get a nonvoting Delegate; that is better than where we are now.

I hope we will have a chance to study thoroughly the whole issue before this session is over, and will have a chance to vote on it.

I thank both my colleagues for their indulgence.

Mr. ALLEN. I thank the Senator from Indiana.

Mr. BYRD of West Virginia. Mr. President, may I say that Congress has not been niggardly in its appropriations to the District of Columbia. It is true that there are in both Houses legislative committees and appropriations subcommittees which deal solely with the business of the District of Columbia. Having served on the Appropriations Subcommittee on the District of Columbia for 10 years, and having once served as chairman of that subcommittee for 8 years, I know, Mr. President, something about the time and the work that are incumbent upon the members of those committees. I think it is our duty as Senators, it was my duty then as a member of the Appropriations Subcommittee, and it is the duty of those who serve on the legislative committee and appropriations committee in each House, to give liberally of our time and labor to discussing and debating and serving the needs of the people of the District of Columbia, because it is our Capital—the Nation's Capital. I am not among those who would espouse the idea that the District has been without due and considerate attention here in Congress, or that it has not been shown a sympathetic understanding of its problems, or that it has lacked support for adequate appropriations and legislation to deal with its problems.

Mr. BAYH. Mr. President, will the Senator yield briefly?

Mr. BYRD of West Virginia. If I may continue for just a moment.

For years I supported every dollar that we could possibly squeeze out of the total revenues for the cause of education in the District of Columbia, for the cause of public safety, for the cause of recreation, and so on. So, we have been conscientious in our work on behalf of the Capital City of the Nation. But, Mr. President, I think it is our duty to provide that the people of the District of Columbia, who are also taxpayers, should have a voice on the inside of the Federal Legislature. While it would not be a voting voice, it would be one which could participate in debate, submit amendments, and so on.

I do not agree that that individual would necessarily take advantage of his position to complain and propagandize any more than any present Member of Congress seeks to complain when he feels that his State is not getting an even break. I do believe that a nonvoting Delegate might constitute a more responsible voice than some of those who now pretend to speak for the District. One can visit almost any street corner in the city and find a self-appointed spokesman for the District of Columbia these days. These self-ordained spokesmen advocate demonstrations, protests—this and that and everything else in order to achieve their own self-serving goals. It seems to me that an elected voice in Congress would likely be a more responsible voice, and one that would be dedicated to the service of the people—not only of the District but, to some extent, of the Nation—while at the same time he would recognize his duties and responsibilities under the law and would, I think, go about trying to persuade and convince his colleagues of the needs of the people of the District of Columbia. In that way perhaps all sides would be better served by a nonvoting Delegate. He would at least be someone to whom District residents could turn in the handling of veterans problems, social security problems, and the many matters which can only be handled by a congressional office. At the present time, District residents have nobody on the Hill to whom they can go.

So, I do not see how we in the Senate can really deny the people of the District of Columbia a nonvoting delegate in the other body. I realize that the Federal Government, under the law, provides for a Federal payment each year to the District of Columbia—which is not provided to the 50 States of the Union; and so far as grants-in-aid are concerned, I think the District of Columbia makes out very well on a per capita basis. The District's share per capita is higher than that of most States with respect to Federal grant-in-aid programs.

So, in my judgment, Congress, as I say again, has not been niggardly to the District of Columbia. But I do not see

how we can justify denial of a nonvoting Delegate in the House of Representatives.

That body has already acted in this regard. As I say, I hesitated to have the Senate speak out in support of a nonvoting Delegate in the other body prior to action by that body itself. But that body has now acted, and I cannot see any foundation stone whatsoever upon which this body could stand in voting against the proposal that has already been passed by the House, or in delaying action on that proposal.

We all may have our differences with respect to the treatment of the District of Columbia as a State which would qualify for two Senators in this body and voting representation in the other. When we reach that point, I shall join with others in opposing such a move, and in that regard I would have to be 180 degrees apart from my able colleague from Indiana.

But with respect to this measure, which is on the calendar and awaiting action by this body, I stand with the Senator from Indiana, wholeheartedly in full support of favorable and prompt action by the Senate.

Mr. BAYH. Mr. President, will the Senator yield for one observation?

Mr. BYRD of West Virginia. Yes.

Mr. BAYH. I do not want to prolong the debate, necessarily, but I think it is helpful to this problem to say to the distinguished Senator from West Virginia and the distinguished Senator from Alabama that I did not want the record to show, nor do I think the record will show, that I would infer that my feeling about voting representation in any way demeans the efforts that have been made by some who have labored long and hard in the past. I look to the future, and I concur in the assessment of the distinguished assistant majority leader, the Senator from West Virginia, that to the degree that responsibility is given it will be carried; and I think we will have a higher degree of responsibility by giving some official status to some who, prior to this time, have been unofficial spokesmen in the various realms of the District of Columbia. I think, in fact I know, that this is one reason why the Senator from Indiana differs a bit with his friend from West Virginia. As I see it, as the amount of responsibility is increased, for example, to vote, the way this responsibility is carried through will be increased, and there will be a greater degree of responsibility if someone is given to Congress who has a vote as well as a voice. It is to that end that we differ, but we will have a chance to express these differences, and I hope that we can make some progress in this session.

Mr. BYRD of West Virginia. I am saying—and I think a nonvoting Delegate in the House of Representatives would have a far greater voice and would have far greater influence than does any mayor or mayor-commissioner or city council, and so forth. So the city would be far, far ahead of where it stands today if this measure were passed and the people of the District of Columbia could elect a nonvoting Delegate.

Mr. BAYH. Mr. President, will the Senator yield?

Mr. BYRD of West Virginia. I yield to the distinguished Senator from Indiana.

Mr. BAYH. I concur with the Senator from West Virginia. I think that to the degree people have a chance to choose someone to represent them, there will be a greater degree of responsibility, with all due respect to Mayor Washington, who I must say I think is a fine man. But I think the people who are represented feel much better and the chances of discontent and misunderstanding are significantly less if they have a choice themselves in who shall speak for them. Unfortunately, this is not the case at other echelons of representation in the District. Hopefully, we can do this at one level or another in Congress in this session.

I thank the Senator from West Virginia for yielding.

Mr. ALLEN. Mr. President, will the Senator yield for a question?

Mr. BYRD of West Virginia. I yield to the distinguished Senator from Alabama.

Mr. ALLEN. Under the bill as passed by the House and now pending on the Senate Calendar, does the nonvoting Delegate have the same allowances, the same franking privileges, the same right to attend committee hearings, and the same office space as provided for a Member of the House of Representatives?

Mr. BYRD of West Virginia. He would have all the privileges that are granted to a Representative under the Constitution, with the exception of voting.

Mr. ALLEN. He differs, then, in power and authority and role, only to the extent that he is not able to cast a vote?

Mr. BYRD of West Virginia. That is my understanding.

Mr. ALLEN. I believe the distinguished Senator said that he could even propose an amendment to pending legislation, under his conception of the bill.

Mr. BYRD of West Virginia. I do believe that is correct.

Mr. ALLEN. Does the Senator have a judgment as to how much of the duty and responsibility of a Member of Congress is embraced in the act of voting as compared to all the remaining functions and privileges and rights and duties of a Member of Congress? In other words, what percentage would the Senator say was represented by the voting and what percentage by all the rest?

Mr. BYRD of West Virginia. Mr. President, I am afraid that I could not answer this question by allocating on the basis of percentiles what portion the vote would represent and what the other activities would represent. But this individual, as I understand it, would have the same privileges of a Representative and the same powers that are now possessed by, say, the Resident Commissioner of Puerto Rico, and as was possessed, prior to the granting of statehood to Hawaii and Alaska, by the then Delegates from Hawaii and Alaska.

I served in the other body when our late and beloved colleague, Bob Bartlett was, I believe, a Delegate from Alaska. He served in that capacity for a long time. As I view it, a Delegate representing the District of Columbia would have the same powers and the same prerogatives as did the Delegate from Alaska at that time.

I do not believe that the Delegate was allowed to vote, but, as I recall, he was permited to offer amendments and bills, he could partcipate in debate, he could attend committee sessions. He was a member of certain committees. So he could propose, but he could not dispose of an amendment or a bill.

Mr. ALLEN. It occurs to the junior Senator from Alabama that as it passed the House all the bill would withhold from such a nonvoting delegate would be less than one-fourth of 1 percent of the total vote of the House of Representatives. So that it would seem to the junior Senator from Alabama that if we go to the extent of providing for a nonvoting Delegate, in the very next session of Congress a bill would be before the Senate providing for a full vote for that so-called nonvoting Delegate. It would be much easier then just to add this little one-fourth of 1 percent of the total vote of the House to the power of this nonvoting Delegate.

So this will be an entering wedge, the passage of this bill, as it comes to us from the House—an entering wedge providing, first, for a voting Delegate in the House; next would come a nonvoting or voting Delegate in the Senate; and, finally, doubtless two Senators and one or two Representatives. They would be treated just as though the District of Columbia was a State, which the distinguished Senator from West Virginia has eloquently pointed out it is not, and it was never intended that it should be.

So I am wondering whether we should be in favor of a bill which unquestionably would provide an entering wedge for the enactment of legislation providing for full membership in the House and in the Senate from the District of Columbia.

Mr. BYRD of West Virginia. Mr. President, there is no doubt that some people will view the passage of this bill and its signature by the President as an entering wedge. I think we must recognize, however, that such measures as are fearfully contemplated by the able Senator from Alabama have been introduced in past years. They have been introduced year after year, going back a period of several decades.

So the failure of enactment of this bill would be no guarantee whatsoever that efforts will not persist to pass legislation which would provide for a constitutional amendment giving the people of the District of Columbia a vote in the House and votes in the Senate. We are going to see such measures proposed regardless. They have been introduced heretofore, and we will continue to hear about them. But I do not believe that the enactment of this measure providing for a nonvoting Delegate in the House would necessarily portend the successful passage of a constitutional amendment later. As a matter of fact, it might have just the opposite effect. Of course, it might encourage Members to try a little more assiduously but that, in itself, I do not think, is so much to be concerned about. What we do have to deal with is the matter which now awaits Senate action; namely, how can we deny the people of the District of Columbia a nonvoting Delegate in the other body, which has already voted, by something like a 6-to-1 majority, to seat such

a Delegate in that body? I do not think they can be rightfully denied. I cannot see any justification whatsoever, legally, constitutionally, or morally for such a denial. That is what we have to face up to.

Mr. ALLEN. Is it possible that the other body may have thought the Senate, in its wisdom, would see that the legislation did not pass here in the Senate?

Mr. BYRD of West Virginia. I do not think we can second-guess the other body. I do not think the other body, really, would have had any justifiable reason to believe that the Senate would block passage of this legislation.

I call to the Senator's attention, may I say, that I feel there might have been some sentiment in the other body toward adding a nonvoting Delegate for this body, in the hope that if the House did include such, the Senate would then block the legislation out of opposition to a nonvoting Delegate in this body. But, since the House did not include that in the bill, I feel that the House fully expects the Senate to act favorably on the bill.

Mr. ALLEN. The Senator will recall that earlier this year the Senate, with a Senate resolution, set up the Committee on Equal Educational Opportunity and appropriated $375,000 to defray the cost of the work of that committee. Would it not be possible, under the law, if the House is so anxious to have a nonvoting Delegate from the District of Columbia serve in that body, for the House to handle that by a House resolution without concurrence of the Senate?

Mr. BYRD of West Virginia. The Senator means to provide for a nonvoting Delegate by a simple resolution?

Mr. ALLEN. Yes, sir.

Mr. BYRD of West Virginia. No, I do not believe so, because under the legislation the nonvoting Delegate would be accorded all the privileges of a Member of the House of Representatives. He would have the right, as I say, to participate in debate and, I believe, the right to offer bills and amendments, et cetera. Moreover, provision has to be made for his election by the voters of the District of Columbia.

Mr. ALLEN. The House by resolution could not make any such provision?

Mr. BYRD of West Virginia. I am not prepared to say it could or could not, but I seriously doubt it. I have not looked into that aspect of the question.

Mr. ALLEN. It just occurred to the junior Senator from Alabama that if the Senate could set up a whole committee and appropriate $375,000 for its work, the House could set up a one-man committee, so to speak, to look after the affairs of the District of Columbia there in that body.

Mr. BYRD of West Virginia. I do not share the Senator's suggestion, if indeed it is a suggestion. If he is asking whether it might have done so by a simple resolution, I do not believe it could.

Mr. ALLEN. The junior Senator from Alabama was merely asking the distinguished Senator from West Virginia his opinion in that regard.

Mr. BYRD of West Virginia. Well, my opinion is that the House could not have done that.

Mr. ALLEN. I thank the distinguished Senator.

Mr. BYRD of West Virginia. I shall want to verify my opinion, but I do not think the House could have done this by passage of a House resolution.

Mr. ALLEN. I thank the distinguished Senator and wish to pledge him my efforts when the next legislation comes up seeking to give the right to vote to this Delegate we are now asked to set up on a nonvoting basis. The junior Senator from Alabama will be working shoulder to shoulder with the distinguished Senator from West Virginia to prevent that.

Mr. BYRD of West Virginia. I thank the Senator from Alabama. Further anent the Senator's question, a simple resolution does not have the force of law. A simple resolution may be enacted by either body to establish an ad hoc committee of that body, and the committee may be paid out of the contingency funds of that body; but a simple resolution, which cannot carry the force of law, could not provide for election, in accordance with the District of Columbia Election Act, by the people of the District, of a Delegate to the House to serve during each Congress, and so forth.

A nonvoting Delegate in the House of Representatives would, in some measure, and as the Senator himself has suggested in terms of percentage, have a great impact upon the passage of legislation dealing with the District of Columbia and some impact on the passage of legislation dealing with the affairs of the country. I am confident that a simple resolution could not be made the vehicle whereby a nonvoting Delegate could be granted to the District of Columbia in the House of Representatives. It would not require an amendment to the Constitution, but it would have to be done by law.

Mr. ALLEN. I thank the distinguished Senator.

Mr. BYRD of West Virginia subsequently said: Mr. President, a little earlier in a colloquy with the able Senator from Alabama (Mr. ALLEN), who is presently presiding over this august body with a degree of efficiency that is "so rare as a day in June," I was asked to express a viewpoint as to what the responsibilities would be of a nonvoting Delegate to represent the District of Columbia in the other body.

Reading, Mr. President, from the Rules of the House of Representatives, under rule XII, "Delegates and Resident Commissioner," I find the following paragraphs in a footnote, and I quote them because they will shed a helpful light in answer to the able Senator's question:

> The law provides that on the floor of the House a Delegate may debate, and he may in debate call a Member to order. He may make any motion which a Member may make except the motion to reconsider. A Delegate may make a point of order. A Delegate has even moved an impeachment. He may be appointed a teller; but the law forbids him to vote. He has been recognized to object to the consideration of a bill, and has made reports for committees. The rights and prerogatives of a Delgate in parliamentary matters are not limited to legislation affecting his own territory.
>
> The office of Delegates was established by ordinance of the Continental Congress and confirmed by a law of Congress. The nature of the office has been the subject of much discussion; and except as provided by law the qualifications of the Delegate have been a subject of much discussion. A territory or district must be organized by law before the House will admit a Delegate.

I thank the able Senator from Alabama.

RECOGNITION OF SENATOR HATFIELD TOMORROW

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that on tomorrow, at the conclusion of the remarks of the able Senator from Kansas (Mr. DOLE), the able Senator from Oregon (Mr. HATFIELD) be recognized for not to exceed 15 minutes.

The PRESIDING OFFICER. Without objection, it is so ordered.

VETO OF APPROPRIATIONS FOR OFFICE OF EDUCATION

Mr. BYRD of West Virginia. Mr. President, I am prepared to propound a unanimous-consent request which has been discussed with the able Senator from Washington (Mr. MAGNUSON) and with various other Senators, including the able minority leader and the able assistant minority leader. It appears to be supported by all concerned.

Mr. President, I ask unanimous consent that, on tomorrow, the Senate proceed to vote at 4:30 p.m. on the motion to override the President's veto on H.R. 16916, making appropriations for the Office of Education for the fiscal year 1971 and for other purposes; with the time from 2:30 p.m. to 4:30 p.m. to be equally divided and controlled, respectively, by the majority and minority leaders, or their designees.

The PRESIDING OFFICER (Mr. ALLEN). Is there objection to the request of the Senator from West Virginia?

Mr. GRIFFIN. Mr. President, reserving the right to object—and I shall not object—I want to confirm the statements made by the distinguished Senator from West Virginia, the acting majority leader.

Of course, this is a matter which is privileged and can be called up at any time. The minority is aware of that. It is not the most convenient time for every Senator, but we have accommodated as many Senators as we possibly could. Therefore, I withdraw my reservation.

Mr. BYRD of West Virginia. I want to buttress the statement just made by the able Senator from Michigan. There are 100 time-scheduling problems facing 100 Senators. It is impossible to accommodate every Senator. We have done the best we could, however, to accommodate the Senate and to enable it to reach a vote on the motion to override. The unanimous-consent request that has been propounded seems to achieve that end.

The PRESIDING OFFICER. Is there objection? The Chair hears none, and it is so ordered.

The unanimous-consent argument subsequently reduced to writing, reads as follows:

Ordered, That on Tuesday, August 18, 1970 the Senate proceed to vote at 4:30 o'clock

p.m. on the motion to override the President's veto on H.R. 16916, making Appropriations for the Office of Education for the fiscal year 1971, and for other purposes, with the time from 2:30 p.m. to 4:30 p.m. to be equally divided and controlled respectively by the majority and minority leaders, or their designees.

AUTHORIZATION OF APPROPRIATIONS FOR MILITARY PROCUREMENT AND OTHER PURPOSES

The Senate continued with the consideration of the bill (H.R. 17123) to authorize appropriations during the fiscal year 1971 for procurement of aircraft, missiles, naval vessels, and tracked combat vehicles, and other weapons, and research, development, test, and evaluation for the Armed Forces, and to prescribe the authorized personnel strength of the Selected Reserve of each Reserve component of the Armed Forces, and for other purposes.

Mr. STENNIS. Mr. President, as I understand it, there will be another proposal made shortly perhaps for a unanimous-consent agreement.

Mr. BYRD of West Virginia. Mr. President, the leadership on both sides of the aisle has endeavored throughout the day to reach an agreement as to when a vote might be had on the amendment to be offered by Mr. BROOKE. Consultations are still underway, I believe, and it is hoped that, before the day is over, a unanimous-consent request to that end may be proposed.

Mr. STENNIS. Mr. President, I thank the Senator from West Virginia. The reason I make this inquiry—I am vitally interested in it myself—is that I want to use this time to comment some about the other amendment.

Mr. President, this is an important bill. The military procurement bill represents the hardware all of our services will need and have to be supplied with during the fiscal year now running. It looks forward, as everyone knows, 5, 6, or 7 years in advance.

There are 25 or more amendments. Some of those duplicate or overlap one another. Those amendments will either have to be abandoned or be disposed of one way or the other before the bill passes.

I feel that until we get the ABM matter disposed of, the bill will drag along. We have had the general debate. It has been explained and covered by the various subcommittee chairmen. There has been interrogation.

The general debate has been disposed of. We have had two votes on the ABM question. I think that when we do dispose of the ABM amendment, the bill will move along. I feel that until that matter is disposed of that it will not move.

I hope that we can get this unanimous-consent agreement. When we do, I believe then that it will be reasonably possible to get a very reasonable agreement for voting on the McGovern amendment, which is an important matter. It will provide that troops from Vietnam must be withdrawn by a certain date.

As I understand it, there will then probably be an overall appropriation reduction amendment, an across-the-board reduction, that will involve weaponry, which has already been discussed. I believe that we can get a reasonable agreement with reference to that.

It is so difficult to get the substance of the amendments, that is the opposition to them, before the Senate. I want to exercise the privilege of speaking with reference to some of these amendments that have been presented and are not being called up.

I want to get before the Senate and the public the position of the committee on the amendments.

I mention that now so that I will not be considered to be ill mannered. I am not saying that I will call them up and move to table them. But I will call up the subject matter of the amendment and discuss it from the viewpoint of the committee. It is time now for us to be voting on the amendments or disposing of the committee amendment.

I am ready to yield the floor.

DEATH OF HERMANN B. DEUTSCH, OF NEW ORLEANS, LA.

Mr. LONG. Mr. President, on the 25th day of June of this year, a great newspaperman, Hermann B. Deutsch, of New Orleans, died in his 82d year.

Among his well-known literary works was a widely read book entitled "The Huey Long Murder Case," the story of my father's assassination, extensively cited in the recent Pulitzer Prize biography by Harry Williams.

Among his survivors is his brother, one of my closest personal friends and advisers, Col. Eberhard P. Deutsch, also of New Orleans, a lawyer of national repute, personally known to many Members of this body.

Hermann B. Deutsch received his bachelor's and master's degrees and his doctorate from the University of Chicago, in each case with honors. While in college, he was editor in chief of the Daily Maroon, and he has been a writer and author of note ever since.

For a great number of years, Hermann Deutsch was regarded as an outstanding and highly reliable reporter of the news. During his later years, he wrote a daily column which enriched the day for those who lived in New Orleans and the surrounding area. Many of us came to regard him as one who carried in his memory intimate details of practically everything that had transpired in the New Orleans area for more than a half century. He was famous among his friends as a connoisseur of good food as well as good taste in other matters.

Up to the very moment of his passing, Hermann was, as he had been throughout recent years, writing actively as a columnist for the New Orleans States-Item; and his last two columns appeared after his death.

Perhaps one of his finest and most interesting literary compositions was his last will, written on his 80th birthday, in many of its passages a penerating, philosophical treatise.

Mr. President, this document deserves, in my opinion, a place in the history of literature, and in tribute to the memory of Hermann B. Deutsch, newspaperman, author, and philosopher, I ask that it be printed in the RECORD.

There being no objection, the document was ordered to be printed in the RECORD, as follows:

NEW ORLEANS,
March 16, 1969.

I, Hermann B. Deutsch, make this my last will, hereby revoking any and all others I may heretofore have made. I have never been married and both my parents have died. I have never adopted any one. So much for what I understand are normal legalisms.

I should like to add, however, that I repose complete trust and confidence in my brother Eberhard, whom I propose to designate as my executor. It is my conviction as I write these words that whatever disposition I choose to make of my possessions, these would be carried out by him regardless of how I phrased my wishes, as long as these were completely understood; and after a long lifetime of striving to put my meaning into comprehensible words, it is not likely that I would go up in my exit lines. Hence I have no fear that my disposal of what is—or rather, at the time these lines are read, "was"—mine will be thwarted or denied.

At the moment I set down the foregoing words, the heartening thought came to me that I need not fear anything else, either. Being a rational agnostic, who concedes he does not know what by its own express terms is the unknowable, making no claim that within the confines of a finite mind I can encompass the Infinite, and that, having conducted my worldly affairs as best I could, in accordance with what I conceive to be a reasonably ethical modus vivendi, I certainly need not fear any hereafter based on a concept of justice. Nor do I fear the extinction that would inevitably be the concomitant of the conviction that there is no hereafter beyond the continuing germ-plasm we pass on through the children who survive us.

I have known more delight than dolor, more contentment than frustration, more gladness than sorrow. The balance of gain over loss is so heavily in my favor that I am (if a light form of speech be permitted at a moment presumably solemn) in the position of a golfer who is four up and has but three to go, I can no longer lose. Life has been very good to me; and since I have nothing to ask of death, death can deny me nothing, least of all the serenity with which I look forward to a sounder, less troubled sleep than any I have known heretofore.

That is a long winded and therefore wholly characteristic prologue to what I intend this instrument to say. Oh well! the late Hermann Deutsch suffered chronic attacks of logorrhea. You who of necessity must wade through this, his ultimate outgiving, may draw comfort from the certainty that I can now commit no further offenses of this genre. All that once was I is now permanently cured of the vice of prolixity and I trust may therefore be pardoned one last surrender to garrulousness in disposing of what once was mine.

Of smallest worth among my possessions, is assuredly my body. I ask that it be turned over to one of the physician friends who survive me: Dr. James D. Rives, Dr. Arnold Lupin, Dr. Haroldd Kearney, and Dr. Abe Mickal, in the order named, if they have any use for it. When they have finished whatever they care to do with it, I ask that whatever remains of it be disposed of by them as other refuse is disposed of. Should this not be practical, or should the physicians declare they did not wish to accept it, I ask that a vessel putting out to sea from New Orleans, be charged with carrying it far enough from shore to assure it would not become a nuisance, and there to slide it overside to sink, to be devoured, or to blend in

decomposition with the primordial slime that has been the wellspring of all life on this terrestrial planet.

If legal technicalities should prohibit this, then let my body be cremated and have the ashes scattered over some field where something useful is grown. The one result I ask to assure by these alternative demands is that on an already over-burdened earth no one spot of ground which might be devoted to growing something serviceable shall be pre-empted senselessly by that which once was I; that a future which has no interest for or in me shall in no way permanently call attention to the supremely unimportant fact that throughout one minimal splinter of eternity my heart pumped approximately 72 times a minute, that my lungs drew in and expelled various gases some 20 times a minute, or that I laughed or wept from time to time as the occasion offered. Above all, let there be no gathering of any sort, no "wake", no funeral or other barbarous survival of an uncivilized past, no prayer, no rituals or other incantations I ask this with all the earnestness I could summon were I still alive.

Having thus disposed of the least of my possessions, I should like to pause for one more general observation before parceling out what were my material belongings. I feel that I owe the community in which my lot was cast an acknowledgment of the deep appreciation in which I shall hold it as long as the capacity for emotional response is vouchsafed me. I came to New Orleans with my friend Don Higgins when both of us were strangers here, and to all intents and purposes, penniless. In the fullest and most prodigal measure I was accorded the only boon I asked: the opportunity to make friends and to prosper to a degree which, however modest, satisfied my simple wants. This was a priceless gift. I can do no more (and no less) than make grateful acknowledgment of the obligation.

To this end it is also my earnest desire to record my affectionate appreciation to the Metairie neighbors among whom I passed more than a score of years. They made me welcome warmly when I first took up residence there, and did much to make my life among them happy and contented.

In disposing of my material possessions, I charge first that all debts *justly* owed by me to any man or institution be paid in full. I further charge that with the exception of whatever sums in royalties, or other payments for literary or editorial work might be due me at the time of my death, either for work done on my own account, or work done in collaboration with others, all who are in debt to me be forgiven whatever sums they might owe me.

I ask that the sum of $300 be set aside by my executor to defray the cost of a "business session" of Les Escargots (La Societe des Escargots Orleanaise). I ask further that the then Master Chancellor, whoever he may be, invite five, or if need be, more, non-member guests to adjoin themselves on this occasion to the cherished company in whose presence I may thus play host one last time: my brother Eberhard, Arnold Ginrish, Ralph Nicholson, Lester Klinger, John Schwegman, Dr. James D. Rives, Admiral Fred Reeder of Laurel, Walter Cowan, Ralph Vinson, Ben Franklin of Baton Rouge, and L. C. Montgomery, Jr. This would constitute no breach of the proprieties, since non-members have customarily shared with us the pleasures of such informal gatherings as we have termed our "business sessions."

I have listed nearly a dozen guests for the "five" place settings originally contemplated. But I think it unlikely all of these will be able (or wish) to attend. If, however, they do accept, I charge my brother to make up the additional cost out of the residual funds of my estate; it pleases me greatly, as I pen these lines, to think the invitations will be extended on my behalf to such of them as will be able to accept it. When all's said, this will be the final imposition I make on the good will of the other masters in an association I valued so highly.

My most excellent material possessions are my books. I leave their disposition unconditionally to my brother Eberhard, who is thus free and welcome to retain for himself such of them as he might wish to possess, particularly among the autographed volumes, some of which have, or will have some day, a substantial value over and above the sentimental value they have had for me. I suggest to him—but he remains free to disregard the suggestion in whole or in part—that whatever books he does not want for himself be tendered to the New Orleans Public Library as a small tribute from me to the shining memory of John Hall Jacobs who, in his day, redeemed the Library from the lamentable decadence into which it had declined under his several predecessors, and a tribute also to the dedication and the remarkable capacity Margaret Ruckert devoted to her assignments in the Library's services. I should like the same choice to be extended, at Eberhard's discretion, to the Metairie branch of the Jefferson Parish Public Library whose staff has been uncommonly cooperative over the years, whenever I had occasion to avail myself of its facilities.

Among the remaining volumes which neither my brother nor the public libraries might care to acquire, there will probably be some old text books, laboratory notes, diaries and the like which some university conceivably might wish to include as potential source material on their reference shelves. In that event, I suggest that such items be divided equally among the libraries of Tulane, LSUNO, LSU at Baton Rouge, and Loyola, observing, as best it can be done, what each of them might prefer, if anything.

Obviously, there will be a number of volumes no one wants. Quite a little trash has found its way to my bookshelves, as decade followed decade. I suggest that in their entirety these undesired items be contributed to some public school's scrap drive. Campaigns of this sort seem always to be in progress; in this fashion other minds might profit indirectly from the trove that so greatly enriched mine.

Only the less valuable part of my belongings now remains to be apportioned. To the survivors among three younger friends who, by their self-less affection and understanding companionship, gladdened my senescent years with the assurance that, whatever might befall, I would not be left to face the future in solitude, I now bequeath certain sums of money.

This is not done in requital or repayment for deference to my occasionally captious whims or wishes. I do not think any parent could have been rejoiced and comforted by greater devotion than Jimmy Enos, Jack Bates and Joseph Withers have accorded me. Obviously, therefore, the following bequests are in no sense "rewards" for something no sum, however munificent could repay adequately. May they in turn, one and all, find in others what so spontaneously and generously they offered me during the years of our friendship.

To Mary (Mrs. James D.) Enos, if living at the time of my death, I bequeath the sum of $10,000 (ten thousand dollars).

To Joseph Withers, if he survives me, I bequeath the sum of $15,000.00 (fifteen thousand dollars.)

To Cecile (Mrs. Jack W.) Bates, I bequeath the sum of $10,000.00 (ten thousand dollars.)

While all three of the foregoing bequests are made without stipulation or condition of any kind soever, the various sums were computed on the basis of my feeling that these amounts would suffice to provide for each of their children, in the event of adversity, adequate assistance to assure for them the boundless opportunities which only an adequate education can afford.

Frances Parkinson Keyes has expressed a desire to have the two black walnut book cases and matching table which I have used as dining room furniture. I hereby gratefully bequeath them to her in the event her death shall not have preceded mine. At this time I also make grateful mention and acknowledgment of the wealth of diversified and the considerable financial returns that have come to me as her editorial adviser over an extended period of years. The association has always been stimulating and animated. My thanks have always been, and still are, due her for this.

Though the foregoing bequests dispose of what, at conservative present-day appraisals, constitute a relatively small part of my material estate, I make relatively small bequests to the members of my immediate family. Those closely akin to me, my brother and sisters are all more than well provided for through the success that has marked their several careers which, in the case of my brother, at least, has been exceptionally noteworthy. I make no provision for any more distant kinsfolk, not recognizing that they have of right any claim upon me.

Further, I make no bequests to organized charity or welfare groups; in my estimation, the heavy imposts levied upon my earnings in life through taxes for the support of those less fortunate than myself or assistance to those less willing to exert themselves for the attainment of what earnest effort could almost surely have brought them, fully discharge any obligation I might have in this respect.

While my sisters are not by any standard in necessitous circumstances, I make the following bequests to them to enable the closing years of their lives to be perhaps a little easier and more pleasant:

To my sister Edith I bequeath the usufruct for the remainder of her life and without bond, of the cash sums of which the naked ownership is hereby and herein elsewhere bequeathed to the University of Chicago ($15,000.00), Louisiana State University in New Orleans ($15,000.00), Loyola University of the South ($10,000), and to my nephew Brunswick ($5,000.00).

To my sister Naomi I bequeath the usufruct, for the remainder of her life, and without bond, of the cash sum of $15,000, of which the naked ownership is herein elsewhere bequeathed to the Tulane University of Louisiana.

To my nephew, Brunswick G. Deutsch, I bequeath as a token of my affection for him, my photographic equipment and the naked ownership of $5,000.00, subject only to the usufruct hereinabove imposed thereon.

I bequeath to the following institutions the naked ownership of the sums set opposite their names, subject only to the usufruct hereinabove imposed thereon:

The University of Chicago, $15,000

The Tulane University of Louisiana, $15,000

Louisiana State University in New Orleans, $15,000

Loyola University of the South in New Orleans, $10,000

All of the legacies hereinabove bequeathed (except that of the residue of my estate bequeathed hereunder) shall be paid in full, free of any and all inheritance and estate taxes, and free of any costs and expenses of administration, and any and all other charges which may be due or claimed to be due thereon, all of which taxes, costs, expenses and charges shall be paid out of the residue of my estate after payment of said other legacies in full.

I bequeath all the residue of my estate to John L. Ivester of Grady, Arkansas, for many years my close friend, companion of unforgettable hunting and fishing excursions, the father of my godson and namesake, the only

one other than my brother, upon whom I could have called for any sacrifice in time of need. If by some quirk of fate his death should have preceded mine, I bequeath the residue to John's son, J. Hermann Ivester with the stipulation that he look after the welfare and financial needs of his mother, Margaret, with the affection and solicitude which his father would have exercised and wished his only son to exercise, during the balance of her life.

There now remain only those further technicalities without which I could not make an untroubled exit from a restless life into a restful and untroubled eternity into which I shall have entered by the time these lines fall within the view of other eyes than mine.

I nominate my beloved brother, Eberhard P. Deutsch, and in the event of his death, inability or unwillingness to serve, my nephew, Brunswick G. Deutsch, to be the executor of my estate with full seizin and detainer thereof, from the moment of my death, and without bond. Whatever fees shall be payable to them as executors, are to be in addition to the small bequests hereinabove made to them.

Finally, I take this last opportunity to put into words my abiding gratitude to my brother Eberhard, to whom this is a personal and very affectionate note of farewell.

Thus entirely written, dated and signed by me in my own hand at New Orleans, Louisiana, this 16th day of March, nineteen hundred and sixty-nine.

HERMANN B. DEUTSCH.

NEW ORLEANS, LA.,
March 18, 1969.

I, Hermann B. Deutsch of New Orleans hereby make this codicil to my will of March 16, 1969. I hereby bequeath to Dillard University the sum of $5,000.00.

Thus entirely written, dated and signed by me in my own hand at New Orleans, Louisiana, this 18th day of March, 1969.

HERMANN B. DEUTSCH.

AUTHORIZATION OF APPROPRIATIONS FOR MILITARY PROCUREMENT AND OTHER PURPOSES

The Senate continued with the consideration of the bill H.R. 17123) to authorize appropriations during the fiscal year 1971 for procurement of aircraft, missiles, naval vessels, and tracked combat vehicles, and other weapons, and research, development, test, and evaluation for the Armed Forces, and to prescribe the authorized personnel strength of the Selected Reserve of each Reserve component of the Armed Forces, and for other purposes.

Mr. BYRD of West Virginia. Mr. President, the able assistant minority leader will be present in the Chamber in a moment. He has been momentarily called off the floor.

The able Senator from Massachusetts (Mr. BROOKE) will offer his amendment tonight. There can be discussion on it tomorrow.

Mr. STENNIS. Mr. President, may we have order so that we all can hear? There is an important matter.

The PRESIDING OFFICER. There will be order in the Senate.

ORDER FOR RECESS FROM TOMORROW, TO WEDNESDAY, AUGUST 19, 1970, AT 10 A.M.

Mr. BYRD of West Virginia. Mr. President, now that the able assistant minority leader has returned, I ask unamimous consent that when the Senate completes its business tomorrow, it stand in recess until 10 o'clock Wednesday morning next.

The PRESIDING OFFICER (Mr. ALLEN). Without objection, it is so ordered.

UNANIMOUS CONSENT AGREEMENT

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that on Wednesday morning next, following the prayer by the Chaplain, the Senate having recessed, the time on the amendment which will shortly be offered by the able Senator from Massachusetts (Mr. BROOKE) be limited to 3 hours, to be equally divided between the able Senator from Massachusetts (Mr. BROOKE) and the able committee chairman and manager of the bill, the Senator from Mississippi (Mr. STENNIS), and that a vote on the amendment occur at 1 p.m. on Wednesday next.

The PRESIDING OFFICER. Is there objection?

Mr. GRIFFIN. Mr. President, reserving the right to object, and I shall not object, here again I want to indicate that the leadership on both sides has struggled with a lot of problems. There are some Senators who will not be happy with this arrangement because it will involve a great personal inconvenience to them. Some Senators will not be able to be present.

But we have done the very best we could.

I know of no effort that would be made to table this amendment, but I would like to have the unanimous-consent agreement follow the pattern of other agreements where, if there were a tabling motion, the vote would come immediately preceding.

Mr. BYRD of West Virginia. Does not the Senator wish to shut out any tabling motion?

Mr. GRIFFIN. No, on the contrary, I want to make it clear there could be.

Mr. BYRD of West Virginia. Under the unanimous-consent request, as I have proposed it, a motion to table would be shut out.

The PRESIDING OFFICER. The Senator is correct.

Mr. GRIFFIN. The understanding, I take it, was that there would not be an opportunity for a tabling motion. In view of the fact that that was the understanding, I will not press the point.

Mr. BYRD of West Virginia. So, Mr. President, the verbiage in the unanimous-consent request would stand, and a tabling motion would not be in order.

The PRESIDING OFFICER. The vote would be at 1 p.m. on the amendment itself; no other amendments would be offered.

Mr. BYRD of West Virginia. The vote at 1 p.m. would be on the amendment shortly to be offered by the able Senator from Massachusetts (Mr. BROOKE.)

The PRESIDING OFFICER. The vote would be on the amendment and the time prior to that time would be divided between the Senator from Mississippi and the Senator from Massachusetts.

Without objection, it is so ordered.

The unanimous-consent agreement, subsequently reduced to writing, is as follows:

UNANIMOUS-CONSENT AGREEMENT

Ordered, That the Senate proceed to vote at 1 o'clock p.m. Wednesday, August 19, 1970 on the pending amendment by Mr. Brooke (No. 821) to H.R. 17123, the military procurement authorization bill, with the time between 10 a.m. and 1 p.m. to be equally divided and controlled by the Senator from Massachusetts (Mr. BROOKE) and the Senator from Mississippi (Mr. STENNIS).

Mr. STENNIS. Mr. President, will the Senator yield?

Mr. BYRD of West Virginia. I yield.

Mr. STENNIS. What was the response to the inquiry by the Chair that no other amendments would be offered?

Mr. BYRD of West Virginia. As I understand the unanimous-consent request and as I understand the precedents, an amendment to the amendment and may be brought up when all time had expired, but there could be no time for debate on such amendment.

The PRESIDING OFFICER. The Senator is correct.

Mr. BYRD of West Virginia. It would have to be immediately voted upon without debate and the vote on the amendment offered by the Senator from Massachusetts would immediately follow.

The PRESIDING OFFICER. The Senator is correct. No amendment to the Brooke amendment could be offered until the elapse of the entire time at 1 o'clock. The vote at that time would be on the amendment to the Brooke amendment, followed by the vote on the Brooke amendment.

Mr. STENNIS. Would the situation the Chair just outlined be correct and true even though the Brooke amendment is an amendment to a committee amendment and any amendment to the Brooke amendment would be the third amendment?

The PRESIDING OFFICER. It would be in the second degree.

Is there objection?

Mr. GRIFFIN. Was it established that the amendment being referred to is a printed amendment?

The PRESIDING OFFICER. It is to be called up and stated.

Is there objection? The Chair hears no objection, and it is so ordered.

Mr. BROOKE. Mr. President, I call up my amendment No. 821 to H.R. 17123 and ask that it be made the pending business.

The PRESIDING OFFICER. The amendment will be stated.

The legislative clerk read as follows:

On page 17, beginning with line 15, strike out all down through line 5 on page 18, and insert in lieu thereof the following:

"SEC. 402. Funds authorized pursuant to this Act for the procurement of antiballistic missile defenses may be used only for defense of strategic forces deployed at Grand Forks Air Force Base, North Dakota, and Malmstrom Air Force Base, Montana."

The PRESIDING OFFICER. The Senator from Massachusetts is recognized.

The BROOKE. I yield the floor.

Mr. BYRD of West Virginia. Mr. President, I wish to express appreciation on behalf of the leadership to the Senator from Massachusetts (Mr. BROOKE), the

minority leader, the acting minority leader, the manager of the bill, Mr. STENNIS, and all other Senators who made it possible to reach the unanimous-consent agreement.

Mr. STENNIS. Mr. President, I think the thanks go to those who work on the floor of the Senate, the Senator from Massachusetts, to the leadership, the Senator from West Virginia (Mr. BYRD), the Senator from Michigan (Mr. GRIFFIN), and others who have assisted them in working out this matter. It is very difficult and very complex. I wish to thank the Senator from Massachusetts (Mr. BROOKE) for his attitude in enabling us to get to a vote.

Mr. BROOKE. Mr. President, I thank the distinguished Senator, the acting majority leader, and the acting minority leader for working out the agreement. As the distinguished minority whip said there is no time which would accommodate everyone, but I think we have done the best we could under the circumstances.

Mr. STENNIS. Mr. President, will the Senator yield?

Mr. BYRD of West Virginia. I yield.

Mr. STENNIS. Mr. President, I am very glad we have this agreement on the ABM vote. I think that after that occurs, this bill will move along rapidly. I know it should and that everyone will cooperate in trying to bring about the consummation of these decisions. The matter should be concluded as soon as we can, and by all means action on this bill should be completed before we think about taking a Labor Day recess.

I thank the Senator.

ORDER FOR PERIOD FOR THE TRANSACTION OF ROUTINE BUSINESS TOMORROW

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that, upon completion of the special orders for the recognition of Senators tomorrow, there be a brief period for the transaction of routine morning business, with statements therein limited to 3 minutes.

The PRESIDING OFFICER. Without objection, it is so ordered.

PROGRAM

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that, upon the conclusion of the transaction of routine morning business tomorrow, the unfinished business be laid before the Senate.

The PRESIDING OFFICER. Without objection, it is so ordered.

ORDER OF BUSINESS

Mr. GRIFFIN. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

ADJOURNMENT TO 11 A.M.

Mr. BYRD of West Virginia. Mr. President, if there be no further business to come before the Senate, I move, in accordance with the previous order, that the Senate stand in adjournment until 11 o'clock tomorrow morning.

The motion was agreed to; and (at 5 o'clock and 32 minutes p.m.) the Senate adjourned until tomorrow, Tuesday, August 18, 1970, at 11 a.m.

EXTENSIONS OF REMARKS

OREGONIAN SAYS MANY FORESTED AREAS HAVE TO BE LOGGED TO BE SAVED

HON. LEN B. JORDAN

OF IDAHO

IN THE SENATE OF THE UNITED STATES

Monday, August 17, 1970

Mr. JORDAN of Idaho. Mr. President, the Portland Oregonian, one of the Northwest's distinguished newspapers, recently published an editorial which pointed out that people who talk in emotional terms about saving our forest frequently overlook the fact that in many cases these forested areas must be logged to be saved.

The editorial cites the case of a 1,400-acre tract of Ponderosa Pine on the Metolius River in Oregon which had been set aside as a natural area since the 1930's but which has deteriorated into a mess. Large trees are dying, rust and bugs are taking a heavy toll, and snags dot the area.

This deteriorated area is contrasted with adjacent managed areas which have been protected against insects and logged under Forest Service supervision.

This well-reasoned editorial is especially significant to me because I have on display in my office a series of five photographs which graphically tell the story of a managed forest in the Willow Creek area south of St. Maries, Idaho, in the St. Jose National Forest.

This forested area was logged in the 1930's, about the time that the Metolius River area, described in the Oregonian, was set aside as a natural area. When this acreage was taken over by the Forest Service in 1938, only a few native seedlings were visible in the first photo in my series, showing the logged-over area, a sight that many people object to if they do not understand the cycle of a managed forest. In 1939 and 1942, CCC crews planted 4-year-old trees from the Forest Service nursery, filling in the blank spaces left by the natural seeding. This new growth is very apparent in the second photo, taken in 1944.

In the third photo, taken 11 years later, the hillsides are mantled with young trees. Shrubs between them provide abundant food for deer and elk. Because the earlier forest was clearcut, the new one contains sun-loving trees. The clearcutting also helped reduce the incidence of dwarf mistletoe, the parasitic problem plant referred to in the Oregonian editorial.

The fourth photo, taken 16 years after the management program began, shows a vigorous growth of new trees so large and dense that they would benefit from thinning and weeding. The last photo in the series, taken in 1969, shows a beautiful, maturing forest of the type that makes Idaho one of the most beautifully forested areas in the continent.

This series of photographs and the Oregonian editorial both make a case for multiple-use management of our forest resources. This type of management "saves" a valuable, renewable resource, and contributes to the welfare of our wildlife and to the economic welfare of man.

Mr. President, I ask unanimous consent that the Oregonian editorial be printed in the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

MANAGED FORESTS

The best possible management of national forests is everyone's business, but not everyone will take the time or trouble to get the facts straight. Preservationist fanatics who seek to block logging in vast acreages of federal commercial timber talk in emotional terms, of "saving" the forests. But the fact is, in many cases these forested areas must be logged to be "saved."

Before a Sierra Club critic makes the expected rejoinder, this is not at all like saying, as an American officer was quoted as saying in Vietnam, that he had to destroy a village to save it.

Doubters should visit a 1,400-acre tract of Ponderosa pine next to the road down the Metolius River below Camp Sherman which has been set aside as a "natural area" since the early 1930s. Foresters have guarded it against fire, but have not touched it in any other way. It looks a mess. Large trees are dying. Rust and bugs are taking a heavy toll. Snags dot the area. It is unlikely that the overstory will survive more than 10 years longer.

In adjacent areas the Forest service has permitted contract logging of trees of declining vigor to control infestation of the western pine beetle—up to 5,000 board feet per acre. This is a controlled landscape management program, also evident along the Santiam Highway, in which logging is done with rubber-tired vehicles on a snow cover, slash is burned, buried or chipped, and the more open, parklike result is a scenic stand of old growth pine.

In the same area, on a plateau above the river, another problem is being met in a way preservationists may scream about unless they listen to the reason. The villain there is dwarf mistletoe, a parasite which saps the life of conifers. The seeds of this destroyer are in berry-like fruits which, on maturity,

"explode" through the air for 50 feet or more and stick to other trees. Sometimes the mistletoe clusters reach great size, weighing hundreds of pounds. The growths which attack the trunks of younger trees will so weaken them that they will never reach maturity but will fall prey to insects and other diseases.

Clear-cutting—a practice not generally used in the "yellow-belly" pine country of Central Oregon—is the only sure, known method of getting rid of an infestation of dwarf mistletoe. Replanting with healthy stock is, of course, the necessary next step. But in the interim, complaints are expected about "desecration" of scenic forests. And there are 110,000 acres of ponderosa pine and 100,000 acres of other species among the 1,587,692 acres of the Deschutes National Forest, alone, seriously infected with mistletoe. Because of shortage of funds, it would take 10 years to clear and replant less than 20,000 acres of the infected, doomed mistletoe forest at the present rate of treatment.

This inability because of financing or other reasons to keep up with forest decay is the real problem of forest management, and it is not improved by the complaints from zealots who raise political storms about every clear-cut in the forest.

In a related situation, the Sierra Club has protested the Lucky timber sale on 13,000 acres of pine between the Cascades Lakes Highway and the Three Sisters Wilderness area. This is a regular commercial sale, but because it leads into the wilderness the Forest Service has laid down conditions for shelterwood and limited clear-cut logging which will preserve the timbered vista and provide for intensive slash clean-up.

The protest here is similar to that lodged against timber sales on the Western Cascades. The Sierra Club and some others demand "buffer strips" outside wilderness areas—in other words, an expansion of the wilderness area without benefit of congressional sanction.

As a matter of practice, the Forest Service itself provides a buffer strip by careful logging to preserve the scenic values. But it does not, and should not, permit the preservationists to commandeer the commercial forest outside wilderness boundaries. The sorry degeneration of the Metolius Natural Area shows why this should not be done. And Oregon's forest-based economy provides another sound reason for a managed, multiple-use forest.

MALE POVERTY SLOWLY FADING BUT WOMEN ARE TRAPPED

HON. DONALD M. FRASER

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Friday, August 14, 1970

Mr. FRASER. Mr. Speaker, on Monday this House passed the equal rights amendment. As I listened to and participated in that debate I became even a stronger advocate of the need for action. After the debate, a Washington Post column by Richard Harwood which appeared July 22, 1970, was called to my attention. I think Mr. Harwood's article indicates one result of our failure to give all women equal pay for equivalent work.

The article follows:

MALE POVERTY SLOWLY FADING BUT WOMEN ARE TRAPPED

(By Richard Harwood)

The Census Bureau last week published a fresh communique on poverty in the United States. The gist of it was that the problem is slowly going away, at least as a statistical concept.

There were roughly 40 million poor at the start of the 1960s, about 22 per cent of the American people. At the end of the decade there were about 24 million, 12 per cent of our people.

For those who like to take a happy view of these things, the numbers seem impressive. Whites and blacks, old and young have been getting out of the poverty classification at the rate of nearly 2 million a year. As a result, the "total elimination of poverty" has become something the nation can easily afford.

It would have taken only $10 billion last year, the Census Bureau calculates, to raise the income of all poor people above the poverty line—$7 billion for the poor whites, $3 billion for the poor blacks.

That kind of money is peanuts in an economy generating more than $900 billion a year. But still Congress hesitates and the modest Family Assistance Plan proposed by the administration is stalled in a Senate committee room by well-fed men playing Hamlet.

Some of them no doubt believe that if you wait another 10 years or so the problem will solve itself, that it is a self-liquidating affliction.

That notion is a half-truth at best because people who are poor have unequal capacities for self-help. The record of the 1960s proves that point.

At the beginning of the decade there were nearly 5 million poor families in this country headed by a man under 65 years of age. By the end of the decade there were fewer than 2.5 million such families. This means that if you were a poor kid—either black or white—in 1960 and lived with your father, you had a 50–50 chance of getting out of poverty by 1970.

If your father was gone, however, and you lived with your mother your chances of getting out of poverty in that decade were zero. There were as many poor families headed by women in 1970 as in 1960. Among blacks, the situation was even worse.

The number of poverty-stricken Negro families headed by women has increased by more than a third over the past 10 years. There were 483,000 such families in 1959 and today there are nearly 700,000 containing 3.8 million people. They represent more than half of the poor blacks in America. Families headed by white women contain another 3.6 million of the poor.

For these families, any escape from poverty through the workings of the private economy—slices of a bigger pie—is little more than a pipe dream. They are locked in and they will remain locked in until their children get old enough to work or until an able-bodied male joins the household.

The reason is that the private economy is not generous to women in America, and it is most especially not generous to the poorly-educated "welfare mother."

If these women had left their homes and their children to enter the labor market in 1968, if they had had the same education and training as the "average" woman in the labor market, if they had held an "average" full time job and worked an "average" number of weeks they would have enjoyed an "average" income of $3,621. That doesn't quite get a family of four out of "poverty," which is currently defined as an income of about $3,800 a year.

This problem transcends the problem of racial discrimination. The median money earnings of white women who worked full time in 1968 was $3,731; for Negro women the figure was $2,766.

For men of both races, the rewards of work were far greater. White men had median full time earnings of $7,447; the Negro median was $4,761.

What this means is that poor men in America have some hope of getting themselves and their children out of poverty if they stick to it long enough for the private economy to slowly draw them in.

But the poor woman trying to raise a family alone is hopelessly trapped. The private economy simply will not take her out of poverty.

That is why the administration's Family Assistance Plan—or some version of it—is the only solution to her problems. The fact that the 1960s made no dent whatever in the problems of the poor women in this country is a national disgrace and it is time that the Senate faced up to it.

SOME SPRIGS OF GOOD NEWS

HON. WILLIAM B. SPONG, JR.

OF VIRGINIA

IN THE SENATE OF THE UNITED STATES

Monday, August 17, 1970

Mr. SPONG. Mr. President, in these times, when we are beset with so many problems, perhaps we forget that some encouraging things are happening, too. We are grateful to Bill Monroe of "NBC News" for calling attention to them recently in a "Byline Report" on the "Today" show.

For many listeners, Mr. Monroe's words proved to be a tonic. I ask unanimous consent that the text of his broadcast, "Some Sprigs of Good News," be printed in the Extensions of Remarks.

There being no objection, the text of the broadcast was ordered to be printed in the RECORD, as follows:

SOME SPRIGS OF GOOD NEWS

(By Bill Monroe)

In this summer of 1970, just as Americans had almost accepted the dismal idea that the news had turned permanently bad, a few sprigs of good news have appeared.

Because of an American peace initiative, which seems to have gotten some backing from the Russians, those bitter enemies, the Arabs and the Israelis, have said, all right, we'll try to talk it out. They may not succeed. But at least they're serious enough about it so that, on both sides, they're standing firm against their own extremists who don't want any attempt at peace.

In Vienna, Americans and Russians have been talking for almost four months about limiting the ominous escalation of nuclear weapons. Reportedly they're making progress.

In this country, there are signs of a more rational approach to our own deep internal divisions.

The government may not have changed its mind about some of its militant young critics but it seems to have eased its language of condemnation. It is seeking better contacts with students, with educators and with blacks.

There are reports from campuses, there are reports from black ghettoes, of more emphasis on change through politics, less emphasis on confrontation by seizure, by brickbat and by rabid rhetoric. The anger is still there but the moderates are insisting on a say in how it's expressed.

In magazine articles, leaders of the anti-Vietnam war movement write of their discovery that, while most Americans may not like war, they like flag burning even less. In Chicago, a group of black men contends

openly with a powerful young street gang over who's going to speak for their community.

These are some of the signs, at home and abroad, that there is less talk this summer of tearing down the house and more talk of fixing the roof. The roof, of course, may take plenty of fixing.

But there it is, nevertheless, more hopeful news, springing up like green shoots in burned-over land. And if you're one of those human persons who tends to blame television for bringing too much bad news, we'll be happy to accept your congratulations for our recently improved performance.

CZECHOSLOVAKIA

HON. WM. JENNINGS BRYAN DORN

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Friday, August 14, 1970

Mr. DORN. Mr. Speaker, August 21 will mark the second anniversary of the Soviet-led occupation of Czechoslovakia. This outrageous violation of human rights and international law by the Soviet Union and its Warsaw Pact satellites abruptly halted the slow steps being made in Czechoslovakia to develop a certain measure of political liberty. At the time of this invasion the basic democratic and freedom-loving nature of the Czech people was gradually winning over the repressive and totalitarian aspects of Russian-style communism that had been imposed on that small nation. The courageous Czechoslovaks were discovering a new sense of personal freedom, freedom of political expression that we Americans take for granted. Such basic rights as the right freely to travel—also taken for granted under our Constitution—were to the Czechs a source of new found joy. Even the professional Communist leadership was slowly moving toward a form of two-party state.

All of this encouraging movement toward freedom was of course too much for the Soviet imperialists to swallow. For the Soviets, aptly called the "new czars" by their former Red Chinese allies, cannot tolerate the slightest manifestation of political freedom within their satellite empire.

The captive nations of Eastern Europe, together with the many captive nationality groups that make up the modern-day Soviet Union, comprise an empire held together by force, fear, and isolation. The Communist-militarists now in control in Moscow fear that a taste for freedom among their captive nations might well spread into the Soviet Union itself; they fear that once their young people tasted the freedoms of expression and movement that there would be no turning back to the modified Stalinism of the current regime.

So it was, Mr. Speaker, that the Soviet imperialists and their satellite lackeys struck out in fear to run roughshod over Czechoslovakia. The recent period of slow but sure Stalinization in Czechoslovakia has by now led to the total expulsion from the Communist Party of the leaders of the "Prague spring" and has led to the reimposition of hardline Communist totalitarianism.

Mr. Speaker, the ruthless and illegal actions of the Soviet imperialists on August 21, 1968, when considered together with Soviet imperialism in the Middle East and Southeast Asia, holds an obvious lesson for the free world. That is that the Soviets have combined the expansionism so much a part of Communist ideology with the worst aspects of 19th-century imperialism. The product of this combination is an aggressive and powerful nation-state intent on territorial, economic, and political expansion.

Mr. Speaker, we are currently engaged in negotiations with the Soviets of the most serious nature, as are our West German allies. Perhaps some good can come from these negotiations. But the lesson of August 21, 1968, is that in dealing with the Soviet imperialists we must always be wary, and always negotiate from a position of strategic strength.

THE NATIONAL ENVIRONMENT FOUNDATION, INC.

HON. HUGH SCOTT

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Monday, August 17, 1970

Mr. SCOTT. Mr. President, I wish to inform Senators of the National Environment Foundation, Inc., a charitable, scientific, and educational institution which was created to act as a catalyst and prime authority in the problems of the environment which face the Nation and its people, and which may make a lasting contribution in this field.

This foundation was formed to assemble and collate, and to place into a private data bank system for the first time, all information and on-going research from Government, industry, universities, and the private sector concerning the environment and matters ecological.

As Senators know, recent testimony before the House Committee on Merchant Marine and Fisheries recommended in substance that a central data bank on the environment within the Federal Government be delayed indefinitely. I am, therefore, most happy to inform the Senate that the National Environment Foundation is commencing activity along these lines, the comprehensive information from which will be made available to all interested parties.

When the accumulated data reaches such form, a foundation board of distinguished scientists with impeccable credentials in the particular fields will render findings and recommendations, both as to the acute and the long-range aspects.

Finally, the foundation will then widely disseminate this information and findings throughout school systems, the private sector, Government at all levels, universities, and other research areas.

The foundation thus becomes a prime source and authority in the environmental field, and occupies an unbiased posture somewhere between government and industry.

A basic belief of the foundation, as described to me, is that betterment of our environment will not come about by government and more government, nor through industry alone, but through a matter of national will, which in essence must be based upon the widespread dissemination of proper and correct educational information, particularly to the youth of America into whose hands the stewardship of the environment must pass.

To these ends the National Environment Foundation is committed.

Earlier this year I introduced Senate bill 3388 which would establish an Environmental Quality Administration to consolidate the more important agencies and authorities within the Federal Government, and to coordinate our basic Federal environmental quality efforts. Since President Nixon's proposed Environmental Protective Agency will establish these same ends, it is of particular interest to me, therefore, that sincere and dedicated distinguished Americans under the capable leadership and direction of Mr. Walker P. Buel, president, are uniting to engage in important environmental work through private endeavor which will parallel and benefit the efforts of Government in the critical areas of the environment.

As one of its major projects, the foundation is sponsoring Dimension U.S.A. Commitment: Environment, a major 20-city exposition tour beginning in mid-1971 in the city of Philadelphia, the birthplace of other important happenings in the history of this great Nation.

This will be the first of three such tours. The second is now scheduled into the bicentennial in 1976, also in Philadelphia, in the nature of a progress report on the environment to the American people, and the final exposition in 1980 as a review of the progress made by Government and industry and private research in this decade of the environment.

The exposition will illustrate the concern and activities of Government and industry, have a central theme, exhibit specific techniques and processes now extant, and include what is presently in the research stage and what is planned for the future.

Impact of the show will also illustrate the importance of the individual citizen's role in bettering his environment as an integral part of it.

Reasons for this exposition are two-fold: First, the exposition furthers the educational aspect of the National Environment Foundation, and second, the Department of the Interior three times has been rebuffed by industry for some type of illustrative trade fair on the environment, and Secretary Hickel has recently canceled a similar show here in Washington which was well underway.

As an unbiased, nonpolitical catalyst, the Foundation is in the unique posture of being able to bring industry and Gov-

ernment together in an exposition of this kind.

In summation, these exhibits will be available to millions of people who are now somewhat confused and uninformed about what the responsible segments of Government and the Nation are doing about the problems or, in fact, that they even care about them.

Final repository of the exposition exhibits themselves, which will be kept upgraded by the appropriate industry trade associations and governmental departments and overseen by the Foundation, will be in the Nation's Capital.

It is indeed my pleasure, therefore, to bring to the Senate this brief notification of the National Environment Foundation and its major aims, aspirations, and activities.

WE MUST PRESERVE OUR OCEAN RESOURCES

HON. DANTE B. FASCELL

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Friday, August 14, 1970

Mr. FASCELL. Mr. Speaker, recent activities regarding the disposal of lethal nerve gas in the Atlantic Ocean have focused the attention of the Nation and the world on a major problem—the preservation of our ocean resources. As I stated in the House of Representatives earlier this week, we must take positive action now if we are to prevent our waters from becoming the garbage dump of the world.

It is not idle philosophy to observe that although we tend to ignore or misuse the sea resources—as a nation and as a people—we will eventually live or die by the sea. Such a postulate takes into consideration our future utilization of the sea as a source of food, minerals, fresh water—via desalination—as well as its use as a storage facility.

Yet, in spite of such potentials, very little moneys are being spent on useful, relevant projects to enhance our understanding of this invaluable resource. For example, we know very little about the coral reefs portions of the sea—a vitally important ecological area.

Thus, in the absence of this knowledge, we are engaged in an ironic and senseless sort of war today—man against his environment. Unfortunately, man seems to be winning and the eventual outcome could mean his destruction. Obviously something must be done—and soon—to make compatible partners of the current combatants.

The University of Miami's Field Station at Pigeon Key in the sun-splashed Florida Keys represents one of the most tangible steps taken to evolve such a treaty. Don Groves, in his August 1970 Underseas Technology magazine article, has excellently summarized the work of this vitally important university activity. I call this important article to the attention of our colleagues:

PIGEON KEY—UNIVERSITY OF MIAMI'S FIELD LABORATORY

(By Don Groves)

Ecology, now beginning to receive considerable national attention, is emerging as a major field of emphasis in university biology and urban programs. Ecology, of course, involves intensive study of all aspects of the environment, including the tropical and subtropical marine areas. In these mangrove and coral reef portions of the marine environment, various principles and processes having broad application to all living things can be investigated in such a way as to reveal an understanding of the present, an interpretation of the past and a prediction of the future.

Unfortunately, such essential studies of marine phenomena often involve long and costly voyages. Moreover, as Dr. S. R. Galler, assistant secretary for science at the Smithsonian Institution, has said: " . . . The lack of adequate field facilities for observing living organisms in their normal habitats over long periods of time has been one of the principal handicaps in establishing the validity of working hypotheses which describe the mediums of primary productivity, biological cycles, and other fundamentally important biological phenomena. Usually, these hypotheses are constructed from three kinds of data—laboratory data (which is now relatively reliable), collections of preserved specimens (which at present are inadequate) and field measurements (few of which have been made) . . ."

Recognizing these facts, the University of Miami recently obtained a 20-year lease for a field station on Pigeon Key, Fla., to conduct tropical marine studies.

Named for the white-crowned wild pigeon, Pigeon Key is a small, isolated—but accessible—3.5-acre island in the line of the Florida Keys, lying midway between the Straits of Florida and the Gulf of Mexico. The area is one of the richest in coral growths and ocean fauna in the continental United States. The island is crossed by a seven-mile bridge which runs northeast to southwest between the town of Marathon on Key Vaca and Bahia Honda Keys.

The University of Miami's Rosentiel School of Marine and Atmospheric Sciences operated the facility for three years, beginning in 1965, as a biological research station until funding shortages curtailed operations. In 1968, the present 20-year lease was issued by Monroe County to the University of Miami. A committee representing the Rosenstiel School, the medical school and the main campus, the Monroe County Commission, the Marathon Chamber of Commerce, and the Florida Keys Recreation and Conservation Society administers the operation of Pigeon Key.

The facilities on the island are available primarily to student investigators and qualified groups. Saint Olaf, Harvard, Louisiana State, Tulane, Wooster, North Carolina and Princeton are but a few of the schools that have conducted studies at Pigeon Key. The facilities are made available on a first-come, first-served basis to both male and female undergraduates, independent researchers and graduate students. (Interested persons should first contact Dr. E. H. Man, Dean, Research Coordination, P.O. Box 8293, University of Miami, Coral Gables, Fla. 33124.)

The Pigeon Key facilities, which are currently being refurbished, include a general classroom and laboratories with several sea water holding tanks for both small and large specimens, a dark room and a cold room. Instruction in both scuba and skin diving are offered. Living quarters for more than 50 scientists are available.

The sea around Pigeon Key provides a magnificent laboratory. Here, for example, the properties of the water mass are sometimes oceanic and sometimes those of Florida Bay.

One of the characteristics of the bay and associated flats is the high salinity and temperature of the water during the summer months, and an associated high rate of calcium carbonate deposition. The entire area has a base of Key Largo limestone. Pigeon Key, like many of the other keys, is a promontory of this material with eroded rock shores and a covering of shallow organic duff.

The waters around Pigeon Key abound in coral growth. The cement pilings of the overseas highway are covered with growth of stony corals, alcynarians and sponges. At the bases of rocks below the low tide zone are small clusters of the coral *Porites*, several genera of coraline algae such as *Amphiroa, Jania and Goniolithon*, and other calcareous forms such as *Penicilus and Halimeda*.

Beyond Hawk Channel, about five miles from Pigeon Key, the Florida Barrier Reef lies parallel to the Gulf Stream. The reefs are extensive outcroppings of live corals such as *Acropora* and *Porites*, which lie inches below the surface at low tide and whose dead patches protrude above. Studies of the ecology of associated fauna such as reef fishes have been carried out in this vicinity by the staff of the Rosenstiel School, and the reefs afford valuable areas for many future studies.

Besides the extensive calcareous deposits and growth, the eroded rock along the shore affords refuge to most of the typical intertidal rock-dwelling invertebrates of the West Indian region. There are also extensive banks of the turtle grass *Thalassia* lining channels and rock outcroppings, where fauna is rich and varied in tropical invertebrates and fishes. These shallows are so shoal that at low tide, they are only two or three feet below the surface and often completely bare.

Because of the extensive movement of water during the tidal cycle, Pigeon Key does not appear to be endangered by polluted waters, even under extremes of settlement in nearby keys. The larger keys in the vicinity have growths of tropical plants and halophytic forms that are protected by conservation regulations and may be used for study.

SCHWEIKER PRAISES CENTRE COUNTY LAY CHAPLAIN

HON. RICHARD S. SCHWEIKER

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Monday, August 17, 1970

Mr. SCHWEIKER. Mr. President, I invite the attention of Congress to an example of voluntary action and involvement by a Centre County, Pa., resident.

Charles Schlow, of State College, has been a lay chaplain to the inmates of the State Correctional Institute at Rockview, Pa., for over 50 years. He has not only conducted religious services for inmates, but has arranged for family visits, helped inmates to secure jobs upon their release from prison, and done many other acts of kindness for the inmates.

At a time when much criticism is being made about our penal system, and about the lack of rehabilitation being done in our prisons, this example of 50 years of unselfish service by Charles Schlow helps us to keep in proper focus just what our

prisons should be doing. I think the most important thing he has done during these 50 years has been to let the inmates know that they are not forgotten, that someone cares, and thus to serve as an inspiration for the inmates to better themselves when they leave prison.

The Centre Daily Times published an article about Charles Schlow on July 9, 1970. I ask unanimous consent that it be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

CHARLES SCHLOW THE UNOFFICIAL BUT OFFICIAL ROCKVIEW CHAPLAIN

(By Nadine Kofman)

Last month, Charles Schlow of State College received a membership card from the American Correctional Chaplains Association in Washington—made out to Rabbi Charles Schlow.

He is the only member of that organization who is not a rabbi, but the confusion is understandable since for the past 50 years he has been a chaplain to the Jewish inmates at the State Correctional Institute at Rockview.

In 1920 he was asked by the former chaplain to assume the duties, and since that time, he has, on his own, met on Sunday mornings with a group of inmates, composed largely of Jewish prisoners, but usually with a few Protestant and Catholic men as well. The group has numbered from as few as one to as many as 14 at one time.

The Sunday services may include a prayer or a chapter reading from the Bible, but there is always a discussion around a specific theme, which may be a current events issue, a basic humanistic or religious idea or a book. He does not preach to the men.

"Religion is how you live," he says. "You don't preach to grown-up men, you've got to get them to think a little."

For one service, Mr. Schlow brought up the topic of pollution, and discussed it in terms of mind pollution.

One topic they do not discuss is their crimes.

"I never ask a man what he's done. What he did is water under the bridge," he says.

The important thing now, he feels, is to get the men to think—to get a discussion going, even to the point of argument. "To make them live outside for a minute," he says. Sometimes a guard comes in to listen.

On their own, the men read newspapers and books, which are available to them through the prison, and Mr. Schlow often lends books from his own extensive library. Recently, he supplied one man with a book on psychology.

He also sets aside time to listen to problems. Tuesdays or Wednesdays he makes individual appointments, "because a man may have something to talk about," he says. They meet informally in his office at the penitentiary, where the Sunday services are usually held.

Mr. Schlow has several files full of letters from men in the prison and men who have been released, thanking him for his help and letting him know how they are getting along.

Over the years, he has arranged for family visits and acted as liaison between the family, the prisoner and the prison. He has contacted businessmen to arrange for jobs for men so that they can be released, and agencies to help individuals after their release, and he has filled numerous special requests from men in the prison. On religious holidays he takes the men holiday food, which they cannot get at the institution.

He receives weekly letters from men at the penitentiary, usually with the heading—"friend-advisor."

He corresponds not only with the men, but also with their families, who often write for help and information.

Due to his closeness with the men, he has been asked by inmates on numerous occasions "to take them out"—which means to meet a man at the gate when he is released, rather than have the penitentiary arrange for transportation to his bus or train for the trip home.

Until about five years ago, the system was to release a man at midnight, and Mr. Schlow would take him to his home for a meal before driving him to the station. Now that prisoners are released in the morning, Mr. Schlow usually takes them to a restaurant for breakfast before the trip.

When silver dollars were plentiful, he gave one to each man to save for a telephone call to him if the need should arise. Now, he gives the man a half-dollar.

After 50 years as a lay chaplain, Mr. Schlow has arrived at several conclusions on crime and penitentiaries.

He feels that one climate which can give rise to crime among the young is lack of rapport between a child and his parents—what he calls "dropouts from families" caused by lack of family cohesion. This, he believes, and man's "acquisitive" nature are some of the major causes of crime.

Men who have committed a crime and have served sentences for it, he says, have a difficult time, because their families are ashamed and their employers are afraid of what might happen.

"Mankind is the worst group to his fellow man; they don't forgive," he says.

As to penitentiaries as a method of rehabilitation, he says, "penitentiaries are not a cure—jails are not for human beings. There's no such thing as rehabilitation. You can't rehabilitate a man; he rehabilitates himself. Punishment has never erased the will" to commit a crime.

Of his work at Rockview, he says that he goes to let the men know that they are not forgotten by their religious community. "You can't do much," he says of his efforts, "but be there and show you're interested."

His role at the penitentiary is largely that of a teacher—his first profession.

Born in Russia in 1886, he attended Central High School in Philadelphia, the only secondary school in the country which awards a bachelor's degree at graduation. He attended his high school's 128th reunion—they have a two year—in May, After earning a BA at Central, he attended the School of Pedagogy in Philadelphia and received his teaching certificate. He then earned a BS degree at the University of Pennsylvania.

He taught for five years in the public school system and seven years at the vocational technical school, both in Philadelphia, teaching courses in English, history, chemistry and math. For two semesters, he taught vocational education courses to teachers at the University of Pittsburgh.

In 1919 he came to Bellefonte and opened a store. He branched out with a store in State College in 1925, sold the Bellefonte store and maintained the one in State College for 40 years.

During World War II, he and his wife, Bella S. Schlow, who died in 1957, held parties on the lawn of their home every Sunday, for 100 Army Air Corps Cadets who were in training at the University. In 1954 Mr. and Mrs. Schlow were given a citation for their efforts by the Nittany Squadron Air Force Association.

In 1964 Mr. Schlow was presented a plaque by the State Correctional Institution at Rockview for his years of service to the institution.

The Pennsylvania Municipal Authority Association presented him with a plaque for 20 years of service to the Borough of State College Authority in 1966. He is a member and has been since its founding, of the Borough Water Authority, from which he stepped down as head two years ago. He was a councilman and served as president of Borough Council for a number of years.

In 1958 he donated a building on W. College Ave. for the founding of Community library, the Bella S. Schlow Memorial Library, which has since moved to E. Beaver Ave.

He was advisor to Phi Epsilon Pi fraternity for many years.

Mr. Schlow is currently a director of the State College Federal Savings and Loan Association, a member of the P'nai B'rith of State College and Bellefonte, the Friends of the Library, the Bellefonte Elks Club, of which he is a former exalted ruler, and the Masonic Order of Bellefonte.

At the present time, he says, his chief hobbies are "enjoying laziness, reading and raising tomatoes."

TROOP WITHDRAWAL FROM VIETNAM

HON. DONALD M. FRASER

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Friday, August 14, 1970

Mr. FRASER. Mr. Speaker, 9 weeks remain in which the President presumably will accomplish the 50,000 phase four troop withdrawal from Vietnam he announced June 3. On August 13, there were 406,050 troops in Vietnam. The President's October 15 goal is, apparently, 374,000.

I favor the policy of withdrawing troops, but the pace of the withdrawal is too slow. I remain concerned that our withdrawal from Southeast Asia is linked to factors such as Vietnamization which are beyond our control.

I have other concerns. Has our withdrawal of troops been accompanied by a comparable scaling down of our military efforts in South Vietnam?

Are we trying to do too many of the same things with fewer troops?

I am deeply concerned about the American troops remaining in the war zone. My concern has been increased by a letter I recently received from a fellow Minnesotan. He forwarded to me a copy of a letter received from a company grade officer in Vietnam.

Mr. Speaker, this young officer's view of the Vietnamization program may be too narrow. The experience of his battalion may be unique. But if his experience has wider application, my fears about the present policy in Vietnam are deepened.

The letter follows:

JUNE 14, 1970.

Thank you very much for the letter. Needless to say I was very surprised and happy to receive it. I must admit it has been quite a long time since I've seen or talked to you, about nine months would be a good guess. Many things have happened to me in that nine months, good or bad I'm not really sure, but at least up to this point I'm still around to remember them. People say "War is hell" and how correct they are, but once a person actually becomes physically involved in it they seem to take a little different view on things. I know I have! I've seen death, I've faced it, and of all things I'm an officer who is in charge of young men that fight very bravely for something they don't really un-

derstand, nor do I. Maybe I should clarify something before I go on. I'm not complaining or bitching for myself, I knew what I was getting myself into when I went to OCS. It's just that I've seen so many things happen over here that seem so completely worthless and yet they have cost so many lives. Just a couple of examples. The people of higher rank that run this war do it on the most part from behind a desk. Obviously we can't have all the rank and authority out in the field—what I'm trying to say is that these people move companies of men around like people moving pawns on a chess board. This may be ok at times when they have the support to cover them, but as this happens the support is not there to give. Because this does happen some of our companies have been nearly completely torn apart. The companies in our battalion have been in heavy contact for the last two months. Because of this our company strengths are now down to about sixty people. This may not sound as bad as it really is, so here comes the rest. We are not getting the replacements to cover the people that have been killed and wounded. Oh, we get a few every now and then but nothing like we need. There are no officers coming into the battalion until Aug. or Sept. Right now we have no company out in the field that has the required amount of officers. At present we have three company commanders out there with less than sixty days left in the country. None of them had planned on becoming CO's. My turn will probably come in about three weeks. I guess I'm writing this to you because I know you are a powerful man both politically and otherwise. The only reason I'm telling you some of these things is because I know you and I just wanted to express myself to someone other than my father. One question: How do you explain to some PFC over here why he's risking his life for some war that is obviously not being fought to win?, yet the bullets still make a person very dead when hit in the wrong place. You'd probably say we're over here helping out until the ARVN's get strong enough to take over for themselves. If so, then how do you explain that when we've worked with them every time we have had contact we are the ones shot at and not the ARVN's, and yet these small, inefficient people try to run over us to get the hell out of the area when we come under fire.

This will probably come as quite a shock to you getting a letter such as this—if so I'm very sorry, but at times I do get very bitter about some things that happen over here.

Well thanks again for the letter and I hope you like the watch. Maybe we could have a nice long discussion when I get home. Politics from you and war from me and how they can possibly fit together.

Thank you for reading this letter.

Sincerely,

———— ————.

MAN'S INHUMANITY TO MAN—HOW LONG?

HON. WILLIAM J. SCHERLE

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Friday, August 14, 1970

Mr. SCHERLE. Mr. Speaker, a child asks: "Where is daddy?" A mother asks: "How is my son?" A wife asks: "Is my husband alive or dead?"

Communist North Vietnam is sadistically practicing spiritual and mental genocide on over 1,500 American prisoners of war and their families.

How long?

ONE-THIRD OF THE NATION'S LAND

HON. LAURENCE J. BURTON

OF UTAH

IN THE HOUSE OF REPRESENTATIVES

Friday, August 14, 1970

Mr. BURTON of Utah. Mr. Speaker, on June 23, 1970, the Public Land Law Review Commission presented its final report to the President. Since 70 percent of Utah's area is owned by the Federal Government, I was delighted to serve as a member of the Commission whose work will have an influence on the future of the West for decades to come.

General agreement was achieved among the members of the Commission, and there is little dissent reflected in its report. While I do not necessarily accept all the details of every recommendation, I certainly do approve of the general thrust of the report. It is my earnest hope that the administration and the Congress will cooperate to make significant progress in implementing the report in the near future.

I commend to the attention of my colleagues an article by Thomas J. Cavanaugh found in the August 1970 issue of the American Beef Producer, and the remarks made by Mr. Paul S. Rattle before the State Advisory Board to the Bureau of Land Management, August 10, 1970, at Cedar City, Utah. Both items give excellent brief summaries of the Commission's report.

The items follow:

"ONE-THIRD OF THE NATION'S LAND"—THE RECOMMENDATIONS ARE IN

(By Thomas J. Cavanaugh)

(NOTE.—Thomas J. Cavanaugh is the general counsel of the Public Lands Council, with offices in Washington, D.C. From 1961 to 1969 he served as Associate Solicitor for Public Lands in the Department of the Interior and was assistant to Elmer F. Bennett, general counsel of the Public Land Law Review Commission.)

One hundred and thirty-seven recommendations have been made by the Public Land Law Review Commission (PLLRC) which, if translated into new legislation and administrative practices would provide an almost totally new body of public land law.

Most of the recommendations are in the form of general statements of policy. The details of implementing legislation or administrative regulation have not been provided. Furthermore, in some instances the language of the recommendations and supporting text is of such a general nature that it may well generate considerable argument over its interpretation.

Commission chairman Wayne N. Aspinall, D–Colo., has repeatedly said the report must be read as a whole and this is certainly true. Almost each one of the eighteen chapters—containing specific Commission recommendations—suggests some public land policy modification which would directly affect all major users—and particularly grazing permittees.

Grazing permit holders will be interested in chapter six, entitled "Range Resources." Recommendation 44 near the end of the chapter says: "Fair market value—taking into consideration factors in each area of the lands involved—should be established by law as a basis for grazing fees."

The text material supporting Recommendation 44 is important and should be carefully examined. For example, the material explains "fair market" value for public grazing land is not necessarily the same as the value of private grazing land. According to the PLLRC, fair market value is the price which would be paid for public land grazing, given all of the advantages and disadvantages of grazing domestic livestock on public lands. The Commission does not attempt to list the advantages and disadvantages of grazing domestic livestock on public lands. The Commission does not attempt to list the advantages and disadvantages of grazing on public land because they are easily identifible.

The question of an allowance for permit value in fixing grazing fees is not answered very clearly. In the final version of the report, the Commission recommends an equitable allowance be offered to current permittees in establishing fees. But the PLLRC did not supply the basis for computing the allowance.

STABILIZING TENURE

The Commission favors greater stability of tenure and to accomplish this suggests permits be valid for a fixed statutory term; the conditions which will trigger use changes be spelled out precisely; and the permittee be compensated when permits are cancelled to satisfy other public uses. Furthermore, the Commission says, to whatever extent possible, the kinds of public uses for which a permit may be cancelled should be clearly spelled out in the permit.

Another interesting recommendation contained in the section on tenure suggests—whenever practical—rangeland be allocated on an area basis with the permittee being required to maintain specific range conditions regardless of the number of animals grazed. The adoption of this recommendation would mean that, in most instances, there would be no upper limit on the number of animal units which could be grazed each month under a permit, as long as the permittee maintained the range in accordance with the conditions of his permit.

The Commission would abolish the uniform fee system now used by the Bureau of Land Management and turn instead to a variable system much like the one used by the Forest Service. Criteria for determining the fee schedule for a certain area would be variances in operating and economic situations, and differences in the quality of the public land and forage yield.

Throughout the Commission report the "dominant use" theory is developed. This idea would require that the public lands be examined and designated as being chiefly valuable for one particular use. The lands would then be further designated as being in an area of "dominant use" for principal value identified. Other uses would be permitted but would be subordinate to the dominant use and, if a choice between competing uses had to be made, the dominant use would prevail. Thus, grazing would be the dominant use in areas which are identified as being chiefly valuable for grazing. Other uses could be subordinated in these areas to the point of being excluded, if necessary, to preserve the grazing value of the lands. Such a system of classification would be practical and realistic substitute for the present "multiple use" classification system.

While the Commission does recommend the wholesale disposition of some grazing lands, it is doubtful the criteria suggested by the Commission would result in any substantial sale. The lands to be disposed of would have to be chiefly valuable for livestock grazing, have a few or no other uses which would not be equally realized under private ownership, and disposition must not complicate the management of retained lands.

Concerning range improvements, the Commission states investments should be shared between the government and users based on the identifiable benefits to each. To pre-

vent double charging, however, the Commission believes that the user should be credited with his investment when he pays his grazing fee.

While grazing lands are being identified, those which are frail and deteriorated should also be recorded, said the Commission. Lands which are identified as frail and deteriorated would be classified as unsuitable for grazing—and grazing would be prohibited.

Wherever possible, the Commission hopes a balance between competing uses of public land can be achieved, and one which is fair to all. The Commission was sensitive to the thorny access problem. It indicated solution of the problem would be largely dependent upon public understanding and acceptance of reasonable ground rules. Unfortunately, meaningful ground rules are very scarce. The Commission recommended the government should assert control over access, which, while avoiding unreasonable interference with authorized livestock use, would also prohibit ranchers from unreasonably restricting public access.

The PLLRC recommended existing eligibility requirements should be retained for the allocation of grazing privileges up to recent levels of forage use (calculated by the permit holder's obligated use at the average level of actual use during the last five-year period). Forage which becomes available beyond this level would be subject to reallocation to new applicants at public auction. Present permittees as well as other ranchers in the area would be eligible to purchase the additional grazing privileges. The PLLRC did not explain just how this would work in an area in which there would be no upper limit on permitted use so long as the permit conditions as to range maintenance are observed.

The Commission also suggests there should be more flexibility in public land grazing policy and one way to achieve this would be to allow grazing privileges to be fully transferable upon request of the permittee.

And finally, the Commission states the same grazing policies should be uniformally applicable to all federally owned lands.

The body of the report in which the recommendations appear comprises 270 pages and, of course, it is not possible to detail each recommendation. It is possible, however, to highlight some of the other recommendations, which, if adopted will have the greatest impact on the user of public lands.

IN LIEU PAYMENTS

Since the founding of the Republic, the fact that federally owned lands are not subject to state and local taxation has been a source of frustration and concern in areas of heavily concentrated public lands. The Commission found present systems of shared revenues amount to much less than the revenue state and local governments would receive if the Federal lands were subject to taxation. Because the report recommends the retention of most federally owned land, the Commission believes the United States should reexamine its relationship to the states and local governments. The Commission has recommended, therefore, that payments in lieu of taxes be made to state governments. Because certain benefits are received by the state and local governments from federally owned lands within their boundaries, the Commission does not recommend that the public lands be taxed at full equivalency. Instead, it recommends a public benefits discount of not less than 10 percent and not more than 40 percent. The valuation of federal lands for tax purposes would exclude improvements. Also, payments would be made to the state governments on the assumption that the legislative process in each state would provide an equitable reallocation to local governments.

The immunity of the Federal government to suits against it has also been a matter of frustration. In its chapter on Trespass and Disputed Title, the Commission recommends the modification of this doctrine to permit quiet title actions against the United States. Further, the Commission advocates the doctrine of "adverse possession" operate against the United States where there has been a good faith occupancy for a substantial period of time. In land title suits brought by the United States, the Commission would permit citizens to assert defenses which have not heretofore been available. Reliance upon the acts of a government employee, even though unauthorized, could be a defense in such a suit under the Commission recommendations.

To reduce the number of title disputes, the Commission urges an intensified survey program be undertaken to locate and mark the boundaries of all public lands.

Finding the homestead laws and Desert Land Act to be obsolete, the Commission recommends they be replaced with new authority for the sale of public lands for intensive agriculture when that is the highest and best use of the land. State governments would have the right to certify or veto the potential agricultural use of public lands but only according to the availability of state water rights.

Lands would be sold for agricultural purposes only when a market demand exists in the area and then only at market value. Artificial restraints on the allocation of public land to agriculture, such as acreage limitations, farm residency requirements, and the exclusion of corporations as eligible applicants, should be removed according to the PLLRC report.

FISH AND WILDLIFE HABITATS

Of more than passing interest to ranchers are the chapters on fish and wildlife and outdoor recreation.

The "dominant use" theory appears again in this chapter with the Commission recommending that public lands be reviewed and key fish and wildlife habitat zones identified and formally designated for such dominant use.

The Commission believes that Federal officials should have authority for final land use decisions affecting fish and wildlife habitat and populations on public lands. However, they would not be permitted to take action inconsistent with state harvesting regulations except when overriding national need is discovered.

For the privilege of hunting and fishing on Federal lands, the Commission believes there should be a reasonable charge which, however, would not be a substitute for the licensing functions of the states.

Almost buried in the text of the fish and wildlife chapter is a sub-recommendation which probably will not bring joy to the hearts of ranchers. For the most part, the Commission believes wildlife population control should be left to natural mechanisms. To accomplish this, the Commission states it is convinced that predator control programs should be eliminated or reduced on Federal public lands. Elimination of these programs, in the opinion of the Commission, would assist in the reduction of the population of some game species, most notably deer and elk, to levels consistent with the capacity of the natural habitat to support them.

While the Commission believes that recreational use of public lands should help pay the cost of maintenance and management, it does not believe pricing should be used to ration such use. The PLLRC recommends a general recreation land use fee for a nominal amount. Rather than employ pricing as a control method, the Commission recommends recreation be regulated to minimize conflicts with natural conditions and other public land uses.

As to areas which are likely to be most suitable for intensive recreation use, the Commission appears to favor more state and local control either by outright conveyance or lease of the areas to the state and local governments. Such transfers would be made only in conformance with an approved statewide recreation plan.

The Bureau of Outdoor Recreation, the Commission believes, should be given the power to review recreation programs for the public lands administered under general multiple-use policy and disapprove of them if they do not conform with statewide recreation plans.

ACCESS RECOMMENDATIONS

The treatment of the "access" question in the chapter on outdoor recreation is most important to ranchers.

Recommendation 86 states: "Congress should authorize a program for acquiring and developing reasonable rights-of-way across private lands to provide a more extensive system of access for outdoor recreation and other uses of the public lands."

What is being recommended is, of course, that the land management agencies be supplied with funds for the purchase of rights of way.

In addition, the Commission recommends the agencies be given statutory authority to require public land lessees to grant reciprocal rights-of-way across their private lands in cases where, because of topography, relief, or geographic conditions, the landowner controls key access to significant areas of public land. The Commission cautions, however, such authority be exercised with careful consideration of the rights and privileges of the landowner. Also, the government would finance and maintain the access road or trail.

Land exchanges are dealt with in the chapter dealing with disposals, acquisitions and exchanges.

General exchange authority should not, according to the Commission, be used for the acquisition of major new Federal units. Instead, major new acquisitions should be accomplished only with specific Congressional approval.

On the other hand, with non-major acquisitions, Congress should express its feelings that proposed exchanges be accomplished where this can be done without detriment to federal programs or without excessive cost. This recommendation stops short of suggesting that the exchanges be mandatory, and keeps discretionary authority with the Secretary of the Interior. In addition, the Commission would make state exchanges discretionary rather than mandatory, as now.

Under the recommendations, all classes of real property interests would be subject to exchange with authority to equalize value differences with cash. It is, however, suggested there be a limit in the range of 25 percent of an exchange transaction which could be satisfied in cash.

Additionally, the Commission recommends as a general rule, within each department, all federally owned lands should be subject to exchange, regardless of agency jurisdiction and geographic limitation.

Throughout the report the Commission demonstrates a concern for maintenance and enhancement of environmental quality. In the chapter on environment the PLLRC made the following recommendations: mandatory hearings on proposed public land projects with respect to environmental factors at the request of the states or the Council on Environmental Quality; recognition of environmental quality as an important objective of public land management; and classification of public lands for environmental quality maintenance and enhancement. Getting to the heart of the matter, however, the Commission recommends public land agencies be required to qualify the use of public lands on compliance with appropriate environmental control measures. It is conceivable, under this proposal, a grazing permit could be conditioned to prohibit the shipment of livestock grazed under the permit to a feedlot determined to be in non-compliance with state or local environmental quality standards, even though the lot might be located some distance from the permitted area. As

the report states: "This recommendation is premised on the conviction that the granting of public lands rights and privileges can and should be used, under clear congressional guidelines, as leverage to accomplish broader environmental goals off the public lands."

As a part of the section of the report on land use planning, the Commission proposes a comprehensive review of the Classification and Multiple Use Act of 1964. In addition, the PLLRC recommended a complete review of all existing withdrawal to be completed within ten years. Those not renewed at the expiration of this period would terminate. In order to continue a withdrawal, it would have to be renewed under procedures which would require detailed justification, public notice and the opportunity for public comment, and public hearings. Large scale withdrawals would be limited to congressional action and a time limit of six months would be imposed.

Almost certain to be resisted by the land management agencies are some of the Commission proposals for involvement of state and local governments in the planning process. To give these governments an effective role in agency planning, the Commission would require that federal plans be submitted to them for comment and that such plans conform to state and local zoning. In addition, the Commission recommends that Congress provide by statute the federal action programs may be invalidated by court orders upon adequate proof that procedural requirements for planning coordination have not been observed.

Many proposals are made in the report for increased public participation in the decision making process. One such proposal is that statutory authority be provided for public land citizen advisory boards. Unfortunately, the Commission does not spell out the extent of authority it believes these boards ought to be given.

FOREST SERVICE

The Forest Service, the Commission recommends, should be merged with the Department of the Interior into a new Department of Natural Resources. Many people believe that just such a plan of reorganization has long been under consideration and the Commission report may well furnish the final impetus necessary to effect such a proposal.

Concerning water rights, the report does not recommend abandonment of the implied reservation doctrine but does recommend that it be clarified and limited by Congress. A reasonable time, the report states, should be provided within which federal land agencies would be required to ascertain and give notice of their projected water requirements for the next 40 years for reserved areas.

Also, Congress was recommended to establish a procedure for determining the reasonableness of the quantity of water claimed by federal agencies. Procedures would be established which would require future withdrawals and reservations to contain a statement of prospective water requirements and to express reservation of such a quantity of unappropriated water. Finally, the Commission would require the payments of compensation where the utilization of the implied reservation doctrine interferes with uses under water rights vested prior to the 1963 decision in Arizona vs. California.

The report contains many other recommendations and suggestions for future public land policy which are of interest and concern to the livestock industry. To discover these, the entire report, both specific recommendations and the text, must be read carefully. It must also be read as a whole since much of the material is interrelated.

The introductory material in each chapter and the explanatory material which appears with each recommendation were carefully and deliberately drafted and contain much of the real "meat" of the report. There can be no real understanding of what the Commission did without reading this material.

The report was completed after five years of intense study and the expenditure of almost $7 million. It is backed up by 32,000 pages of contractor and staff study documents as well as additional thousands of pages of comments from the land management agencies, conservationists and industry.

The report is a "consensus" report. Not all of the members of the Commission agree with all that is said in the report or with all of the recommendations. In those few instances where individual commissioners disagree strongly with a recommendation, their views are recorded in separate statements. Nonetheless, the report received generally strong support from the Commission members.

PUBLIC LAND LAW REVIEW COMMISSION SUBMITS ITS REPORT TO THE PRESIDENT AND CONGRESS

(NOTE.—Comments to the Bureau of Land Management State Advisory Board by P. S. Rattle, Utah Mining Association, representative on minerals to the Board, August 10, 1970, at Cedar City, Utah.)

State Director Bob Nielson has asked me for comments on the Public Land Law Review Commission's recent report, such comments to be oriented in particular toward my area of interest—the minerals industries.

After almost six years and the expenditure of over $7 million, the Public Land Law Review Commission on June 23 submitted its Report to the President and to Congress. The Report, which is some 342 pages in length, is available from the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C., at $4.50 per copy. It contains 18 statements that the Commission lists as "basic concepts and recommendations for long-range goals," 137 specific recommendations that are numbered and over 200 unnumbered, supplemental recommendations that appear in italics.

The report is titled "One Third of the Nation's Land" and I am compelled to comment that over 90% of this land is located within our western states. Over 70% of the land in Utah is federally controlled. Some of the recommendations in the report of interest to the mineral industries are as follows:

The Commission recommends that the policy of large-scale disposal of public lands be revised and that, in the future, disposals be made only to achieve maximum benefit for the general public. As another basic principle, the Commission states that the United States shall receive full value for the use of the public lands.

In its recommendations regarding mineral resources, the Commission states that federal policy "should encourage exploration, development and production of minerals on the public lands and that mineral exploration and development should have a preference over some or all other uses on much of our public lands." However, Congress should continue to exclude some classes of public lands, such as national parks, from future mineral development, but federal agencies should make mineral examinations which will provide reliable information on lands recommended for exclusion as well as those where mineral activity is already excluded.

The Commission recommends that the Mining Law of 1872 be modified to establish a system which incorporates the desirable features of this Act as well as the leasing laws. "Unless a public land area is closed to all mineral activity, we believe that all public lands should be open without charge for nonexclusive exploration . . . However . . . different conditions should prevail if the prospector desires an exclusive right," or if significant surface damage may result.

In this regard, the Commission recommends the following:

"Whether a prospector has done preliminary exploration work or not, he should, by giving written notice to the appropriate federal land management agency, obtain an exclusive right to explore a claim of sufficient size to permit the use of advanced methods of exploration. As a means of assuring exploration, reasonable rentals should be charged for such claims, but actual expenditures for exploration and development work should be credited against the rentals.

"Upon receipt of the notice of location, a permit should be issued to the claimholder, including measures specifically authorized by statute necessary to maintain the quality of the environment, together with the type of rehabilitation that is required.

"When the claimholder is satisfied that he has discovered a commercially minable deposit, he should obtain firm development and production rights by entering into a contract with the United States to satisfy specified work or investment requirements over a reasonable period of time.

"When a claimholder begins to produce and market minerals, he should have the right to obtain a patent only to the mineral deposit, along with the right to utilize surface for production. He should have the option of acquiring title or lease to surface upon payment of market value.

"Patent fees should be increased and equitable royalties should be paid to the United States on all minerals produced and marketed whether before or after patent."

Additional and clarifying Commission recommendations—

In regard to legal requirements for the discovery of valuable minerals: "Federal land agencies are poorly equipped to judge what is a prudent mining investment, and this issue should be closed when the mineral explorer is prepared to commit himself by contract to expend substantial effort and funds in the development of a mineral property."

Stale claims: "Congress should establish a fair notice procedure to clear the public lands of long-dormant mining claims."

Uniform federal requirements: Discovery work required by state law often serves no useful purpose. "Federal statutes should fully prescribe uniform methods."

The Commission also recommended that legislation be enacted to authorize legal actions by the government to acquire outstanding claims or interests in public land oil shale subject to judicial determination of value. It also urged that some oil shale public lands be made available now for experimental commercial development by private industry.

The Commission recommends that the Forest Service be merged with the Department of the Interior into a new Department of Natural Resources.

As a parallel to the consolidation of public lands programs in the executive branch, the report recommends a consolidation of congressional committee jurisdiction over public land programs into a single committee in each house of Congress.

A major chapter of the report is devoted to "Public Land Policy and the Environment." The report states that "those who use the public lands and resources should be required by statute to conduct their activities in a manner that avoids or minimizes adverse environmental impacts, and should be responsible for restoring areas to an acceptable standard."

As to withdrawals, the Commission recommends that "large scale limited or single-use withdrawals of a permanent or indefinite term should be accomplished only by act of Congress. All other withdrawal authority should be expressly delegated with statutory guidelines to insure proper justification for proposed withdrawals, provide for public participation in their consideration, and establish criteria for Executive action."

Rep. Wayne N. Aspinall (D-Colo.) is chairman of the Commission and chairman of the House Interior Committee. He has indicated that his committee intends to hold

hearings in 1971 on legislation designed to implement the Commission's report.

Probably no single group of public land users will agree fully with the findings and recommendations of the Commission. They will agree with some, but not all of this work. The mining industry generally views with favor most, but not all, of the Commission's recommendations.

It is significant to note that the Commission was directed by the Congress to present *recommendations* to the President and Congress with respect to the retention, management and disposition of the public lands, excluding the Indian reservations. Except for a limited number of administrative changes that might be made by governmental departments within the framework of existing law, none of the Commission's recommendations can become effective until the Congress passes the necessary legislation. It is in this area where I identify the problems of the future.

When the Commission was established about six years ago, there seemed to be the feeling that, after a period of study and review, the group could arrive at a set of relatively firm, clear-cut, black and white objective recommendations to guide the legislative efforts of Congress. I am told that fairly early in the Commission's work, it became apparent that because of the complexity and interrelationship of existing public land uses, laws and policies, plus the potential pressures of the future, that clear-cut, black and white recommendations would frequently not be possible. We see this condition in the final report: In many cases we find what appears to be a firm, clear recommendation in one sentence only to be followed in the next sentence by modifying exceptions. Similarly, many of the basic recommendations are not and could not be clear-cut. Thus, there is enormous room for interpretation within the scope of these recommendations. The individual reader is provided the opportunity of wide latitude in his evaluation of the meaning intended.

But to make these recommendations effective, we still must have laws—legislation—passed by the Congress. And because of the interrelationship of the different land uses and existing land laws and in light of current public concerns, this legislation will be difficult to arrive at. To complicate issues we will have self-centered legislation proposed through the workings of special interest and pressure groups—such as yours and mine—plus the workings of practical politics and bureaucratic pressures in government.

As I mentioned earlier, Representative Wayne Aspinall of Colorado is chairman of the Public Land Law Review Commission and, in addition, chairman of the House Committee on the Interior. Rep. Aspinall hopes to hold hearings next year on legislation designed to implement the Commission's report. Perhaps the Interior Committee will consider proposing the extension of the Commission's work, this time directed toward preparing recommended legislation to accomplish the goals that the Commission has suggested in its report.

We in Utah were most fortunate in being very ably represented on the Public Land Law Review Commission. The vice chairman was Byron Mock, an attorney in Salt Lake, well known to many of us, who has a tremendous background and experience in land law. Our own Representative Larry Burton was a member of the Commission and a wide variety of specialists from our Universities at Salt Lake and Logan contributed substantially to the studies of the Commission. This names but a few from our state who were active in this project. A complete list would include many in this room tonight.

Perhaps we can hope that the Commission's recommendations will serve as a springboard for sound legislation to establish meaningful direction in the management of our public lands. It would be a pity if this tremendous work became but another dust collector in the libraries of our country.

Bob Nielson tells me that there are about 5000 different laws that now govern the administration of our public lands. In addition there are thousands of administrative rulings and court decisions that establish the framework for land management, all dating back for over 100 years. One could hope that there is a better way!

THE SECOND ANNIVERSARY OF CZECHOSLOVAKIAN INVASION

HON. JOHN BUCHANAN

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Friday, August 14, 1970

Mr. BUCHANAN. Mr. Speaker, on August 21 freedom-loving people everywhere will be saddened again by the memory of one of the blackest marks in the world's more recent history—the brutal invasion of Czechoslovakia by the military forces of the Soviet Union and its satellites. This date will mark the second anniversary of the Soviet-led invasion of a small and peaceful nation, whose citizens are still living under the oppression of complete Soviet domination. In Czechoslovakia August 21 will be commemorated as the "Soviet Day of Shame."

In addition to the endless personal suffering brought to the Czechoslovak people, the Soviet aggression and occupation was a direct violation of the United Nations Charter provisions prohibiting all members from the threat or use of force against the territorial sovereignty or political independence of another state. The continued Soviet presence in Czechoslovakia constitutes still another heinous crime against the right of the Czechoslovak people to freedom and self-determination.

As our thoughts turn once again to this tragic violation of human rights, it is the profound hope of those of us privileged to live in freedom that through our expressions of support the brave people of Czechoslovakia will be strengthened in their rightful quest for freedom and self-determination.

Because of continuing support for this goal of freedom for the people of Czechoslovakia, I have joined with several of my colleagues in the House of Representatives in sponsoring a concurrent resolution on their behalf. This resolution—House Concurrent Resolution 718—clearly indicates our condemnation of the brutal aggression against the Czechoslovak people, our deep concern over the continued oppressions suffered by them, and our conviction that certain steps should be taken toward helping the Czechoslovak people to obtain their freedom. The resolution is as follows:

H. CON. RES. 718

Concurrent resolution expressing the sense of the Congress with respect to the intervention in Czechoslovakia in 1968 by the military forces of the Soviet Union and its satellites

Whereas the intervention in Czechoslovakia by the military forces of the Soviet Union, in 1968, contravened the independence of sovereign states and the Wilsonian doctrine of self-determination; and

Whereas such intervention is in violation of the United Nations charter which states that "All Members shall refrain in their international relations from the threat or use of force against the territorial sovereignty or political independence of any state"; and

Whereas such intervention is further evidence of the perpetuation of colonialism as practiced by the Soviet Union; and

Whereas the agreement in Moscow between representatives of Czechoslovakia and the Soviet Union was reached under duress; and

Whereas the continued occupation of Czechoslovakia by the Soviet Union is another crime against the rights of the free people of a small country to determine their own destiny and aspirations; and

Whereas the people of Czechoslovakia are not resigned to the oppressive plans of the Soviet Union, and continue to resist and reject Soviet domination: Now, therefore, be it

Resolved by the House of Representatives (the Senate concurring), That it is the sense of the Congress that, with respect to the Soviet Union and those states which participated in the intervention in Czechoslovakia, the President should take such steps as may be necessary—

(1) to prohibit the extension of any Government trade credits or guaranties to any of the intervening states;

(2) to prohibit sales, either for dollars or local currency, and grants under any title of the Agricultural Trade Development and Assistance Act of 1954, to any of the intervening states;

(3) to suspend all commercial air traffic between the United States and the Soviet Union; and

(4) to express support for the people of Czechoslovakia (as they commemorate August 21, 1970 as the "Soviet Day of Shame") in their efforts to achieve the withdrawal of the troops of the Soviet Union from Czechoslovakia.

SEC. 2. It is further the sense of the Congress that the President, acting through the United Nations and other international organizations, should take such additional steps as may be necessary to end as quickly as possible the continuing intervention in Czechoslovakia by the Soviet Union.

CONCERNED OVER INACTIVITY ON LEGISLATIVE REORGANIZATION ACT

HON. GEORGE BUSH

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Friday, August 14, 1970

Mr. BUSH. Mr. Speaker, it is a great concern to me that after more than a month of consideration of the Legislative Reorganization Act of 1970 it has yet to be voted on by the House. Unless the measure is given the highest priority so that discussion of the bill may be completed, Congress may adjourn without action on the reform bill. This would be a great tragedy.

The American people are looking to Congress to make reforms that are badly needed, and needed now. I therefore urge that the appropriate officials take prompt action to see that this first comprehensive reorganization bill to be considered by Congress since 1946 is scheduled for debate so action may be taken on it this year.

THE ECONOMICS OF SCARCITY

HON. WM. JENNINGS BRYAN DORN

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Friday, August 14, 1970

Mr. DORN. Mr. Speaker, John E. Ray III, executive vice president of Union Camp Corp., recently delivered an outstanding address in my neighboring State of Georgia. I commend to the attention of my colleagues in the Congress and to the people of the country a very careful study and reading of this great address:

THE THIRD FOREST AND THE ECONOMICS OF SCARCITY

It's sort of ironic for me to address you in such a bountiful state as Georgia and after a fine and filling lunch because what I plan to talk about is the Economics of Scarcity, the very real Economics of Scarcity that the forest products industry is approaching right now.

Economics of Scarcity! That's a phrase we haven't heard very often for 30 years or more. It sounded strange to me too when it first came to mind as I was preparing this talk. Here we are producing and consuming more forest products and in greater quantities than ever before in the history of man—576 pounds of paper and paperboard per American capita and an annual total of 43.7 billion board feet of lumber and plywood.

Yet the Economics of Scarcity is, I believe, not only accurate but—to use today's popular adjective—relevant in describing our current situation.

Now our current standard of living is fabulous compared to, say, the hard times of the thirties. But even the depressed thirties would have appeared luxurious to the people of Elizabethan times. And Elizabethan conditions were beyond the wildest dreams of people who lived a thousand years earlier. And so on back to what Thomas Hobbes called the "nasty, brutish, and short" life of primitive man.

The point is that scarcity is relative. Our current levels of consumption may seem like anything but scarcity by previous standards. But we don't live by or derive our feelings of well being from previous standards.

Let's look at it another way. Suppose we were forced back to the consumption levels of ten years. Suppose, on a per capita basis, we had only 433 pounds of paper at our disposal, and 17 per cent less lumber and plywood. We would, I'd venture to say, feel very deprived, very much up against it.

And yet that's precisely the kind of retrenchment that could lie ahead of us. Let's examine some trends.

Presently there are about 2½ acres of woodlands for every person in the United States. Based on population growth projections and the erosion of forests to make way for airports, highways, housing developments and other manifestations of urban spread, by the year 2000 there will be no more than 1½ acres of forest land per American—and at Union Camp we're very much aware that that's only one pine growth cycle away.

That's a major element of scarcity developing . . . in the form of a shrinking supply base for our raw materials.

There are scarcities developing too in the means of production for transforming the raw materials into forest products. The scarcity of labor to tap pine trees, for example, has seriously weakened the gum naval stores industry. Georgia, which produces 85 to 90 per cent of domestic output, has seen this product group go down during the soaring sixties from $25 million to less than $9 million.

In the prime forest product area of paper—where for a long while now we've grown accustomed to talking and thinking in terms of overcapacity—the situation has suddenly reversed itself. Tight money, the traditionally low return on the huge outlays required for new mills and papermaking machines, and, most fundamentally, the increasing difficulty and cost of acquiring backup resources of wood and water have reduced the oncoming increments to production potential very significantly. In 1969 only 2.7 percent was added to existing papermaking capacity. Compare that to the average annual increment of 4.6 per cent for the rest of the sixties. And current industry plans call for a continued lowering of that average.

It comes as a shock—it happened so quickly—to realize that the problems ahead will more likely be in the area of supplying paper demand rather than creating demand to absorb production capabilities.

Turning to lumber, a scarcity situation could be shaping up there as well. If deferred demand breaks through the tight money bind, we could be heading towards the near-term needs of 2.5 million new housing units a year specified by Housing and Urban Development Secretary George Romney. In 1968—not a boom year but more typical than 1969's depressed construction level—we started 1.5 million new dwellings and produced 43.7 billion board feet of lumber and plywood. Applying straight percentage increases, meeting new housing needs at a 2.5 million level will require production of 73 billion board feet of lumber and plywood.

How did it all happen? Why, after 25 years of plenty, are we abruptly up against limits not only in our wood supply but in resources which have heretofore seemed limitless such as usable air and water?

The answer, I believe, is that, over the past generation, we've become a nation of voracious consumers. We eat more, buy more durable and non-durable commodities, use more services, and enjoy more luxuries than any nation in history. The average American uses almost 200 pounds more paper and paperboard than the average Swede who ranks next in per capita consumption and about nine to ten times as much as the average Russian who thinks he's coming along right well. Two-car American families are commonplace and some of our biggest cities are faced with the incredible problem of how to deal with abandoned cars, cars that people just walk away from when they break down. We consume so much that merely getting rid of our total refuse has become a major task.

Still it's a good life and I'm sure all of us would like to see continued improvement in living standards. With the accent on consumption, however, it's difficult to get across the problems of producers and ways of solving them.

But that's exactly what we have to do. By one tree growth cycle from now, demand for forest products is expected to double. And for the South, according to the Southern Resources Forest Committee, the rise will be even greater with wood usage going up 2.3 times current levels.

How do we go about combatting the pending Economics of Scarcity in the forest products industry?

If we define Economics of Scarcity as a situation in which supply fails to keep pace with demand, a course of action emerges. We have to accelerate supply.

Generally speaking, there are two broad roads to this goal. One is through greater utilization of our wood resources.

Georgia has made remarkable advances in this direction. During the sixties, while state pulpwood production went up about 35 per cent, the use of chips, sawdust, and other formerly wasted wood residues rose 250 per cent. That's had the impact of adding more than a million acres to Georgia timberlands. And, going by national and regional trends, it's reasonable to anticipate at least a doubling of current usage of wood residues over the next tree growth cycle.

I'm proud to say that Union Camp has contributed to Georgia's record. Our Savannah mill was the first in the state to use chips and pine slabs and today residues provide 21 per cent of our pulping needs.

We're also pursuing another form of increased utilization through two new Chip-N-Saw mills, now under construction in Georgia, which will enable us to process into lumber smaller diameter logs than was previously possible.

These and other utilization measures—like recovering more wood fiber in the pulping process—will help. But the most effective, direct approach to augmenting supply is by the other road . . . by increasing wood yield per acre.

That's where the Third Forest comes in. I'm sure most of you are as or more familiar with the idea of the Third Forest than I am . . . and that's a very good reason for me to clarify my use of the concept. The First Forest is the original virgin timberland, the forest primeval, and the Second is the Forest that replaced it according to the random forces of nature alone. The Third Forest is the scientifically managed Forest, the one in which we—businessmen, public servants, and interested citizens—play or can play a role.

I'm going to site figures that don't sound like much in themselves, but you have to realize that they are the backbone of our contribution—as people involved in the forest products industry—to the present peak in living standards. And what might read like slight changes in yield are reflected as thousands of tons of paper and millions of board feet of lumber.

Here again, Georgia shines. For the South as a whole, average annual forest yield per acre is .4 cords of wood. Georgia averages 25 per cent more or half a cord per acre.

As might be expected, companies in the forest products business do better. At Union Camp, for example, on our Georgia acreage we average .7 cords of wood per acre per year. On our best tree farms, under absolutely optimum conditions, we manage an annual acre yield of 2½ cords.

There's tremendous room for improvement in wood yield. But, by the nature of the slow-growing beast, that means sustained, consistent effort . . . continued research in growing bigger, more densely fibered trees and accelerating their growth; sharpening techniques of site preparation, seeding, fire and disease prevention, and harvesting efficiency.

Union Camp, for one, expects to be getting one to 1.2 cords of wood per average acre by the end of the seventies. Now, I realize that our company puts more time and money than most landowners into growing more wood. After all, it's a major aspect of our business. So I'm not suggesting our goal as a general standard to be achieved over the next ten years.

What I am suggesting is that we aim for that kind of average yield for the South by the year 2000, by the end of this beginning the growth cycle. If we could by then attain a 1.2 cords average per Southern acre—with the progressive state of Georgia showing the way with a 1½ cords yield—and if we could generalize that same tripling rate of advance nationally, we would offset the 40 per cent shrinkage that will have taken place in our base of supply. We will be able—with the help of the increased utilization of wood I mentioned before—to provide the greater number of Americans living then with the 800 pounds of paper and paperboard each is projected to consume, to supply their increased lumber requirements, and, in short, meet the double demand on forest products brought on by continuously improving standards of living and communications.

I don't think that kind of increased yield is an unreasonable expectation. State and federal forestry agencies and forest products companies will, of course, continue their efforts in that direction.

But the real hope of improvement lies, I'm convinced, in the private sector of the forest economy. Simply because so much can be done there.

Take this state, for example. Seventy-eight per cent of Georgia's timberlands are privately held . . . by some 200,000 farmers and businessmen. Fifteen per cent is owned by industry and the remaining seven per cent by federal, state, and local government. Business and government, we can assume, utilize progressive methods of silviculture and so get better than average wood yield. That means that the private sector—about 20 million acres—is producing somewhere under the half cord average for Georgia as a whole.

How can we help to beef up yields of private holdings? One way is to continue and step up what we have been doing . . . spreading the message of good forestry practices.

Our Georgia Forestry Commission does itself proud along these lines. With its assistance in fire fighting and prevention, and its counseling of private landowners on advanced cultivation practices, it ranks with the best public agencies in the nation.

The Future Farmers of America is another group that is doing its share. It is helping to bring an awareness of the importance of trees and increasing know-how and interest in forest cultivation into the classrooms. That will certainly have long-run beneficial impact on private land yields.

And business, including Union Camp I'm happy to say, is actively spreading the word. Like other forest products companies, we have been and are educating everyone who will hold still long enough, cooperating with all other groups in the field, and distributing free seedlings to landowners, youth groups, and others.

These and other educational activities have helped and will continue to help importantly increase yield in the private sector.

Another area that is definitely worth investigating is that of incentives. I would point out that, while industry had been installing improved silviculture practices for years before 1944 when timber production became eligible for capital gains treatment, that incentive did provide much added impetus to such programs. I would suggest that a more equitable ad valorem tax structure applied to forest lands would greatly encourage improved wood yield. I'm sure too that incentives can play a role in important special areas—such as hardwoods cultivation—where very little has been done and which involve inordinate expense for private enterprises or individuals.

It's interesting to note that the Third Forest started during a time of plenty. Companies were improving their forests and wood production 30 years ago, simply as good business practice, with no thought of imminent scarcities. Fortunately, with the help of public and private groups, a good start was made towards the higher wood yields we will need in the future.

Today with wood resources showing their limitations in the face of overwhelming growth in demand coupled with an eroding supply base, it is not too much to say that the Third Forest is as essential to the future progress of the forest products industry as the cotton gin was to the development of the early textile industry.

And I suspect the Third Forest will work in the same way. Just as volume production by the cotton gin put pressure on finding ways to pick cotton—and, incidentally, on increasing cotton yield per acre—so the Third Forest will generate pressure on the means of production.

Take, for example, the trend I described before in the slowed growth of new paper production capacity. If an increased flow of raw material is forthcoming from our lesser acreage, ways will be found—through equipment and processing advances, assuming that additional mills will not be feasible—to produce the greater quantities consistent with demand growth.

In housing, to take another example, production methods applied to the new factory built, modular homes indicate that 20 per cent more dwellings can be built from a given amount of lumber and plywood.

But again, whatever private enterprise can do is based upon the growth of the Third Forest. And that's a cooperative effort, entailing business and individuals, public and private organizations.

That brings up other resources which have become worrisome. Previously I mentioned useable air and water.

I'd like to make some remarks on them from a different viewpoint than that taken by the current chaotic concern. I find some very strong analogies between the need to combat pollution and the need to combat scarcity through the Third Forest.

I could say that the forest products industry has demonstrated concern with pollution long before it became a publicized problem. I could say that my company has spent $10 million over the past decade on preventing pollution and that we're continually upgrading our anti-pollution equipment and techniques.

All that is true, but it's beside the point. It's talking defensively and in no way induces a productive approach to the problem.

In reality, like the imminent scarcity of wood resources, the idea of air and water being in "short supply" has developed suddenly. It has taken us by surprise. Let's admit it. How many people really thought ten years ago that there might be limitations to these resources?

Let's also admit that we are all guilty. The consumer through his wants—and I dare say needs—for automobiles, paper, appliances, and most everything else; the producer through his desire to make a reasonable profit by satisfying these needs; the garbage-generating citizen is guilty; so is the tourist passing through; so is the Communist and the Capitalist, the Democrat and the Republican. We can all cry "Mea culpa!"

Once we get beyond the finger-pointing stage, we can think clearly. Like the Third Forest, combatting pollution of our elements is a collective project. It goes beyond the single company or the single industry, beyond the single state. It's as ridiculous to put a company out of the competitive running by laying on an exorbitant expense for pollution control as it is for a company to argue that it should continue to pollute air and water because it can't afford to install anti-pollution equipment. We don't even find general agreement as to what the most effective pollution control entails.

Conserving our air and water resources is at least a regional problem with strong federal overtones. It requires intensive, broad-based, coordinated action.

Despite the role of villain assigned to us by some groups, industry can be counted on to do its share. Looking at the forest products area, industry has certainly proven its cooperative, responsible attitude. Most companies have over the years, and despite satisfying ever rising consumption, planted millions more trees on the timberlands under thier jurisdiction than they've cut down. Industrial woodlands have consistently promoted the multiple use concept, providing hunting, fishing, and other forest recreational opportunities to more people than ever before.

Those of us who are concerned with growing forests and producing forest products stand at the interface between rising demand and the resources needed to supply it. I think we're in excellent position not only to satisfy greater consumption but also to expand the productive conservation of these resources.

SENATE—*Tuesday, August 18, 1970*

The Senate met at 11 a.m. and was called to order by Hon. JAMES B. ALLEN, a Senator from the State of Alabama.

The Chaplain, the Reverend Edward L. R. Elson, D.D., offered the following prayer:

Eternal Father, we thank Thee that Thou hast given us this time in which to live, and in serving this Nation, to work for the betterment of the whole world. Grant us wisdom and strength for this day.

We thank Thee for all who through many generations have labored in this place and have brought strength and healing to the Nation.

We give Thee special thanks for Thy servant, Frederick Brown Harris, and for the sense of Thy presence he brought to this Chamber. We thank Thee for his Christian manhood and his church statesmanship, for his steadfast ministry of prayer and pastoral care, for the mysticism and poetry of his utterance, for his fidelity to truth and his espousal of righteousness, for his piety and patriotism, for the warmth of his friendship and the radiance of his personality.

May the mantle of his gentle and good life fall upon each of us. In sacred memory help us to love Thee more ardently and to serve Thee more faithfully all the days of our lives.

Through Jesus Christ our Lord. Amen.

DESIGNATION OF ACTING PRESIDENT PRO TEMPORE

The PRESIDING OFFICER. The clerk will please read a communication to the Senate from the President pro tempore of the Senate (Mr. RUSSELL).

The legislative clerk read the following letter:

U.S. SENATE,
PRESIDENT PRO TEMPORE,
Washington, D.C., August 18, 1970.

To the Senate:

Being temporarily absent from the Senate, I appoint Hon. JAMES B. ALLEN, a Senator from the State of Alabama, to perform the duties of the Chair during my absence.

RICHARD B. RUSSELL,
President pro tempore.

Mr. ALLEN thereupon took the chair as Acting President pro tempore.

MESSAGES FROM THE PRESIDENT—APPROVAL OF BILLS

Messages in writing from the President of the United States were communicated to the Senate by Mr. Leonard, one of his secretaries, and he announced that the President had approved and signed the following acts:

On August 13, 1970:

S. 1076. An act to establish a pilot program in the Departments of the Interior and Agriculture designated as the Youth Conservation Corps, and for other purposes.

On August 15, 1970:

S. 3302. An act to amend the Defense Production Act of 1950, and for other purposes.

EXECUTIVE MESSAGES REFERRED

As in executive session, the Acting President pro tempore (Mr. ALLEN) laid before the Senate messages from the President of the United States submitting sundry nominations, which were referred to the appropriate committees.

(For nominations received today, see the end of Senate proceedings.)

THE JOURNAL

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the reading of the Journal of the proceedings of Monday, August 17, 1970, be dispensed with.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

ORDER OF BUSINESS

Mr. MANSFIELD. Mr. President, with the acquiescence of the distinguished Senator from Wisconsin (Mr. PROXMIRE), who is to be recognized at this time, and without losing his right to the floor or any of his time, I ask unanimous consent that I may proceed with unobjected-to items on the calendar.

Mr. PROXMIRE. I am happy to yield for that purpose.

THE CALENDAR

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the Senate proceed to the consideration of Calendar No. 1030 and then proceed to the consideration of Calendar No. 1095, and the rest of the measures in sequence.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

Mr. SCOTT. Mr. President, will the Senator from Montana yield?

Mr. MANSFIELD. I yield.

Mr. SCOTT. I should like once more to point out that the Daily Digest in the CONGRESSIONAL RECORD, on page D921, now calls attention to the fact that, beginning today, and on each legislative day hereafter, until further notice, there will be a call of the calendar, and the conditions and terms are set out in the RECORD there.

Thus, all Senators are now on notice.

Mr. MANSFIELD. Mr. President, I am very glad that the Senator from Pennsylvania reminded me of that. I was in Montana and returned only last night.

The ACTING PRESIDENT pro tempore. The clerk will state the first measure.

ADDITIONAL MEMBERS ON THE BOARD OF REGENTS OF THE SMITHSONIAN INSTITUTION

The Senate proceeded to consider the bill H.R. 14213 to amend sections 5580 and 5581 of the Revised Statutes to provide for additional members of the Board of Regents of the Smithsonian Institution which had been reported from the Committee on Rules and Administration with amendments on page 1, line 9, after the word "States,", strike out "and"; in the same line, after the word "the", strike out "Senate and" and insert "Senate,"; on page 2, line 1, after the word "of", where it appears the second time, strike out "Representatives; together with", and insert "Representatives, and"; in line 4, after the word "of", strike out "Washington; and the", and insert "Washington, and"; in the same line, after the amendment just above stated, strike out "other"; at the beginning of line 5, insert "of whom"; in line 11, after the word "and", insert "the"; in line 12, after the word "the", strike out "Senate and House of Representatives" and insert "Congress.".;" and after line 18, insert:

(d) The second sentence of section 5582 of the Revised Statutes (20 U.S.C. 44) is amended to read as follows: "The board shall also elect three of their own body as an executive committee, and shall fix the time for the regular meetings of the board; and, on application of any three of the regents to the secretary of the institution, it shall be his duty to appoint a special meeting of the Board of Regents, of which he shall give notice, by letter, to each of the members; and, at any meeting of the board, eight shall constitute a quorum to do business."

Mr. MANSFIELD. Mr. President, I ask unanimous consent to have printed in the RECORD an excerpt from the report (No. 91–1031), explaining the purposes of the measure.

There being no objection, the excerpt was ordered to be printed in the RECORD, as follows:

BACKGROUND OF THE LEGISLATION

The Board of Regents is the governing body of the Smithsonian Institution. As established by act of Congress in 1846, the Board of Regents consists of 14 members.

There are eight public members:

The Vice President;

The Chief Justice;

Three Members of the Senate, appointed by the President of the Senate; and

Three Members of the House of Representatives, appointed by the Speaker.

There are in addition six private citizen members of the Board, appointed by the Congress by joint resolution. Of these, two must be residents of the city of Washington, and no two of the remaining four citizen regents may be residents of the same State.

Members of the Board of Regents are reimbursed for necessary traveling and other actual expenses incurred in attending meetings of the Board, but service on the Board is gratuitous.

The bill H.R. 14213 would increase the number of private citizen regents from six to nine, thus increasing the number of members of the Board from 14 to 17.

COMMITTEE CONSIDERATION

The Subcommittee on the Smithsonian Institution of the Committee on Rules and Administration conducted a joint hearing, together with the Subcommittee on Library and Memorials of the Committee on House Administration, on H.R. 14213 on September 23, 1969.

Dr. S. Dillon Ripley, Secretary of the Smithsonian Institution, testified on behalf of the Board of Regents in support of the legislation.

The committee was informed that the Board considers an expansion of its membership desirable because of the growth of the Institution's responsibilities, the need to reflect on the Board the national character of the Institution, and because of the Institution's interest in soliciting greater support from private, nongovernmental sources.

The committee noted that the number of States in the Union, and the population of the United States, as well as the functions and expenditures of the Smithsonian Institution all have increased substantially since the establishment of the Institution, with no adjustment in the size of the Institution's governing body.

The committee believes that additional members of the Board of Regents would permit a broader national representation in the affairs of the Institution, and would in addition permit members of the Board to contribute more significantly to the management of the Institution by enabling individual members to concentrate their attention on specific problems or opportunities encountered by the Institution.

The committee noted that because of the unique organizational structure of the Smithsonian Institution, the Congress bears a special responsibility in the governing of the Institution. Members of the Senate and the House of Representatives serve as members of the Institution's governing body, and the Congress is the sole authority for appointment of citizen regents. Although the Congress by tradition has acted on recommendations by the Board of Regents in appointing citizen regents, the committee expects appropriate committees of the Congress shall be consulted before the submission of such recommendations.

COMMITTEE AMENDMENT

The Committee on Rules and Administration adopted an amendment to H.R. 14213 to increase the number of members of the Board of Regents required for a quorum to conduct the business of the Smithsonian Institution. The quorum established by existing law is five. The committee amendment would increase the quorum to eight, reflecting the increase in the membership of the Board that would be authorized by H.R. 14213.

In adopting the amendment, the committee noted that the average attendance at the 10 most recent meetings of the Board has been 10 of the 14 members. The larger quorum, with a 17-member board, should therefore present no difficulty in conducting the business of the Institution.

The amendments were agreed to.

The amendments were ordered to be engrossed and the bill to be read a third time.

The bill was read the third time, and passed.

The title was amended so as to read: "An act to amend section 5580, 5581, and 5582 of the Revised Statutes to provide for additional members of the Board of Regents of the Smithsonian Institution and to increase the number of members constituting a quorum."

HEADSTONES OR MARKERS TO MEDAL OF HONOR RECIPIENTS

The bill (H.R. 6265) to provide that a headstone or marker be furnished at Government expense for the unmarked grave of any Medal of Honor recipient was considered, ordered to a third reading, read the third time, and passed.

Mr. MANSFIELD. Mr. President, I ask unanimous consent to have printed in the RECORD an excerpt from the report (No. 91–1085), explaining the purposes of the measure.

There being no objection, the excerpt was ordered to be printed in the RECORD, as follows:

PURPOSE

The bill is intended to authorize the furnishing of headstones to mark the graves of Medal of Honor recipients regardless of the character of discharge granted for their last term of service.

PRESENT LAW

Existing law (act of July 1, 1948, 62 Stat. 1215) provides that the Secretary of the Army is authorized and directed, when requested, to furnish headstones or markers for unmarked graves of members of the Armed Forces whose last service terminated honorably.

BACKGROUND

According to the testimony as reported in House Report 91–666 dated November 20, 1969, that of 2,198 Medals of Honor awarded as of that time, only 178 recipients were living; and that of those who are deceased, it appeared that only one received a discharge under other than honorable conditions. The committee is in accord with the House that a serviceman who distinguished himself at great personal sacrifice and merited the award of the Medal of Honor, should not be denied a proper grave marker despite any discharge under less than honorable conditions.

COST

The Department of Defense has indicated that enactment of this bill would, to their knowledge, cost no more than $31.

COMMAND OF THE U.S.S. "CONSTITUTION" BY RETIRED OFFICERS OF THE U.S. NAVY

The bill (H.R. 8662) to authorize command of the U.S.S. *Constitution* (IX–21) by retired officers of the U.S. Navy was considered, ordered to a third reading, read the third time, and passed.

Mr. MANSFIELD. Mr. President, I ask unanimous consent to have printed in the RECORD an excerpt from the report (No. 91–1086), explaining the purposes of the measure.

There being no objection, the excerpt was ordered to be printed in the RECORD, as follows:

PURPOSE

Passage of this bill would permit a retired officer of the U.S. Navy to command the U.S.S. *Constitution*, a historic naval vessel maintained "in commission, active status," and permanently berthed at the Boston Naval Shipyard.

EXPLANATION OF THE BILL

This bill would authorize the Secretary of the Navy to order to active duty a retired officer of the U.S. Navy for the purpose of commanding the U.S.S. *Constitution* (IX–21).

Under existing law, a retired officer of the U.S. Navy is prohibited from commanding a ship of the U.S. Navy. Since the U.S.S. *Constitution* is in a commissioned status, the law effectively prevents a retired officer from commanding the ship.

The U.S.S. *Constitution*, a historic naval vessel maintained "in commission, active status," and permanently berthed at the Boston Naval Shipyard, has been commanded by junior officers of the U.S. Navy for the past 15 years. However, because of the relative inexperience of those officers and because of their brief tours of duty, the mission of the U.S.S. *Constitution* has not been fully achieved. Because of the mission of the ship and because of her unique status as the sole relic of the earliest years of the Navy, the commanding officer's duties necessarily include those associated with positions of a museum director and curator.

In order that the ship may be fully developed as an extraordinary historical exhibit, it is considered necessary that her commanding officer be mature, possess an extensive knowledge of the ship and the naval period which she represents, and be able to remain associated with the ship for longer periods than the normal tour of duty. It is believed that a carefully selected retired officer of the U.S. Navy would most satisfactorily fulfill these qualifications.

In addition, the U.S.S. *Constitution* is often used for ceremonial purposes by the Navy such as retirement ceremonies and change of command. Therefore, the command of the U.S.S. *Constitution* should be under an experienced officer familiar with duties of command and the ceremonies and responsibilities incident thereto.

This bill is presented in order that the U.S.S. *Constitution* may more effectively fulfill its role through capable and efficient command of a retired U.S. Naval officer.

FISCAL DATA

Enactment of this proposed legislation would result in no additional costs to the Department of Defense.

INTERSERVICE TRANSFERS OF COAST GUARD OFFICERS

The bill (H.R. 9052) to amend section 716 of title 10, United States Code, to authorize the interservice transfers of officers of the Coast Guard was considered, ordered to a third reading, read the third time, and passed.

Mr. MANSFIELD. Mr. President, I ask unanimous consent to have printed in the RECORD an excerpt from the report (No. 91–1087), explaining the purposes of the measure.

There being no objection, the excerpt was ordered to be printed in the RECORD, as follows:

PURPOSE

Section 716 of title 10, United States Code, stipulates that the President may, within authorized strengths, transfer any commissioned officer with his consent from the Army, Navy, Air Force, or Marine Corps to, and appointment in, any other of those Armed Forces.

This bill will place the Coast Guard officers on the same parity as their counterparts in the military departments.

FISCAL DATA

Enactment of this measure will not involve the expenditure of any Federal funds.

DEPARTMENTAL POSITION

Letters from the Department of Defense and the Department of Transportation to the House Committee on Armed Services indicate there is no objection to enactment of this bill. A copy of each letter is set forth below and made a part of this report.

PRESENTATION OF U.S. FLAGS TO PARENTS OF DECEASED SERVICEMEN

The bill (H.R. 13195) to amend title 10 of the United States Code to provide that U.S. flags may be presented to parents of deceased servicemen was considered, ordered to a third reading, read the third time, and passed.

Mr. MANSFIELD. Mr. President, I ask unanimous consent to have printed in the RECORD an excerpt from the report (No. 91–1088), explaining the purposes of the measure.

There being no objection, the excerpt was ordered to be printed in the RECORD, as follows:

PURPOSE

The purpose of H.R. 13195 is to amend title 10, United States Code, to provide that U.S. flags may be presented to parents of deceased servicemen, in addition to flags presented to the surviving spouse or next of kin.

EXPLANATION OF BILL

Under present provisions of law (10 U.S.C. 1482), if a serviceman or woman dies during a period of active service, the Secretary of the military department concerned may pay the necessary expenses of presentation of a U.S. flag to the following categories of persons designated to direct disposition of the remains, in the order named: the surviving spouse of the decedent, blood relatives of the decedent, adoptive relatives of the decedent, or a person standing in loco parentis to the decedent.

The bill as introduced provided that the flag to be presented to the parents of deceased servicemen would be smaller in size than the flag presented to the spouse or next of kin. The House Committee on Armed Services amended the bill to provide that a flag of equal size be presented to the parents for the following reasons: It was considered that presentation of a smaller flag would cause an increase in the administrative procedures in this proposal; and secondly, the presentation of a smaller flag would seem to indicate that the members' parents are in a second-class status, which was considered inequitable.

Interest in this legislation is evidenced by the fact that 60 Members of Congress cosponsored this, or similar legislation.

FISCAL DATA

Any increase in expenditure which might result from enactment of this legislation is estimated to be minimal and could be covered from within available appropriations.

CASA ANGELICA MENTAL RETARDATION FACILITY

The bill (S. 1196) for the relief of Casa Angelica mental retardation facility of Albuquerque, N. Mex., was considered, ordered to be engrossed for a third reading, read the third time, and passed, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, notwithstanding any provision of the Mental Retardation Facilities Construction Act, if the State of New Mexico so desires, any application for a construction grant under part C of such Act (42 U.S.C. 2671 et seq.) may be submitted with respect to the facility known as Casa Angelica, of Albuquerque, New Mexico, and such application shall be treated and acted upon in like manner (insofar as possible) as if construction of such facility had not commenced at the time such application is submitted, except that no grant made under such part C shall be made, as a result of any such application, in an amount in excess of the amount of the indebtedness of such facility which was incurred as a result of the construction thereof and which is outstanding at the time such application is approved, and the Secretary of Health, Education, and Welfare may condition the payment of such grant on the payment of such indebtedness.

Mr. MANSFIELD. Mr. I ask unanimous consent to have printed in the RECORD an excerpt from the report (No. 91–1089), explaining the purposes of the measure.

There being no objection, the excerpt was ordered to be printed in the RECORD, as follows:

SUMMARY

As reported by the Committee on Labor and Public Welfare, S. 1196 would allow the Casa Angelica Mental Retardation Facility of Albuquerque, New Mexico, to apply for a construction grant under the Mental Retardation Facilities Construction Act (42 U.S.C.

2671 et seq.) in spite of the fact that construction of the facility has been completed. At present, the State of New Mexico may not accept and act upon a construction grant application with respect to any facility where construction has been completed. S. 1196 would waive this preconstruction submission requirement in the case of this facility.

S. 1196 prohibits any grant to the Casa Angelica Mental Retardation Facility which would be in excess of the outstanding indebtedness of the facility at the time the application is approved.

S. 1196 does not amend any existing statutes.

BACKGROUND

Under pressure of parents with severely retarded children who could not have them admitted to the State facility because of long waiting lists, Casa Angelica did not apply for funds under the Mental Retardation Facilities Construction Act prior to the commencement of construction. Time was of the essence and construction began in May, 1966, and was completed in January, 1967. Had the facility complied with preconstruction application requirements, the completion and operation of the facility would have been delayed significantly. This failure to submit an application prior to the commencement of construction now precludes this facility from being considered for a grant under the Act. S. 1196 would only allow this facility to submit an application to the State and be given a priority rating by the State Advisory Council and Health and Social Services Board. Casa Angelica would then have to compete with other applicants in the State for the funds to which New Mexico is entitled under the Act.

S. 1196 neither amends the Mental Retardation Facilities Construction Act nor affects New Mexico's entitlement to Federal funds under the Act.

MEASURES PASSED OVER

The bill, S. 3355, to amend title IX of the Public Health Service Act so as to extend and improve the existing program relating to education, research, training, and demonstrations in the fields of heart disease, cancer, stroke, and other major diseases and conditions; House Joint Resolution 264, a joint resolution proposing an amendment to the Constitution of the United States relative to equal rights for men and women; and S. 437, a bill to amend chapter 83, title 5, United States Code, to eliminate the reduction in the annuities of employees or Members who elected reduced annuities in order to provide a survivor annuity if predeceased by the person named as survivor and permit a retired employee or Member to designate a new spouse as survivor if predeceased by the person named as survivor at the time of retirement, were announced.

Mr. MANSFIELD. Mr. President, I ask that these three bills go over.

The ACTING PRESIDENT pro tempore. The three bills will be passed over.

FEDERAL FIREFIGHTERS

The Senate proceeded to consider the bill S. 578 to include firefighters within the provisions of section 8336(c) of title 5, United States Code, relating to the retirement of Government employees engaged in certain hazardous occupations which had been reported from the Committee on Post Office and Civil Service with amendments on page 1, at the beginning of line 8, strike out:

"SEC. 2. The provisions of section 8348(g) of title 5, United States Code, shall not be applicable with respect to benefits payable pursuant to the amendment made by this Act."

And on page 2, at the beginning of line 3, change the section number from "3" to "2"; so as to make the bill read:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That section 8336(c) of title 5, United States Code, is amended by inserting after "United States" the following: "or are primarily to perform work directly connected with the control and extinguishment of fires or the maintenance and use of firefighting apparatus and equipment".

SEC. 2. The amendment made by this Act shall be applicable only in the case of persons retiring after the date of enactment of this Act.

The amendments were agreed to.

The bill was ordered to be engrossed for a third reading, read the third time, and passed.

Mr. MANSFIELD. Mr. President, I ask unanimous consent to have printed in the RECORD an excerpt from the report (No. 91–1093), explaining the purposes of the measure.

There being no objection, the excerpt was ordered to be printed in the RECORD, as follows:

PURPOSE AND JUSTIFICATION

S. 578 extends to Federal employees whose duties "are primarily to perform work directly connected with the control and extinguishment of fires or the maintenance and use of firefighting apparatus and equipment" the same hazardous-duty retirement provisions of title 5, United States Code, now provided for certain Federal law-enforcement officers.

S. 1507, a similar measure for firefighters, passed the Senate unanimously in the 90th Congress. It was reported favorably by the House committee but was recommitted by House floor action and died in that body. The Senate committee believes congressional action to provide firefighters a more equitable retirement program is past due.

Section 8336(c) of title 5 provides for retirement with an immediate annuity at age 50 after 20 years' service for Federal law-enforcement officers who face hazards in the performance of their official duties. These special retirement provisions apply only if the head of the agency recommends such retirement and if the Civil Service Commission approves that recommendation. Thus, an individual determination of retirement eligibility based upon the danger of the employee's duties is made by responsible officials who have access to duty and personnel records. S. 578 amends section 8336(c) to include Federal firefighters, with the same safeguards applying to their early-retirement eligibility. No firefighter who had not in fact been exposed to hazards would be extended the liberalized retirement provisions. Section 8336(c) states:

"The head of the agency and the Commission shall consider fully the degree of hazard to which the employee is subjected in the performance of his duties instead of the general duties of the class of the position held by the employee."

More than 16,000 U.S. marshals, policemen, guards, and FBI and Treasury agents are covered by section 8336(c). Yet more than 11,000 Federal firefighters, whose fatality rate is 2½ times greater than that of policemen, are denied these special benefits. One out of every eight firefighters—or 12.5 per 100 men—sustained a lost-time injury in 1965. Fifty-five percent of firefighters' deaths resulted from heart and lung diseases. Clearly firefighters' duties involve frequent exposure to danger. Moreover, the ability of the average man to avoid and overcome the hazards of this occupation decreases as he gets older. In view of the dangers involved and a normal man's increasing susceptibility to injury with each year on the job, the committee believes firefighters should be offered an opportunity to shorten their careers. Thus, the committee endorses the 50–20 formula with agency recommendation and Civil Service Commission concurrence.

AMENDMENT

The committee has amended S. 578 by the deletion of section 2 of the bill and the appropriate renumbering of section 3. The section deleted related to the old section 8348(g) of title 5, which was repealed by Public Law 91–93. This is a technical amendment having no effect upon the operative provisions of the bill.

COST

The cost of each qualified firefighter's retiring has been estimated at $17,500. If an estimated 200 firefighters retire each year, the additional annual cost would be $3.5 million.

ARIE ABRAMOVICH

The bill (S. 1943) for the relief of Arie Abramovich was considered, ordered to be engrossed for a third reading, read the third time, and passed, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, for the purposes of the Immigration and Nationality Act, Private Law 87–523 for the relief of Arie Abramovich is hereby repealed.

Mr. MANSFIELD. Mr. President, I ask unanimous consent to have printed in the RECORD an excerpt from the report (No. 91–1095), explaining the purposes of the measure.

There being no objection, the excerpt was ordered to be printed in the RECORD, as follows:

PURPOSE OF THE BILL

The purpose of the bill is to repeal Private Law 87–523 in order to restore the beneficiary's immigration status to that which existed prior to the enactment of the said law to make him eligible to apply for suspension of deportation.

MRS. PANG TAI TAI

The bill (S. 3853) for the relief of Mrs. Pang Tai Tai was considered, ordered to be engrossed for a third reading, read the third time, and passed, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, notwithstanding the provision of section 212(a)(25) of the Immigration and Nationality Act, Mrs. Pang Tai Tai may be issued a visa and be admitted to the United States for permanent residence if she is found to be otherwise admissible under the provisions of that Act: *Provided,* That this exemption shall apply only to a ground for exclusion of which the Department of State or the Department of Justice has knowledge prior to the enactment of this Act.

Mr. MANSFIELD. Mr. President, I ask unanimous consent to have printed in the RECORD an excerpt from the report

(No. 91–1098), explaining the purpose of the measure.

There being no objection, the excerpt was ordered to be printed in the RECORD, as follows:

PURPOSE OF THE BILL

The purpose of the bill is to waive the excluding provision of existing law relating to one who cannot read and understand some language or dialect in behalf of the sister of a U.S. citizen.

EAGLE LAKE TIMBER CO.

The bill (H.R. 1749) for the relief of Eagle Lake Timber Co., a partnership of Susanville, Calif., was considered, ordered to a third reading, read the third time, and passed.

Mr. MANSFIELD. Mr. President, I ask unanimous consent to have printed in the RECORD an excerpt from the report (No. 91–1099), explaining the purposes of the measure.

There being no objection, the excerpt was ordered to be printed in the RECORD, as follows:

PURPOSE

The purpose of the proposed legislation is to pay the Eagle Lake Timber Co., a partnership comprised of Mr. W. Crook, John B. Crook, R. H. Emmerson, and A. A. Emmerson, of Susanville, Calif., $43,690 in full satisfaction of its claims against the United States for compensation for losses incurred in connection with the performance of a timber sale contract dated May 25, 1964, No. 11–150, between the company and the Forest Service, Department of Agriculture, based on the fact that the company failed, under the provision of the contract for amortizing road costs, to recover a substantial portion of the road construction cost incurred before the contract was terminated by mutual consent of the parties thereto because of a forest fire.

STATEMENT

In its favorable report on the bill, the House of Representatives set forth the facts in the case as follows:

The bill would authorize the payment of $43,690 to a company for the cost of roads which were constructed pursuant to a timber sale contract. The figure stated in H.R. 1749 represents the loss the company suffered since that amount had not been amortized when the contract was canceled due to a forest fire which swept over most of the timber remaining to be cut under the contract. The Department of Agriculture stated that the contract covered the sale of an estimated 25,030 thousand board feet of national forest timber to Eagle Lake Timber Co.

The timber sale was awarded to Eagle Lake Timber Co., after it bid successfully against one other bidder. On September 5, 1966, most of the uncut portion of the sale was burned over by a fire caused by lightning. At the time of the fire, 10,592 thousand board feet of timber had been cut and removed. Most of the remaining timber designated for sale under the contract, totaling an estimated 14,438 thousand board feet, together with intermingled undesignated timber which was intended to be left uncut, was affected by the fire. While both designated and undesignated timber affected by the fire were subject to deterioration, continuing over time, it nevertheless was merchantable. In such situations in California, it is both economically feasible and customary to salvage, log, and manufacture fire-affected timber into lumber products.

Shortly after the fire, Mr. John B. Crook, representing the Eagle Lake Timber Co., met with the Forest Service seeking relief under the sale contract. Mr. Crook was advised of the customary choices available under the contract. They were:

1. Continue operations, buying all fire-affected timber on the sale at contract rates; and

2. Apply to have the contract cancelled without liability for its incompletion.

The Forest Service offered to explore a third possibility whereby Eagle Lake could continue operations buying all affected timber at contract rates, except in portions of the sale area where prefire sale operations had been entirely completed.

In response to Mr. Crook's inquiries, he was told that the Forest Service had no authority under the contract to reduce timber prices or to pay Eagle Lake for the cost of advance roadbuilding not yet recovered by timber cutting. Mr. Crook advised he would recommend his firm that it apply for contract cancellation, and in that event, would seek enactment of a private relief bill. The Forest Service suggested, and it was agreed, that engineers representing each party would meet on the ground and seek to agree on the value of the unamortized road construction.

On October 11, 1966, the purchaser applied for contract cancellation, and this was approved by the Forest Service the following day. The burned-over area was then divided into three salvage sales which were advertised and sold. Eagle Lake Timber Co. purchased one of these sales. It was essential that the completed and uncompleted road work be measured and evaluated before existing work was disturbed or further work was performed under the salvage sale contracts. Forest Service engineers started their fieldwork and evaluations on September 28, 1966, concluding the work by mid-October. During this period, Eagle Lake was invited to participate and was kept informed of results. On October 18, 1966, the Forest Service called Eagle Lake and furnished its final results which are reported herein.

On November 9, 1966, Eagle Lake advised the Forest Service that its subcontractor had hired an engineering firm to make evaluations. Subsequently, on February 21, 1967, the parties met in the local office of the Forest Service to compare results. No agreement was reached.

Results of the Forest Service evaluation are shown in the attached table. They are properly based on the estimated road costs used in the timber appraisal at the time the sale was advertised. Four roads were involved and are identified in the table as roads 28N25, 28N31, 28N35, and 28N02. As shown in the table accompanying the Agriculture report, the amount of road construction work not recovered by Eagle Lake Timber Co. at the time of contract cancellation is $43,690. As has been noted, this is the amount stated in the bill.

The consulting engineer's report to the purchaser's logging contractor presented three alternative estimates of the unamortized portion of the completed road work. One estimate is $71,175, which was the amount originally stated in the bill H.R. 6662 introduced in the 90th Congress. The other estimates are $68,864, and $44,154.

The purchaser's sale contract was similar to hundreds of others in existence at the time. Under them, purchasers are authorized to build roads needed for each sale. Prior to advertising, the Forest Service estimates the costs to an average efficient purchaser of building the roads. Such estimates, along with other estimated sale operating costs, are used in the timber appraisal to set advertised stumpage prices. Prices bid are for purchase of timber, not roadbuilding, and the contract is not considered a road procurement contract. Bidders make their own judgments of profit opportunities, including possible road costs. Also, purchasers customarily build roads ahead of logging needs in order to facilitate needed flow of logs.

In this particular case, the fire was of catastrophic magnitude with more than usual impacts on the purchaser's plans. In turn, the Forest Service was faced with need to reshape its plan to promote salvage of the damaged timber, both to capture value and to prevent an insect epidemic. Contract cancellation enabled the Forest Service to accomplish this expeditiously.

The Department of Agriculture in its report to the committee in the 90th Congress, stated that the road work which had been completed at the time of the fire was a contribution to the speedy and successful salvage of the fire-damaged timber. The Department further noted that the advertised prices in the resales were enhanced by the amount of the appraised value of road construction which had been accomplished at the time of the fire. The result was that the Government realized the monetary benefits of the Eagle Lake Timber Co.'s road construction work which was not amortized because of the fire. Because of this fact and the other aspects of the case noted by the committee, the Department indicated it would have no objection to enactment of the earlier bill if the amount were amended to provide for a payment of $43,690. This is the amount the company would have recaptured for the completed work if the sale had proceeded to conclusion.

The committee also received a report from the Comptroller General of the United States concerning the bill. The comments of the Comptroller General are also set out following this report. The General Accounting Office report indicated that it would not object to the favorable consideration of the earlier bill provided the amount be amended to $43,690, which is the same figure recommended by the Agriculture Department. In this connection, the report of the Comptroller General stated:

"As noted above, contract No. 11–150 made no provision for recovery of road costs other than through amortization as the timber was cut and paid for by the purchaser. Since the Eagle Lake Timber Co. was unable to recover a substantial portion of its road construction costs because the contract was terminated by mutual consent of the parties as a result of a fire in the timber sale area, and since it is reported that the advance construction of the roads by the company did benefit the Forest Service, we would not object if H.R. 6662 were favorably considered by the Congress provided the amount stipulated therein be changed from $71,175 to $43,690."

Both the Department of Agriculture and the Comptroller General reports analyzed the basis for the figure $43,690 now in the present bill, H.R. 1749. The committee is satisfied that this figure represents the actual loss suffered by the company and, therefore, it is recommended that the bill be considered favorably.

The committee has been advised that an attorney has rendered services in connection with this matter. The bill therefore carries the customary limitation on attorney's fees.

The committee concurs in the action of the House of Representatives, and recommends that the bill, H.R. 1749, be considered favorably.

ANAN ELDREDGE

The bill (H.R. 2849) for the relief of Anan Eldredge was considered, ordered to a third reading, read the third time, and passed.

Mr. MANSFIELD. Mr. President, I ask unanimous consent to have printed in the RECORD an excerpt from the report (No. 91–1100), explaining the purposes of the measure.

There being no objection, the excerpt was ordered to be printed in the RECORD, as follows:

PURPOSE OF THE BILL

The purpose of the bill is to grant first preference status to the adopted son of citi-

zens of the United States, which is the status normally enjoyed by the alien sons and daughters of U.S. citizens.

GLORIA JARA HAASE

The bill (H.R. 12959) for the relief of Gloria Jara Haase was considered, ordered to a third reading, read the third time, and passed.

Mr. MANSFIELD. Mr. President, I ask unanimous consent to have printed in the RECORD an excerpt from the report (No. 91–1104), explaining the purposes of the measure.

There being no objection, the excerpt was ordered to be printed in the RECORD, as follows:

PURPOSE OF THE BILL

The purpose of the bill is to facilitate the entry into the United States in an immediate relative status of the alien daughter adopted by citizens of the United States.

STATEMENT OF FACTS

The beneficiary of the bill is a 21-year-old native and citizen of the Phillippine Islands, who presently resides in that country. She was adopted at age 16 by a U.S. citizen member of our Armed Forces and his wife. The beneficiary's mother died when she was 7 months old and the whereabouts of her father are unknown. The adoptive father has been stationed in Ohio since his tour of duty in the Philippines ended in August 1966. The adoptive parents are anxious that their daughter be permitted to join them in this country.

MRS. MARCELLA COSLOVICH FABRETTO

The bill (H.R. 13383) for the relief of Mrs. Marcella Coslovich Fabretto was considered, ordered to a third reading, read the third time, and passed.

Mr. MANSFIELD. Mr. President, I ask unanimous consent to have printed in the RECORD an excerpt from the report (No. 91–1106), explaining the purposes of the measure.

There being no objection, the excerpt was ordered to be printed in the RECORD, as follows:

PURPOSE OF THE BILL

The purpose of the bill is to enable the mother of a U.S. citizen to file a petition for naturalization based on the periods of time she has resided in the United States since her lawful admission for permanent residence on December 21, 1955.

VINCENZO PELLICANO

The bill (H.R. 13712) for the relief of Vincenzo Pellicano was considered, ordered to a third reading, read the third time, and passed.

Mr. MANSFIELD. Mr. President, I ask unanimous consent to have printed in the RECORD an excerpt from the report (No. 91–1107), explaining the purposes of the measure.

There being no objection, the excerpt was ordered to be printed in the RECORD, as follows:

PURPOSE OF THE BILL

The purpose of the bill is to waive the excluding provision of existing law relating to one who has been convicted of a crime involving moral turpitude in behalf of the son of citizens of the United States.

AMENDMENT OF SECTION 355 OF REVISED STATUTES

The bill (H.R. 15374) to amend section 355 of the Revised Statutes, as amended, concerning approval by the Attorney General of the title to lands acquired for or on behalf of the United States, and for other purposes was considered, ordered to a third reading, read the third time, and passed.

Mr. MANSFIELD. Mr. President, I ask unanimous consent to have printed in the RECORD an excerpt from the report (No. 91–1111), explaining the purposes of the measure.

There being no objection, the excerpt was ordered to be printed in the RECORD, as follows:

PURPOSE

The purpose of the proposed legislation, as amended, is to substitute revised language for the first seven paragraphs of section 355 of the Revised Statutes having to do with approval of land titles by the Attorney General. The bill provides that the Attorney General is to be responsible for the approval of the sufficiency of titles to land acquired by the United States and that he may delegate this authority to other departments and agencies subject to his general supervision and regulation. The amended bill would preserve the existing law permitting the Tennessee Valley Authority to approve land titles as to land acquired by that Authority. It also provides for appropriate amendments to other provisions of law in order to conform them to the changes made by section 1 of the bill.

STATEMENT

In its favorable report on the proposed legislation, the Committee on the Judiciary of the House of Representatives set forth the facts of the case as follows:

ANALYSIS OF THE BILL

Section 1. The first section of the bill provides for the repeal of the first seven paragraphs of section 355 of the Revised Statutes, as amended, and to substitute the revised language contained in section 1. The revised language consists of five paragraphs.

The first paragraph requires that prior to the expenditure of public money for the purchase of land or an interest in land, the Attorney General must give written approval as to the sufficiency of the title. This requires the Attorney General to determine that the tile is sufficient for the purpose for which the property is being acquired by the United States.

The second paragraph provides that the Attorney General may delegate his responsibility as to the approval of land titles to other departments or agencies subject to his general supervision and in accordance with regulations promulgated by him.

The third paragraph provides that when the Attorney General has delegated the responsibility for approving land titles to a department or agency, that department or agency may request the Attorney General to render his opinion as to the validity of titles to land or may request his advice or assistance in determining the sufficiency of titles.

The fourth paragraph provides that unless otherwise authorized by law or provided by contract, the expenses of procuring certificates of title or other evidence of title as required by the Attorney General may be paid out of appropriations for the acquisition of the land or out of appropriations made for contingencies of the acquiring department or agency.

The fifth paragraph, added as a committee amendment, is identical to language now a part of section 355 of the Revised Statutes and makes it clear that the provisions of the section do not change the existing authority of the Tennessee Valley Authority with respect to the acquisition of land or interest in land, including the authority to determine the sufficiency of title.

Section 2. Section 2 of the bill repeals an obsolete provision in an act of March 2, 1889, which requires that all legal services connected with the procurement of titles to sites for public buildings be rendered by U.S. attorneys. This is not consistent with modern practices and is properly deleted.

Section 3. Section 3 of the bill refers to the act of March 1, 1911 (36 Stat. 962), which is set out as section 517, title 16, United States Code. This section requires the Secretary of Agriculture to secure safe titles to certain lands acquired by the United States and requires that title shall be satisfactory to the Attorney General. The bill would amend the provision by adding the words "or his designee" so as to be consistent with the amendments added by section 1 of the bill.

Section 4. Section 4 of the bill amends section 5 of the act of February 26, 1931 (46 Stat. 1422), which is set out as section 258e of title 40 of the United States Code. This section deals with condemnation proceedings and presently contains an exception concerning the provisions of section 355 of the Revised Statutes. The bill would delete this exception on recommendation of the Department of Justice because it is clear that a determination should be made that there is sufficient title in the United States prior to the expenditure of moneys as is provided in section 258e of title 40.

Section 5. Section 5 of the bill deletes an exception in the present law concerning the application of section 355 of the Revised Statutes. Sections 4776 and 9776 of title 10 presently provide that in an emergency and when the President considers it urgent, a temporary fort or fortification may be built on private land with the consent of the owner. The exception concerning a determination concerning the sufficiency of title under section 355 of the Revised Statutes appears to be surplusage since no title is acquired by the United States under such circumstances and therefore there appears to be no need for an exception for the provisions relating to approval of title.

Section 6. Section 6 of the bill conforms the provisions of section 6 of the act of February 18, 1929 (45 Stat. 1223, as amended), which is set forth as section 715e of title 16 by providing that the reference to approval land titles by the Attorney General shall include the words "or his designee." This section concerns the acquisition of land for certain purposes by the Secretary of the Interior and requires title to be approved by the Attorney General. The amendments would be to add the reference "to his designee" to make the language consistent with section 1 of the bill.

STATEMENT

The bill, H.R. 15374, is a revised bill resulting from the committee's consideration of the earlier bill, H.R. 14119. The original bill was introduced in accordance with the recommendation of an executive communication transmitted to the Congress by the Department of Justice. A subcommittee hearing was conducted on the first bill on October 22, 1969. After consideration of the recommendations of the Department and the testimony presented at that hearing, the bill, H.R. 15374 was introduced embodying the recommendations of the subcommittee. A hearing was then held on February 4, 1970, on the revised bill and the representatives of the Department of Justice at that hearing advised the committee that they had no objections to the bill.

The basic difference between the original bill and H.R. 15374 is that the revised bill places primary responsibility for the approval of the sufficiency of land titles in the

Attorney General and this permits him to delegate the authority. The original bill would have vested the authority to approve land titles in the head of all departments and agencies with respect to land acquired by the department or agency for the United States. The committee concluded that the Attorney General as the chief law officer of the United States should retain the primary responsibility for the approval of land titles. It is clear from the executive communication and testimony at the hearings that this authority can be properly exercised by other departments and agencies and in many instances it should be so exercised in the interest of efficient and effective operation. However, the original proposal of a general grant of authority to heads of all departments and agencies by legislative action did not permit a determination of whether an individual agency, in fact, had the capability of exercising the authority or the need for such authority in terms of its actual operation. The committee therefore concluded that a more approprate amendment to secton 355 of the Revised Statutes would be to preserve the primary responsibility for the approval of land titles in the Attorney General with additional authority for the Attorney General to delegate the responsibility to individual departments or agencies. This would make it possible to meet the needs of the departments and agencies actively engaged in land acquisition. They could be granted this authority when the Attorney General deems a delegation to be appropriate. This would result in the authority being exercised by departments and agencies familiar with the requirements concerning sufficiency of title and permits the Attorney General to determine whether the department or the agency has the capability, including the personnel and organization necessary to pass on such titles. Finally, the Attorney General is given a clearly defined role of supervising the exercise of the delegated authority with provision for implementing this supervision by regulations governing its exercise.

Section 355 of the Revised Statutes which would be amended by this bill is set out in three places in the United States Code (40 U.S.C. 255; 33 U.S.C. 733; and 50 U.S.C. 175), and prohibits the expenditure of funds upon land purchased by the United States for a construction site until the Attorney General has approved the title to that land. As has been noted this bill would continue to place the responsibility for the approval of land titles in the Attorney General and would further authorize the Attorney General to delegate this title approval responsibility to other departments and agencies subject to his general supervision and in accordance with regulations promulgated by him.

The basic provisions of section 355 were enacted in 1841 (5 Stat. 469) and have remained in effect since that time. At the time of its original enactment and for a considerable time afterward, title work was a highly specialized legal function. Title opinions were based on abstracts prepared by the examining attorney. These abstracts not only involved a search of the title records but often required many extraneous investigations. The need for searches outside the records subsequently became limited due to the fact that in the first half of the 20th century, the various States improved their title recording requirements and facilities. In the same period, title companies began preparing and certifying abstracts for examining attorneys. More recently and particularly in the past 20 years, certificates of title and title insurance policies have largely displaced abstracts and eliminated much of the need for record searches. In its communication, the Justice Department observed that these developments have gradually changed much title practice so that it now has many of the aspects of administration rather than legal decisionmaking.

These developments and practical considerations have prompted action on the part of both the Department of Justice and the Congress. In 1930, section 355 was amended to permit the Attorney General to accept certificates of title of a title company as evidence of title to land to be acquired by the United States (act of June 28, 1930, 46 Stat. 828). In 1940 the section was further amended to permit approval of a title upon any evidence which the Attorney General deemed satisfactory and to permit the relaxation of standards for the approval of title to low value lands to easements and to rights-of-way (act of Oct. 9, 1940; 54 Stat. 1083).

The Department of Justice in its communication stated that it had concluded that the time has come for an adoption of Government practice to more recent developments associated with land transactions. In recent years more than 93 percent of titles approved by the Department of Justice have been based upon title certificates or title insurance policies. While judgment must be exercised in examining encumbrances in title certificates and exceptions in title policies, this judgment is similar to those involved in determinations concerning other matters related to the effective operation of governmental programs. The Justice Department notes that agency heads must now make determinations concerning real property acquired for these programs. These determinations relate to the propriety, timing and scope of acquisition, as well as the development, use and disposition of such properties. Whether the interest in land, that is the title being acquired, is sufficient for the purpose of a program or presents unwarranted risks for the United States involves a similar sort of determination under current practices. The Justice Department therefore concluded that in many instances this latter determination could appropriately be made by certain acquired agencies in accordance with proper legal standards fixed by the Justice Department.

As has been noted in discussing the provisions of the bill, the committee has recommended an amendment which will have the effect of retaining the present language of section 355 of the Revised Statutes making an exception so that the provisions of the section will not affect existing law concerning the acquisition of lands or interests in land by the Tennessee Valley Authority. The following language is presently found as the first sentence of the seventh paragraph of section 355 of the Revised Statutes:

"The foregoing provisions of this section shall not be construed to affect in any manner any existing provisions of law which are applicable to the acquisition of lands or interests in land by the Tennessee Valley Authority."

Identical language is contained as the committee amendment following line 19 of page 2 of the bill. The committee has concluded that the present legal situation should be preserved so that there will be no question concerning the continuance of the legal basis for the procedures followed by the Tennessee Valley Authority in connection with titles to land and interests in land. It can be noted that this authority has been exercised by the Tennessee Valley Authority for the past 37 years. Under the TVA Act (16 U.S.C. 831 et seq.) TVA has approved titles for the acquisition of property needed for its program. This was approved by the Joint Congressional Committee Investigating the Tennessee Valley Authority, which in 1938 and 1939 made a detailed examination of all of TVA's operations. When 40 United States Code section 255 was amended in 1940, the provision referred to above was included explicitly preserving TVA's right to approve titles.

The committee has considered this legislation primarily on the basis that it provides for a realistic adjustment of Government procedures to meet modern conditions. The Department in the communication to the Congress noted that this improvement in the law will also result in certain economies to the Government. The proposal recognizes the fact that the assembly of title papers, curative work, closings and related title functions are already performed by the agencies. The considered use of the authority to delegate the functions of the Attorney General will have the effect of avoiding duplication which now exists as to some aspects of title processing by the Government.

In view of the factors described in this report and outlined in the communication of the Department of Justice, it is recommended that the amended bill be considered favorably.

The committee after a review of the foregoing concurs in the action taken by the House of Representatives and recommends favorable consideration of H.R. 15374.

BILLS PASSED OVER

The bills, H.R. 13810, for the relief of Lt. Col. Robert L. Poehlein, and S. 3419, for the relief of Capt. Claire E. Brou, were announced.

Mr. MANSFIELD. Mr. President, I ask that these two bills go over.

The ACTING PRESIDENT pro tempore. The two bills will be passed over.

JOHNNY TRINIDAD MASON, JR.

The Senate proceeded to consider the bill, S. 3529, for the relief of Johnny Trinidad Mason, Jr., which had been reported from the Committee on the Judiciary, with an amendment, in line 4, after the word "Act," strike out "Johnny Trinidad Mason, Junior," and insert "Johnny Mason, Junior (Johnny Trinidad Mason, Junior)"; so as to make the bill read:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, for the purposes of sections 203(a)(1) and 204 of the Immigration and Nationality Act, Johnny Mason, Junior (Johnny Trinidad Mason, Junior) shall be held and considered to be the natural-born alien son of J. D. Mason, a citizen of the United States: *Provided,* That the natural mother of the beneficiary shall not, by virtue of such parentage, be accorded any right, privilege, or status under the Immigration and Nationality Act.

Mr. MANSFIELD. Mr. President, I ask unanimous consent to have printed in the RECORD an excerpt from the report (No. 91–1117), explaining the purposes of the measure.

There being no objection, the excerpt was ordered to be printed in the RECORD, as follows:

PURPOSE OF THE BILL

The purpose of the bill, as amended, is to enable the beneficiary to qualify for first preference status as the unmarried son of a citizen of the United States. The bill has been amended to correct errors in drafting.

The amendment was agreed to.

The bill was ordered to be engrossed for a third reading, read the third time, and passed.

The title was amended, so as to read: "A bill for the relief of Johnny Mason, Junior (Johnny Trinidad Mason, Junior)."

BILL PASSED OVER

The bill, H.R. 18127, making appropriations for public works, 1971, was announced as next in order.

Mr. MANSFIELD. Over, Mr. President.

The ACTING PRESIDENT pro tempore. The bill will be passed over.

DR. PIO ALBERT POL Y ZAPATA

The Senate proceeded to consider the bill (S. 3129) for the relief of Dr. Pio Albert Pol y Zapata and his wife, Dolores S. Alvarez de Pol, which had been reported from the Committee on the Judiciary, with an amendment, strike out all after the enacting clause and insert:

S. 3129

That the periods of time Doctor Pio Albert Pol y Zapata has resided in the United States since his lawful admission for permanent residence on February 10, 1962, shall be held and considered to meet the residence and physical presence requirements of section 316 of the Immigration and Nationality Act.

Mr. MANSFIELD. Mr. President, I ask unanimous consent to have printed in the RECORD an excerpt from the report (No. 91–1119), explaining the purposes of the measure.

There being no objection, the excerpt was ordered to be printed in the RECORD, as follows:

PURPOSE OF THE BILL

The purpose of the bill as amended is to enable the beneficiary to file a petition for naturalization. The bill has been amended in accordance with established precedents. The name of the beneficiary's wife has been deleted, inasmuch as there is no showing of need for citizenship in her case.

The amendment was agreed to.

The bill was ordered to be engrossed for a third reading, read the third time, and passed.

The title was amended, so as to read: "A bill for the relief of Doctor Pio Albert Pol y Zapata."

MEASURES PASSED OVER

The bills H.R. 18110, to amend the Public Health Service Act to extend the programs of assistance to the States and localities for comprehensive health planning; H.R. 17570, to amend title IX of the Public Health Service Act so as to extend and improve the existing program relating to education, research, training and demonstrations in the fields of heart disease, cancer, stroke, and other major diseases and conditions, and for other purposes; the joint resolution, House Joint Resolution 236, authorizing and requesting the President of the United States to issue a proclamation designating the week of August 1 through August 7 as "National Clown Week"; the bill, H.R. 18725, to establish a Commission on the Organization of the Government of the District of Columbia and to provide for a Delegate to the House of Representatives from the District of Columbia; the joint resolution, Senate Joint Resolution 1, proposing an amendment to the Constitution to provide for the direct popular election of the President and Vice President of the United States; and the joint resolution, House Joint Resolution 681, proposing an amendment to the Constitution of the United States relating to the election of the President and Vice President, were announced.

Mr. MANSFIELD. Mr. President, I ask that these six measures go over.

The ACTING PRESIDENT pro tempore. The six bills will be passed over.

EXTENSION OF THE SECURITIES EXCHANGE ACT

The Senate proceeded to consider the bill (S. 3431) to extend the coverage of sections 13(d), 14(d), and 14(e) of the Securities Exchange Act of 1934 in order to provide additional protection for investors, which had been reported from the Committee on Banking and Currency, with amendments. On page 2, after line 5, insert a new section, as follows:

SEC. 2. Paragraph (2) of subsection (e) of section 13 of the Securities Exchange Act of 1934 (15 U.S.C. 78m(e) (2)) is amended by adding at the end thereof the following: "The Commission shall have power to make rules and regulations implementing this paragraph in the public interest and for the protection of investors, including exemptive rules and regulations covering situations in which the Commission deems it unnecessary or inappropriate that a purchase of the type described in this paragraph shall be deemed to be a purchase by the issuer for purposes of some or all of the provisions of paragraph (1) of this subsection."

At the beginning of line 17, change the section number from "2" to "3"; on page 3, at the beginning of line 3, change the section number from "3" to "4"; and at the beginning of line 8, change the section number from "4" to "5"; so as to make the bill read:

S. 3431

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the part of pargaraph (1) of subsection (d) of section 13 of the Securities Exchange Act of 1934 (15 U.S.C. 78m(d)(1)) which precedes clause (A) is amended—

(1) by inserting after "section 12 of this title" the following: ", or any equity security of an insurance company which would have been required to be so registered except for the exemption contained in section 12(g)(2)(G) of this title,"; and

(2) by striking out "10 per centum" and inserting in lieu thereof "5 per centum".

SEC. 2. Paragraph (2) of subsection (e) of section 13 of the Securities Exchange Act of 1934 (15 U.S.C. 78m(e)(2)) is amended by adding at the end thereof the following: "The Commission shall have power to make rules and regulations implementing this paragraph in the public interest and for the protection of investors, including exemptive rules and regulations covering situations in which the Commission deems it unnecessary or inappropriate that a purchase of the type described in this paragraph shall be deemed to be a purchase by the issuer for purposes of some or all of the provisions of paragraph (1) of this subsection."

SEC. 3. The first sentence of paragraph (1) of subsection (d) of section 14 of the Securities Exchange Act of 1934 (15 U.S.C. 78n(d)(1)) is amended—

(1) by inserting after "section 12 of this title," the following: "or any equity security of an insurance company which would have been required to be so registered except for the exemption contained in section 12(g)(2)(G) of this title,"; and

(2) by striking out "10 per centum" and inserting in lieu thereof "5 per centum".

SEC. 4. Paragraph 8 of subsection (d) of section 14 of the Securities Exchange Act of 1934 (15 U.S.C. 78n(d)(8)) is amended by striking out clause (A) and redesignating clauses (B), (C), and (D) as clauses (A), (B), and (C), respectively.

SEC. 5. Subsection (e) of section 14 of the Securities Exchange Act (15 U.S.C. 78n(e)) is amended by adding the following sentence at the end thereof: "The Commission shall, for the purposes of this subsection, by rules and regulations define, and prescribe means reasonably designed to prevent, such acts and practices as are fraudulent, deceptive, or manipulative."

Mr. WILLIAMS of New Jersey. Mr. President, the Securities Exchange Act of 1934, as amended by Public Law 90–439, provides for the following disclosures in acquisitions and tender offers for 10 percent of any equity security registered under that act; the identity, background, and plans of the person or group making a tender offer or acquiring the securities; the size of the holdings of the person or group involved; the source of the funds used or to be used to acquire the shares; any contracts or arrangements relating to the shares; and if the purpose of the acquisition is to acquire control of the company, any plans to liquidate the company, sell its assets, merge it with another company, or make major changes in its business or corporate structure.

It also provides for investor protection against fraudulent activities in connection with these acquisitions and tender offers. In addition the Securities and Exchange Commission is authorized to regulate purchases by corporations of their own shares, and to require disclosures when there is a change in the majority of the board of directors of a corporation in conjunction with a 10-percent acquisition of securities or a tender offer.

Public Law 90–439 also substantively protects public investors to whom a tender offer is directed by providing withdrawal rights during the first 7 days and after the first 60 days of the offer. Furthermore it provides for a limited period during which securities must be taken up on a pro rata basis rather than on a first-come, first-served basis, and requires that any increase in the price offered during the period of the tender shall be extended to all persons who have previously tendered their securities.

Over the last 2 years this legislation has been most successful in lifting the veil of secrecy that had previously surrounded tender offers; however, certain legislative adjustments have now become necessary.

Anyone who reads the financial press is aware of the increase in corporate takeovers. Between August 1968 and April 1969 there were 243 filings made with the Securities and Exchange Commission announcing proposed tender offers. In addition, there were 188 acquisitions of more than 10 percent of a company's stock. The dollar amount for tender offers alone was $1.45 billion.

Ten percent of the stock of large corporations, indeed even 5 percent, can involve large amounts of money and can have a significant impact on corporate control.

The Banking and Currency Committee has also been informed of a recent tendency of people contemplating a takeover to terminate their acquisition at the 9-percent level in order to avoid compliance with the act's requirements. Here the need for the full disclosure provisions of the Securities Exchange Act are of the utmost necessity if we are to have adequate investor protection.

S. 3431 would extend the protections of Public Law 90–439 to acquisitions of over 5 percent of a company's stock. It would also extend coverage to shareholders of publicly held insurance companies who are currently at the mercy of secret takeover bids. This disparity in consumer protection is unwarranted and should no longer be tolerated.

The bill does not seek to disturb the decision reached in 1964 to leave periodic reporting, proxy solicitation and regulation of insider trading with respect to securities of insurance companies to the appropriate State authorities. However, in view of the nationwide basis of most tender offers and the fact that they are not presently regulated by State insurance commissioners, it is appropriate to bring within the purview of sections 13 (d) and 14(d) acquisitions of insurance company securities.

The bill would also subject stock-for-stock exchange offers made by means of a registration statement under the Securities Act of 1933 to the tender offer requirements of the act. Exchange offers involving the offer by a bidder of its own securities, in exchange for the securities of the target company are becoming more and more prevalent. This is particularly true in acquisitions of larger companies due to the enormous amount of money that would be required if a cash tender offer was used in order to gain control.

Exchange offers are presently exempted from the provisions of Public Law 90–439 because they are made pursuant to a registration statement under the Securities Act. This statement furnishes investors with adequate disclosure concerning the offer. However, this exemption also excludes the large groups of public investors to whom exchange offers are made from the act's substantive protections. These protections include the right of depositors under a tender offer to withdraw their shares during the first 7 days of the offer and after the expiration of 60 days; they require that the bidder take up all shares deposited during the first 10 days of the offer on a pro rata basis rather than on a first-come, first served basis; and they require the bidder to extend any increased consideration made in connection with the offer to persons who have already deposited their shares.

In addition S. 3431 would give the Commission rulemaking power with respect to fraudulent, deceptive, and manipulative activities used in tender offers. The techniques currently being used in these offers have become increasingly sophisticated and they change rapidly. This is particularly true when the takeover is resisted by incumbent management. In some instances industrial warefare occurs.

Claims and counterclaims, charges and countercharges are hurled back and forth. Efforts are made to influence the price of the securities involved. By granting this additional rulemaking authority the Congress would allow the Commission to deal promptly and with flexibility with these problems.

In his testimony before the committee, Chairman Budge of the Securities and Exchange Commission proposed an amendment to allow the Commission to adopt appropriate rules and regulations so that distinctions may be drawn between the issuer and its controlling persons in filings required under the act. Section 13(e) of the Securities Exchange Act grants the Commission rulemaking power concerning purchases by certain corporations of their own securities and specifies that for the purposes of section 13(e) a purchase by or for a person in a controlling relationship with the issuer is deemed to be a purchase by the issuer.

In adopting this amendment the committee felt that it was unnecessary to place on persons in a controlled relationship with the issuer all of the burdens of the section's requirements such as giving notice to shareholders after each purchase, which may be appropriate when the issuer purchases its own securities. When a company's funds are not used, the furnishing of information to shareholders does not involve all of the considerations and implications associated with the use of such funds.

Mr. President, this legislation is supported by the securities and Exchange Commission, the New York Stock Exchange, the American Stock Exchange, the National Association of Securities Dealers, the Investment Bankers Association and the Association of Stock Exchange Member Firms all of whom are involved on a daily basis with the problems which this bill attempts to solve.

The attitude of the securities industry towards this legislation is exemplified by a letter which I have received from James W. Walker, Jr., Executive Vice President of the American Stock Exchange. So that all Members of this body may have the benefit of Mr. Walker's views, I ask unanimous consent that his letter be included in the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

APRIL 16, 1970.

Hon. HARRISON A. WILLIAMS, Jr.,
Chairman, Subcommittee on Securities of the Committee on Banking and Currency, U.S. Senate, Washington, D.C.

DEAR CHAIRMAN WILLIAMS: The American Stock Exchange thanks the Subcommittee for this opportunity to comment on S–3431. We wish to commend the Subcommittee for continuing to focus on the matter of disclosure requirements in connection with tender offers and takeover bids.

The Exchange supports the basic principles embodied in Senate Bill S–3431. Mindful of the essential objectives of the Bill, we believe the proposed legislation is in the public interest, and will strengthen the safeguards available to this country's investors.

In addition, the American Stock Exchange wishes to take this occasion to emphasize the importance of early disclosure requirements in tender offers and takeover bids to the protection of the public market. Adequate and timely disclosure requirements are, we believe, vital to the maintenance of the public market. In order to make certain that fair treatment is afforded to all investors sharing the public market, small and large alike, the flow of information necessary to make informed investment decisions must be assured. Above all, confidence in the public market must be preserved, and this confidence comes only when the investing public is certain that it it receiving all of the facts. The Exchange is particularly concerned that information of contemplated actions, if not made publicly available at an early point, can have a disruptive or unfair impact on the public market to the detriment of ordinary investors.

From the standpoint of the investor in the public market, it may be very important to know about a prospective acquisition. If the investor is a stockholder of the aggressor company, the entire nature of his investment could change upon the consummation of the takeover. Furthermore, it can be of equal importance to the stockholder of the target company to be informed at the earliest possible point of the prospective takeover venture since his investment may be radically changed as a result of the market impact of the buying activities in that connection. The information needs of the general investing public also warrant consideration in view of the fact that many of them may be contemplating the purchase of stock in either the aggressor or the target company.

Moreover, a program of purchases by several independent investors through the public market as a prelude to an acquisition, when arranged by a third party having no direct financial participation in such purchases, may be able to circumvent the proposed requirements of the Bill, if care is taken by such third party to see that no one purchaser attains holdings, at an early stage, of 5 percent of the stock of the target company. It may be difficult to prove that the total holdings of the participants in the early stages of such a program would fall within the proposed requirements since there would, of course, be no direct link between the various purchasers. The best interests of the investing public would appear to be served by a full disclosure of the plans—whether definite or conditional—for a takeover venture at the very outset or at an early stage in the implementation of these plans when they are to involve the use of the public market. It may be that legislation directly designed to this end should be considered by the Subcommittee.

A program of purchases, as a prelude to an acquisition, can have an additional significant consequence to the public market in that it may disrupt the fairness and orderliness of the market. As trading in a particular issue becomes concentrated in fewer hands, which would be the inevitable outcome of a program of purchases, it is more difficult to preserve liquidity in the market. An essential element of liquidity is a steady flow of round-lot orders on both sides of the market which may be disrupted if there is a concentration of block trading on the buy side. Furthermore, a fair and orderly market must accurately reflect public supply and demand for stock, whereas if there exists a concentration of large purchases in a given issue, the floating supply can be substantially reduced. The Exchange believes that the dangers to the public market in this method of acquisition cannot be overlooked.

The Exchange is in full accord with the view that further steps are necessary to see that all essential facts are placed in the hands of public investors. Despite the present lull in the number of tender offers and takeover bids, with an uptrend in the stock market and greater availablity of credit the number of tender offers and takeover bids may significantly increase. Conglomerate formations might again increase in both number and scope. It is our view that the growth of conglomerates represents a pooling of assets and diversification of investments not totally unlike the economic philosophy contributing to the growth of investment companies.

There is one additional thought which we would like to present relative to the importance of the objectives of this legislation. There have been expressions of opinions in the past that acquisitions are, in general, healthy to the nation's economy because inefficient management of the target company was replaced by the more capable leadership provided by the acquirer. These opinions were based on the premise that one of the reasons a takeover bid succeeded was because shareholders of the target company

were dissatisfied with incumbent management. However, the utilization of a program of purchases through the public market, even though by several independent investors and arranged by a third party having no direct financial participation in such purchases, may give the aggressor company such a substantial foothold within the target corporation that incumbent management is powerless to prevent the takeover irrespective of the regard in which management is held by the remaining shareholders. It may well be that the target company is selected because of the caliber of incumbent management since in particular a well-run company might be considered a more valuable holding.

The Exchange is in accord with the amendment which widens the scope of Sections 13(d)(1) and 14(d)(1) to include purchases involving equity securities of insurance companies. In addition, the Exchange concurs with the amendment which removes from Section 14(d) the exemption from filing requirements applicable to offers for tenders proposed to be made through a registration statement under the 1933 Act.

We would once again like to express our appreciation to the Subcommittee for this opportunity to comment on Senate Bill S-3431.

Very truly yours,

JAMES W. WALKER, Jr.

Mr. WILLIAMS of New Jersey. Mr. President, it is our Nation's legitimate businessmen as well as the more than 30 million American shareholders who have the most to gain from this legislation. This bill will put all on an equal footing with respect to the availability of significant facts about a tender offer or a corporate stock purchase program. All will be able to deal in the securities markets knowing that all of the pertinent facts are available. This is the premise under which our securities markets are supposed to work. Following this premise they have thrived and prospered over the years. Now is the time to eliminate the last remaining areas where full disclosure is necessary but not yet available.

Mr. MANSFIELD. Mr. President, I ask unanimous consent to have printed in the RECORD an excerpt from the report (No. 91-1125), explaining the purposes of the measure.

There being no objection, the excerpt was ordered to be printed in the RECORD, as follows:

BACKGROUND OF THE LEGISLATION

This proposed legislation (S. 3431) would amend the Securities Exchange Act of 1934 to provide additional investor protection in corporate tender offers and other acquisitions of securities, and would supplement the protections afforded to investors by Public Law 90-439 enacted on July 29, 1968.

The Securities Exchange Act of 1934, as amended by Public Law 90-439, provides for the following disclosures in acquisitions and tender offers for 10 percent of any class of an equity security registered under that act and for the equity securities of closed-end investment companies registered under the Investment Company Act of 1940:

(*a*) the identity, background, and plans of the person or group making a tender offer or acquiring the securities,

(*b*) the size of the holdings of the person or group involved,

(*c*) the source of the funds used or to be used to acquire the shares,

(*d*) any contracts or arrangements relating to the shares,

(*e*) if the purpose of the acquisition is to acquire control of the company, any plans to liquidate the company, sell its assets, merge it with another company or make major changes in its business or corporate structure.

It also provides for investor protection against fraudulent activities in connection with these acquisitions and tender offers. In addition the Securities and Exchange Commission is authorized to regulate purchases by corporations of their own shares, and to require disclosures when there is a change in the majority of the board of directors of a corporation in conjunction with a 10-percent acquisition of securities or a tender offer.

Public Law 90-439 also substantively protects public investors to whom a tender offer is directed by providing withdrawal rights during the first 7 days and after the first 60 days of the offer. Furthermore it provides for a limited period during which securities must be taken up on a pro rata basis rather than on a first-come, first-served basis, and requires that any increase in the price offered during the period of the tender shall be extended to all persons who have previously tendered their securities.

PURPOSE OF THE LEGISLATION

The purpose of this proposed legislation is to provide additional protection for investors by augmenting the provisions of Public Law 90-439.

The bill would extend the coverage of Public Law 90-439 to encompass acquisitions of and tender offers for equity securities of insurance companies. It would also extend the act's full disclosure provision to acquisitions and tender offers of over 5 percent of a company's stock. Under Public Law 90-439 these provisions only apply to acquisitions and tender offers of over 10 percent.

In addition the bill would extend the substantive provisions of Public Law 90-439 which protects stockholders involved in cash acquisitions and tender offers to stock for stock exchange offers and would give the Securities and Exchange Commission additional rulemaking power to deal with certain types of fraudulent, deceptive, and manipulative practices. Finally, an amendment to the bill would give the Commission rulemaking power to differentiate between control persons and issuers in applying certain requirements of section 13(e) of the Securities Exchange Act.

SUMMARY OF THE LEGISLATION

First, the bill extends the provisions of sections 13(d) and 14(d) of the Securities Exchange Act to acquisitions of and tender offers for securities of insurance companies. The bill does not seek to disturb the decision reached in 1964 to leave periodic reporting, proxy solicitation and regulation of insider trading with respect to securities of insurance companies to the appropriate State authorities. However, in view of the nationwide basis of most tender offers and the fact that such offers are not presently regulated by State insurance commissioners, it appears appropriate to the committee to bring within the purview of sections 13(d) and 14(d) acquisitions of insurance company securities.

Second, the bill amends sections 13(d)(1) and 14(d)(1) of the Securities Exchange Act to reduce the 10 percent figure in those sections to 5 percent.

Section 13(d)(1) now requires that any person who acquires 10 percent of the equity securities of a company registered under section 12 of the Securities Exchange Act or of the equity securities issued by a closed-end investment company registered under the Investment Company Act of 1940, file with the Commission certain specified disclosures. These include information pertaining to the identity and background of the person who acquired the securities, the source and the amount of funds used, and the purposes for which the shares were acquired.

Section 14(d)(1) presently makes it unlawful to make a tender offer, for securities in an amount which, if successful, would give the bidder 10 percent or more of that class of securities, unless a statement containing essentially the same information required under section 13(d) is filed with the Commission, sent to the target company and the same equivalent information is furnished to investors who are invited to tender their shares.

The reduction for 10 to 5 percent would provide public disclosure of impending corporate takeovers at a more meaningful level. The Securities and Exchange Commission has informed the committee that in some instances persons or companies undertaking an acquisition have limited their purchases of stock in the open market to 8 or 9 percent as a means of avoiding the disclosure requirements of Public Law 90-439. This practice deprives investors of the material information which is necessary to enable them to make a decision whether to accept or reject the tender offer.

An investment of between 5 and 10 percent of the securities of a company can have a significant impact on the public market for that company's stock. Shareholders of the target company are entitled to full disclosure when over 5 percent of their company's stock is to be acquired by an outside group. These acquisitions may lead to important changes in the management or business of the company and the shareholders should be fully informed. Similarly, management of a target company should be advised of a tender offer under section 14(d) for securities in an amount of over 5 percent of its stock in order to appropriately protect the interests of its security holders.

At the hearings exemptions from sections 13(d) and 14(d) relating to acquisitions by stock exchange specialists, over-the-counter market makers, and investment companies were suggested by various segments of the securities industry. No reason for such exemptions were put forward other than inconveniences to the specialist or market maker. The committee did not include these exemptions in the proposed legislation since the statutory purpose could be evaded if an individual were permitted to accumulate over 5 percent of a company's securities which he could then sell in a block transaction without public notice. Any inconveniences or burdens to specialists or market makers can be appropriately handled by the Commission pursuant to its rulemaking authority which allows it to vary the filing requirements in these areas in order to avoid the repetitious filing of information.

Third, the bill would subject stock-for-stock exchange offers made by means of a registration statement under the Securities Act of 1933 to the tender offer requirements of section 14(d) of the Securities Exchange Act. Exchange offers involving the offer by a bidder of its own securities, in exchange for the securities of the target company are becoming more and more prevalent. This is particularly true in attempted acquisitions of larger companies due to the enormous amount of money that would be required if a cash tender offer was used in order to gain control.

Exchange offers are presently exempted from section 14(d) of the Securities Exchange Act, because they are made pursuant to a registration statement under the Securities Act. This statement furnishes investors with adequate disclosure concerning the offer. However, this exemption also excludes the large groups of public investors to whom exchange offers are made from the substantive protections of section 14(d) in connection with a cash tender offer. These protections include the right of depositors under a tender offer to withdraw their shares during the first 7 days of the offer and after the expiration of 60 days; they require that the bidder take up all shares deposited during the first 10 days of the offer on a pro rata basis rather than on a first-come, first-served

basis; and they require the bidder to extend any increased consideration made in connection with the offer to persons who have already deposited their shares. Moreover, in the absence of the applicability of section 14(d) to a registered exchange offer, solicitations or recommendations in opposition to such an offer are not subject to regulation.

At the hearing the question was raised as to whether making exchange offers subject to the disclosure requirements of both the Securities Act and the tender offer provisions of the Securities Exchange Act would impose an unnecessary burden of duplicate filings upon registrants. If this problem should arise, the Commission has adequate rulemaking authority to alleviate any unnecessary burden of duplicate filings and the committee would expect the Commission to take such an approach.

Fourth, the bill amends section 14(e) of the Securities Exchange Act to grant the Commission rulemaking power to define and prescribe means reasonably designed to prevent fraudulent, deceptive, and manipulative practices. The purpose of this provision is to allow the Commission to deal more effectively with the devices sometimes employed on both sides in contested tender offers. The language of the addition to section 14(e) is identical to that contained in section 15(c)(2) of the Securities Exchange Act concerning practices of broker and dealers in securities transactions in the over-the-counter markets.

COMMITTEE AMENDMENTS

In his testimony before the committee, Chairman Budge of the Securities and Exchange Commission proposed an amendment to the bill. He suggested that the Commission be granted power to adopt appropriate rules and regulations under section 13(e)(2) so that distinctions may be drawn between the issuer and its controlling persons in filings required under section 13(e). Section 13(e) grants the Commission rulemaking power concerning purchases by certain corporations of their own securities and specifies that for purposes of section 13(e) a purchase by or for a person in a controlling relationship with the issuer is deemed to be a purchase by the issuer.

In adopting this proposed amendment the committee felt that it was unnecessary to place on persons in a control relationship with the issuer all of the burdens of the section's requirements such as giving notice to shareholders after each purchase, which may be appropriate when the issuer purchases its own securities. When corporate funds are not used, the furnishing of information to shareholders does not involve the considerations and implications associated with the use of corporate funds. Moreover, a controlling person of a corporation is subject to the tender offer requirements of section 14(d) and the acquisition reporting requirements of section 13(d), whereas the issuer is exempt.

The amendments were agreed to.

The bill was ordered to be engrossed for a third reading, read the third time, and passed.

The title was amended, so as to read: "A Bill to amend sections 13(d), 13(e), 14(d), and 14(e) of the Securities Exchange Act of 1934 in order to provide additional protection for investors."

COMMITTEE MEETINGS DURING SENATE SESSION

Mr. MANSFIELD. Mr. President, I ask unanimous consent that all committees be authorized to meet during the session of the Senate today.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

ORDER FOR RECOGNITION OF SENATOR STENNIS TODAY

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the distinguished Senator from Mississippi (Mr. STENNIS) be allowed to proceed for not to exceed 20 minutes, following the remarks of the distinguished Senator from Oregon (Mr. HATFIELD) today.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

ORDER FOR TRANSACTION OF ROUTINE MORNING BUSINESS

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the conclusion of the remarks of the distinguished Senator from Mississippi (Mr. STENNIS) there be a brief period for the transaction of routine morning business with a time limitation of 3 minutes on statements made therein.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

DEATH OF REV. FREDERICK BROWN HARRIS

Mr. SCOTT. Mr. President, the passing of Rev. Frederick Brown Harris this morning is a source of grief and sadness to all of us in the Senate and to all of us who have met him and served with him during his tenure as Chaplain of the Senate.

He was a man of God who walked humbly with the Lord, but who always conducted himself joyously as a man, to whom religion was not only a part of his daily life but also something to be lived to the fullest in consonance with his firm trust and faith in the Almighty, and in the powers of the Almighty to guide mankind and to watch over us during our daily goings and comings in this place.

He was a very good man, a very much beloved man, and one whom we shall miss during our own remaining days in the Senate.

I know that all of us join in extending condolences to his family and are happy that he passed from this part of his experience in his sleep, which is equated by the poet with death as a forgetting. He must therefore have passed from one world to another in the gentle transition which accompanies this form of the ending of one's time upon the earth. This is, I think, a final kindness which his Creator bestowed upon him.

We shall miss him and mourn him and shall ever love him and his memory.

Mr. MANSFIELD. Mr. President, will the Senator yield?

Mr. SCOTT. I yield.

Mr. MANSFIELD. Mr. President, I wish to associate myself with what the distinguished minority leader has said.

Dr. Frederick Brown Harris was one of the Senate's outstanding Chaplains, a man of deep religious devotion, dedication, and integrity.

It is with sorrow that I have heard of our loss. It is with deep regret that I note this event.

So in response to what the distinguished minority leader has already said, I join in expressing my personal regret and the regret of this body, which he served so well.

ORDER OF BUSINESS

The ACTING PRESIDENT pro tempore. Under the previous order, the Senator from Wisconsin is recognized for a period not to exceed 45 minutes.

VINCE LOMBARDI, SUPERCOACH—REMARKABLE MAN

Mr. PROXMIRE. Mr. President, a remarkable man lies ill. He has come to public knowledge not because he is a man of government or science or the professions. He has come to public knowledge because, as Art Modell, owner of the Cleveland Browns, said, he is the greatest coach in the history of professional football.

Vince Lombardi would have been great had he never played football or coached it. Mr. Lombardi is a remarkable man of dedication, determination, leadership, courage, and humility. He has those qualities in measures seldom seen in most men.

A large segment of the American public—sports fans and those who do not read the sports pages; poor and wealthy; black and white—are truly concerned about Mr. Lombardi. They know, however, that this unusual man is showing the same courage in his present travail as he did that day when, playing on the Fordham line, as a 170-pound guard and as one of the Rams' "Seven Blocks of Granite," an opposing tackle's repeated jabs opened a wound inside his mouth that required 30 stitches to close.

Vince Lombardi has always said that physical pain is something that is in the mind. He convinced the Packers and the Redskins that he coached that this is true.

We in Wisconsin hold Vince Lombardi in special admiration. Green Bay, the city the Packers represent, is not one of the 20 large metropolis centers in the country. It is viewed by many as a relatively small city. It is a city which had relatively little success with its football team in the years before Mr. Lombardi came. As a matter of fact, the year before he came to the Packers, the Packers had won only one game.

I remember when former Senator and former President John F. Kennedy came to Wisconsin to campaign for me that the Green Bay Packers had had one losing season after another. He said that what the Packers needed was a quarterback and that until they got a good one they would not win in professional football.

Lots of people debated whether they needed a good quarterback or better players or whether the management should have more money with which to buy outstanding players.

I think that Vince Lombardi proved that what it takes above all is a great football coach. He took over a football team that had had one losing season after another. He brought the Green Bay Packers up from the depths, after having won just one game the preceding season, to perhaps the greatest heights

that any professional football team has ever reached.

Vince Lombardi led the team on the field to unsurpassed triumphs—three straight championships and two straight victories in the Super Bowl. But in his office as general manager, he also made the team solvent and put it on a firm financial footing. Such a combination should not be considered unusual for an unusual man. For, after having graduated magna cum laude in 1937 from Fordham, and while working toward a law degree, Mr. Lombardi taught Latin and science at St. Cecilia's High School in Englewood, N.J., where he also coached football.

Despite his talents, Lombardi remained in relative obscurity until he reached Green Bay in 1959 as head coach and general manager.

He was then 45 years old, having been hired from the New York Giants where he had been assistant coach. So, the Packer offer became that rare combination: the right man in the right spot at the right time.

Just 2 weeks short of 9 years after he had signed that first contract at Green Bay, on January 14, 1968, Vince Lombardi and his Packers won the second Super Bowl, and he stood on the top—king of the sports mountain. In nine seasons at Green Bay he had won five league titles. In a decade that saw professional football boom—from 12 teams to 26 teams—it was Lombardi's Packers who were the winningest club in the pro game. It was Lombardi who put winning above everything but virtue.

In one way, Lombardi is an old-fashioned coach. He does not believe in razzle-dazzle. He believes in doing the basics well—not just well, but perfect. It was the fundamental running game—power sweeps, the off-tackle plays—that made the Packers. The secret was precise execution. That could come only by stressing perfection. And Lombardi, if he is anything, is a perfectionist.

I think one would have to have been in Green Bay during those remarkable years to understand the impact that the Packers and Lombardi made. Professional football players are like any group of young athletes. They are carefree and relaxed and they get into trouble as young men do everywhere. There was something different about the Packers after he took over. He convinced them that they had an obligation to the community to constantly comport themselves as gentlemen, to be respectful and respectable in the best sense; not that they did not still love life, but one would never see a Packer leaning against a bar in a tavern and one would never see a Packer engaged in any kind of activity that could bring criticism on the town, on the city, on the game, or on the Packers. It takes a remarkable quality to instill this in young athletes. It takes an unusual man to do this and at the same time have the team so devoted to him and to their cause that they not only were great football players but also remarkable emissaries of good will and good conduct.

As a coach at Green Bay, Lombardi was a taskmaster, and he was gruff. Yet he gained the affection of his players. I suppose no one ever organized a practice as he did. Vince Lombardi did not believe in long practices, but his practices were tightly organized and every single minute was well spent and well organized in such a way that the players and the coaches got the most out of practices.

In his book "Instant Replay," all-pro guard Jerry Kramer wrote:

> Vince is driving us like a madman; he never lets up. It's hard to resist hating him, his ranting, his raving, his hollering. But damn him, he's a great coach.

And Kramer was one of the players Lombardi made into a star. He along with another all-time great guard, Fuzzy Thurston, led the sweeps that became a Lombardi hallmark of "run to daylight."

Willie Wood came to camp as a free agent, and Lombardi made him All-Pro. Incidentally, Willie Wood is from a high school here in Washington. Paul Hornung became a star under Lombardi. As everyone who is interested in sports knows, Hornung was a Heisman trophy winner at Notre Dame as a quarterback but never seemed to be able to "get with it" in professional football. He was a playboy and a lover of life. He came under the discipline of Vince Lombardi and became a remarkable player, a great star, and broke all records for scoring; and it was largely because Vince Lombardi recognized what it took to make Paul Hornung into an outstanding football player.

Jim Taylor was the same way. Bart Starr came off the bench to become one of the best signal callers and passers in either league, again because of Vince Lombardi. I think many people feel that Bart Starr is one of the finest quarterbacks the game ever produced, along with John Unitas, and others.

But Lombardi has not sought to produce stars. Rather his aim has always been the success of his team. One of his players, Henry Jordan, is quoted in a book by Chuck Johnson, sports editor of The Milwaukee Journal, as saying:

> I don't think we have better players than anyone else. But we don't keep anyone here who doesn't become a part of the team. When a game is over, it's not how I did, but how the team did.

Bill Gleason wrote last Sunday in his column in the Chicago Sun-Times:

> The Packers of the championship years realize that Lombardi built great teams with the roisterers, the dum-dums, the culls, the malcontents, and the other oddballs that other coaches could not bend to their wills. And those who were roisterers and all those other things appreciate most the fact that the very moral man who was their coach did not try to change them.

There was, perhaps, one way in which Lombardi has changed some players. It is general knowledge now that Mr. Lombardi would not put up with bigotry. When he came to the Redskins there were some vestiges of racial tension on the squad.

I remember reading recently that one Redskin player said that in his view the real contribution Lombardi made to make the Redskins a better team was not in any of the more famous and well-known attributes he brought to the team or in his football technique, which was superb, but the fact that he was successful in abolishing the hostility that had developed on the Redskins between white and black players. Vince Lombardi would just not put up with that. He recognized men were men, and whether they were black or white did not make any difference to him.

Without giving speeches on civil rights or becoming a conspicuous civil rights champion, he was able through much better appreciation, understanding, respect, and affection to bring understanding between players of different colors. But Lombardi is a leader of men, and all the men on his teams are to him just that, men.

He also demands that his charges act like men at all times. Big celebrations in the locker room after a big victory can be seen with some other clubs—not with Lombardi's. No champagne, no horseplay, no throwing the coach into the shower. None of that kid's stuff for Lombardi. He is concerned about the image of professional football. That means the players must be responsible. In Green Bay, Lombardi did not say his players could not drink, but if a player were caught standing at a bar there he was subject to an automatic fine. And the players were expected to comport themselves like gentlemen and dress like gentlemen.

One could take time here to recount the wins and loses of Lombardi teams—an impressive record by any yardstick. But that would make it sound as though that record would not grow even more impressive. We all hope and pray that the winning ways of Vincent Thomas Lombardi will go on for season, after season, after season.

One of the most quotable statements ever made by Lombardi is this, for he often told it to his players:

> Only three things should matter to you: Your religion, your family and the Green Bay Packers, in that order.

That is a philosophy anyone could live by. There is one trouble with it, however, for fans and other football teams—for now, he is undoubtedly saying it to the Washington Redskins, and they will turn into latter-day Packers.

Another sampling of Mr. Lombardi's viewpoint beyond the football field can be found in a speech he made shortly after the Packers won their first Super Bowl.

He said:

> This is an age for heroes. The test of the century is whether we mistake the growth of wealth and power for the growth of strength and character. We've weakened discipline and respect for authority and let freedom of the individual predominate.
>
> It is the obligation of people who are in authority to see that we are awakened once more to the need to develop a strong interest in competitive spirit. Those who are in authority fail in that pursuit unless they preserve what has been an American goal—to win and to be first in whatever we do.

And Lombardi listed these qualities of leadership:

> It takes mental toughness. And it includes humility, Spartanism, love, loyalty, teamwork, respect for the dignity of the individual and charity.

And he gave advice for those who are led:

> We also need followers who will accept authority. In our search for individual freedom, in struggling to liberate ourselves from ancient creeds, we sometimes have idealized freedom against order. It has been the new

against the old, and, by reducing authority, we have lost discipline. Thus the freedom—too much freedom—has had an adverse effect. The strength of a company or a team is in the will of the leaders. If the manager is weak-willed, the company is poorly directed.

That speech was made to the American Management Association's annual personnel conference. But there is a measure of the man in it.

We know that the man in the hospital has the strength of character he needs. But there is a need we can fill, and we will fill it with our prayers.

Mr. President, I am very proud, as the senior Senator from Wisconsin, to pay this tribute to Vince Lombardi. Representative MURPHY of New York led a similar tribute in the House of Representatives a couple of days ago. Representative MURPHY had the great honor of playing under the coaching of Vince Lombardi when he was assistant coach at West Point.

It is unusual for a Senator to take the time of the Senate to pay tribute to a sports leader, but I say this is a most remarkable and unusual man. He has the kind of qualities America needs now as never before. He lies seriously ill, and I feel it is necessary and desirable that we recall these qualities, his record, and his dedication to the attention of our fellow citizens.

Mr. SPONG. Mr. President, will the Senator yield?

Mr. PROXMIRE. I am happy to yield to the Senator from Virginia.

Mr. SPONG. Mr. President, I am pleased to join Senator PROXMIRE in tribute to Vince Lombardi, the fine coach of the Washington Redskins, and to wish his recovery from the illness which has kept him from his coaching duties. All football fans, and I count myself one, are the losers when a master coach such as Vince Lombardi is removed from the field of action.

When Mr. Lombardi became coach of the Redskins a wave of optimism swept through the ranks of Redskin fans. This optimism was justified, although the Redskins in their first year under him did not win a championship. The caliber of play seemed to improve magically, and just seeing Lombardi on the bench—or in his usual standing position—seemed worth the price of admission.

Vince Lombardi is an American success story. He won early fame as a member of the Fordham University football, team where he was one of the "Seven Blocks of Granite." He became a highly successful high school coach, then an able assistant to Red Blaik at West Point, and later won his professional spurs as assistant coach of the New York Giants. His success as coach of the Green Bay Packers is legend.

Vince Lombardi bespeaks everything that is good and great about America. He is a fighter—a determined, courageous man who instills those attributes into his players. But—more—he has studied the game of football until he has become one of its great masters. He is a magnificent American and I hope he will soon be back on the football field.

I am pleased to join in the tribute by the Senator from Wisconsin.

Mr. PROXMIRE. I thank the distinguished Senator from Virginia. I think what few of us realize is that we tend to focus on our own areas, our own narrow interests. The American public in recent years has probably paid more attention to football than to almost any other kind of activity. It has become almost a family joke that wives have been unable to get their husbands to do the chores they should do on Sunday afternoon because they are watching the football games. I suppose we can carry anything to extremes, but I think it has had a wholesome and healthy influence on American life. The terrific competition, the fierce competition in professional football is almost unparalleled anywhere else, when one considers the kind of excellence it takes to win.

So I think the fact that this country has produced a man of these remarkable qualities is something that all of us have reason to be thankful for and to recognize and to acknowledge.

I thank the Senator from Virginia very much.

Mr. YOUNG of Ohio. Mr. President, will the Senator yield?

Mr. PROXMIRE. I am happy to yield to the Senator from Ohio.

Mr. YOUNG of Ohio. Mr. President, may I say to the senior Senator from Wisconsin that I agree with every statement he has made today. I feel that he is rendering a fine service to millions of those of us who are rooters and fans for different football teams. It is with pleasure that I have listened to him and I desire to join in paying tribute to Vince Lombardi, the general manager of the Washington Redskins.

I hope that within the near future he will resume his duties as head coach of the Redskins.

He has been one of the very great coaches of our Nation. He has become a tradition. Vince Lombardi, in addition, has proven to be a very great American who has molded real men out of boys. He has molded champions out of football players wherever he has coached, from his early days as coach at St. Cecelia's High School, to his period of coaching internship under the great Red Blaik at West Point, to his unmatched success with the Green Bay Packers over the years, with whom he won three straight professional championships.

These are unparalleled achievements.

Mr. President, Vince Lombardi has dedicated himself to the attainment of excellence. I know, in joining with other Senators here and in announcing my views in support of everything that the distinguished senior Senator from Wisconsin has stated today, all of the football fans of my State of Ohio and around the entire country agree with us when we wish Coach Vince Lombardi a speedy and complete recovery and look forward to his resuming his work as head coach of the Washington Redskins.

I speak as one of those who customarily enjoy spending Sunday afternoons watching television. Whenever the Cleveland Browns and the Washington Redskins play, I am just one of some millions of men and women throughout our country who keep in front of the television screen throughout that afternoon, and we do not want to be interrupted by anyone.

Mr. PROXMIRE. Mr. President, I especially appreciate the tribute of the Senator from Ohio. Ohio has a long and well-deserved reputation for football achievement. I thinks perhaps the only coach who has a record comparable to that of Vince Lombardi's is Paul Brown. Paul Brown had those marvelous years with the Cleveland Browns. Many people thought the Cleveland Browns were named after him. Maybe they were. They won one championship after another. Now Paul Brown has gone to the Cincinnati Bengals, where he is doing a superb job. I know how much Paul Brown thought of Vince Lombardi, and how he deeply admired his qualities of determination and pride, and particularly the notion that professional football has an obligation for its men to deport themselves as gentlemen regardless of where they are.

I think that is the reason why we should be grateful to men like Paul Brown and Vince Lombardi for what they have brought to football. There is no question that they have made a finer and better country.

I appreciate what my friend has had to say. As the Senator has just stated, millions of Americans watch football games constantly, and it has a real effect on their attitudes and their character.

Mr. YOUNG of Ohio. What the distinguished Senator from Wisconsin says is, of course, true; and the Cleveland Browns were named after Paul Brown.

Mr. PROXMIRE. Oh, were they? I did not realize that.

Mr. YOUNG of Ohio. They were named after Paul Brown; and it is a fact that Paul Brown and Vince Lombardi are not only close personal friends, but they are outstanding coaches, and they have both done a great deal for all Americans. As an Ohioan, and now as a Washingtonian, I believe that Vince Lombardi ranks as the greatest and has done the most of all American coaches. When we speak of Paul Brown in connection with him, however, we are speaking of the two topmost coaches, it seems to me.

Again, I express my thanks to the distinguished Senator from Wisconsin.

Mr. PROXMIRE. As I pointed out earlier, Art Modell, the owner of the Cleveland Browns, with greatest respect for and in no derogation of Paul Brown, said that Vince Lombardi is the greatest football coach who ever lived.

Mr. YOUNG of Ohio. I go along with that. May he have a complete recovery, and soon.

Mr. PROXMIRE. Mr. President, I would like to correct one completely inadvertent remark I made, which has been called to my attention. I said that when Lombardi came to Green Bay, that team had only lost one game the year before. They had only won one game. When Lombardi took over, they had a winning season immediately, and the following year were runner-up to the Philadelphia Eagles for the NFL championship. Then they won five championships in the next 7 years, and two superbowls. No other coach has ever accomplished anything like that.

Mr. MURPHY. Mr. President, will the Senator yield?

Mr. PROXMIRE. I yield to the Senator from California.

Mr. MURPHY. I am sorry that I did

not enter the Chamber until the last few moments, but I know of the subject that has been under discussion. I yield to no man when it comes to enthusiasm for sports. We pride ourselves, in California, that we have more professional baseball teams and football teams, and fine collegiate teams, than any other part of the country, and we are very enthusiastic about the great figures connected with them, and the contribution which they make to the pleasure of the spectators and to the American way of life.

There is one thing that supersedes even the pride that we Californians take in our own home State teams, and that is the respect we have for the outstanding leaders in competitive sports everywhere, even when they might be our rivals. Their spirit reflects the true spirit of our Nation, and we recognize and applaud great leaders and men in public life such as Vince Lombardi.

Truly, not only is he a giant in his chosen field of endeavor but he is, even more, a giant among our national leaders, and the example and leadership he has displayed throughout the years have brought hope and inspiration to young and old alike.

When we Californians speak of such rare individuals, we refer to them as "men to match our mountains," and although Vince Lombardi is not a Golden Stater, we have seen him not only match some of our most formidable sports "mountains" but also, all too frequently, topple them.

As the son of an Olympics coach, I know in a special way the importance of sports in this great Nation and the strength which true sportsmen like Vince Lombardi have contributed to the country.

With my Senate colleagues, I extend my most sincere wishes for a rapid recovery and for many years of health and happiness.

Mr. PROXMIRE. I thank the Senator from California. I know that the Senator's father was a crack track coach at Yale and that he himself was an outstanding athlete, and I am sure that Coach Vince Lombardi will deeply appreciate the fine statement he has made.

Mr. STENNIS. Mr. President, will the Senator yield briefly?

Mr. PROXMIRE. I yield.

Mr. STENNIS. I have been delighted to hear the tributes paid by the Senator from Wisconsin and others to Coach Vincent Lombardi. I shall not try to add anything to what has been said about him as a coach, but I do feel that he has qualities of character, stamina, courage, and frankness that could well be emulated in public life, not only here in the Senate and in Congress, but back in the States, the cities, the towns, and the local governments. We need more people in public life, as I see it, who have those qualities. I think it would be an answer to the permissiveness and the uncontrolled carrying on of a great many misguided people. It would help add a firmness of purpose and a determination toward the attainment of personal goals, to have more men of the spirit of this truly great coach. I agree that he has added much to American life.

We cannot all be football coaches, but positions of leadership are open in every avenue under our way of life and our system of government, and we laud his qualities, and should try to bring them into focus in other fields, particularly in public life.

Mr. PROXMIRE. Mr. President, I thank the Senator from Mississippi. I think he has put his finger on exactly the quality that should be stressed here. This man has brought a character, a discipline, and a sense of responsibility and teamwork to football that, as the Senator has said, we need desperately right now throughout American life. In doing this, he has made an extraordinary contribution. I think that now, as he lies seriously ill in Georgetown Hospital, it is most appropriate and desirable that we pay our tribute to him.

Mr. GOLDWATER. Mr. President, will the Senator yield?

Mr. PROXMIRE. I yield to the Senator from Arizona.

Mr. GOLDWATER. I am most happy that the Senator from Wisconsin has taken the floor to voice his regard and the regard of the Senate for Vince Lombardi. While we have never been close friends, we are friends. We belong to the same club, and I see him very often. In fact, I saw him just the day before his first operation. I was very shocked, the next day, to read that he had gone to the hospital, because he looked his usual healthy, husky self.

I have known of him, of course, ever since he played collegiate football. I think he has brought to the game precisely what the Senator from Mississippi has said. He has brought character, but he has also brought discipline, which is something that has almost vanished from American life. Young people hardly know what discipline is. Older people have known it and forgotten about it. But the secret of his success, to me, was not his superb knowledge of football, but his demand that discipline be followed by his players, and not just by his players, but by everyone associated with the game.

I think many of our young people today, wondering how they can better their lives, might look at the remarkable history this man has made, with mediocre football players in many cases, by making them hew the line to the point that they turned out to be outstanding players. I know many players who have played under him, and this is the first thing they laud about him. He taught these people discipline, and that is the reason he has had such outstanding success in football.

I join with my colleagues in the Senate, and I know with the American people all over the country, in their prayers and wishes for his speedy and complete recovery.

Mr. PROXMIRE. I thank the Senator from Arizona. I would like to reinforce what he has said. I agree that discipline, character, and dedication are the hallmarks of Vince Lombardi. At the same time, when he had people who were free spirits such as Paul Hornung, for instance, who loved to have a good time and never stopped enjoying the fun of life, he did not seek to remold them. Hornung was not changed in his essential character, but he was completely a team man. He was absolutely dedicated to the Green Bay Packers, while at the same time recognizing that he had to work with Vince Lombardi and become a part of that Packer spirit and that team spirit.

This is a very difficult element to define. I think the Senator from Arizona has done an excellent job in emphasizing how desperately and urgently it is needed in this country right now. Perhaps, the only way you can get it is by example. You cannot really get it by speeches or by any other method. It is most fortunate for this country that we have a man of such smashing success in this area, in a field which has the attention of literally millions of our young men and of our older men, for that matter, and of all our people.

Mr. President, I simply conclude by wishing fervently—as I am sure all Members of the Senate do—that Vince Lombardi, struggling for life, as I have said, at Georgetown Hospital, will recover and once again give to professional football and to America the great spirit and great example he has demonstrated.

I yield the floor.

Mr. PERCY. Mr. President, I am pleased today to have the honor of paying tribute to a man whose contribution to the betterment of our society stretches far beyond his brilliant playing and coaching career in college and professional football.

Vince Lombardi is the man I am speaking of today. He has inspired athletes to realize their full potential; he has taught fans and players alike the personal satisfaction realized when a complete effort is given; he has served as an example, not only to our youth but to every person whose life he has touched, of what it means to be a man in the truest sense of the word.

Many have felt the positive influence of Vince Lombardi and certainly all have benefited from it. His life continues to serve as a reminder to all of us that hard work, strict discipline, and complete dedication mold championship character. I can think of no more appropriate words to sum up the life of Vince Lombardi than those echoed by Tennyson in Ulysses when he said: "To strive, to seek, to find, and not to yield." Certainly, Vince Lombardi's life has been patterned after this meaningful thought by Tennyson.

Mr. NELSON. Mr. President, I would like to pay tribute to a friend, Coach Vince Lombardi.

Coach Lombardi came to my State 11 years ago. With him he brought a code of undeviating excellence and a personal determination that did not know the meaning of defeat. In a few years, the Green Bay Packers had become the standard of performance in American football and the inspiration to a generation of athletes.

Much has been said about the victories he won for Green Bay and more recently, for Washington. The record stands for itself and needs no further comment. What is singular about the victories, though, is the iron will behind them—that behind the fanfare is a man who could inspire other men to be great.

No coach, no leader can simply command people to be champions. First, he

must have the soul and the heart of a champion himself. Vince Lombardi led his teams with a tight rein. But what made his teams winners was the respect, admiration, and devotion that made them follow him.

Now Coach Lombardi has been temporarily felled by an adversary that knows no rules of sportsmanship. He is fighting back, after two serious operations, with all the resources of his great heart and his rugged, indomitable will.

I think I can speak for Wisconsin and for all of America in wishing him a quick victory in this contest and a quick return to the playing field. Our prayers and our hopes are with him as he struggles in his lonely battle. Good luck, Coach.

ORDER OF BUSINESS

The ACTING PRESIDENT pro tempore. At this time, and in accordance with the previous order, the distinguished Senator from California (Mr. MURPHY) is recognized for not to exceed 30 minutes.

C–5A SIGNIFICANT TO SECURITY

Mr. MURPHY. Mr. President, I rise today to speak with regard to an amendment which will be offered by the distinguished Senator from Wisconsin; and because I may not be present when it is offered, I would like to speak to it.

I once again find myself in the position of complimenting the distinguished Senator from Wisconsin (Mr. PROXMIRE) on his dedication to economy in Government. I share his zeal for economy and am pleased to work along side him in his endeavors whenever I can. Unfortunately, there are times when I find that I must disagree with his suggested programs. This is not too often, but the amendment which he will offer, No. 680, is one of those cases.

It is, therefore, with regret that I must urge Senators to oppose the amendment which will be offered by the Senator from Wisconsin, which would delete the $200 million contingency funds from the authorization of the Committee on Armed Services, which it has included and recommended in its report for the C–5A transport aircraft.

Much as I dislike to disagree with this amendment, I am convinced that it is necessary to do so, and before I turn to the C–5A specifically, I feel that some rather general background on this year's authorization would be appropriate and possibly necessary. The distinguished and dedicated chairman of the Committee on Armed Services—of which I am proud to be a member—the Senator from Mississippi (Mr. STENNIS), recently reported some interesting statistics worthy of reiteration.

Contrary to some of the figures of questionable accuracy which I have heard quoted in this Chamber, total appropriations for Defense will be only about 36 percent of the total Federal budget for fiscal year 1971. The lowest portion, I might add, since 1950. In addition to this, on an overall basis, the committee reduced the administration's $20.3 billion Defense authorization request by $1.3 billion, an unprecedented amount. On a dollar basis, the authorization before us is the lowest since fiscal year 1961—10 years ago. It is factual, then, that Defense spending is decreasing instead of skyrocketing, as some would have us believe. Furthermore, it is most important for Senators to realize and acknowledge that this bill provides—and I quote Chairman STENNIS—"the lowest possible dollar level consistent with the necessity for providing the weapons for our national survival." Chairman STENNIS is well known to choose his words carefully, and I cannot overstress that he has said our national survival depends on passage without further reduction.

As examples of the figures contained in this bill, it has been shown that the Air Force is buying fewer aircraft than at any time since 1935, 6 years before World War II, and it should be well remembered that this nearly did cost us our national survival. As I think back to those days, in reacting to people who said that we did not need armament, it nearly cost the freedom of the entire world, because this was during the period when the Nazis were building up their armaments with a plan to conquer all of Europe, possibly just for a beginning, and we, at the same time, had let our weapons systems fall into disarray because we felt that we would be protected by the Versailles Treaty.

The Navy is, also, buying fewer aircraft this year than at any time since 1946 when we were once again bent on disarming. That, Senators will recall, was just 4 years before the unfortunate situation in Korea which made it necessary, once again, to go to war.

Therefore, without burdening Senators with statistics, suffice it to say that the Armed Services Committee has reduced the administration's request by 6.7 percent to a total of $19.2 billion—to what we consider the bare necessity. In other words, Mr. President, if one really wants to know where the taxpayers dollars are doing, I can furnish that information. Total Government spending has increased 62 percent since fiscal year 1964, and of that total, 90 percent has gone to nondefense Federal agencies. There is one more figure that is significant, and again I quote Chairman Stennis:

> The pay of personnel—
>
> These are paychecks for jobs—
>
> and personnel related expenses now account for 60 percent of defense spending.

In other words, every time we cut $1 of defense spending, we cut approximately 60 percent—60 cents—from the payroll and dollars available for some individual's paycheck. I may be more sensitive to this than other Senators, because at the present time the cuts in the defense spending are being felt in my State probably more severely than in any other. Thus, I hope Senators can see the portion of the DOD budget we are discussing in its real perspective and in its proper context.

When the problem of the C–5A came up last year, I addressed myself to the matter; and I beg the forebearance of Senators if, at the risk of appearing immodest, I repeat what I said at that time.

We all regret cost overruns on this plane. Had we been able to deal on a fair or more clearly understood basis with the Department of Defense over the past 8 years, this might never have happened.

I am acquainted with Lockheed's officials, with many of their employees and with their union officials. I am more than normally aware of their many fine projects of the past. I can recall, back in the old days, when they came up with something called the P–38, when it was badly needed; then the U–2, which was highly publicized—and is still performing a great service lately, according to the press, to give us information which is badly needed about what is actually taking place in the Middle East; and later on the Polaris and Poseidon missiles, and the P–3 antisubmarine airplane, the Agena space vehicles, the fabulous SR–71, the world's fastest and highest flying aircraft, in the long and honorable history of this fine company. This company enjoys an outstanding performance record and deserves respect for its integrity throughout the Government and throughout the aircraft industry over many years. I know something about Lockheed and its reputation for integrity, both as to its people and its product. I was more than normally skeptical about the things being said about Lockheed and its product, the C–5A, things which by implication and innuendo seemed to allege or to create the impression that there was some sort of mischief or dishonesty afoot, that there was at least bad performance, that someone was trying to deceive the Government and the people of the United States, and that there had been sly activities going on.

Fortunately, my committee membership gave me access to information that would provide the complete and balanced in-depth story. I was able, I think, to put together all the pieces, at long last, and get a fairly true, dependable and factual picture of what had happened and what was going on.

Therefore, I must point out, first, that the C–5A contracts, which seem to be the cause of some of the trouble, were let during the McNamara years by the men who conceived the so-called "total package procurement technique," which has, so far, proved to work hardship upon both manufacturers and taxpayers, to say nothing of Members of Congress who took some time to discover and finally, at long last, to understand what the "total package procurement technique" involved.

I might add at this point that they did a good job confusing many of us. The matter of overruns in the contracts should not come as a surprise to Congress this year at this time. There have been warnings as evidence in past years that this was happening and, certainly, I was suspicious of it as far back as 4 years ago. That has passed. That is behind us. We should learn from these unfortunate lessons. But now we have the question of the C–5A, this badly needed aircraft, and what to do about it at the present time.

I do not want to take up the time of the Senate reciting statistics concerning C–5A performance. Suffice it to say that

the C–5A performance is excellent. This, I am sure, is well known to all my colleagues.

It was designed to satisfy the requirement rapidly to deploy fully equipped Army troops anywhere in the world, without the need for intermediate servicing stops, or without the need for sophisticated airport facilities when they arrived at their destination. We can carry an army, fully equipped and ready for operation, with great speed to any place in the world. This was a new concept in military tactics. The C–5A represents a major step forward in improving our capability for global military deployment in support of our national interests, while reducing our dependence on overseas bases. It insures that Army units being deployed will be accompanied by all their heavy equipment and will arrive in minimum time as a fully effective force, ready to go into operation immediately.

Since I spoke on this last year, we have had some concrete proof of capabilities of the C–5A.

The Associated Press reported from Charleston, S.C. on July 14, 1970:

> The giant C–5A military transport plane was given unqualified approval by Air Force personnel today after its first operational flight. "The trip was a most remarkable success," said Col. Harry Spillers, Commander of the Joint Task Force for operational testing of the C–5A.
>
> His comments came at a news conference following the return of the aircraft from a 10-day, 21,000-mile trip from Charleston Air Force Base to the South Pacific. Spillers said that craft took 83,000 pounds—83,000 pounds in one aircraft, Mr. President—of supplies to Vietnam and returned with 100,000 pounds of cargo from Japan. He said 41 C–147 cargo ships would have been needed to carry that load.

Mr. President, this is an amazing aircraft. I have seen it. I have been through it. I have studied it. It is unbelievable. It can carry five Greyhound buses, fully loaded, at one time. It can carry 1,000 troops fully equipped. There has never been an aircraft like it constructed. So, there is really nothing to which to compare it. Therein may lie some of the problems that have evolved from its construction.

Now, insofar as the return of our troops to American soil is concerned—and that is, of course, of great concern to all of us, I am sure we are all for that—I am among those who support the "remote presence" concept so ably articulated and nurtured by the distinguished Senator from Missouri, my friend, STUART SYMINGTON. The Senator has explained, through the use of systems such as the C–5A, that we can bring hundreds of thousands of boys home and keep them home and, yet, we can honor our treaties and our commitments from the United States and maintain our credibility through the ability to redeploy troops and heavy materiel via this massive airlift, to which, I might add, the C–5A is not only essential but is the key instrument.

The remote presence that the Senator from Missouri (Mr. SYMINGTON) has told us about should save us as much as $2 billion a year in maintaining our Military Establishment. In order to do this, though, we agreed that this massive airlift capability was necessary and, therefore, the Air Force was directed to put their best men on the problem. It was decided that 200 aircraft of the C–5A type would be the proper optimum number. However, the Department of Defense directed that we should construct 120, which would be enough to equip six squadrons. This was then reviewed, and 120 aircraft was the number decided upon by the best planners and, I might say, there was enthusiastic support for it here in Congress. In fact, Senators will remember that the first plan for 200 aircraft was greeted with what might be called exuberance in the Senate. It was an entirely new approach to maintaining our military capability. But today we are trying to provide for the continued production of the C–5A under the agreement, and at least 81 planes are needed.

Now, remembering that the Joint Chiefs of Staff still feel we need 120 aircraft, budgetary restraints have limited us to 81—a lesser number—in the opinion of this Senator, the bare minimum.

Now, the removal of the $200 million contingency fund, as proposed by the Senator from Wisconsin in his amendment, would stop production at the end of this calendar year, with only about 30 airplanes finished. It would force the Secretary of Defense thereby to retain thousands of American boys on foreign soil. I am certain that the Senator from Wisconsin and the Senator from California would not prefer that.

Our best qualified experts honestly believe, and I do and many other members of the committee do, also, that at least 120 C–5A aircraft are necessary both for our own security and to provide for a remote presence, especially in view of our military commitments around the world, a subject to which the Senator from Missouri (Mr. SYMINGTON) addressed himself in this Chamber on July 27.

But once again, the administration and the Congress of necessity are operating under very stringent budgetary restraints. We are still trying to arrest and stop inflation. The Committee of the Armed Services has agreed that we are in a time when such austerity is badly needed.

Mr. President, at the present time if the $200 million contingency fund is deleted from the appropriations bill, the Lockheed Aircraft Corp. will only have a financial capability of manufacturing 31 aircraft—certainly not nearly enough. This is obviously not enough, and the cost under these conditions would be prohibitive. If we had only 31 aircraft and spread the research and development costs, it would amount to $125 million for each aircraft.

With the $200 million contingency fund, the company would be able to continue manufacturing 81 of these aircraft, which all agree is a bare necessity in this new type airlift capability. This would cut the unit cost from $120 million to $56 million.

I would point out that if we went to the original number of 120 aircraft, the cost would again go down to $28 million.

If we were to revert to the original plan as conceived by the Joint Chiefs of Staff and the Department of Defense experts, of 200 aircraft, the cost would be reduced to $19 million.

Mr. President, I address myself to the $200 million discussed in the amendment. There has been a great deal of confusion as to what this $200 million in so-called contingency funds would actually do. It has been said that this would, somehow, accrue to the Lockheed Aircraft Corp. and the General Electric Co. profits. This is not so.

To the contrary, it would only keep the C–5A's coming off the production line and, the reverse of what has been said, would actually guarantee to Lockheed the continuance of its performance in what would seem to be an operating loss. Yet, it would guarantee to the American people and to the Military Establishment the aircraft we so badly need for this new military concept and for our national security.

Our colleague, the distinguished Senator from Pennsylvania (Mr. SCHWEIKER), has filed an individual report on this issue, and I believe he is misinformed or mistaken in some of his comments in that report which reads in part as follows:

> Congress can no longer allow itself to be lured by defense contractors into approving systems at low prices, and the taxpayers can no longer afford to pick up the tab for cost overruns.

This indicates that there is some sort of a malicious plan. I am sure in this particular case—and I have examined it carefully—that this was not the case.

I continue to quote from the minority report of the Senator from Pennsylvania:

> Deletion of the $200 million item, and official congressional approval of Lockheed's and the Defense Department's request for this new kind of government subsidy can set the proper tone for military procurement policy for some time to come. The "buy-in" and government "bail out" that has occurred with the C–5A is perhaps the most glaring example of the inadequacy of our military procurement system.

He continues:

> There are many other contracts with similar drawbacks. Holding the line at this time can have a healthy influence on all other existing contracts and serve as a deterrent against unrealistically low bids on all future contracts.

One sometimes gets the feeling that the wording of the contract is the important consideration.

I submit that this is not the case. The important consideration is the need of the military and the capability of providing for its needs at the lowest possible and practical available price.

I would point out with respect to this particular contract that it was a new venture. There was nothing to compare it to. There is no way of really knowing whether the management was at fault or whether it was a question of the times and the circumstances.

I happen to know that a good deal of question was brought about because of the particular timing of the contract. It came at a time when many of the contractors and subcontractors who would be necessary to carry out the contract were unavailable. They were busy on another commercial aircraft—and a good one, too, the 707 as well as the 747.

Mr. President, I must disagree with my friend, the Senator from Pennsylvania. This $200 million contingency fund is in no way a subsidy. It is merely money that the Department of the Air Force under the auspices of its best and most capable men and the Department of Defense under the auspices of Deputy Secretary Packard will provide to cover only the actual costs of production on one type of aircraft, and in no way will it subsidize any Lockheed program, be it Government or commercial. It certainly does not bail out anyone but the American taxpayer. It will insure a national security. The American taxpayers will lose billions of dollars and great safety if this program is stopped at this particular point.

This brings up another area in the broad view of this entire matter that I think is of great importance and must not be given just cursory attention.

Lockheed Aircraft and the Air Force are currently contenders in a legal dispute of sizable proportion. There is a disagreement about the terms of the contract as drawn by the lawyers. The amount in disagreement involves funds between $500 million and $600 million.

For the purposes of this discussion, my research indicates that the figure $567 million seems to be reasonably close to the amount upon which the contenders agree that they disagree legally. Lockheed claims that this money is properly owed to the company under this contract. The Air Force questions the claim, and the case is in adjudication now.

Should Lockheed be the eventual winner in this dispute by way of a decision from the General Accounting Office or in the courts as a result of litigation, that would very simply mean we could be required to appropriate the full amount since that would be what the Government owes Lockheed according to the contract; in other words, an additional $567 million. Furthermore, by its own timetable the Department of Defense must reach a settlement before next year's appropriation bill comes to the floor. The Department of Defense just does not wish to have this accomplished in the stipulated time. It is so required by its commitment. It must be accomplished.

Suppose Lockheed is right and the $567 million is paid. What happens with the $200 million contingency fund then? Why we would just deduct it from the amount owed. It is a contingency fund pure and simple; not a bail-out. It is merely a contingency fund for the purpose of continuing production, if that is necessary.

The PRESIDING OFFICER. The time of the Senator has expired.

Mr. MURPHY. Mr. President, I ask unanimous consent that I may proceed for such time as may be necessary to conclude my remarks and I estimate that to be in the neighborhood of 5 minutes.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. MURPHY. On the other hand, I must agree with the Senator from Pennsylvania when he refers to the inadequacies of our military procurement system. Surely the examples of the TFX, and I have a list of some 28 others, are clear examples that something must be done. The most important thing we should recognize is the inadequacy which is part and parcel of something called "Total Package Procurement," invented by former Secretary of Defense Robert McNamara. It has taken, as I stated earlier, literally years for Congress to figure out what "Total Package Procurement" is; and now that we understand it we have situations like the TFX and the C–5A on our hands and some of us do not like it and some of us feel there should be a better way. In this I agree with the Senator from Pennsylvania and the Senator from Wisconsin.

On the question of overruns some persons have thrown up their hands in mock horror. They express shock and surprise. Who is surprised? We have known for at least 3 years we would have overruns in the C–5A and on literally hundreds of other contracts let since 1960.

Furthermore, Congress was advised in advance by the Department of Defense. We have had full disclosure at all times through our appropriate committees.

The plight of Lockheed, of the Air Force, of Congress, and the people, who are the most important of all in this controversy, is the result of this unfortunate "Total Package Procurement."

I intend to go into this subject specifically at another time. I have learned some very interesting things about it.

Let us recognize, however, that Lockheed did not "buy in," and I am not suggesting we "bail out" Lockheed. We are just trying to keep this vital program on the production line and get the aircraft we need at the best possible price under existing conditions.

I hope my colleagues will be aware of something additional at this point which seems to have been overlooked, or perhaps has not been brought forward. All of the manufactured materials for all 81 aircraft provided in this bill, four squadrons, has been delivered and is now in the hands of the contractors. This is important because we are not buying scrap aluminum, bolts, nuts, transistors, or just hardware. We are buying a completion of the manufacture of this aircraft which we need.

As to the airplane itself, it has growing pains similar to those of any aircraft. But as noted in the Bisplinghoff report, it is a good airplane that will do the job. I do not think anyone will disagree on this, especially if Senators have taken the time to read the report.

What is the point of this amendment? It seems there are those who would seize on this opportunity to downgrade our defenses, not believing Congress has been told the entire truth. I believe we heard the truth, certainly from Secretary Packard, himself, in his testimony before the Committee on Armed Services.

Mr. Packard told us he had established a Department of Defense team which had visited Burbank to search into depth into the company's financial burden. That team, working with Lockheed management, detailed for us Lockheed's sales potential, their cash receipts and disbursements, their work-in-process inventory positions, capital investments in machinery and structures, depreciation cash flow, and tax liabilities.

This is what is generally called a cash-flow analysis, and from such an analysis it can be determined whether the company will have the resources which are necessary to finance the work it has undertaken during the period for which the cash-flow analysis is made. It is possible to make a rather accurate cash-flow analysis for the short term because this involves work covered by contracts which are on hand, and the costs which are to be incurred during the short term are reasonably well known.

From such an analysis, it has been determined that the company has resources available to pay the costs of the work it will be doing through calendar year 1970.

There have been several suggestions put forward by many interested in this and other programs as to how to save Lockheed and it is germain to this discussion in the sense that we acknowledge that buy-ins and bail-outs are not a factor. Possible mergers have been considered, but this takes time plus the approval of the Department of Justice and, further, how many merger partners can there be for a multibillion dollar per year corporation, such as Lockheed?

Receivership has been suggested. Again, it takes a long time to establish such an arrangement. And what would be accomplished?

Broad, long, and deep lines of bank credit may be another answer, but it takes a group of the largest of banks to make such arrangements and, again, a long time to set it up. Thus, we are still left with the questions of what to do about the $200 million. We must buy this fine aircraft at the lowest possible price.

So to summarize some of these things we learned from Secretary Packard, and this Senator agrees, we must have the C–5A regardless of whom or what is at fault in this financial problem. The plant must be kept going. Production must continue. The Government, under the pending bill, is protected. This is a good airplane and will serve its purpose. It is being built under the wrong kind of contract which may be all right for trucks, or shoes or jeeps, but not acceptable for an entirely new weapons system. Lockheed will continue to operate at a loss under the bill and no funds will accrue to the profit of the company of the $200 million.

These funds do not "bail out" anyone but the American citizens, who need this particular aircraft.

There is a possibility that the GAO and the courts will rule in favor of Lockheed in its claim for several hundred million dollars against the Air Force, and should they do so, this debate becomes academic.

Let me point out what that means. Since the contract between the Air Force and the Lockheed Aircraft Corp. is in contest and if, because of the denial of the $200 million contingency funds, Lockheed would be forced to stop production. It would be completely probable that Lockheed would institute a damage suit against the Air Force for an amount of money which Lockheed feels is owed under the contract plus damages which would most certainly result in the event that the company were forced to stop production.

I feel quite certain that this amount of money would far exceed the $200

million discussed in the amendment plus the approximately $350 million which Lockheed claims is owed under the contract plus damages and would, therefore, present the worst possible financial situation for the American taxpayer. We would have received 31 aircraft at an unbelievable price, not to mention the fact that our future national security would have been greatly damaged by this entire unfortunate suggestion. And we would have to pay a tremendous damage claim should Lockheed win the case in the courts.

So, to summarize some of the things we learned: We must have the C–5A. We must have it at the lowest possible price.

As Secretary Packard put it:

> We must seek ways to assure its continued production and at the same time protect the Government's and the taxpayers' interest. We already have a large investment, over $2 billion, in the program to date, largely development and early production costs. If the program is cancelled now, we would have about 20 to 30 planes for the money. To abandon the production now would appear illogical in light of the incremental future cost to achieve the needed 81 airplanes.

Abandonment of the program now, in other words, would be stupid financial management on our part, and is unthinkable, and I believe Senators understand this. This Senator can go even further than that. 30 C–5's will be finished and delivered by the end of the year. But, what is not generally realized is that the remaining 51 C–5's are, in fact, in a partial state of completion—all 51 of them. The costs have largely already been incurred on these 51. In fact, the 31st C–5A is presently 98 percent complete. But even more importantly, the 81st C–5A is 50 percent complete on a costs incurred basis.

With these facts in mind, knowing 200 aircraft were originally planned, 120 absolutely needed, 81 underway on a really less than acceptable austerity basis, then to stop at 30, as this amendment would force us to do, to anyone who has studied both sides of the matter, is financial folly, unwise, and beyond any comprehension.

So, we must recognize that the question we face is one of choosing between prudent continuation of a vital program under sound guidance or throwing taxpayers dollars away needlessly by deleting the $200 million contingency fund, and getting only 31 aircraft which may cost us far more than even my records have indicated.

Mr. President, we need the C–5A, and we need it as quickly as we can get it. The only way to get it is to continue its manufacture at the present time and let it go on uninterrupted. The only way to avoid stopping production at this time is to provide the $200 million contingency fund, which is purely a contingency fund to be used only for that purpose, to keep the production of the aircraft going.

I thank the Chair and yield the floor.

MESSAGE FROM THE HOUSE— ENROLLED BILLS SIGNED

A message from the House of Representatives, by Mr. Hackney, one of its reading clerks, announced that the Speaker had affixed his signature to the following enrolled bills, and they were signed by the Acting President pro tempore (Mr. ALLEN):

S. 3547. An act to authorize the Secretary of the Interior to construct, operate, and maintain the Narrows unit, Missouri River Basin project, Colo., and for other purposes.

H.R. 5655. An act for the relief of Low Yin (also known as Low Ying);

H.R. 12400. An act for the relief of Tae Pung Hills;

H.R. 12446. An act to confer U.S. citizenship posthumously upon Jose Gauldalupe Esparza-Montoya;

H.R. 13265. An act to confer U.S. citizenship posthumously upon L. Cpl. Frank E. Krea;

H.R. 13895. An act for the relief of Mrs. Maria Elosia Pardo Hall;

H.R. 13971. An act granting the consent of Congress to the Falls of the Ohio Interstate Park Compact; and

H.R. 13997. An act to confer U.S. citizenship posthumously upon S. Sgt. Ryuzo Somma.

ORDER OF BUSINESS

The PRESIDING OFFICER. Pursuant to previous order, the Senator from Kansas (Mr. DOLE) is recognized for 15 minutes.

THE SENATE AND THE ABM

Mr. DOLE. Mr. President, first of all, I wish to concur with my colleague from Kansas, Senator PEARSON, who stated last Wednesday:

> President Nixon, Ambassador Smith, and the other U.S. negotiators assert, in the strongest terms, that congressional approval of the committee proposal is needed and is, in fact, essential; and that such congressional action offers the greatest chance for success of the SALT talks. It is against that assertion by the highest authority that I judge the path of my responsibility to be a resolution of whatever doubts I have in their behalf and to act in support of their position.

My senior colleague was addressing himself to the controversial ABM.

Mr. President, it is true that the Congress is a branch of the Government equal to the executive, but it is also true that the executive, because of its unique nature, is often in a better position to garner all the information needed to make a correct decision.

In general, we recognize that fact here in the Congress, and so long as we can have trust and confidence in the Chief Executive, we are prone to accede to his wishes in those areas where he has the greater expertise or is charged under the Constitution with the greater responsibility.

NO CREDIBILITY GAP

Certainly, today there is no reason for any Member of the Congress not to trust the President. There is no credibility gap.

The President is unwinding the war and bringing American soldiers home in accordance with what he has told the American people he would do.

The President brought American troops out of Cambodia on schedule.

The President has initiated a cease-fire in the Middle East.

He has abided by his principles in matters both foreign and domestic, and he has kept his word with the American people.

Mr. President, there are some who would substitute their judgment for that of the President even though it is doubtful that they have the knowledge the President has on which to reach a superior judgment.

All of those with differing views perhaps are of the best intentions, though a few, for reasons unknown to me, appear to seek what amounts to surrender in Southeast Asia.

Some efforts of ABM opponents are, in my opinion, detrimental to the defense of the United States and could cause a needless expenditure of Federal funds.

A prime consideration is the credibility of this administration. It is the Nixon credibility that is making possible real progress toward peace.

That progress is best illustrated by the most recent news stories to the effect that the United States has offered to give up its ABM deterrent entirely if the U.S.S.R. will do the same thing and will limit its numbers of offensive weapons.

This offer was made at the strategic arms limitation talks and was given in background form to the press. I am pleased, as all Senators are, at the general note of optimism that prevails today.

However, I am convinced we would not have a reason for optimism if three things had not happened. First, and perhaps most important, is the reinstillment throughout the world of a belief in the credibility of the President of the United States. Not only Americans, but world leaders everywhere know now that the President means what he says. They know he is not a tiger. They know he is determined that the United States remain strong enough both to defend itself and to live up to its commitments throughout the world.

Second, is the fact that the Senate—narrowly, you will recall—voted last year to approve the first two ABM sites.

Third, is the fact that the President has asked this year for enlargement of the program. If nothing else, this has given the U.S.S.R. the word that the President of the United States will take whatever political risks necessary to defend this Nation and its credibility as a deterrent to aggression.

In light of this, it is most difficult to understand how anyone can doubt that the ABM is a bargaining chip of the greatest importance.

BROOKE AMENDMENT

Let me now address myself to the amendment proposed by the junior Senator from Massachusetts (Mr. BROOKE).

That amendment, as proposed, says that:

> Funds authorized pursuant to this act for the procurement of antiballistic missile defenses may be used only for defense of strategic forces deployed at Grand Forks Air Force Base, North Dakota, and Malmstrom Air Force Base, Montana.

The words of this proposed amendment, Mr. President, seem simple and clear. But it is difficult to determine their intent. Does, for instance, the Senator seek to add one more Safeguard site, but at Grand Forks or Malmstrom instead of at the proposed new base at Whiteman?

Does he seek to provide a Minuteman defense capability at Grand Forks and

Malmstrom equal to that the modified phase II defense would supply?

Does he seek reduction in the protection that can be provided for our strategic bomber force?

PURPOSE?

In other words, Mr. President, we have yet to learn the purpose behind the Brooke amendment. It obviously does not call for less money, only for less defense at the same price.

Does this make sense to those who seek a vast reordering of our priorities?

Certainly it does not make sense to those of us who have no intention of reordering our defense priority out of existence.

Nor does it make sense to those of us who wish to spend our defense money wisely.

Nor does it make sense to those of us who wish to provide the President with the best hand possible at the vital SALT talks.

I believe, Mr. President, it makes sense only to those who seek to reduce the effectiveness of America's defenses.

Because, in all candor, that is all the Brooke amendment will do. It will give us less defense at the same price. Mr. President, I believe we need more, not less, defense, but if we are to settle for less defense—and the devil take the consequences—then we should also cut back on the amount of funds to be spent.

The Brooke amendment does not do this.

Mr. President, I believe the Brooke amendment is ill-considered and illogical, from every standpoint that is in the best interests of our Nation's defense and our Nation's chances to reach agreement on limiting strategic arms.

I will vote against it, and urge other Members of the Senate to vote against it also.

Finally, Mr. President, I have a fact sheet that analyzes the possible effects of the Brooke amendment which I ask unanimous consent to have printed in the RECORD at this point.

There being no objection, the fact sheet was ordered to be printed in the RECORD, as follows:

FACT SHEET

Subject: A Comparison of the Modified Phase 2 Defense of Minuteman With the Possible Effects of the Brooke Amendment.

FACTS

1. If, like Modified Phase 2, the intent of the Brooke amendment is to add one more Safeguard site, but at Grand Forks or Malmstrom instead of Whiteman then the impact on schedule, cost and effectiveness is as follows:

a. The operational availability of the third site would be delayed by about 12 months. This is because no analysis or survey work has been done for a second Safeguard site at either Grand Forks or Malmstrom. In contrast, significant analysis has been conducted of the Whiteman site under the old Sentinel program.

b. For a program cost approximately equal to that of Modified Phase 2, a third site at either Grand Forks or Malmstrom would result in reduced capability to defend Minuteman. This is due to two factors. First, because of the shape of the Minuteman fields the number of Minuteman silos that could be protected by a third site at Grand Forks or Malmstrom would be about 70 percent of the number protected by a site at Whiteman. Second, for an equal cost program, fewer interceptors could be deployed with the third site at Grand Forks or Malmstrom. This further reduction resulting in only about 35 percent of the interceptors at the Whiteman site is caused by the necessity to compensate for the program stretchout costs resulting from the delayed availability of a third site at Grand Forks or Malmstrom.

2. If, alternatively, the intent of the Brooke amendment is to provide a capability to defend Minuteman equal to that of the Modified Phase 2 defense of Minuteman (the two Phase 1 sites and Whiteman) then the impact on cost and schedule would be as follows:

a. Instead of three Safeguard sites, four sites would be required if deployment is constrained to Grand Forks and Malmstrom. The increased equipment requirements and the program stretchout would result in an increased program cost of $0.5B to $0.7B to provide equal capability. The fourth site is necessary to provide a sufficient number of Sprint protected Minuteman silos.

b. This four site defense will not be available until 15 or more months after the Whiteman site can be available.

3. Another consideration of restricting the Safeguard deployment to only Grand Forks and Malmstrom is the reduction in the protection that can be provided for our strategic bomber force. The Modified Phase 2 defense of Minuteman also can provide protection to fifteen to twenty percent of the strategic bomber force bases. A defense of Minuteman constrained to Grand Forks and Malmstrom would, in constraint, protect about five percent of the strategic bomber bases.

4. In summary the results of the Brooke amendment are:

a. to provide reduced Minuteman defense capability for equal cost or to provide equal Minuteman defense capability at increased cost.

b. to provide less protection of the strategic bomber bases.

Mr. DOLE. Mr. President, an editorial published in yesterday's Washington Evening Star entitled "Safeguarding SALT" touches on the so-called Brooke amendment. The editorial in part states:

The Brooke amendment strikes us as even more nonsensical than Cooper-Hart, lacking as it does the minimal virtue of saving money while gambling with the nation's security. The Massachusetts senator's proposal would provide the full $1.3 billion requested by the administration for Safeguard, but would limit its expenditure to the existing ABM sites in Montana and North Dakota.

Mr. President, I ask unanimous consent that the complete editorial be printed in the RECORD at this point.

There being no objection, the editorial ordered to be printed in the RECORD, as follows:

SAFEGUARDING SALT

The Senate did well when, by a 52–47 vote, it defeated the Cooper-Hart amendment, which would have pared $322 million from the $1.3 billion anti-ballistic missile authorization and blocked Safeguard's deployment to two new sites.

We are all for an end—or at least a limitation—to the international arms race. But that has to be achieved jointly through negotiations with the Russians at the strategic arms limitation talks (SALT) in Vienna and Helsinki; it cannot with a reasonable respect for the nation's security be brought about through unilateral disarmament on the Senate floor.

While a 52–47 vote is hardly a convincing demonstration of national unity and resolve, it is an improvement over the 50–50 vote by which last year's amendment to scuttle Safeguard failed. And it may be enough to convince the Russians, when the talks reconvene in Helsinki this fall, that they need to negotiate seriously to reach an agreement.

The Safeguard system, which is designed to protect Minuteman missiles in their underground silos from a first strike by the 300 giant SS–9 missiles which the Russians have deployed or have under construction, is not yet out of the woods. This week, yet another anti-ABM amendment, this one sponsored by Senator Brooke, will come up for a vote in the Senate.

The Brooke amendment strikes us as even more nonsensical than Cooper-Hart, lacking as it does the minimal virtue of saving money while gambling with the nation's security. The Massachusetts senator's proposal would provide the full $1.3 billion requested by the administration for Safeguard, but would limit its expenditure to the existing ABM sites in Montana and North Dakota.

By blocking the expansion of the system to Missouri and Wyoming, the nation would, in essence, be paying the same amount of money for a lesser degree of security, while at the same time depriving our SALT negotiators of an important bargaining point.

When the Russians agree to a mutual and verifiable limitation on strategic arms, it will be time to reduce expenditures on the missiles which are our best guarantee of national survival. That time is not yet. The Brooke amendment, like Cooper-Hart, should be defeated.

Mr. DOLE. Mr. President, also in yesterday's Evening Star there appeared a particularly interesting letter to the editor, written by Max P. Friedman, of Arlington, Va., with reference to the "Bloodbath Potential in Vietnam."

We shall be discussing the bloodbath potential in Vietnam as we get into the amendment to end the war or, as I prefer to call it, the amendment to lose the peace—or perhaps the amendment to extend the war, because the sponsors may now add 6 more months to the amendment.

I understand that one of the crucial issues will be whether or not there will be a bloodbath in South Vietnam if there should be a precipitate withdrawal. The facts indicate that that is very likely. The sponsors of the amendment would offer asylum to refugees at some place in this country yet to be designated—perhaps South Dakota, perhaps Oregon, perhaps Kansas; I have yet to learn where the asylum would be.

I ask unanimous consent to have printed in the RECORD the letter to the editor written by Max P. Friedman and published in yesterday's Washington Evening Star.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

BLOODBATH POTENTIAL IN VIETNAM

ARLINGTON, VA.

SIR: In a recent column, Clayton Fritchey challenged the Nixon administration on its predictions of a massive bloodbath if the United States precipitously withdrew from South Vietnam ("Nixon Figures on North Viet Purge Challenged"). Mr. Fritchey then went on to make the following statement about President Nixon and the Rand report on probable killings if the Communists took over the South (Hosmer report): "They both inflicted wild and unsupported guesses on an unsuspecting public." If this ridiculous claim is true, then every respectable and noted authority on Vietnam is guilty of the same thing because they all back the "bloodbath theory" of the 1954 "political purge" which Mr. Fritchey, on his own authority, states never happened.

Let's look at facts, not dreams. Ho Chi

Minh, in his "Letters to the Peasants and Cadres on the Successful Completion of Land Reform in the North (August 18, 1956)," told of how his Communist reformers committed errors and wrongly convicted (executed) party members, cadres, and others. Defense Minister Vo Nguyen Giap (Nhan Dan, Oct., 1956) said: "We executed too many honest people . . . seeing enemies everywhere, resorted to terror which became far too widespread. . . . Worse still, torture came to be regarded as a normal practice during party reorganization."

The following Vietnam authorities have written about the Communist purges in the North from 1954–56, giving the death toll a conservative low of 50,000 to a possible high of 500,000: Douglas Pike, "The Viet Cong Strategy of Terror," 1970; Bernard Fall, "Le Viet Minh"; Joseph Buttinger, "Vietnam: A Dragon Embattled"; Lucien Bodard, "The Quicksand War"; George K. Tanham, "Communist Revolutionaary Warfare: The Viet Minh in Indochina"; (especially pertaining to the land reform program) Harvey Smith et al, "Area Handbook for North Vietnam"; Hoang Van Chi (a Communist official in Ho's government who escaped in 1955) "From Colonialism to Communism"; Donald Lancaster, "The Emancipation of French Indo-China"; Dennis Duncanson, "Government and Revolution in Viet-Nam"; Bernard Fall, "The Two Vietnams," "Vietnam Witness," and "The Vietminh Regime"; J. Mallin, "Terror in Vietnam"; Chester A. Bain, "Vietnam: The Roots of Conflict"; and George A. Carver, Jr., "The Faceless Viet Cong," (Foreign Affairs, April, 1966). Columnist Jack Anderson who wrote two excellent articles on the subject of Communist terror in Vietnam, "Hanoi's Purges Curb U.S. Concessions" (Sept. 19, 1969) and "Hanoi, VC Kill Civilians Regularly" (Dec. 6, 1969).

Further confirmation of Hanoi's bloodbath potential was revealed by the statements of a North Vietnamese defector, Lt. Col. Le Xuyen Chuyen (Wash. Daily News, Nov. 25, 1969), who estimates that up to 5 million people might die if the Reds captured the South. Other defectors have mentioned the figure of 3 million possible deaths in the takeover and consolidation of power. Readers' Digest writer, John Hubbell, in his November, 1968 article entitled "The Blood-Red Hands of Ho Chi Minh," (besides giving the estimated deaths for the North Vietnam purges of from 50,000 to 100,000, slightly lower than Bernard Fall's estimates) told how Ho Chi Minh crushed, in bloody style, a revolt (one of many) in his own home province of Nghe An and home village of Nam Dam. Here about 6,000 unarmed civilians were killed, about equal to the number killed in a systematic manner in Hue, February, 1968 by the North Vietnamese-Viet Cong invaders.

So much for Mr. Fritchey's charge that both President Nixon and Stephen Hosmer (author of the Hosmer report) "inflicted wild and unsupported guesses on an unsuspecting public." The public is not so unsuspecting as one thinks, and obviously neither are the 15 other authorities or knowledgeable writers on Vietnam who are mentioned in this letter. It is Mr. Fritchey who is trying to put something over on the American public.

MAX P. FRIEDMAN.

Mr. DOLE. I also ask unanimous consent to have printed in the RECORD an article entitled "Nixon Moving Quietly Toward Disengagement," written by Richard Wilson, and published in the Washington Evening Star of Monday, August 17, 1970, which refers to disengagement not just in Southeast Asia, but around the world.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

NIXON MOVING QUIETLY TOWARD DISENGAGEMENT

(By Richard Wilson)

It is a year now since President Nixon flew around the world, stopping in Vietnam and Communist Europe, among other places. In that year, the shape of events has changed. The change has been in the direction indicated by the President a year ago, but something new may have been added.

This new thing is hard to define and largely speculative, but it would appear that the United States is in the first stages of what, in the next several years, may prove to be a large-scale disengagement from what once were considered its unavoidable world responsibilities.

That observation at once becomes suspect as an exaggeration. But at least it should be agreed that we are getting out of the fighting in Vietnam and not getting into a new fight anywhere else, including Israel.

That is not all. We are beginning to talk about getting out of South Korea and to think about getting out of Western Europe. Once this process begins, it takes on a velocity of its own as a kind of principle guiding separate actions, a subconscious sense of direction.

That is what has happened in the Nixon administration. And it is not, in practical effect, so much different from what Sen. Mike Mansfield and Sen. J. William Fulbright have been advocating in varying degrees all these years.

The element which threw them off was that in the process of disengagement Nixon does not propose to be badgered or have the United States taken advantage of.

Mansfield and Fulbright could not see Cambodia in that light; they saw it only as an extension of the war and as a reversal of the process of disengagement. Nixon viewed the Cambodia incursion as a modus operandi on the way to disengagement, and saw it as having the secondary effect of giving notice to the Soviet Union and other Communist nations that the United States would not permit itself to be taken advantage of while the process was under way.

The same conditions seem to apply in the matter of deploying anti-ballastic missiles. Nixon is not undertaking to do so on anywhere near the scale projected in the Johnson administration. But because he does so at all, the peace forces in the Senate are blinded to this further modification of previous policy.

Foreign and defense policies have in fact been modified drastically in the year since Nixon flew to Asia and around the world to spread the word of the Nixon Doctrine. It is only a little more than a year ago since he turned American policy around, beginning with the first announced withdrawals from Vietnam.

At this rate he will have completed the turn-around by the fall of 1972. It is at least conceivable that with luck in the Middle East, the United States then will not be engaged anywhere in the world in a direct military confrontation. It could happen that a week would pass without a single American combat death. And if it prayerfully does, the change will have come so slowly that it may be scarcely recognized as the end of direct American involvement in far-off wars.

Crises have a way of presenting themselves at the most inconvenient times, and this vision of the future may be marred by undesired events.

But it is at least moderately possible that in a relatively short period of time there will be no primary cause attributable to Washington for student disorder—the so-called national emergency which Chancellor Heard claims exists.

It is becoming more believable all the time that the military draft will be abolished in favor of a volunteer army. The sense of that comes through in recent congressional debate on other questions such as the women's rights amendment. Advocates contended that by the time the amendment could become operative, there no longer would be a military draft to which women would be subject.

It is even becoming more believable that reforms at the Pentagon may help to reduce military spending and that the Nixon administration will, in fact, reduce the Pentagon budget.

These are changes of considerable magnitude. Nixon's trip around the world signaled them in advance and there is no indication a year later that the signals have been changed.

Mr. DOLE. Mr. President, in preparation for what appears to be another extensive debate on the antiballistic missile system, the Senate again concerns itself with the extent to which our country should be made secure.

President Nixon, after carefully weighing all aspects of the ABM from national security to its effect on the arms limitation talks, has decided further development of it is in our best interests.

In a recent editorial entitled "Too Many Coaches," the Detroit News compares President Nixon and the "committee of 100" to a football coach and an alumni advisory group. I believe my colleagues will find this analogy pertinent to the forthcoming ABM discussions and therefore ask unanimous consent that it be printed in the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

SENATE JEOPARDIZES ABM GAME—TOO MANY COACHES

Imagine a football team in the big game of the year. And imagine the dilemma of the coach if, having drawn up a game plan based on expert analysis of the scouting reports, he were to get a new set of signals each quarter from a powerful but inexpert alumni committee sitting just behind him in the box seats.

If you can imagine that, you understand President Nixon's position vis-a-vis the United States Senate as he tries to conduct defense and foreign policy effectively and with some continuity of purpose.

The game can be lost if the President is repeatedly thwarted by Senate quarterbacks determined to call all the signals. As Kenneth Crawford observes in a column in Newsweek, "there is serious question about the competence of the Senate to sit as a committee of 100 to direct the nation's course in world affairs in times as dangerous as these."

The "committee of 100" is now prepared to grapple at length once more with the President over the diplomatically delicate and highly technical question of the Safeguard antiballistic missile system. One year ago, the issue apparently had been settled, after long and strenuous debate, in favor of the theory that defense is a good thing in this age of missiles and nuclear warheads.

Pursuing essentially the same logic that dictated the establishment of Safeguard, the administration now seeks to expand it. But the Senate foes of ABM remain as obdurate as before, which means that ABM must be justified all over again and that the logical expansion of the system could be defeated by the shifting and manipulating of one or two votes.

It's no way to run a ball game.

The last thing in the world President Nixon needs is another bruising battle over ABM but he has chosen to risk that battle because expert analysis of the scouting reports tells him that expansion of the system is in the best national interest.

We are willing to accept the judgment that Safeguard will make the nation more secure against enemy attack. If the administration errs in that judgment, at least it errs on the side of safety.

Moreover, it makes sense to proceed with Safeguard as an incentive for the Soviet Union to come to reasonable terms in negotiations for the limitation of defensive and offensive strategic weapons. Abandoning Safeguard would be the same as ordering the star quarterback to the showers with the game tied in the fourth quarter.

The "committee of 100" by its constant interference complicates the making of vital policy and in the case of the ABM jeopardizes the very security of the nation. For a change, the committee should give the coach some freedom to play according to his game plan.

Mr. DOLE. Mr. President, I yield the floor.

The PRESIDING OFFICER. Pursuant to the previous order, the Senator from Oregon (Mr. HATFIELD) is recognized for 15 minutes.

Mr. HATFIELD. Mr. President, I ask unanimous consent to suggest the absence of a quorum without losing my right to the floor, and without the time being deducted from my 15 minutes.

The PRESIDING OFFICER. Without objection, it is so ordered. The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. HATFIELD. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

ORDER OF BUSINESS

Mr. HATFIELD. Mr. President, I ask unanimous consent that I may yield to the Senator from West Virginia without losing my right to the floor and without the time being deducted from my 15 minutes.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. BYRD of West Virginia. I thank the Senator.

Mr. President, I ask unanimous consent that, notwithstanding the fact that the time for the transaction of routine morning business would close at 1 p.m., the unfinished business not be laid before the Senate until special orders for recognition and the transaction of routine morning business have been completed.

The PRESIDING OFFICER. Without objection, it is so ordered.

VICE PRESIDENT AGNEW'S VIEWS ON THE McGOVERN-HATFIELD AMENDMENT

Mr. HATFIELD. Mr. President, yesterday the Vice President of the United States spoke about an amendment which 24 Senators and I are sponsoring in the Senate—an amendment designed to insure responsible military disengagement from Indochina.

If this amendment proposed what the Vice President claimed, I would be the first to oppose it.

The Vice President's remarks evidence little understanding of the amendment and its goals. The unwarranted attack directed at its sponsors inhibits the opportunity for careful consideration of the Nation's most crucial issue.

Those who support the amendment, in Congress and the millions of citizens across the country, will not be intimidated by false and inflammatory charges.

What is needed now is thoughtful, rational discussion about the future of our policies in Vietnam and responsible congressional action to restore the constitutional balance in the conduct of foreign policy.

The Vice President has chosen to speak about the dangers of American military defeat and has talked about seeing this war through to an end.

Does this mean that he is advocating a new policy in Vietnam—one contrary to the President's previous statements?

On May 14, 1969, President Nixon stated:

We have ruled out attempting to impose a purely military solution on the battlefield.

On April 20, 1970, the President stated that "a political settlement is the heart of the matter."

But now we see a responsible plan for disengagement attacked with innuendo and emotional rhetoric, and hear pledges that "this Nation will not go down in humiliating defeat on the battlefield of Southeast Asia."

Those words suggest an attempt to seek a military solution to the conflict, and reflect the past, misguided thinking that has resulted in the tragic prolonging of this war.

His words raise an uncertainty about the administration's stated policies.

Even more serious is that the Vice President's speech entails a direct attack on our constitutional process. Apparently, he either fails to comprehend or simply disagrees with the provisions of our Constitution.

The responsibility for war is one that must be borne also by Congress—that is what our Constitution says Congress must assume its constitutional duty for sharing the responsibility for this war, and must now make decisive judgments about terminating our military involvement.

By attacking Congress' attempt to assume its rightful constitutional role, the Vice President is doing a great disservice to the President.

He is making the war "Nixon's war." He is implying that the President's policies for the war must be exercised without regard for Congress, just as President Johnson's policies were. The President could make no more unfortunate mistake than to assume that he alone is responsible for our policy in Indochina, that he alone must bear the burden of responsibility for every American that dies there, and that he alone must chart our course for the future. Yet, that is what the Vice President seems to be saying.

I believe that the Vietnam war should not now become "Nixon's war," in spite of what the Vice President states. I believe that any war must be determined by the people acting through their elected representatives. We, in Congress, must take the responsibility for determining the future course of our policy. That is the heart of the democratic process.

I am committed to see Congress fulfill its constitutional responsibility—regardless of the wishes or the words of the Vice President.

His speech makes this task more difficult, for his words contain information and inferences which are totally incorrect and completely unfounded.

I am sure that the Vice President would never speak in a manner intentionally calculated to deceive or mislead the American people. He may want to call his speech writers and researchers to task, however, for providing him with material containing misleading, false, and inaccurate statements.

The Vice President's lack of comprehension and understanding about these matters, and the goals and effects of the amendment, is evidenced by the fact that he did not recognize errors and correct them himself. I hope he would agree with me that it is as important for the Vice President to be accurate as it is for the New York Times to be objective.

He claimed that:

Should this amendment become law, and all American military operations in Southeast Asia cease by December 31, the immense burden of this war would fall immediately and totally upon South Vietnam.

First, the passage of this amendment would in no way have that effect. It would provide for all military operations necessary to protect our troops in the process of withdrawal.

Second, the amendment would in no way restrict continued military aid even after the date of withdrawal of our troops.

Further, the Vice President infers that our amendment would take risks with the lives of American men. The truth is that it would save American lives.

The central purpose of the amendment is the preservation of human lives—both American and South Vietnamese. As long as American troops remain in Vietnam, as long as we remain committed to staying in South Vietnam indefinitely, Americans and Vietnamese will continue to suffer and die.

The Vice President claims that our amendment restricts the President's power as Commander in Chief. This is false; in no way is the President's power to protect American troops called into question by this amendment.

The Vice President totally distorted the amendment by characterizing it as "a unilateral, precipitous American abandonment of South Vietnam." By phasing out the withdrawal of American troops over many months, in accordance with President Nixon's stated objectives, the amendment provides every possibility for the protection of American lives, and, in fact, assures lower casualties. In addition, the amendment would provide ample time for the South Vietnamese government to broaden the base of its support and encourage its leaders to reach a political accommodation with all factions within its borders.

After 285,000 American casualties and 43,000 deaths, is it "reckless, unwise, unjust, or illogical" to act now to bring this tragic war to an end? Is it precipitous, I must ask, after more than 2 decades of American involvement in Vietnam, for

Congress to stipulate that almost a year from now, with all due caution, American troops will be brought home to stay, which meets the goals of our President.

The Vice President also chose to ignore the amendment's provision for an extension of the timetable. If the President decides that conditions prevent the orderly and responsible withdrawal of American troops within the stated timetable, all that is necessary is Congressional action to provide the needed time. Such a proposal can scarcely be termed precipitous.

The Vice President argues that the amendment would destroy the chances for a negotiated settlement, but a fixed timetable could finally enable the stalemated Paris talks to make progress. With the evidence that America is determined to end the war, both Hanoi and Saigon would be forced to confront the political realities to end their own war. By calling the amendment "a lethal blow to the Paris peace talks," the Vice President assumes that the talks have been productive under present conditions. Other than the shape of the table, what has been produced? As the Secretary of State has already indicated, the possibilities for a negotiated settlement after Cambodia have been greatly reduced. If negotiations will go anywhere, the amendment provides the only impetus for the first real breakthrough between the various antagonists.

By invoking the so-called "blood bath" theory, the Vice President declared that hundreds of thousands of Vietnamese "who placed their faith in us will die for that error in judgment." His authorities for such a claim are the Rand Corporation and Douglas Pike, whom he called "the Nation's foremost authority on the Vietcong," and who is also a career USIA officer. However, the Rand Corporation report which the Vice President referred to also maintains that a new coalition or even an all-communist government would have decisive political reasons for holding down the level of political reprisals. The report continues that any new government would be primarily concerned with political consolidation, and assassinations and repression in an already divided country would only deepen the suspicions and divisions among the Vietnamese. The truth is that the only means of preventing violent reprisals is a broadly-based government in South Vietnam which would secure the support of a loyal population.

Furthermore, those who use the "blood bath" argument fail to recognize the fact that we are engaged in such action now and will continue with an unending commitment of American men to battle.

It should hardly be necesary to counter the Vice President's description of the amendment as isolationist. We desire neither a rejection of America's international responsibilities nor a retreat into a domestic cocoon. Rather, we desperately need a prudent and humane exercise of American power which will aid people in their search for political institutions of their own choice, which will preserve and improve life rather than destroy it, which will make the world safe rather than endanger it. We are not saying that any use of American power is wrong, but in Vietnam it is both unnecessary and futile. A withdrawal from Vietnam would provide us once again with the opportunity to wield moral and political leadership for peace in a divided world.

Since the Vice President attacked the logic of those supporting the amendment, one can properly inquire what kind of logic led him to the conclusion that a withdrawal from Vietnam would cause a rejection of the nonproliferation treaty and stimulate the nuclear arms race.

The issue in Vietnam is not simply one of victory versus defeat. Only the Vietnamese can win the war; only they can lose it. We cannot give them or impose on them what they do not want or will not do for themselves. That is the agonizing lesson of Vietnam, and the Vice President misleads the American public by offering them promises which cannot be fulfilled.

In the previous administration, those who criticized the Vietnam war were subjected to the charge of being unpatriotic. At that time, I believed that such charges achieved nothing, and stifled any rational discussion of the issue. On April 26, 1967, I stated in a speech:

> What kind of men have we at the helm of government who would deliberately coerce the public into accepting their policies on the threat of being branded traitors?

My position today has not changed. It is nonpartisan, and applies equally to the Johnson and Nixon administrations. Now I ask that same question of the Vice President.

The most repressive periods in history have occurred when public debate has been silenced by those who abused positions of political power. This has not been the exclusive domain of demagogs or dictators either on the left or on the right. Nazi Germany, McCarthyism, Hungary and Czechoslovakia, all stand as examples of people intimidated into silence and fear.

Full and rational discussions of vital issues, both here in the Congress and across the country, must not, and cannot, be curtailed by those who cry "Isolationist," "Pacifist," "Blind impatient politicians," or other such divisive intimidations.

I will continue to fight for an open forum that is free from fear, rather than cover to those who would drive dissent from that forum and thereby verify the claims of the revolutionaries.

The real threat to our "American way of life" is within the household of America rather than 10,000 miles away in Indochina.

Mr. FULBRIGHT. Mr. President, will the Senator from Oregon yield?

Mr. HATFIELD. I am happy to yield to the Senator from Arkansas.

Mr. FULBRIGHT. Mr. President, I wish to commend the Senator on his statement. I know of no precedent, certainly since I came to the Senate, nor have I read of any in history, when the President of the Senate has attacked personally the Members of this body in any fashion comparable to the way the present President of the Senate has attacked the Senator from Oregon, the Senator from Arkansas, and a number of others.

I wish to draw attention to the fourth paragraph of the Senator's speech, in which he says:

> Those who support the amendment, in Congress and the millions of citizens across the country, will not be intimidated by false and inflammatory charges.

I wish I shared the Senator's confidence that they will not be or are not intimidated. I think there are enough signs to indicate that they are and have already been intimidated by reports and charges such as those leveled yesterday by the President of the Senate.

I believe that the Senator might compare the difference between the role that the Vice President, who is also President of the Senate, has in our Government and the position of the late Senator from Wisconsin, Joe McCarthy, to whom he referred in the latter part of his speech. It is well known that Joe McCarthy did have a period in which, at least, he intimidated the Senate and the people of this country, until the Senate, after quite a long time, finally censured him.

There is a great difference between Senator Joe McCarthy and the Vice President. As everyone knows, it has happened many times in our history that the Vice President may become the President who would speak for and represent the executive power of this Government.

It strikes me it is far more dangerous, with respect to intimidation, to have a man who could succeed to the Presidency, in case of any unfortunate accident, to be making threats of this kind and charges of this kind against Members of the Senate. I think it is very subversive of the democratic process, very dangerous, and, implicit in his statement, is subversive of the independence of the Senate itself.

It is no small thing to have the President of the Senate going about before the major veterans organizations of this country. Yesterday it was the Veterans of Foreign Wars, and the speech he made was reported in the press and was applauded at great length, particularly the attack on individual Senators.

Only a few days before, the President of the Senate made a similar speech before the Air Force Association. He has spoken to many patriotic organizations, arousing their animosity and their hatred against Members of the Senate and the Senate itself as an institution.

I believe that this is a very dangerous development especially when the kind of inflammatory language that is used is used by a person who could be President of the United States, as the Senator knows, and who is, of course, very influential and who now has complete access to all the minds of the people of this country.

I expect that every newspaper in this country, certainly all the local papers, carried the speech. If not in full, some newspapers reported it on their front pages, and I am sure it was on radio and television stations throughout the country.

I, for one, congratulate the distinguished Senator from Oregon. I think

he is very courageous to state what he did this morning in the Senate in the face of the personal reference to the Senator from Oregon.

I think it is far more serious than most people like to believe. We had this same kind of experience with a lesser light, as I say, about 18 years ago, but here, for the first time in our history, we now have the Vice President of the United States attacking one of the principal institutions of our democratic system.

Mr. HATFIELD. Mr. President, I am very grateful to the distinguished Senator from Arkansas for his comments. As he knows, I have been concerned about this issue for a long period of time. It is not a matter that I have taken lightly in any of my statements or comments on the issue of the war.

I recall that at the Republican National Convention in 1964, I think for the first time, in a major public address that I warned about this war. At the National Governors Conference in 1965 and again in 1966 I voted against resolutions to give full carte blanch support to President Johnson's Vietnam policy; the vote was 49 to 1.

So it has not been a Johnny-comelately situation, nor something which I have lightly touched upon, but rather it is a matter to which I have given many years of study.

I feel that as one Senator—I cannot speak for others—it is rather unfortunate that the Vice President should single out by name those with whom he disagrees and ascribe to them by sly rhetoric and sly methods of phraseology that they "do not give a damn"—and I would like to make that a quote—that we possibly "do not give a damn."

I think this is not becoming language for a man of such high public office. I do not believe that even by implication it would represent the views of any Senator, whether I might agree or disagree with him on any issue.

I think that is charging improper motives and creating suspicion and a divisiveness in this country—when people in the public at large see that a Senator of the United States, a man with some position of responsibility and integrity, is subjected to such an unwarranted attack, what does the average citizen feel about his right to stand in a public forum and to disagree with the President of the United States?

I say it is a dangerous situation in this country when any Senator or Representative or citizen concerned about bringing an end to this war fears that he will be charged with being soft on communism or with playing into the hands of the enemy or undermining the war effort in Vietnam or causing American casualties or aiding and abetting Hanoi or giving aid and comfort to the enemy.

This is not in keeping with what I feel to be the great ideals of a pluralistic democratic society where men can hold different views on questions of importance without having their motives undermined or challenged.

Therefore, this speech is not just one instance. This is a pattern. And I think that it is unbecoming to the administration which I fought for in the campaign.

I am proud of the fact that I was asked to be a surrogate candidate. I was asked to campaign in 17 States of the Union, including the States which my candidate for President said were five key States for his victory.

I went into those areas fully committed to the cause that this administration represented—a new purpose and a new change of dignity in the White House that I found lacking in the previous administration.

I think we have maintained that dignity in the President and in the White House. Yet I say that this kind of speech making upon the part of the Vice President may raise money for the campaign coffers and may tickle the audiences and cause them to laugh and applaud, but it is a disservice to the President and to the dignity he has brought to the office.

I do not rise without careful thought to make the statements I have made today. I have remained silent before in this matter. I have not called the statements of the Vice President to the public attention, as others have.

I say they do not represent the kind of Republican tradition and the kind of Republican party I became interested in during the Hoover campaign in 1932, the Willkie campaign in 1940, in the Dewey campaigns in 1944 and 1948, in Mr. Eisenhower's campaigns in 1952 and 1956, in Mr. Nixon's campaign in 1960, in Mr. GOLDWATER's campaign in 1964, and in Mr. Nixon's campaign in 1968.

I feel compelled, therefore, to rise at this time to express what has been in my heart and mind and what has been greatly disturbing me as to the kind of image and the kind of character that has been given to my party.

The PRESIDING OFFICER. The time of the Senator has expired.

Mr. HATFIELD. Mr. President, I ask unanimous consent that I may have 1 additional minute.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. HATFIELD. Mr. President, I feel that this country needs desperately to have a two-party system. We need to attract the black, the young, the poor, the minority groups.

I would ask the distinguished Senator from Arkansas what was the genesis of the Republican Party. It was the party giving hope for the first time to the black people, to the ethnic groups, to the poor, to the farmer, to the businessman, to the young people.

Where is today the greatest weakness of the Republican Party insofar as attracting new and broad support? It is within the very groups that I have mentioned.

That is what disturbs not only as a party man, but also as an American first and a Republican second.

I do not feel that it is a disservice. I feel that it is a service I am trying to provide my party today in calling attention to these matters and asking my party leadership, my Vice President, a man I campaigned for, not that he change his viewpoints on this amendment—I do not ask for his agreement on this amendment—but that there be gentlemanliness and discussion in such a way that men do not have fear that their patriotism and their motives are undermined by such sly rhetoric as has been engaged in by the Vice President of the United States.

The PRESIDING OFFICER. The Senator's time has expired.

Pursuant to the previous order, the Senator from Mississippi is now recognized for 35 minutes.

Mr. DOLE. Mr. President, will the Senator yield?

Mr. STENNIS. I yield 1 minute to the Senator from Kansas.

Mr. DOLE. Mr. President, I think the Senator from Oregon discussed everything but the amendment. I understood that was what the Vice President was talking about on yesterday. That part of the amendment is only 18 lines long.

It does provide that after December 31, 1970, no money could be expended for any purpose arising from any military conflict.

It does say that money can be expended for asylum. That indicates that the Senator from Oregon and the Senator from South Dakota do feel that there might be a blood bath, or that language would not be in the amendment.

It does say that after June 30, 1971, every American must be withdrawn from Vietnam.

I understand there is a move on the part of the Senator from Oregon and the Senator from South Dakota to revise the amendment.

I would only say, without any reference to what the Vice President said, that the amendment is very short and should be read.

Mr. STENNIS. Mr. President, I am very glad, as I said yesterday, that we have obtained agreement now to vote on what I believe is the major ABM amendment.

We have had splendid debate on it. And we will have some controlled time tomorrow. I believe when that matter is disposed of that we will have a new start and a more rapid disposition of the amendments that have been filed to the bill.

I have reason to believe and certainly think that the Members of the Senate can expect things to move along faster. It will take cooperation to get these important unanimous consent agreements.

Mr. President, I will have some remarks to make tomorrow on the Brooke amendment on the ABM. But I want to say a few words today as well as to address myself to another amendment.

It has been very clear to me, Mr. President, that we need Safeguard installations to protect our Minuteman forces not only at Grand Forks and Malmstrom, but also at Whiteman Air Force Base and Warren Air Force Base. This is the minimum that is needed for the protection of our land-based deterrent and to carry out the future development and deployment of the very vital Safeguard system in an orderly manner.

The proposition that we are faced with is that stable deterrence means that both the U.S.S.R. and the United States are able to absorb an initial attack by the other and still retaliate with overwhelming power. If we have this capacity the chances of an initial attack against us is greatly diminished—certainly as long

as the U.S.S.R. does not wish to commit suicide. While our retaliatory capability is fairly well assured at present, if the U.S.S.R. should develop the multiple independent reentry vehicle—MIRV—with reasonable accuracy our land-based missiles may some time in the future be in jeopardy. Therefore, defending the four Minuteman bases against the possibility of a Soviet attack is a very sensible step. It would mean that, when and after the Safeguard system is deployed and operational, we would probably have at least twice as many Minuteman missiles surviving a Soviet first-strike attack than would we have with only a two-base deployment.

We have said before that the additional base at Whiteman would increase the capacity for protection by 40 percent. That tells the story.

The very survival of the Nation may hinge on the vote which we take tomorrow and on whether or not we authorize all four bases for Safeguard installations as recommended by the full committee. When I say "national survival," I do mean, not only the survival of the United States of America as a national entity, but the survival of millions of Americans who would not survive if we become vulnerable and our strategic forces no longer deter. In addition, under those circumstances we would be prime candidates for nuclear blackmail.

We must not be led astray by the assertion that Safeguard does not protect the people but protects merely our bases. The Safeguard is designed to protect the people in that it protects our arsenal, our ability to hit, and our ability to protect ourselves. We protect the people most when we protect those things that are designed to be their protective weapon.

Let me remind you, Mr. President, that we voted in favor of the four-base deployment when we rejected the Cooper-Hart amendment last week. This was one of the direct issues presented to the Senate and, therefore, to adopt the Brooke amendment to reduce the Safeguard deployment around Minuteman bases to two rather than four would be a reversal of the action which we took last week and a step backward. I do not think that we want to take this leap to the rear at this time.

There is no middle ground. We either want four bases or we want two bases. Last week that was the prime issue with which we were concerned. The majority of this body, by a rather decisive vote, decided in favor of four bases. Now this amendment would come right along and state that we shall have only two bases. The only difference is that the Brooke amendment would leave in some of the money which the Cooper-Hart amendment would take out. That makes it eligible to be offered as an amendment, but the meaning is the same. With all deference to the Senator from Massachusetts, I think the orderly way to proceed with this matter would be to offer this amendment as a substitute for the Cooper-Hart amendment. Then we would have had a direct issue drawn; but now since we rejected the Cooper-Hart amendment, to come back now with an amendment providing for only two-site deployment is to march up the hill last Wednesday and back down the hill this coming Wednesday.

I just do not believe the Senate will do it. I do not believe the Senate wants to do that and I do not believe they will do that.

I want to point out at this point what Secretary of Defense Laird said about the cost in connection with money in the Brooke amendment. Secretary of Defense Laird was on the national televised program "Issues and Answers." The following is his anwer in response to a question by Mr. Peterson:

> Secretary LAIRD. Yes, I believe that the Brooke Amendment would give us less defense at more cost by using all of the funds that were provided in the authorization bill as requested by the administration at the two sites in North Dakota and Montana. We would be constructing additional radar time there and additional facilities. It would not give us the coverage of the Minuteman field that the third site would give us if constructed in Missouri, and would not give us the follow-on options for either area coverage or for accidental launch coverage that would be available should the third site go forward in Missouri.
>
> So what it would do, it would not limit the amount of funds. As a matter of fact, if we were to go forward and put all of these funds on these two sites, it would cost that additional $500 million. So we would have less defense, less coverage, at more cost.

I do not think that statement can be seriously contradicted. The Secretary of Defense is a knowledgeable man in this field and he is highly responsible for what he says.

Now let me turn to the SALT talks and the possible impact of the Brooke amendment on these talks. The second phase of these talks ended just a few days ago. The next phase is scheduled for Helsinki in November. The American officials have expressed guarded but clear optimism that progress has been made in these talks. One of the vital bargaining positions apparently revolves directly around Safeguard, and it would be a serious mistake at this delicate stage of the bargaining to pull the rug out from under the Government and limit this system as proposed by the Brooke amendment.

I mean that it would be a mistake of strategy, not a political mistake, in not backing up the President. The President is the head of this Government and he is the representative of the Government at these talks. He is the head man. Now, if we are going to march up the hill on this delicate matter that is directly involved in these negotiations and in favor of four sites, and then a week later we say, "No, we have changed our minds to two sites," we not only take the force out of his position but, with great respect, in the eyes of those at the negotiating table who are against us, it would make us look ridiculous.

It might be asked as to why four ABM deployments are more valuable and have more negotiability than two. The answer is as simple as two and two. As a matter of fact, it is precisely two and two, and two and two make four. Four sites certainly add to the force of our bargaining position and the strength of our negotiating power. This is one reason why the authorization for the Whiteman and Warren deployment is so important at this particular time.

There has been a momentum in the SALT talks which perhaps was not expected by most of us a few months ago. We need to maintain this momentum and a continuation with the Safeguard program will do this and enhance our bargaining position at Helsinki. On the other hand, the adoption of the Brooke amendment would not have this impact and would probably weaken our bargaining position which, it is reliably reported, revolves around an agreement involving the Safeguard and a limitation of some type of U.S.S.R. ICBM's, particularly the SS–9.

I think it would be very dangerous to adopt the Brooke amendment. Not only would we diminish the protection for our Minuteman sites, we might very well give a very adverse and perhaps fatal blow to the bargaining positions of our negotiators at Helsinki. I am sure that all of us who are interested in world peace do not want this result.

Let me make it clear that when the SALT talks are showing some encouraging signs of progress we are asked to unilaterally slow down the only program that we have which offsets the increasing offensive deployment of the U.S.S.R.

Refusal to proceed with the Whiteman and Warren deployments by adopting the Brooke amendment would be unilateral. We would receive nothing from the Soviets in return. Not a single SS–9 or any other Soviet ICBM would be shelved as a result.

I would not hazard any guess as to the amount which we would expend on Safeguard prior to a possible SALT agreement, but if our authorization of the four-site deployment of Safeguard creates enough pressure on the U.S.S.R. to bring about such an agreement then the cost is more than justified, regardless of how small or large it may be. In addition, let us remember that the Safeguard is a defensive weapon and is, therefore, in the nature of a hedge for the protection of our Minuteman sites in the event SALT should fail. The same cannot be said about the Soviet SS–9. That monster missile—which has a warhead which is equivalent of 25 million tons of TNT—can only be viewed as an offensive weapon and as having a potential first-strike capability.

Mr. President, while I appreciate the fine motives of the Senator from Massachusetts, I believe his amendment would impact adversely on the already tenuous balance of power, and I hope it will be defeated.

I think we will move into that debate tomorrow and then move into a very important vote and that there will be a very decisive reflection here in that rollcall that the Senate feels it has made up its mind, has taken its position, and the President can move forward and depend on that position, and then we will move forward to the rest of the bill.

As I said yesterday, I believe we will move forward rapidly after the vote tomorrow. We have many amendments. I shall start discussing many of them—not calling them up, but discussing them in advance in order to get the committee's view and my view into the RECORD.

THE HATFIELD AMENDMENT

Mr. STENNIS. Mr. President, I would like to make a few remarks with respect to amendment No. 765 submitted by Senator HATFIELD and cosponsored by other Senators, the purpose of which was to implement the recommendations of the Gates Commission with respect to making our Armed Forces an all-volunteer operation.

I realize that this amendment has not yet been called up and I will have far more detailed remarks at that time. In view of the significance of this proposal, however, certain preliminary observations are in order.

Let me first say, Mr. President, I fully realize that on its face this is a highly appealing amendment. In substance, this amendment presumes that after next July 1, when the present induction authority lapses, all entering the Armed Forces will be only volunteers and there will be no more draftees. It presumes that we can end the draft and provide enough volunteers to maintain the Armed Forces by increasing certain enlisted pay rates.

There are a number of basic reasons why this proposal should be voted down at this time.

First of all, for the Senate to adopt an amendment of this magnitude without committee hearings in either the House or the Senate is to repudiate the fundamental legislative processes. The amendment itself, 15 pages in length, proposes a number of changes, some of them far reaching, in the compensation structure of our Armed Forces.

The amendment would cover increases in:

First, basic pay rates, both active and reserve, for certain enlisted and officer personnel;

Second, proficiency pay;

Third, hostile fire pay;

Fourth, travel and transportation allowances for certain lower and enlisted grades;

Fifth, ROTC scholarship programs;

Sixth, recruiting incentives; and

Seventh, special pay for physicians and dentists.

Mr. President, the estimated annual cost of this amendment is $4,316,000,000.

There is not one iota of a recommendation or approval of this matter from the Budget Bureau. I shall refer to a small amount, $250 million, recommended here, that is related, but there is no recommendation for the $4.316 billion required to cover this amendment.

Mr. President, we worked here for days, and even months, to reduce the cost of the pending bill.

The Armed Services Committee worked very hard to reduce the cost of this bill from $20,605,489,000 to $19,242,889,000. Moreover, there are a number of Senators, as we all know, pressing to see this bill cut still further on the Senate floor. It is ironic indeed that we are now confronted with an amendment which would increase the cost of the bill as reported by the committee by 22.4 percent—an amendment upon which not even hearings have been held and on which there is no recommendation from the President or the Bureau of the Budget.

Mr. President, it is important for the Senate to know that the pending budget for fiscal year 1971 contains no funds for the adoption of the $4 billion amendment implementing the Gates report. The only pay legislation which has been submitted for this year is a proposal which has not passed either body which would increase the enlisted rates with under 2 years of service by 20 percent. This proposal would have an effective date of January 1, 1971, and involve a 6-month fiscal year 1971 cost of $250 million.

That is the only money recommendation we hear of here concerning this important matter.

What I have enumerated thus far, Mr. President, are just the cost elements of the amendment. Of equal significance is the fact that the amendment presumes that the authority for induction under the draft will be allowed to lapse next July 1. The President in his message to the Congress of April 23, 1970, made it clear that an extension of induction authority beyond July 1, 1971, would be required. At least, Mr. President, we should give the administration a chance to make its case rather than prejudge the issue some months before hearings are even conducted on the forthcoming extension legislation. I should add that if the induction authority is to be extended, the entire premise of this $4.3 billion amendment is wiped out.

I think everyone realizes that there must be a consideration of the all-volunteer Army proposal at the same time we consider the extension of the draft, the Selective Service. I think it is just as certain as night follows day that we must extend that Selective Service Act. The President of the United States thinks so. He said so in his message to Congress. So now for us to jump the gun and seriously considering this proposal as an amendment, even if it only passed this body, would be, I think, an abrogation of our legislative responsibility and would be legislating in the dark.

I am sure, Mr. President, that one of the arguments to be made in behalf of the $4.3 billion amendment is that it will save money. I would observe that for over 18 years this has been a customary argument presented in support of military pay legislation.

There is a hope that we may be able to save money after the shooting war is over and we will be able to settle down. I pray we will be able to settle down. The idea of considering the installation of an all-volunteer Army is a concept I do not totally reject, but, at the same time, many, many questions have to be settled. We do that first and settle the matter after extensive hearings, and after hearing witnesses from various sources.

I do not resent it, but I am disappointed that here, on a military procurement bill, we have an amendment that would propose such far-reaching matters, at such high cost, with so many unknown quantities, when that is not supported by the President of the United States, although he supports the idea somewhere in the future, and one that is not supported by the Secretary of Defense, although he doubtless hopes that something can be done at some time. All this is done while the war is still in the shooting stages. We hope the activity continues to go down, but it is by no means certain. There is always a possibility, and more than a possibility, for the attacks to be sustained.

Mr. President, let me say that I have the highest respect for the members of the Gates Commission. All of the men are either prominent in public life or have seen extensive military service in the past. They sincerely believe that the recommendations could result in an all-volunteer force.

I cannot understand how they could think that that could all be done, though, by June 30 of next year. I have the greatest respect for the ability and the high integrity of the authors of this amendment, who include some of our most valuable and experienced members. But I believe they have gone too far this time, rushing forward without hearings, rushing forward with all these facts staring us in the face, which they cannot overcome or ignore.

I would emphasize, however, that there has been at least one study in the past that throws considerable doubt on the practicality of an all-volunteer force. This study was completed in the Department of Defense in 1967. Moreover, in connection with the extension of the draft in 1967, it was then estimated that the cost of attracting an all-volunteer force of pre-Vietnam level of 2,700,000 persons would be from $4 billion to $17 billion annually with $8 billion additional annual cost being a reasonable guess. I do not say it would cost $17 billion; I think that is too high. But these men did vary in their estimates that much. This was at a time, Mr. President, when the price and wage levels were substantially lower than the existing scales. I point this out to show that there have been different views on even the cost of trying to attract an all-volunteer force.

I have grave doubts as to whether at this particular time we can maintain an armed force anywhere near our present size without a Selective Service System. And I want to say, too, Mr. President, that I do not buy all of this volunteer army concept, by any means. I am not satisfied, in my mind, what the army might become over a period of 20, 30, or 40 years, if there were not a stream of young fellows direct from civilian life, coming in and going out. I think the same is true as to young officers. I believe that that is one of the great safeguards in connection with our system of government.

Furthermore, I am very conversant with the fact that in many cases, the finest thing that can happen to these young men is for them to render military service to their country. It helps them find themselves, often as nothing else can do. It puts them on the road to training when they have rejected training of every other kind so far, or at least have not been adept in it, and have not realized the need for it.

It is an avenue of opportunity, it is an avenue of training, it is an avenue toward self-respect and self-sufficiency, and dedication to causes and purposes and to country, that many of these young men have not had until they received it from the military services. I think that training and dedication is a great plus that does not show up in the

cost accounts, but is one of the greatest assets this Nation has.

I would remind the Senate that the present Selective Service System was started in peacetime. Within a little over a year after World War II, this country could not maintain a total armed force of slightly over 1 million men without having in effect a Selective Service System.

We tried that after World War II. There was no Selective Service when I came to the Senate in 1947. But in 1948, before the cold war had gotten very far, and while we were at peace with everyone everywhere, we found that it was necessary to enact a Selective Service Act, and did in 1948—necessary to maintain even a minimum peacetime force. So how could we abolish it now, when we are still at war, and with many other uncertainties facing us as well?

I realize, Mr. President, that much of the impetus for the all-volunteer amendment arises from the disillusionment of the Vietnam war and the desire to greatly reduce our participation in this engagement. Aside from this factor, however, I would hate to see the day when we adopt the concept that the defense of this Nation is not a civic responsibility and that we should rely solely on volunteers. Moreover, that financial inducement would be the principal motivating force for maintaining the necessary manpower input for our Armed Forces.

It seems clear to me that the idea of an all-volunteer force at this time holds out only false hope to the mothers of the young men of America. We are saying to all mothers that "your son will not be drafted because there are sufficient sons of other mothers who will volunteer to meet our military requirements." I doubt if this will prove to be the case.

Mr. President, the forgoing remarks are not intended to be a detailed analysis of the amendment but merely to indicate some of the basic considerations why the Senate should vote down this amendment.

I hope that will be the course that this matter will follow. Of course, I do welcome debate.

Mr. President, I yield the floor.

Mr. DOLE. Mr. President, I ask unanimous consent to proceed for 10 minutes.

The PRESIDING OFFICER. Without objection, it is so ordered.

THE RESPONSE TO VICE PRESIDENT AGNEW'S SPEECH

Mr. DOLE. Mr. President, the Senator from Oregon, following his attack on the Vice President of the United States today, declined to yield to the Senator from Kansas. I had hoped to discuss with the Senator the so-called end-the-war amendment. That is the one item he failed to discuss in his onslaught on the Vice President—the so-called end-the-war amendment, which I have designated the lose-the-peace amendment, and which perhaps should now be called the extend-the-war amendment. It is very brief. With reference to South Vietnam, the pertinent section contains about 18 lines, fewer than 200 words, by which it is sought to lead the Senate and the people of America to believe that by adopting this amendment in Congress, the war in Southeast Asia would be brought to an end.

I have read very carefully the speech by the Vice President delivered yesterday in Miami, Fla., to the Veterans of Foreign Wars. I share the view expressed by the Senator from Arkansas and the Senator from Oregon that there should be limitations with reference to criticism of any Senator by another Senator, or by a member of the executive. But I might note that it was not too long ago that, in this Chamber, the Senator from Arkansas compared the Vice President of the United States, Mr. AGNEW, not to Joe McCarthy, but to Joseph Goebbels. I would comment, as many Senators have heretofore, that it is apparently fine for us to criticize, but the Vice President should not have that right—that he should not be as concerned about some happenings in Congress as other Americans are.

But I fail to find any aspersion concerning the character or the motives of any Member of the Senate in the speech delivered by the Vice President yesterday. In fact, he makes the point at least twice in the speech of emphasizing that he is not questioning the patriotism of any Member of the Senate, but that, as he has a right, he does question their judgment and their wisdom. I would hope that perhaps the propriety of his doing so would not be questioned at this point, after the sponsors of the amendment have raised a half million dollars or more, $600,000, by appealing to the emotions of the American people on an NBC program on May 12. Having now collected a sum in excess of a half million dollars based on their amendment, as they call it, to end the war, I understand it may now be changed, and the amendment to end the war may now become an amendment to extend the war, because, according to news stories this morning, the sponsors propose to extend the war for 6 months, or at least extend their endorsement of the war for another 6 months, until the end of 1971.

Simply by changing the amendment, those who have sent in $600,000 are told, "Well, we will have to go on 6 more months." I am not certain whether their money will be returned nor certain how the money is being used. But I, too, would question the advisability, the ethics and judgment of Senators who raise money from the public to lobby their own colleagues by use of paid TV commercials in many of our States, particularly the State of Missouri, the State of Kansas, the State of West Virginia, the State of Washington, the State of Virginia, and other States which, for some reason, were singled out for special treatment and special coverage.

What did the Vice President say? He discussed the amendment. I regret to say the Senator from Oregon failed to discuss the amendment. He said early in his remarks that the Vice President was making a false statement when he said that by December 31 the entire burden would fall on South Vietnam.

Let me read the amendment. That should be the best proof of what the sponsors intend. It reads:

> Unless the Congress shall have declared war, no part of any funds appropriated pursuant to this act or any other law shall be expended in Vietnam after December 31, 1970, for any purpose—

I repeat—

> for any purpose arising from military conflict:

That seems clear to me. It was clear to the Vice President. It is clear to many Americans who understand the amendment. It says, very simply, that after December 31, this year, not a dime of taxpayers' money shall be spent in Vietnam for any purpose arising from military conflict.

Then it goes on to say that by next June—June 30, 1971—every American must be withdrawn from South Vietnam.

The senior Senator from Oregon condemned the Vice President because he talked about the possible bloodbath in South Vietnam should there be a precipitate withdrawal. Let us go back to the amendment. Again, that is the best proof of what the sponsors intend. I read from page 2, line 3, of the amendment:

> That funds may be expended as required for the safe and systematic withdrawal of all United States military personnel, the termination of the United States military operations, the provision of assistance to South Vietnam in amounts and for purposes specifically authorized by the Congress, the exchange of prisoners, and the arrangement of asylum for Vietnamese who might be physically endangered by the withdrawal of United States forces:

The junior Senator from Kansas would assume that by the inclusion of that language, by making plans now to arrange for asylum for those South Vietnamese who might be physically endangered, at least the sponsors initially thought that there might be some danger of a bloodbath.

Really, the amendment to end the war advertising campaign has been successful. We have seen, for the first time in history, Members of the U.S. Senate go on nationwide television and raise more than a half million dollars, as lobbyists, to lobby their colleagues in Congress. We see full page ad after full page ad featuring a flag draped casket, with the inference being that the Senators listed are opposed to war and that the balance of us must be for war and against peace; that we enjoy the killing, we enjoy the death, and we enjoy the bloodshed, but that only those who cloak themselves in the so-called antiwar terminology are for peace; that those of us who support President Nixon want the war to go on, for some mysterious reason, even though the facts are to the contrary.

Where have some of these colleagues been for the past 5 years, when the war was escalating month after month? Where were they when the Gulf of Tonkin resolution was passed in the Senate by a vote of 88 to 2?

Why should President Nixon feel the brunt of their attack now, at a time when there is a deescalation of the war, at a time when some hope for peace is in sight, at a time when a renowned ambassador, David Bruce, has been sent to Paris to negotiate?

The Vice President yesterday in Miami, discussed the McGovern-Hatfield amendment—and that is how it is re-

ferred to in all the ads and commercials, the McGovern-Hatfield amendment—but somehow, it is wrong for the Vice President to use the name "McGovern" or the name "Hatfield." It is all right to use them to raise a half million dollars, but the Vice President should not refer to the amendment by name because the names mentioning Members of this body is an affront to them.

The Vice President said that if the McGovern-Hatfield amendment should be adopted, it would strike a lethal blow at the Paris peace talks. Why should the enemy negotiate if by legislative fiat we determine that all troops will be out by next June 30, 1971? What is there to negotiate—whether they come by boat or by air or walk? Because then we would have announced to the world and to the enemy that we are quitting in Southeast Asia; we are surrendering, if you will, in Southeast Asia.

I find no direct attack upon any Senator by the Vice President. I recognize the old shell game of "talk about everything but your amendment if it has no merit." And it has no merit, as the debate in the next 2 or 3 weeks will indicate. It says, very clearly, that not one dime shall be spent after December 31, 1970, for any military purpose. That is not difficult to understand. It does acknowledge the possibility of a bloodbath, because it provides for asylum and the expenditure of funds for asylum in this country. Where? In Oregon? In South Dakota? In the Vice President's home State of Maryland? In the State of Kansas? That, apparently, is left to the President though the sponsors do not leave the conduct of the war to the President. Just where does he put the South Vietnamese who seek asylum?

The Senator from Arkansas, who is always free with his criticism of the Vice President, seems to feel some special pain when the Vice President mentions his name, as he does from time to time. But the amendment is clear. The amendment is notice to the enemy that we will quit in Southast Asia, that we will retreat and withdraw if necessary. That is what the Vice President was talking about to members of the VFW, many of whom have risked their lives for our country.

Again, I do not question anyone's patriotism. I agree with the senior Senator from Oregon—he has been consistent; he has been opposed to the war from the start. I do not disagree with that. But the facts are that the President of the United States, President Nixon, is disengaging in Southeast Asia; that we have deescalated the war; and that it has been done without the McGovern-Hatfield amendment; and President Nixon will continue on a path for peace. He might even beat the timetable some are now attempting to impose upon him.

It occurs to the junior Senator from Kansas that there must be one person in America, the President—whether it be Nixon or Johnson or Kennedy, or whoever in the future—who has the authority to negotiate for our country, who has the right and responsibility and obligation to speak for our country. This does not mean that the Senate has no role to play in foreign policy. This does not mean that the Senate has no role to play in Southeast Asia.

But why now, I ask the sponsors of this amendment? Why now, the McGovern-Hatfield amendment? The President has returned 120,000 Americans. By next May 1, it will be 265,000. Why now, the McGovern-Hatfield amendment? The war is being deescalated. We will have an honorable peace and it will be because of the efforts of President Nixon and not of those who would seek to impose their will upon him.

I yield the floor.

TRANSACTION OF ROUTINE MORNING BUSINESS

The PRESIDING OFFICER. Under the previous order, there will now be a period for the transaction of routine morning business, with a limitation of 3 minutes on statements therein.

VICE PRESIDENT AGNEW'S ADDRESS TO VFW IN MIAMI, FLA.

Mr. THURMOND. Mr. President, yesterday, Vice President SPIRO T. AGNEW addressed the Veterans of Foreign Wars in Miami, Fla., on the threat embodied in the Hatfield-McGovern amendment.

He stated that he was not questioning the patriotism of the amendment's sponsors, but that he was deeply questioning their wisdom, logic, and judgment.

The Vice President called the end-the-war measure a perilous one and pointed out that its approval would have several deleterious effects. Among these are: Its approval could be a death blow to the Paris peace talks; and the South Vietnamese could collapse as a result of the hasty withdrawal of the American troops.

Mr. AGNEW documents his criticisms very effectively and raises several other important issues in this penetrating speech.

Mr. President, I invite the attention of my colleagues to the Vice President's remarks and ask unanimous consent to have them printed in the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS BY THE VICE PRESIDENT

I would like to speak to you today of a rising threat to everything our servicemen have fought to accomplish in Southeast Asia—a threat embodied in the Hatfield-McGovern Amendment.

Should this proposed Amendment become law, unless America declares war, President Nixon would be forced to end any military aid to Laos and to halt all military operations in South Vietnam—twenty weeks from today. Every American soldier, sailor, marine and airman would have to be out of Vietnam by June 30 of next year—ten and a half months from today.

Hatfield-McGovern is a blueprint for the first defeat in the history of the United States—and for chaos and Communism for the future of South Vietnam. The *Washington Post* was generous to call this amendment "reckless." It is worse than that; if adopted by the Senate and passed by the House, this publicized "Amendment to End the War" in Vietnam will go down in history as the amendment that lost the war in Vietnam and destroyed the chances for freedom and peace in Southeast Asia for the balance of the century.

Nothing less is at stake.

But, if this amendment, and any similarly irresponsible proposal which may be offered, can go down in humiliating defeat for its sponsors in the Senate—then this nation will *not* go down in humiliating defeat on the battlefields of Southeast Asia—I promise you that.

Today, I have a simple question. I am here to ask you, as fellow Americans, and fellow veterans—can the President of the United States count on your support?

The charges I have already made here are among the strongest since I took office as Vice President. But no more dangerous proposal has been presented to the American Congress in those 19 months—or in 19 years for that matter. While I do not question the patriotism of the sponsors of this amendment—I do deeply question their wisdom, their judgment and their logic. They are horribly wrong—and if their grave error is enacted into law, generations of Asians and Americans will suffer for their tragic blunder.

Let us look at the inevitable consequences should Hatfield-McGovern be enacted.

First, the amendment would be a final lethal blow to the Paris peace talks. Any vestige of hope that the enemy will negotiate with Ambassador Bruce at Paris would disappear overnight—for the last incentives for the enemy to talk seriously would be gone. He would have gotten what he came to Paris to get—a fixed final timetable for all Americans to get out of South Vietnam. Why should the enemy offer concessions to the United States for something Senators Hatfield and McGovern and their allies will give him free of charge in four months?

Should this amendment become law, and all American military operations in Southeast Asia cease by December 31, the immense burden of this war would fall immediately and totally upon South Vietnam. The government and people there would confront, alone and all at once, the completion of the enormous tasks of creating a stable democratic society, promoting economic and social reform, fighting an internal war against guerrillas and defending their nation from invasion from three frontiers.

Though South Vietnam has made enormous strides in development in recent years—today she could not carry those burdens alone. No developing nation could.

Hence, the result of a unilateral, precipitous American abandonment of South Vietnam would be the collapse of the government, chaos in the country—and ultimately the kind of Communism that literally decimated the civilian population of Hue in the Tet offensive.

The Rand Corporation estimates that if Communism prevails in South Vietnam, 100,000 Vietnamese who placed their faith in us will die for that error in judgment. Douglas Pike, the nation's foremost expert on the Viet Cong, estimates three million South Vietnamese could lose their lives in the bloodbath following a Communist victory.

Assuredly, this is not what Senators Hatfield, McGovern, and those supporting them want—but that is what they are inviting.

They say their amendment will provide for transport and a refuge for Vietnamese who would fear for their lives when the Americans go. But how—and where? Do Senators Hatfield and McGovern have in mind opening up Oregon and South Dakota to resettle the refugees? Hardly. And the place for these men and women who believe so deeply in freedom that they will become exiles rather than submit to the Communist yoke is not Oregon or South Dakota—it is South Vietnam.

It is clear from their mention of "provision" for refugees that Senators Hatfield and McGovern have considered that the collapse of South Vietnam will indeed be one consequence of their amendment. But have they considered the consequences of that collapse?

One wonders if they really give a damn.

If South Vietnam collapses then victory and success go to the hard-liners in Hanoi

and Peking who counseled belligerence and war instead of peace and negotiation.

If South Vietnam collapses then 285,000 Americans will have suffered and 43,000 will have died for nothing. An American Army, undefeated on the field of battle, will come home in humiliation because impatient pacifists in the Senate lost the war. What will be the reaction then when the American people wake up to learn that the thousands of lives and billions in taxes over a decade had been spent only to find national humiliation and disaster at the end of the road?

Will they then reward the blind impatient politicians who could not see the war through its final hours—and so snatched, for America, military defeat from the jaws of political victory?

If South Vietnam collapses, then Southeast Asia is gone. Those who do not believe in the Domino Theory, as the President has put it, have not talked to the dominoes. Already, Cambodia is half-occupied by North Vietnamese and Viet Cong. Laos is half-occupied by North Vietnamese and Pathet Lao. Thailand is fighting its own Communist insurgency, aided and encouraged from without. Does any rational man believe these countries—or Malaysia and Singapore at the end of the peninsula—can survive if South as well as North Vietnam should come under the rule of militant Communists?

Have the isolationists in the Senate pondered the full consequences of America's defeat in South Vietnam—and freedom's defeat in Southeast Asia?

Looking down the road to the year 2000, we see most Asian nations on the threshold of technological maturity; we see an Asia that contains 60 percent of all humanity; we see a world in which there are ten Asians for every American.

Are the isolationists content to let that Asia go by default to the Communists because they lacked the perseverance to see this through?

Well, we are not, my fellow Americans and my fellow veterans—and the President is not—and together we shall see this war through to an honorable end that will do justice to the sacrifices of all our sons.

Have the isolationists considered the impact of the abandonment of this one ally upon America's other allies around the world? Could any nation put trust in the word and capacity of the United States—if we slink home, defeated, from the battlefield of Southeast Asia?

The lessons for nations like Germany and Japan—even India—would be clear: The inescapable conclusion would be that the United States cannot be counted upon in the crunch and nations must depend upon themselves to survive. The nonproliferation treaty would be forgotten as every state rushed to develop its greatest possible deterrent. If collective security is a failure in Vietnam—who will place confidence in it in Europe or the Middle East

As I stated moments ago, while I do not question the patriotism of the Senators I criticize, I do question their wisdom, their logic and their judgment—and I question also their sense of justice.

Some of the same Senators who bewailed a Democratic President's lack of power in foreign policy ten years ago now contend that this newly installed Republican President has too much power.

Some of the same Senators who supported the "peace plank" at the Democratic National Convention in 1968 now condemn a President who has taken more risks for peace than that plank contained.

Some of the same Senators who were silent while a Democratic President sent 532,000 American soldiers to Vietnam are obstructing and undercutting a President who is bringing 265,000 Americans home.

What is there in the record of this President to justify the attitude and actions of these Senators?

When President Nixon took office there were 532,500 American troops in Vietnam. He did not send more troops in—he started bringing the boys home. He pledged in June of last year to bring home 25,000 troops; they have come home. He pledged in September to bring home 35,000 more; they have come home; he pledged in December to bring home 50,000 more; they have come home. Every promise he has made to the American people about the war in Asia, he has kept. American casualties are a third of what they were in 1968; time is now on the side of the allies, not the side of the enemy; and still they malign his policies and his performance.

The President has turned the war over to the South Vietnamese as rapidly as they have become prepared to shoulder the burden.

To proceed slower than that is to break faith with the American people. But to move faster than security dictates is to risk the lives of our men and invite a victory for Communism that tens of thousands of our lads died to prevent.

And no matter what the McGoverns and Hatfields propose—the President is not going to take those risks with the lives of American men.

The Senate sponsors of Hatfield-McGovern cannot win this war; they cannot conclude an honorable peace, but they can lose this war—as well as guarantee the ultimate failure of the uneasy peace to follow—if they convince enough of their colleagues to support their amendment.

They argue in the Senate that the Cambodian decision underscores the need to place limits and restrictions upon the President—to force upon him a timetable for withdrawal. I do not agree with that assessment. In my view, the President's decision to enter Cambodia and capture and destroy those tons of enemy arms and ammunition that would otherwise have been killing American men was an act of courage and the finest hour in the Nixon Presidency.

The Cambodian decision does not argue for putting shackles upon this President. It argues eloquently the case that the Senate should leave the President alone to exercise his Constitutional powers as Commander-in-Chief and determine what is necessary to protect the lives of American men.

Senator Fulbright now seeks a larger role for his committee in the conduct of foreign policy—but where the President decided and acted in a matter of hours to protect American lives—it took Mr. Fulbright and his colleagues seven weeks to decide on a simple amendment. His is a history of querulous "fuddy-duddying."

Many of the men in this great organization trace their military service to their country back to World War I. Yet, today, we see abroad in our land and in the halls of Congress the voices of that same short-sighted isolationism that lost the peace after World War I and helped to bring on World War II.

Let us not again forget the lesson that for the United States, there is no security in a retreat from the world. Let us not again force an American President to make in deepening despair the kind of statement that Woodrow Wilson made in St. Louis just 10 months after the armistice in France:

"If," he said, "(the Covenant of the League of Nations) should ever in any important aspect be impaired, I would feel like asking the Secretary of War to get the boys who went across the water to fight, together on some field where I could go and see them, and I would stand up before them and say,

"Boys, I told you before you went across the seas that this was a war against wars, and I did my best to fulfill the promises; but I am obliged to come to you in mortification and shame and say I have not been able to fulfill the promise. You are betrayed. You fought for something that you did not get.

"And the Glory of the Armies and Navies of the United States is gone like a dream in the night, and there ensues upon it, in the suitable darkness of the night, the nightmare of dread which lay upon the nation before this war came; and there will come sometime, in the vengeful Providence of God, another struggle in which, not a few hundred thousand fine men from America will have to die, but as many millions as are necessary to accomplish the final freedom of the peoples of the world."

Let us never force an American President to say that again.

TRANSFER OF JUDICIAL FUNCTION OF NLRB TO FEDERAL COURTS

Mr. THURMOND. Mr. President, the record is clear that the National Labor Relations Board has ignored the intent of Congress and time and time again fashioned law according to notion of Board members. Disregard for congressional purpose by the NLRB is at an all-time high. The Board shows both a zeal to aid union organizations and a preoccupation with punishing employees. Many times employees suffer economically because of unreasonable treatment by the NLRB.

Labor Board decisions have failed to follow the direction of Congress. For this reason they have unsettled the balance of power essential to sound collective bargaining and have contributed to the industrial strife and inflationary settlements which are now rampant.

An excellent editorial in the Wednesday, August 5, 1970, issue of the News & Courier in Charleston, S.C., deals effectively with this issue.

This is done by discussing pending legislation, S. 3671, introduced by the distinguished Senator from Texas (Mr. TOWER), that would transfer the Board's jurisdiction in unfair labor practice cases to the Federal district courts. The editorial says that Senator TOWER's pending legislation would be an improvement over the present unsatisfactory condition.

Mr. President, I will let this editorial speak for itself. The editors of the News & Courier, one of the Nation's leading newspapers, are to be commended for such forceful and sensible discussion of the matter.

I ask unanimous consent to have the editorial printed in the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

NLRB EXPERIMENT

Critics of the National Labor Relations Board, which Congress created in 1935 to oversee labor-management relations and disputes, long have contended that the agency has overstepped its authority by rewriting labor law and making biased decisions favoring organized labor.

The NLRB's record bears out much of this criticism. Nobody, however, seems to have been able to figure out a way to end the bias in this free-wheeling agency. Sen. John Tower, R–Texas, contends it can be done by transferring jurisdiction over unfair labor practice cases from the NLRB to federal district courts.

Sen. Tower says that the 35-year NLRB "experiment" of mixing prosecution, legislative, executive and quasi-judicial powers in the same agency has not been a success and

that Congress should undo its mistake. He is the author of a bill which would transfer the board's judicial functions to the courts.

The NLRB, Sen. Tower asserts, "has ignored the intent of Congress. It has become a policy-making body and has not hesitated to rewrite the law to suit its own purposes. It has subordinated the rights of individual employees, small unions and employers through biased decisions favoring big unions. In no small measure our present persistent labor relations problems derive from the structure which we have set up."

In 1968, a Congressional subcommittee on separation of powers was equally critical of the board and recommended transfer of its judicial powers to district courts. Nothing came of that recommendation.

Little doubt exists that Sen. Tower's bill is supported by a majority of business operators. A poll of members of the National Federation of Independent Business Inc. discloses that 82 per cent of those queried favor the Tower bill, 11 per cent are opposed and 7 per cent have no opinion. Eighty-seven per cent of South Carolina members of the federation endorse the bill.

There is no iron-clad assurance, of course, that Sen. Tower's proposal would automatically improve the government's handling of unfair labor practices. Just as there are some biased federal agencies there are some biased courts. The pro-union bias of the NLRB has endured so long and has been so pronounced that almost any means for improvement seems worth considering.

WELFARE RECIPIENTS IN POSH HOTELS

Mr. THURMOND. Mr. President, an article appeared in the Wednesday, August 5, 1970, issue of the New York Daily News which reported flagrant disbursements of taxpayer's money by the New York City Welfare Department.

These disbursements referred to in the article by Mr. Martin McLaughlin are extravagant expenditures by the New York Welfare Department to house welfare recipients in New York City's posh hotels. The only family whose picture appears in the article lives in posh hotel facilities that cost $85 a day. This will amount to $31,025 a year, tax free. It is also reported that the New York City Welfare Department is paying the same high prices for hotel facilities that are unfit to live in. A workingman with a family would have to earn a much larger sum than this in order to have a net spendable income of $31,025 because he would have to pay over 40 percent taxes on his income. The family referred to in the article does nothing to earn this large sum but the father could probably be trained to perform some kind of work. However, if he worked he would have to earn a much larger salary to end up with $31,025 net spendable income a year, so his financial incentive to work is killed.

The New York City Welfare Department reported that on Tuesday, August 4, 1970, there were 702 families living in New York City's better midtown hotels at a cost of more than $600,000 per month. The working people of the United States support the financing of the Federal Government through their tax dollars and the Congress is supporting this flagrant program by authorizing the Department of Health, Education, and Welfare to disburse funds to pay 50 percent of the cost of this program.

At the same time Congress is authorizing the Department of Health, Education, and Welfare to make disbursements for this and other wasteful programs, the Department of Health, Education, and Welfare is cutting off badly needed funds to southern school districts because they are not complying with HEW's arbitrary and unreasonable guidelines. The education of the children of our Nation is far more important than the administration of extravagant give-away programs that kill all incentives for the recipients to go to school so that they can maintain regular employment and support themselves and their families.

It is true that there are many needy persons in our country that are unable to work because of physical or mental impediments. We have a responsibility to aid these people financially and to rehabilitate and train them so that they can lead healthy and useful lives. However, Congress has neither a duty nor a right to implement or support programs that increase the monetary incentive for Americans to quit working. People receiving assistance payments should find it more to their advantage to go to work than they do now. It should not be financially more lucrative to stay at home, at the expense of the taxpayers, than to go to work.

Many American workers feel that they are currently overtaxed to support wasteful spending by the Federal Government. Welfare programs that house persons in posh hotels and provide welfare recipients with other luxuries than most working Americans cannot afford support their feelings. Most taxpayers cannot afford to stay in $85-a-day hotel facilities. The taxpayers of the United States are rightfully upset by overspending by the Federal Government. Overspending by the Federal Government is a prime contributing factor to the spiraling inflation our country is currently experiencing. In this spiraling inflation, the taxpayer often finds himself in a financial squeeze because his net spendable income decreases as taxes and costs of goods increase.

The average annual income per family in the United States in 1969 was $9,433. Only 3.6 percent of the families in the United States made over $25,000 in 1969. The family referred to in the article in the New York Daily News is, without lifting a finger, receiving financial aid in an amount greater than income earned by over 97 percent of all American families last year. The taxpayer should not be required to support give-away programs that disburse money to support recipients that is in excess of that which over 97 percent of the taxpayers earn.

I have been informed by Mr. Robert Carroll, assistant welfare commissioner for New York City, that this wasteful and flagrant give-away program in New York City is financed 50 percent by Federal funds, 25 percent by State funds, and 25 percent by city funds. The taxpayers will not stand for this continued irresponsible spending by the Federal Government. It is morally wrong to require taxpayers to support such programs as this.

What is needed at this time is the immediate discontinuance of wasteful spending of funds presently allocated for welfare programs rather than allocating additional funds for more give-away projects. Those agencies whose responsibility it is to disburse welfare moneys should not pay prices for goods and services that far exceed their true value.

This kind of spending contradicts what the Federal Government's fiscal policy should be. The fiscal policy of all Government agencies should be one that fights the inflation that our Nation's economy is troubled with rather than one that contributes to this already severe problem.

Those agencies whose responsibility it is to disburse welfare moneys should strive to attain the most benefits available for each dollar spent. This would increase the real benefits to welfare recipients, increase the number of our Nation's deserving needy persons that could be helped, and help decrease Federal spending's responsibility for spiraling inflation.

Mr. President, I will let this article speak for itself. Mr. Martin McLaughlin of the New York Daily News is to be commended for bringing this wasteful practice of the New York City Welfare Department and the Federal welfare program into public light.

I ask unanimous consent to have the editorial printed in the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

RELIEFERS IN POSH CITY HOTELS

(By Martin McLaughlin)

Faced with a mounting crisis in housing for reliefers, the Welfare Department has turned to the city's better midtown hotels.

The department acknowledged that four families have been living at the Commodore for the past week at a cost of nearly $1,200 a week. It is paying $85 a day for one of the families and $27 and $30 a day for the other three.

Welfare reported that as of yesterday 702 families were living in hotels at an average of $900 a month for rent and food, for an overall cost of more than $600,000 per month.

$85 A DAY FOR 3 ROOMS

Presently and Beulah Harris and their seven children, who are in an $85-a-day suite of three rooms at the Commodore, which is at E. 42d St. at Lexington Ave., are typical of these families.

The Harrises said they were living in a comfortable house in Brooklyn until January, when the heater broke, the pipes burst and the Welfare Dept. moved them out because there was no heat. They went on relief three years ago when Harris became disabled.

"Since January," said Mrs. Harris, "we have been in four different hotels and slept on the floors of a friend's house on a couple of occasions. You couldn't believe how bad a couple of the hotels were. And how much the city was paying for these places!"

DAUGHTER IS RETARDED

The size of their family is not the only problem that the Harrises face in trying to find a place to live. Their daughter Bertie May, 14, was hurt in a car accident seven years ago. "The accident left her mentally retarded," said Mrs. Harris, "and injured her physically so that she needs a wheelchair most of the time."

She said that they need a place big enough to care for their daughter and that when most landlords learn they are on welfare and see the size of the family, with the daughter in a wheelchair, "they're just not interested."

Referring to the mounting housing crisis,

Assistant Welfare Commissioner Robert Carrol said that last November 390 welfare families were living in hotels and that the number has been steadily increasing to yesterday's total of 702.

"We have the responsibility of helping clients find housing—often on an emergency basis—and it's damned difficult because of the legal discrimination practiced against welfare clients," he said.

He said that although the costs at the Commodore may seem high, the department is paying the same amount for much poorer accommodations.

THE AGING CRISIS AND PENSION REFORM

Mr. JAVITS. Mr. President, my colleague, Senator KENNEDY, introduced in the RECORD on August 4, 1970, the extremely valuable and perceptive article, entitled "The Old in the Country of the Young," published in Time magazine of August 3.

I would like to join in commending the editors of Time magazine for publishing this authoritative and incisive examination of the truly bewildering array of problems confronting the elderly. Certainly the number and complexity of these difficulties has led to what can be termed "a crisis of the aged"—a crisis which is growing to such proportions that it contains all the ingredients for a vast social upheaval—unless we take the necessary steps to head it off.

In this connection, I would like to direct the attention of my colleagues to one critical passage in the Time article which, in my judgment, exposes the underlying core of the "crisis of the aged." As the Time report succinctly observes:

> Aside from health, money is the most pervasive worry of the aged: income maintenance is a major need. Private pension plans need attention too. According to one informed estimate, only 10% of the people who work under pension plans actually receive any benefits, usually because they do not stay long enough to qualify. As presently arranged, pensions also tend to lock older workers into their jobs and, if they become unemployed to lock them out. They are then denied jobs because it is too expensive to let them join a pension plan.

Without the means to take advantage of the opportunities for leading a positive and diversified existence, it is inevitable that many senior citizens will, of necessity, continue to lead frozen lives of deprivation, isolation, and despair. Thus, the key to any successful strategy for ending the forced and unnecessary obsolescence of the elderly, is to insure to the greatest feasible extent that the aged receive an adequate income.

It is important to appreciate that private pension plans can make a significant contribution to the economic security of large numbers of the elderly—giving to them together with social security a much higher level of living in retirement than would probably be the case from even a substantially liberalized social security system standing alone. While great emphasis deservedly falls on improving social security benefits, it is imperative that we also see to it that the private pension system operate in the public interest.

Since 1967 I have urged basic reforms to the private pension system, as proposed in my bill, S. 2167. In recent months, I have emphasized the basic lack of fairness in private pension plans which fail to provide retirement benefits to substantial numbers of employees because of harsh qualifying requirements. To determine the extent of this lack of justice in private pension plans, Senator WILLIAMS of New Jersey and I have recently commenced a survey—which will for the first time fully document the severity of this problem. This survey is being conducted among a representative sample of some 1,500 pension plans in the country and I believe that it will provide the necessary perspective the Congress needs to grasp the seriousness of this matter.

Lack of fairness, however, does not tell the complete story. To many thousands of retired workers, the additional income generated by private retirement plans could mean the difference between living in cheap, shoddy surroundings or living in modest but adequate housing; eating minimal unbalanced diets, or eating wholesome nutritious meals; foregoing or taking advantage of needed medical care and treatment; and existing in an isolated, friendless world or having the means to utilize existing transportation to visit friends and relatives and participate in community activities.

Unfortunately, for too many retired workers this anticipated retirement income will not be forthcoming simply because they will be victimized by the pension plans in which they had placed their confidence.

Incredible as it sounds, the Government not only permits this victimization to take place but encourages it by permitting employees to take tax deductions for contributions to pension plans which are so restrictively structured that they will only pay off to a handful of employees.

Not only this, but the Government permits its contractors to recover as an item of reimbursable expense, contributions made to a pension plan that will only rarely pay off in terms of benefits. And under the Fair Labor Standards Act, an employer is permitted to exclude from the rate of overtime compensation he must pay to his employees, contributions he makes to pension plans, even though that plan may hardly ever pay off and even though the employee has foregone wage increases in order to obtain promised retirement benefits that may never materialize.

And if this is not enough, consider that opponents of pension reform express concern that such reform will discourage employers from establishing new plans, as if by some parody of reasoning the failure to encourage the further extension of inequitable plans should cause distress.

I do not say that reform of the private pension system will automatically resolve the aging crisis. Of course, it will not. It will, however, provide that needed margin of security to many thousands that will enable them to confront old age with confidence and dignity.

I urge all those interested in securing a decent life for our senior citizens to give their attention to this matter of pension reform—and give it the highest priority. It is clear that pension reform is an essential ingredient if we are to successfully cope with the accelerating problems of the aging.

COMMUNICATIONS FROM EXECUTIVE DEPARTMENTS, ETC.

The ACTING PRESIDENT pro tempore (Mr. ALLEN) laid before the Senate the following letters, which were referred as indicated:

SECRET REPORT FROM ASSISTANT SECRETARY OF DEFENSE

A letter from the Assistant Secretary of Defense, transmitting, pursuant to law, a secret report relative to the support of the Vietnamese and other Free World forces in Vietnam, and local forces in Laos and Thailand (with an accompanying report); to the Committee on Appropriations.

PROPOSED AMENDMENT OF NATURAL GAS ACT

A letter from the Chairman, Federal Power Commission, transmitting a draft of proposed legislation to amend section 14 of the Natural Gas Act (with an accompanying paper); to the Committee on Commerce.

REPORTS OF THE COMPTROLLER GENERAL

A letter from the Comptroller General of the United States, transmitting, pursuant to law, a report on the status of development of the Joint Uniform Military Pay System, Department of Defense, dated August 18, 1970 (with an accompanying report); to the Committee on Government Operations.

A letter from the Comptroller General of the United States, transmitting, pursuant to law, a report on the need to improve the effectiveness of contractor procurement system reviews, Department of Defense, National Aeronautics and Space Administration, dated August 18, 1970 (with an accompanying report); to the Committee on Government Operations.

PROPOSED GRANT AGREEMENT WITH LELAND STANFORD, JR. UNIVERSITY, STANFORD, CALIF., FOR RESEARCH PROJECT

A letter from the Acting Secretary of the Interior, transmitting, pursuant to law, a proposed grant agreement with the board of trustees of the Leland Stanford Jr. University, Stanford, Calif., for a research project entitled "Atmospheric Pollution Aspects of Magnetohydrodynamic Power Plants" (with an accompanying paper); to the Committee on Interior and Insular Affairs.

THIRD PREFERENCE AND SIXTH PREFERENCE CLASSIFICATIONS FOR CERTAIN ALIENS

A letter from the Commissioner, Immigration and Naturalization Service, Department of Justice, transmitting, pursuant to law, reports relating to third preference and sixth preference classifications for certain aliens (with accompanying papers); to the Committee on the Judiciary.

REPORTS OF COMMITTEES

The following reports of committees were submitted:

By Mr. EASTLAND, from the Committee on the Judiciary, without amendment:

S. 3225. A bill to provide that the U.S. District Court for the Western Division of the Southern District of Mississippi shall be held at Natchez (Rept. No. 91-1126).

By Mr. BELLMON, from the Committee on Interior and Insular Affairs, without amendment:

H.R. 15866. An act to repeal the act of August 25, 1959, with respect to the final disposition of the affairs of the Choctaw Tribe (Rept. No. 91-1127).

BILLS INTRODUCED

Bills were introduced, read the first time and, by unanimous consent, the second time, and referred as follows:

By Mr. MANSFIELD:

S. 4252. A bill to amend section 1372(e)(5) of the Internal Revenue Code of 1954 so as to exclude certain interest from the definition of passive investment income; to the Committee on Finance.

By Mr. PACKWOOD:

S. 4253. A bill for the relief of Michael Amamchuko Ojukwu; to the Committee on the Judiciary.

By Mr. HARTKE:

S. 4254. A bill to provide for the free entry of a 61-note cast bell carillon and a 42-note subsidiary cast bell carillon for the use of Indiana University, Bloomington, Ind.; to the Committee on Finance.

S. 4255. A bill to provide that Route 70 of the National System of Interstate and Defense Highways in the State of Indiana shall also be designated as Memorial Highway; to the Committee on Public Works.

(The remarks of Mr. HARTKE when he introduced S. 4255 appear below under the appropriate heading.)

By Mr. MURPHY:

S. 4256. A bill to authorize and direct the Secretary of Agriculture to convey certain lands in the Squaw Valley, Calif., to the State of California; to the Committee on Interior and Insular Affairs.

By Mr. HOLLAND:

S. 4257. A bill to authorize the Secretary of the Interior to sell reserved phosphate interests of the United States in certain lands located in the State of Florida to the record owner or owners of such lands; to the Committee on Interior and Insular Affairs.

By Mr. TYDINGS:

S. 4258. A bill to provide for greater flexibility in Federal transportation funding; to permit the States to elect to use a portion of the funds received from certain Federal trust funds to meet local transportation priorities; and to create an Urban Mass Transportation Trust Fund; to the Committee on Finance.

By Mr. INOUYE:

S. 4259. A bill to provide for the advancement in grade of a certain officer in the U.S. Naval Reserve; to the Committee on Armed Services.

By Mr. RANDOLPH (for himself, Mr. COOPER, Mr. ANDERSON, Mr. BAKER, Mr. BAYH, Mr. BOGGS, Mr. BURDICK, Mr. CANNON, Mr. DODD, Mr. DOLE, Mr. EAGLETON, Mr. EASTLAND, Mr. GRAVEL, Mr. GURNEY, Mr. HARTKE, Mr. HOLLINGS, Mr. INOUYE, Mr. JACKSON, Mr. MCGEE, Mr. MONTOYA, Mr. MOSS, Mr. PACKWOOD, Mr. PERCY, Mr. SPARKMAN, Mr. SPONG, Mr. STEVENS, and Mr. YARBOROUGH):

S. 4260. A bill to authorize appropriations for the fiscal years 1972 and 1973 for the construction of certain highways in accordance with title 23 of the United States Code and to provide for statewide public works planning, and for other purposes; to the Committee on Public Works.

(The remarks of Mr. RANDOLPH when he introduced the bill appear later in the RECORD under the appropriate heading.)

S. 4255—INTRODUCTION OF A BILL TO DESIGNATE HIGHWAY 70 WITHIN THE STATE OF INDIANA AS "MEMORIAL HIGHWAY"

Mr. HARTKE. Mr. President, our Nation owes a debt of gratitude to its veterans which can never be repaid. The bill I introduce is an infinitesimally small measure compared to their great effort; but nonetheless, one which I feel is entirely appropriate.

The bill would designate that part of Interstate Highway 70 within the State of Indiana, as "Memorial Highway" in memory of the brave Hoosiers who have served so gallantly in the armed services. I am proud to say that Indiana has done her part in the Nation's defense; Memorial Highway will pay tribute to the more than 890,000 Indianians who have served in uniform since 1914 and honor those who have made the final sacrifice for their country in Europe and the Pacific, in Korea, and in Vietnam. Indiana has thus far lost more than 1,200 of her sons.

Monuments come in many forms, but I can imagine few so fitting as a bustling artery of commerce, symbolizing the vigor and energy that has brought our Nation to greatness. Perhaps as Americans travel through Indiana on Memorial Highway past prosperous farms and thriving cities, they will reflect on those courageous Indianians whose sacrifice and devotion have guaranteed freedom for future generations of Americans.

The PRESIDING OFFICER (Mr. EAGLETON). The bill will be received and appropriately referred.

The bill (S. 4255) to provide that Route 70 of the National System of Interstate and Defense Highways in the State of Indiana shall be designated as Memorial Highway, introduced by Mr. HARTKE, was received, read twice by its title, and referred to the Committee on Public Works.

ADDITIONAL COSPONSORS OF BILLS

S. 3596

Mr. GRIFFIN. Mr. President, on behalf of the Senator from New York (Mr. GOODELL), I ask unanimous consent that, at the next printing the name of the Senator from Wisconsin (Mr. NELSON) be added as a cosponsor of S. 3596, to amend the Fur Seal Act of 1966 by prohibiting the clubbing of seals after July 1, 1972, the taking of seal pups, and the taking of female seals on the Pribilof Islands or on any other land and water under the jurisdiction of the United States.

The PRESIDING OFFICER (Mr. BELLMON). Without objection, it is so ordered.

S. 3752

Mr. PEARSON. Mr. President, I ask unanimous consent that at the next printing the names of the Senator from Ohio (Mr. SAXBE) and the Senator from Nevada (Mr. CANNON) be added as cosponsors of S. 3752, a bill to amend the Fair Packaging and Labeling Act.

The growing support for this bill, which would bring unit pricing of food commodities to our modern supermarkets, should be most encouraging to the buying public. Present economic statistics indicate that inflation continues to make its cruel impact felt on consumers of this Nation. Unit pricing of food commodities would bring a substantial saving in this Nation's $120 billion food budget. It is a necessary tool for the fight against inflation.

Mr. President, I think it worthy of note that those Senators who presently are sponsors of my bill come generally from Western or Midwestern States—in clear contradiction to the notion that unit pricing is a "radical eastern idea," as has been suggested by certain segments of the grocery industry. I note that four Democratic Senators are cosponsors, as well as four Republican Senators, including myself.

Mr. President, few measures would benefit our people as directly as unit pricing. It would provide the shoppers of this Nation with the facts. It would provide shoppers the knowledge that the giant economy size may indeed be "giant" but often not "economic" at all. It has the support of the President's Special Adviser on Consumer Affairs, Mrs. Knauer, as well as others interested in consumers of this Nation, including certain chains within the grocery industry.

The chairman of our Consumer Subcommittee, Senator Moss, who is a cosponsor of my bill, has indicated he will schedule hearings in the immediate future. I commend the chairman for his statement in this regard, Mr. President, and wish to add my encouragement to this intention.

The PRESIDING OFFICER (Mr. ALLEN). Without objection, it is so ordered.

S. 4067

Mr. BYRD of West Virginia. Mr. President, at the request of the Senator from Minnesota (Mr. MONDALE), I ask unanimous consent that, at the next printing, the name of the Senator from California (Mr. CRANSTON) be added as a cosponsor of S. 4067, a bill to amend title 5 of the Housing Act of 1949.

The PRESIDING OFFICER (Mr. WILLIAMS of New Jersey). Without objection, it is so ordered.

S. 4197

Mr. GRIFFIN. Mr. President, on behalf of the Senator from Florida (Mr. GURNEY), I ask unanimous consent that, at the next printing, the name of the Senator from Texas (Mr. TOWER) be added as a cosponsor of S. 4197, to encourage States to establish junked motor vehicle disposal programs, and for other purposes.

The PRESIDING OFFICER (Mr. BELLMON). Without objection, it is so ordered.

S. 4246

Mr. BYRD of West Virginia. Mr. President, on behalf of the Senator from New Jersey (Mr. WILLIAMS), I ask unanimous consent that, at the next printing, the name of the Senator from Rhode Island (Mr. PELL) be added as a cosponsor of S. 4246, to amend the Older Americans Act of 1965 to authorize a special emphasis transportation research and demonstration project program.

The PRESIDING OFFICER (Mr. WILLIAMS of New Jersey). Without objection, it is so ordered.

ADDITIONAL COSPONSORS OF A CONCURRENT RESOLUTION

SENATE CONCURRENT RESOLUTION 80

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that, at the next printing, the names of the Senator from Kansas (Mr. DOLE), the Senator from Oklahoma (Mr. HARRIS), the Senator from Rhode Island (Mr. PELL), the Senator from Arizona (Mr. GOLD-

WATER), the Senator from Michigan (Mr. GRIFFIN), the Senator from California (Mr. CRANSTON), the Senator from South Carolina (Mr. THURMOND), the Senator from Virginia (Mr. BYRD), the Senator from Texas (Mr. YARBOROUGH), and the Senator from Rhode Island (Mr. PASTORE) be added as cosponsors of Senate Concurrent Resolution 80, to establish a joint committee to investigate the treatment of prisoners of war in Vietnam.

The PRESIDING OFFICER (Mr. BELLMON). Without objection, it is so ordered.

FAMILY ASSISTANCE ACT OF 1970—AMENDMENT

AMENDMENT NO. 841

Mr. RIBICOFF. Mr. President, I submit an amendment intended to be proposed by me to H.R. 16311, the proposed family assistance plan.

The amendment authorizes a series of pretests and evaluations of the major reform provisions in the pending welfare bill. The Secretary of Health, Education, and Welfare is directed to begin these tests immediately upon enactment of H.R. 16311, in the period of time remaining before full national implementation is scheduled. Three locations in various sections of the country would be selected as representative areas for the test programs.

The purpose of this amendment is to explore and evaluate family assistance as an operating program rather than an untried theory.

Mr. President, I have been increasingly concerned over the difficulties encountered by social legislation enacted in Congress. Laws that have been approved in legislative Chambers, and acclaimed as social milestones, have not passed muster in the field. The bureaucratic tangles and massive cost overruns of many of these measures have come as a profound shock to Congress and the country.

Too many social programs have been designed to perfection in social science laboratories only to fall short of expectation when put into effect.

The tendency has been to seek answers in position papers and other academic exercises. But, no social scientist, no administrator and no legislator can solve complex social problems on a piece of paper. People do not always react in accordance with predictions or pet theories.

In its past efforts to study and enact major pieces of social legislation, Congress has carefully reviewed the great questions of equity, Federal-State responsibility, cost estimates and the like. But, we have fallen short in giving enough attention to the equally great question of writing social programs that actually work in practice.

Traditionally, the failures of legislative concept and program administration are reviewed by Congress in the exercise of its legislative oversight function. But, such review is often sporadic and cursory. Administrative errors and legislative loopholes remain untouched for far too long.

Congress must take on a greater responsibility to insure that new programs are based on the best information attainable. This information can only be gained by experience. With the assistance of more practical information, these programs can be initiated on a sounder footing.

Five years ago, Congress enacted the historic medicare and medicaid laws. Today, these programs are beset by abuse and poor administration. After 3½ years of operation, Under Secretary Veneman has stated they are still in a shakedown phase. Only now, at the urging of the Senate Finance Committee, are steps being taken to correct the worst of these problems.

Similar administrative and conceptual difficulties have plagued the model cities program and the series of antipoverty and education bills passed several years ago.

These programs have not failed. But, their success has been short of what was predicted. Many social innovations have caused disillusionment because of these shortcomings.

Congress enacted these programs in a vacuum. No administrative experience or tryout preceded their full national implementation. As a result, problems unforeseen in the White House, Cabinet Room, or at legislative hearings have brought doubts about many programs.

Similar problems may plague the family assistance plan. H.R. 16311, now under review in the Senate Finance Committee, would drastically change our present system of public assistance. These changes include increased payments to families now on welfare as well as higher benefits to the aged, blind, and disabled. More importantly, some 12 million new Americans in families heretofore ineligible for Federal welfare would be entitled to assistance.

These additional millions of Americans coupled with new eligibility criteria, increased staffing requirements, and an expanded administrative role for the Federal Government, will all add their weight to the burdens of effective administration.

Yet, this program, if passed, will begin on a national scale, with little or no practical information available. How many of the newly eligible families will participate? How much assistance will they be entitled to? What new administrative plans must be activated to handle more welfare recipients? How will other social services be delivered?

Mr. President, H.R. 16311 is a major step in the direction of progressive welfare reform. But, the seeds of success or failure of new social programs are not found in the mere words of new statutory language. Innovation alone does not guarantee success, nor do good intentions insure good programs.

Very simply, my amendment would provide the means to answer the questions and meet the problems which arise only after a program is in operation. In this manner, it could foresee, and perhaps forestall, many of the innumerable difficulties which must, by nature, face any marked change in social policy.

Before welfare reform is undertaken nationwide, this amendment would provide the means to test its provisions. The amendment is not designed to delay welfare reform. It has become apparent that national implementation of any welfare legislation passed in the 91st Congress will not take place until 1972. Thus, the administration would have a full year to undertake the pretest programs and evaluations authorized by this amendment. The information so gained could be put to use as the full program goes into effect.

In essence, my amendment would authorize three pretests of the family assistance plan during calendar year 1971. The precise location of these tests would be left to the discretion of the Secretary. The design of the amendment, however, emphasizes that these tests should be in locations representative of as many variables in geography, living patterns, population, and income as possible. The test jurisdictions could be as large as a single State or as small as a single community.

The most radical change proposed in H.R. 16311 is the provision of Federal assistance to the working poor. Therefore, my amendment would stress that the tests and evaluations authorized would concentrate on the administration of this segment of the bill. Nevertheless, the Secretary will be authorized to test the full family assistance plan in at least one location.

These pretests would authorize the full implementation of welfare reform legislation including payment of benefits to all eligible persons within the test jurisdiction.

The amendment would also direct the Secretary to undertake an exhaustive and comprehensive evaluation of these test programs. Careful consideration must be given to all administrative details and a study made of how to improve the implementation of the legislation.

Equally important, the amendment directs the Secretary to review and evaluate the programs already operating in six States which provide financial assistance to the working poor. These States are New York, New Jersey, Pennsylvania, Illinois, Massachusetts, and Rhode Island. It is essential that we learn from those who have tried aid to working poor programs before us. All wisdom does not reside in Washington—or in the theories of Washington's consultants. Those things which have worked successfully at the State level should be incorporated into the Federal program. New York State, for instance, has administered such a program for almost 20 years. What can we learn from these existing programs about participation and attrition rates, income and employment improvement, and administrative details? A careful evaluation of these experiences will provide much useful information to assist the proposed Federal program. Justice Brandeis once wrote that States could be useful social laboratories for the Nation as a whole. Let us take advantage of the knowledge and experience gained in these States.

The amendment authorizes $15 million for the establishment of three pretests and the review and evaluation of existing State programs assisting the working poor. An expenditure of this nature will be a sound investment for a better welfare program.

The ACTING PRESIDENT pro tempore. The amendment will be received

and printed, and will be appropriately referred.

The amendment (No. 841) was referred to the Committee on Finance.

SOCIAL SECURITY AMENDMENTS OF 1970—AMENDMENT

AMENDMENT NO. 842

Mr. PERCY. I am today submitting an amendment to the House-passed Social Security Amendments of 1970 (H.R. 17550). I ask unanimous consent for the printing in the RECORD of the amendment which I submit, following my remarks, in order that my colleagues may study it.

Briefly, I propose to amend the Social Security Act so as to provide that a child dependent upon, but unadopted by, his grandparents with whom he is living, may receive the same benefits as if he were adopted.

Recently, I became aware of the fact that due to a provision in the social security law some children who are dependent on their grandparents cannot obtain benefits based on their grandparents' earnings. Under present law, a grandchild must be adopted by his grandparents before he qualifies for a child's social security benefits. This is most unfortunate, as there are cases in which the grandparents, for valid reasons, are either unable to or do not wish to adopt the child, yet still maintain a quasi-parental relationship.

The purpose of social security is to provide the family with a continuing source of income when the family income stops because of the death, retirement, or disability of a worker. Following this, social security benefits are paid to children whose parents have died, retired, or become disabled on the theory that children are generally dependent on their parents and suffer a loss of support when the parents' income stops. However, if that "parent" is a grandparent the child is made to suffer by denying him a social security benefit. Benefits are extended to grandchildren only when they are legally adopted.

This distinction which prohibits the unadopted child living with and supported by his grandparents from receiving the same benefits he would receive if he were adopted is grossly unfair. A child dependent on his grandparents is as deserving of social security benefits as is a child who is dependent on his parents. Perhaps even more deserving as grandparents very possibly would have less income. The payment of these benefits should be based on the realities of the situation.

Therefore, I am introducing today legislation to permit the payment of social security benefits to the dependent grandchildren of disabled, retired, or deceased workers when it can be shown that the child is actually dependent for support upon the grandparents.

My amendment would redefine the term "child" so that benefits would be provided for a grandchild if, at the time the grandparent died or became entitled to benefits, he had been living with the grandparents at least 1 full year—except in the case of death or disability of the grandparent within the same year as the loss of support from the parents. In addition, it would have to be shown that the grandparents actually furnished at least one-half of the child's support during that time.

Adoption of the measure which I propose would correct an anomaly in the social security program. It would make actual dependency the criterion for paying benefits to a grandchild.

Although this is not a major change when measured in terms of the number of people affected, it is nonetheless a major change when measured by the effect it will have on the incomes of those individuals who will qualify for benefits. Moreover, the social security actuaries inform me that because only a relatively few people could be expected to qualify for benefits, adoption of the proposal would have no significant effect on the total cost of the social security program.

OTHER SOCIAL SECURITY PROPOSALS

On May 21 of this year, the House of Representatives incorporated into H.R. 17550 several proposals which I recommended over a year ago. Specifically, it adopted my proposals to provide full social security benefits for widows age 65 and over; and to protect social security recipients from the combined forces of inflation and politics by including a provision to grant automatic adjustment of social security benefits to correspond with changes in the cost of living. I am delighted with the House's acceptance of these proposals, and I hope the Senate will retain them.

The House also voted to raise the earnings limitation on benefits from $1,680 to $2,000, but I hope the Senate will go further by accepting my proposal to increase this limitation to $2,400 immediately, and to eliminate it entirely over a period of 7 years.

It is not difficult to understand the extensive opposition to the present level of social security earnings limitation. Americans who have invested in social security through all of their working years reach age 65 only to discover that the traditional value America places on industry and productive labor seems to be penalized as soon as a man reaches age 65. At the present time, a beneficiary who earns more than $1,680 a year receives a reduced social security benefit. I believe that there is no more basic a right than the right to work, and therefore it is wrong to penalize people who want to work and to keep from them social security benefits toward which they have contributed for years. It is a scandal to penalize persons who need to work to augment meager incomes. My proposal to increase this limitation immediately to $2,400, and to eliminate it entirely after 7 years, would not only alleviate the financial pressures on the retired; it would also reassure them that our Nation encourages and values the continued productive participation of its older citizens.

To my regret, two of the proposals I submitted a year ago were not included in the House-passed bill: S. 1596, to provide a $30 minimum benefit for each dependent; and S. 1597, to partially refund payroll taxes for low-income workers.

Social security protects not only the retired. It is also the principal source of income for many families suffering the tragic loss of a wage earner. The benefit formula for surviving dependents is designed to take into account both the earnings record of the worker and the size of his surviving family. In most cases the balance provides an equitable replacement of income for the stricken family. But because of the fixed upper limit imposed by the family maximum, this is not true for the very large family. The costs of raising a family of four and a family of eight just are not the same, and under the existing formula large families do not receive any additional benefits to compensate for their size. I propose a simple formula through which this severe problem for a large family might be resolved. My bill would establish a minimum dependent benefit of $30 a month to reflect the added expenses which large families must incur to achieve the same living standards as smaller families.

The steady rise of social security benefits has been accompained by a steady increase in both the taxable wage base and the payroll tax. While this process imposes an important fiscal discipline on the system, it has over the course of time accentuated the regressive aspects of the payroll tax. We have, as a Nation, committed ourselves to the elimination of poverty, yet the payroll tax annually consumes $1.5 billion of the incomes of those families whose incomes fall below the poverty line. For millions of low-income families, social security is an ever-present tax burden with benefits a far distant reality. A country committed to the principle of progressive taxation finds that the social security payroll tax is increasingly regressive because the poor pay proportionately higher percentages of their incomes. For, as income levels rise, relatively fewer and fewer Americans are being taxed on all of their wages.

It is an accepted principle of the income tax system that income alone does not determine a man's ability to pay. This principle is implemented through the mechanism of deductions in our income tax code. In the design of the social security system we seem to have all but reversed this principle. The question of the structure and incidence of the payroll tax is one of the most basic issues that must be considered in a comprehensive review of public policy with regard to retirement income. I do not propose here to sidestep such a review but one fact is clear: The collection of $1.5 billion a year from families whose incomes fall below the poverty line is at odds with national policies directed toward the effective elimination of poverty.

While it would not be in the best interests of the poor themselves to exempt them totally from contributory participation in their future retirement incomes, I do believe that we should seriously consider the possibility that in the lowest income groups the payroll tax might be partially refunded. My bill would establish a formula by which 90 percent of the payroll tax paid by workers in the lowest income groups would be refunded.

The formula takes into account the size of the family, as well as the family income. Single persons with incomes

under $2,225 per year would be eligible for a 90-percent refund. A couple with income less than $2,850 would be eligible for a refund, while a couple with two children could earn as much as $4,100 and still be eligible for a 90-percent social security tax refund.

Because the payroll tax is inequitable, the income tax law should be amended to provide a partial refund of social security taxes. These refunds would accrue almost entirely to households classified as living in poverty. While I do not claim that this formula is perfect, I do believe this is an important concept which should be incorporated into our social security laws, and, therefore, offered this bill as a means whereby the Congress can consider and discuss its merits.

Certainly, when the Nation is considering the feasibility of a negative income tax a more preferable step would be to first eliminate oppressive Federal taxation of the poor.

Mr. President, the legislation I have introduced cannot take care of all of the shortcomings of the social security program. They are, however, matters which have often been brought to my attention by my constituents, and I believe they deserve careful consideration by the Congress. Until some of these shortcomings in our social security law are corrected, social security will not adequately protect those citizens it was meant to protect.

Within the ranks of the elderly is to be found the experience and expertise which built our Nation and created the highest standard of living in the world. We would be an exceedingly ungrateful people if we did not allow those in our society who helped shape our Nation to also share in the fruits of that abundance.

The PRESIDING OFFICER (Mr. CASE). The amendment will be received and printed and will be appropriately referred; and, without objection, the amendment will be printed in the RECORD.

The amendment (No. 842) was referred to the Committee on Finance, as follows:

AMENDMENT NO. 842

On page 57, line 13, insert "AND CERTAIN ADOPTIONS OF A CHILD BY HIS GRANDPARENT" immediately after "BENEFICIARIES".

On page 58, after line 22, insert the following:

"(c)(1) The first sentence of section 216(e) of the Social Security Act is amended—

"(A) by striking out 'and' at the end of clause (1) thereof; and

"(B) by inserting immediately before the period at the end thereof the following: ', and (3) a person who is the son or daughter of the child of an individual or the son or daughter of the child of the spouse of an individual, but only if (A) such person was living in such individual's household and receiving at least one-half of his support from such individual, at the time application for child's insurance benefits was filed on behalf of such person as the child of such individual, or at the time such individual died, and (B) such person began living in such individual's household before such person attained age 18'.

"(2) Section 202(d)(8)(E)(i)(I) of such Act (as amended by subsection (a) of this section) is further amended by adding immediately after 'child-placement agency,' the following: 'or in an adoption which did not take place under the supervision of a public or private child-placement agency if the child is the son or daughter of such individual's child or the son or daughter of the child of such individual's spouse and the child was living in such individual's household at the time application for child's insurance benefits was filed on behalf of such child,'

"(3) Section 202(d)(9) of such Act is amended—

"(A) by striking out the period at the end thereof and inserting in lieu of such period ', or '; and

"(B) by adding after and below paragraph (B) thereof the following new paragraph:

"'(C) was legally adopted by such individual—

"'(i) in an adoption which took place under the supervision of a public or private child-placement agency, or in an adoption which did not take place under the supervision of a public or private child-placement agency if the child is the son or daughter of such individual's child or the son or daughter of the child of such individual's spouse and the child was living in such individual's household at the time application for child's insurance benefits was filed on behalf of such child,

"'(ii) in an adoption decreed by a court of competent jurisdiction within the United States,

"'(iii) on a date immediately preceding which such individual had continuously resided for not less than one year within the United States, and

"'(iv) prior to the date such child attained age 18.'

"(4) Section 202(d) of such Act is further amended by adding at the end thereof the following new paragraph:

"'(10) A child who is a child of an individual under clause (3) of the first sentence of section 216(e) and is not a child of such individual under clause (1) or (2) of such first sentence shall be deemed to be dependent on such individual at the time specified in subparagraph (1)(C) of this subsection unless at the time specified in clause (3) of such first sentence such child was receiving regular contributions from—

"'(A) his natural or adopting parent, or his stepparent, or

"'(B) a public or private welfare organization which had placed such child in such individual's household under a foster-care program.'

"(5) The first sentence of section 203(c) of such Act is amended—

"(A) by striking out the period at the end thereof and inserting in lieu of such period '; or'; and

"(B) by adding after and below clause (4) thereof the following new clause:

"'(5) in which such individual, if a child who is entitled to child's insurance benefits on the basis of the wages and self-employment income of a person (but would not be so entitled except for application of clause (3) of the first sentence of section 216(e)), is not in the case of such person or the spouse of such person, except that the provisions of this clause shall not apply if such person has died.'

"(6) The amendments made by the preceding provisions of this subsection shall apply with respect to monthly benefits payable under title II of the Social Security Act for months after the second month following the month in which this Act is enacted, but only on the basis of applications therefor filed in or after the month in which this Act is enacted."

AUTHORIZATION OF APPROPRIATIONS FOR MILITARY PROCUREMENT AND OTHER PURPOSES—AMENDMENTS

AMENDMENT NO. 843

Mr. McCARTHY. Mr. President, on behalf of myself and the Senator from Ohio (Mr. YOUNG) I submit an amendment to the pending bill (H.R. 17123) to authorize appropriations during the fiscal year 1971 for procurement of aircraft, missiles, naval vessels, and tracked combat vehicles, and other weapons, and research, development, test, and evaluation for the Armed Forces, and to prescribe the authorized personnel strength of the Selected Reserve of each Reserve component of the Armed Forces, and for other purposes, and ask that it be printed. I intend to call up the amendment for consideration by the Senate tomorrow

The PRESIDING OFFICER (Mr. BELLMON). The amendment will be received and printed, and will lie on the table.

AMENDMENT NO. 844

Mr. HATFIELD. Mr. President, I submit an amendment to H.R. 17123 cosponsored by Senators GOLDWATER, CRANSTON, SCOTT, McGOVERN, PACKWOOD, YOUNG of Ohio, DOLE, STEVENS, HARTKE, SCHWEIKER, GOODELL, MANSFIELD, CHURCH, BAKER, PROUTY, PROXMIRE, PERCY, and YARBOROUGH. The amendment would implement the recommendations of the President's Commisison on an All-Volunteer Armed Force.

The PRESIDING OFFICER (Mr. WILLIAMS of New Jersey). The amendment will be received and printed and will lie on the table.

EXTENSION OF THE AGRICULTURAL TRADE AND ASSISTANCE ACT OF 1954, AS AMENDED—AMENDMENTS

AMENDMENT NO. 845

AMENDMENT TO AGRICULTURAL ACT TO MAKE FEED GRAIN AND WHEAT ADVANCE PAYMENTS MANDATORY

Mr. MONDALE. Mr. President, I am today submitting, with the Senator from North Dakota (Mr. BURDICK), an amendment to the Agriculture Act of 1970 requiring the Secretary of Agriculture to make advance payments to producers under the feed grain and wheat programs.

For 7 years advance payments have been made to feed grain producers and for several years advance payments were made to wheat producers when payments were made for additional voluntary diversion. For budgetary consideration, however, they were eliminated this year.

Under the advance payment program, which was tailored to farmers' needs, producers received half of their diversion payments each year immediately after agreeing to divert a specified acreage. These funds were received at planting time and helped pay the spring seed, fuel, and fertilizer bills. Advance payments of a part of the wheat certification have not been made in past years but there is no good reason why they should not be made in the future.

I am convinced that the decision announced by the Secretary of Agriculture to eliminate advance payments to farmers participating in the 1970 program is wrong for a number of reasons:

First, halting such payments is not a cost savings to the Government, but simply a shift in funding to another fiscal year; and

Second, it will place a new financial burden on our farmers who must borrow money at today's high interest rates in

order to finance crop planting and operating costs.

In 1969, Minnesota producers received $31 million in advance feed grain payments which were immediately used in paying spring planting bills. This year in order to accommodate a budget shift, grain producers were required to wait until July and August for their feed grain payments. This was an entirely unnecessary hardship for them and for the small businessmen from whom they buy their supplies.

Minnesota producers are diverting an estimated 2.7 million acres from feed grain production this year, about 10 percent fewer than last year, and are receiving about $130 million in payments. Fewer feed grain acres were diverted in Minnesota and nationally this year, than last, in part because advance payments were not made.

The amendment which Senator BURDICK and I are offering requires the Secretary of Agriculture to make not less than 50 percent of the feed grain and wheat program payments within 30 days after producers sign up under the annual programs.

Our amendment would result in about 3 months earlier payments of some $400 to $450 million under the wheat program and $700 to $800 million under the feed grain program.

Under our amendment, Minnesota farmers would receive some $70 to $80 million from the two programs about 3 months earlier than otherwise each year, at no additional cost to the Government except of the interest cost on the money advanced.

The interest cost to the Government in making these advance payments is far less than the cost to farmers if the same amount of money were borrowed by 1.5 million individual producers and small businessmen.

Even more important, many of the smallest producers are unable to obtain credit. The advance payments make it possible for them to buy supplies in the spring months when otherwise they would be unable to buy all the supplies at planting time that are needed for efficient production.

Mr. President, I hope that the Committee on Agriculture and Forestry will take favorable action on this important amendment during their deliberations on the House-passed Agricultural Act.

The PRESIDING OFFICER (Mr. WILLIAMS of New Jersey). The amendment will be received and printed, and will be appropriately referred.

The amendment (No. 845) was referred to the Committee on Agriculture and Forestry.

ADDITIONAL COSPONSORS OF AMENDMENTS

AMENDMENT NO. 765 TO H.R. 17123

Mr. HATFIELD. Mr. President, I ask unanimous consent that, at the next printing, the names of the Senator from Vermont (Mr. PROUTY), the Senator from Illinois (Mr. PERCY), and the Senator from Texas (Mr. YARBOROUGH) be added as cosponsors of amendment No. 765 to H.R. 17123, the Military Procurement Authorization Act.

The ACTING PRESIDENT pro tempore (Mr. ALLEN). Without objection, it is so ordered.

AMENDMENT NO. 774 TO S. 3619

Mr. BYRD of West Virginia. Mr. President, on behalf of the Senator from Texas (Mr. YARBOROUGH), I ask unanimous consent that, at the next printing, the name of the junior Senator from Minnesota (Mr. MONDALE) be added as a cosponsor of amendment No. 774 to S. 3619, to create within the Office of the President an Office of Disaster Assistance, which would authorize the Small Business Administration to make loans to disaster victims to prevent the dispossession or eviction of any person from his residence as a result of the foreclosure of any mortgage or lien, cancellation of any contract of sale, or termination of any lease, oral or written, of the property which is such person's residence.

The PRESIDING OFFICER (Mr. WILLIAMS of New Jersey). Without objection, it is so ordered.

AMENDMENT 838 TO H.R. 17123

Mr. GRIFFIN. Mr. President, on behalf of the Senator from New York (Mr. GOODELL) I ask unanimous consent that, at the next printing, the name of the Senator from Ohio (Mr. YOUNG) and the Senator from Michigan (Mr. HART) be added as cosponsors of amendment No. 838 to H.R. 17123, the military procurement authorization bill.

The PRESIDING OFFICER (Mr. BELLMON). Without objection, it is so ordered.

ENROLLED BILL PRESENTED

The Secretary of the Senate reported that on today, August 18, 1970, he presented to the President of the United States the enrolled bill (S. 3547) to authorize the Secretary of the Interior to construct, operate, and maintain the Narrows unit, Missouri River Basin project, Colorado, and for other purposes.

NOTICE OF HEARING ON S. 3201, TO AMEND FEDERAL TRADE COMMISSION ACT

Mr. EASTLAND. Mr. President, on behalf of the Committee on the Judiciary, I desire to give notice of public hearings to be held on August 27 and 28, 1970, by the full committee on S. 3201, a bill to amend the Federal Trade Commission Act to provide increased protection for consumers and for other purposes, which was re-referred to the Committee on the Judiciary from the Committee on Commerce with instructions to report back to the Senate not later than September 14, 1970.

Persons desiring to appear and give testimony with respect to this proposed legislation should notify the staff of the committee as soon as possible.

The hearings will commence at 10 a.m. on August 27 and 28 in the main Judiciary Committee room, 2228 New Senate Office Building.

ADDITIONAL STATEMENTS OF SENATORS

VICE ADM. H. G. RICKOVER HONORED BY STEUBEN SOCIETY OF AMERICA

Mr. HRUSKA. Mr. President, earlier this year Vice Adm. H. G. Rickover, pioneer in nuclear research and father of the nuclear submarine, was honored by the Steuben Society of America with its fifth Steuben Award memoralizing the highest type of public service.

The Steuben Society was founded to carry on the principles of Gen. Friedrich Wilhelm von Steuben, a native of Prussia who came to our shores in 1777 to offer his heart and hand in assistance in our struggle for independence.

As a recipient of the Steuben Society Award, Admiral Rickover joins the illustrious company of the late President Herbert Hoover, the late General of the Army Douglas MacArthur, Mr. J. Edgar Hoover, Director of the Federal Bureau of Investigation, and the late, beloved Senator Everett McKinley Dirksen.

In responding to this high honor by the Steuben Society, Admiral Rickover had some cogent thoughts for his audience. These remarks, having recently come to my attention, are worthy of consideration by the Senate.

Asked to offer his views on the Nation's involvement in Cambodia, Admiral Rickover responded with an answer which evoked considerable applause, as did much of his presentation. Pointing out that so much depends upon the credibility we place in our President, he said:

> We have had good Presidents and bad Presidents, but never a President who was disloyal to the United States.

Admiral Rickover went on to say that during World War II there were many who expressed bitter feelings toward President Franklin D. Roosevelt and called him a traitor to the United States. He added that no one was excoriated more than President Lincoln during the Civil War. Commenting that President Nixon inherited a difficult situation in Vietnam and noting that there has been no such commotion in the country since Civil War days, he declared:

> Mr. Nixon is President of all the people and he is trying to do his best.

Admiral Rickover concluded with a personal reminiscence. Noting that in 1958 he had accompanied the then Vice President Nixon to Russia as scientific adviser, he said he found Mr. Nixon to be a man of deep humanity, great intelligence, and one who carried the interest of the American people uppermost in his heart.

He said his conclusion was that the President has all the facts he needs when he makes decisions and that we should support him.

Mr. President, these are wise words from a wise and devoted public servant. They are the words of a lifelong military man dedicated to his country and his Commander in Chief. They are words which all of us would do well to ponder and heed in the days ahead.

TERMINATION OF NAVAL BOMBARDMENT OF CULEBRA ISLAND

Mr. CASE. Mr. President, I am glad to join the Senator from New York (Mr. GOODELL) in cosponsoring the amendment to H.R. 17123 which would end the naval bombardment of Culebra Island. I urge the adoption of the amendment.

Although this island is tiny and its inhabitants few in number, the Culebrans are American citizens and entitled to protection and rights which are not abridged by distance or size of population.

Since Culebra is a part of the Atlantic Fleet's principal gunnery range, it can only be a matter of time before an inaccurate shell adds to the four serious injuries which have been reported on Culebra. Just this year the authoritative Armed Forces Journal documented instances of bombs dropping as close as 400 yards to a dwelling, and in May three mortar shells were reported landing within 200 yards of children playing on the beach.

Alternatives to the use of an inhabited island for target practice certainly must exist, and should be thoroughly explored. As only one example, I understand that the Governor of Puerto Rico, Hon. Luis Ferre, has suggested the Navy's use of four uninhabited islands which are available in the same area.

I strongly urge that the Senate Committee on Armed Services, in its consideration of the Navy's proposal to double its land holdings on Culebra, uphold the rights of its residents and act to end the jeopardy in which they live.

FREIGHT RATES, PASSENGER SERVICE, UNION PACIFIC AND THE ICC

Mr. CHURCH. Mr. President, I am distressed by the recent action of the Interstate Commerce Commission in making permanent its interim across-the-board percentage freight rate increase granted on November 17 of last year.

Once again, the Commission has shown an insufficient regard for the interests of the consuming public, small businessmen and farmers of Idaho.

According to the ICC's own accounting procedures, the Union Pacific, in the first half of 1970, showed a $5.4 million increase in profits over the first half of 1969. Even in the face of this increased revenue picture, the ICC has granted this most recent freight rate increase. For years the railroads, without the ICC so much as raising an eyebrow, have imposed discriminatory freight rates on Idaho farmers. The rate schedules have always favored the Midwest over the intermountain States. Rather than correcting this inequity, the ICC compounds it by making premanent the interim 6-percent increase granted last year.

But freight rates are by no means the only problem. For years, I have been fighting a rearguard action to keep railroad passenger service alive in my State. Once again, the Union Pacific Railroad is pressing to discontinue passenger trains 35 and 36 between Salt Lake City, Utah, and Butte, Mont., via Idaho points. The UP maintains the losses sustained in the operation of these trains justify a discontinuance of the service to the public. Without regard for its public service responsibility, the UP has moved to halt this last remaining North-South passenger service. Twice before, I have presented testimony to the ICC in opposition to this move. But I am left to wonder whether the ICC response on this matter will be any more sensitive to the public need than the granting of this latest freight rate increase.

The ICC has allowed passenger service to deteriorate and disappear; it has allowed discriminatory rate schedules to go uncorrected; and it has shown no initiative in solving the chronic shortage of freight cars throughout the Western States.

In view of this dismal record, I hope the ICC will awaken at last to its public trust and permit no further passenger train discontinuances. However, if the past is any indication of what we may expect, the chances are small. The ICC has become so closely identified with railroad management, so vacillating in the performance of its duty to regulate on the peoples' behalf, that I must agree with the proposal recently made by the Senator from Montana (Mr. MANSFIELD). He said the time has come to abolish the Interstate Commerce Commission and turn its powers over to the Department of Transportation in the expectation that the Department would better protect the public. Certainly the Department of Transportation could do no worse. Hopefully, such a change would bring improvement.

Mr. President, after preparing these remarks for delivery today, I had an opportunity to read the August 14 issue of the National Association of Wheatgrowers' weekly newsletter. I was shocked to note that another freight rate increase request is in the works. This time the railroads will be back for a 15-percent increase.

If this report is accurate, this is the fifth rate hike requested by the railroads since 1967. If approved, it would amount to an increase of more than 30 percent in freight rates in the last 3 years. I oppose this latest request as I have such requests in the past.

I ask unanimous consent that the statement contained in the article be printed in the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

REMARKS FROM THE WHEATGROWERS' WEEKLY NEWSLETTER

Western and Eastern railroads are scheduling a general freight rate increase in the neighborhood of 15%. The railroads' request will more than likely be filed with the Interstate Commerce Commission by September 1, and it could become effective within 30 days. The increase is reportedly aimed at generating revenue to cover more than the "basic necessities."

The proposed rate hike will be the fifth requested by railroads since mid-1967, and, if approved by the ICC, it will amount to an increase in freight rates of more than 30% in the last three years.

AMENDMENT TO END THE WAR: SAFETY OF TROOPS DURING WITHDRAWAL

Mr. HATFIELD. Mr. President, I offer today the third in a series of articles on various aspects of American involvement in Southeast Asia. The article, entitled "The Safety of American Troops While Withdrawing from South Vietnam," was written by Arthur L. Karp and Comdr. G. E. Everly, U.S. Navy retired, for the Congress of Young Professionals for Political Action. The credentials of these individuals for commenting on the subject of troop withdrawals are most impressive and they are found in appendix B at the end of the article. Mr. Karp's and Commander Everly's research delves into methods of troop withdrawals from South Vietnam and sets forth the possible tactics that could be carried out following adoption of Senate Amendment No. 609 to H.R. 17123 in specific. Their conclusion is clear:

In summary, if withdrawal is viewed in purely military terms, a systematic, planned military withdrawal is the safest way to disengage. Any other method, however attractive on the basis of political considerations, will impose greater military risks and a number of casualties that would depend on South Vietnamese performance. Once fully committed to other than a systematic military withdrawal, the U.S. will gradually lose control of the situation. A failure on the part of the South Vietnamese forces could confront the U.S. with the choice between very high casualties or re-entry into the country with a rescue force. A straightforward military withdrawal runs no such risks.

As the matter of the safety of American troops is of the utmost concern to all of us in the forthcoming debate on American involvement in Southeast Asia, I ask unanimous consent that "The Safety of American Troops While Withdrawing from South Vietnam" be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE SAFETY OF AMERICAN TROOPS WHILE WITHDRAWING FROM SOUTH VIETNAM

(By Arthur L. Karp and Comdr. G. E. Everly, U.S. Navy, Retired)

The proposed amendment to end the war, sponsored by Senators Hatfield, McGovern and others, has given rise to concern about the vulnerability of our forces during a disengagement from South Vietnam in accord with the amendment. While much of the concern is undoubtedly genuine, much, when expressed by those familiar with military operations, must be regarded as false argument raised for other than military reasons.

To understand this, one must examine the withdrawal rate apart from domestic factors in the U.S. or the residual political situation in South Vietnam. That is, assume the U.S. is solely interested in removing its troops as safely as possible. If viewed strictly in such terms, the systematic *military* withdrawal called for by the McGovern Amendment is by all odds the safest method. In fact, in the absence of a cease fire agreement, a conventional military withdrawal, in which combat and support echelons are withdrawn in the normal sequence as the forces conduct an orderly fall-back centered on a final port of embarkation, is the only sound military method. Such a maneuver is a standard military operation and would be facilitated

by favorable conditions present in South Vietnam, as will be discussed shortly.

Stated in a somewhat overly simplified form, we have three basic options as to the method of our disengagement (again assuming no negotiated cease fire):

1. A standard military withdrawal as called for by the McGovern Amendment.

2. Withdrawal of all combat troops, within a year or two, leaving only support troops (probably between 50,000 and 150,000 men) to supply the South Vietnamese with those services which have brought about the current relatively favorable military balance, and which the ARVN cannot supply itself. These services include such central functions as close air support (by helos and tactical air), artillery support, and airlift. Under this option, the remaining U.S. troops must depend on ARVN combat units for protection against NVA/VC harassment and assaults. Moreover, they would have to stay in South Vietnam, in a state of precarious dependence, for however many years the ARVN took to develop the required skills and experience.

3. Withdrawal of U.S. combat troops down to the minimum level required to protect the U.S. support forces which remain to service the South Vietnamese. Under this option, we would probably have between 150,000 and 250,000 troops in Vietnam for many years to come.

It is difficult to judge whether the current Administration policy is option 2 or 3. Public statements have been vague on the matter of U.S. protective forces remaining with an unspecified number of support forces. In either case, however, the possibilities for disaster are quite high. At best, if ARVN continues to improve and functions moderately efficiently in the years to come, enemy harassment-type attacks could easily keep the U.S. casualty rate above 100 per week for as long as we keep troops there. At worst, if ARVN fails, the U.S. forces will be in a very precarious situation. The vulnerability of the remaining U.S. support and protective troops should be clear when one realizes that in order to perform the previously stated services, they must be distributed among a number of locations, in relatively small units. It is not too difficult to envisage a situation in which the President would be faced with an unhappy choice between a crash evacuation (and a large number of casualties), reintroducing large numbers of U.S. combat units, or employing advanced (read nuclear) weapons.

Thus, if our disengagement is protracted over a number of years, as would be the case under options 2 and 3 (options generated by considerations of a nonmilitary nature such as the composition of the regime in Saigon), we can expect continued, substantial casualties, and conceivably even a military disaster. However, a purely military withdrawal, as demanded by the McGovern Amendment, could take place with very low risk. The principal reasons supporting this assertion follow.

1. The war in South Vietnam is not such that large numbers of opposing forces are locked in fixed positions. Therefore, the initial break-off of contact will not be difficult. Furthermore, U.S. forces can withdraw from their positions without fighting a rearguard action against overwhelming enemy forces, as they had to do in Korea when the Chinese crossed the Yalu. In Vietnam the U.S. force has a degree of mobility unsurpassed in military history. This mobility makes the initial break-off of contact a routine matter.

2. The fall-back and withdrawal could take place with full tactical air support and complete air superiority. The air support would not need to diminish as the force perimeters become small in the final stages. Our heavy bombers are based outside of South Vietnam, carrier based air is available in large quantity, and if needed during final stages, helicopter gun ships can be supported on some of the LPH's (helicopter assault carriers). For the past two years or more, the North Vietnamese forces have not been able to move as large units in South Vietnam, primarily due to U.S. air power and extremely effective, antipersonnel air-to-ground weapons. This factor would not change during the withdrawal. Air power would be overwhelming to the end. Hence, there is no realistic danger of large scale attacks during withdrawal.

3. The rate of disengagement would be under the full control of the U.S. and could be adjusted to allow for orderly re-embarking of whatever equipment and supplies we wanted to remove. Given the full year provided for in the proposed amendment, no major disruption of shipping would be necessary to obtain lift bottoms. The orderly removal of supplies and equipment might require a comparatively long time, but a year would be more than ample.

4. The amendment permits a coordinated fall-back on a final re-embarkation port while maintaining the proper ratio between combat and support forces at all stages of the withdrawal. The success of the operation would not be dependent upon the performance of the South Vietnamese forces. To whatever degree they can and do take over the defense of their country, the operation would, of course be that much simpler. However, their success or failure in taking over the defense would not be a major factor affecting our successful withdrawal.

5. The normal crucial stage of a withdrawal would be the removal of the final echelon of combat troops. In this case, with complete air superiority and floating helicopter platforms, the final stage should present no problem. A 3 brigade covering force of 16,000 men with its artillery could be lifted out by helicopter in only 9 hours.[1] Thus, in this specific situation, there is no crucial final stage.

In summary, if withdrawal is viewed in purely military terms, a systematic, planned military withdrawal is the safest way to disengage. Any other method, however attractive on the basis of political considerations, will impose greater military risks and a number of casualties that would depend on the South Vietnamese performance. Once fully committed to other than a systematic military withdrawal, the U.S. will gradually lose control of the situation. A failure on the part of the South Vietnamese forces could confront the U.S. with the choice between very high casualties or re-entry into the country with a rescue force. A straightforward military withdrawal runs no such risks.

APPENDIX A.—THE U.S. ABILITY TO QUICKLY AND SAFELY WITHDRAW THE COVERING FORCE

This appendix shows that the U.S. can easily and rapidly withdraw the force covering the final withdrawal of U.S. troops from Vietnam. Such an operation can be done in a number of different ways, and the circumstances are also subject to much variation. The mode of withdrawal examined here would be appropriate if hostile action were a problem—otherwise simple dockside embarkation would suffice.

A covering force of 3 Brigades, each with 5 Maneuver Battalions and 1 Artillery Battalion, will be assumed. This force, roughly equivalent to a division, consists of almost 16,000 men and includes 54 howitzers, all to be helolifted from the withdrawal area.

A Separate Infantry Brigade consists of 2196 men in headquarters and support units to which infantry or tank battalions are attached.[1] The majority of the supporting units would be withdrawn before the last day. In particular, the Armored Cavalry Troop, the Aviation Company, the Engineer Company, and the Support Battalion are assumed to be gone. This leaves the Brigade Headquarters and Headquarters Company (287 men) and a Battalion of 105 mm towed howitzers (540 men). In addition, a Separate Brigade Medical Company[2] (125 men) is attached. These remaining support units include 962 men and 18 howitzers. From 3 to 5 maneuver battalions are attached to the headquarters and support units to form a brigade. In this case, the maximum of 5 battalions will be assumed. Since each infantry battalion consists of 849 men,[3] the total strength of the Separate Infantry Brigade is 5197 men.

To lift the whole covering force of 3 brigades, then, requires that 15,591 men and 54 howitzers be helolifted.

The U.S. Navy operates 7 "Iwo Jima" Class LPH's (Amphibious Assault Ships), each of which carries 20–24 CH–46 and 4 CH–53 helicopters and can berth 2090 troops.[4]

It will be assumed that 5 of the 7 are made available for the operation. Further assumptions are a complement of 22 CH–46 and 4 CH–53 helicopters and an average helicopter availability of 75%. This results in 17 CH–46's and 3 CH–53's per LPH or a total of 85 CH–46's and 15 CH–53's for all 5 LPH's. The CH–46's and 5 of the CH–53's would carry troops and 10 CH–53's would carry howitzers and other equipment.

Each CH–46A can carry 17 to 25 troops to a combat radius of 115 miles at 150 miles per hour.[5] For this paper, 21 troops per lift will be assumed. The CH–53A carries 38 combat equipped troops; a later modification, the CH–53D carries 64 in a high density arrangement. In this appendix, 38 troops will be assumed per lift. The CH–53 can also carry a 105 mm howitzer in lieu of troops. The CH–54 radius is given as 125 miles; the cruising speed, 170 miles per hour.

Thus, the helicopters from the 5 LPH's can simultaneously lift 1975 troops and 10 howitzers. For a one-way flight distance of about 50 miles, the round-trip flying time—at the slower CH–46 speed—is about 40 minutes. If 20 minutes is allowed for loading and unloading troops, refueling, etc., the helicopters can lift 1975 troops and 10 howitzers per hour.

Thus, in 9 hours (about 3 hours per brigade) the troop-carrying helicopters could lift out 17,775 men, somewhat more than the 15,591 men in the 3-brigade covering force. Similarly the 19 CH–53 helicopters could, in the same 9 hour period, lift the 54 howitzers with 36 sorties to spare.[6]

Are there spaces aboard the ships for this number of troops? The 5 LPH's carry 10,450 troops. These berths would be filled by 498 of the 662 CH–46 trips made during the nine hours.[7] The remaining trips could be made to LPD's. There are 12 LPD's in the fleet, and each of these LPD's could receive at least 45 landings in 9 hours.[8]

Assuming 7 of the LPD's are available, this

---

[1] Data on the Separate Infantry Brigade from TOE 7–100G of 31 August 1966.

[2] TOE 8–147E, in Army Field Manual FM 101–10–2, dated January 1965.

[3] TOE 7–15G for "Infantry Battalion, Separate Infantry Brigade," dated 31 March 1966.

[4] In this appendix, ship data is from *Jane's Fighting Ships 1969–70*, McGraw-Hill Book Company, New York 1969.

[5] In this appendix, helicopter data is from *Jane's All the World's Aircraft 1969–70*, McGraw-Hill Book Company, New York 1969.

[6] Actual time to withdraw the covering force is from first lift-off to final lift-off of forces from Vietnamese soil. Thus, only 8 hours are required. On the other hand, some allowance should be made for sequencing waves; thus, the 9-hour estimate.

[7] Based on our assumptions 768 CH–46 trips can be made, but only 662 are needed to carry the troops not lifted by CH–53's.

[8] The LPD's have room for only about one operating helicopter at one time, so spacing helicopter arrivals 12 minutes apart, to give time for offloading, allows 5 arrivals per hour on each LPD, or 45 during 9 hours.

means a total of 315 landings could be made—but only 299 are required after the LPH's are filled. Of these 90 could be CH–53's carrying equipment, leaving 45 CH–53 and 164 CH–46 arrivals with troops. This would mean a total troop delivery of

$(45 \times 38) + (164 \times 21) = 1710 + 3444 = 5154$

The total of 5,154 troops on the LPD's plus 10,450 on the LPH's is 15,604; or just about the number to be lifted. And, the 7 LPD's can accommodate more than the 5154 troops—6180 in fact.

Another alternative would be to include the 2 "Paul Revere" class LPA's in the withdrawal fleet. Each of these ships can carry about 1500 troops. More important, each has a helicopter platform, and in 9 hours the two ships could receive 90 flights delivering over 1800 troops.

Other amphibious ships with helicopter platforms are 4 LST's, 4 LKA's, and 26 LSD's.

The above calculation applies to the removal of the final covering force. Other portions of the force would be taken off in the few preceding days. Table 1, which represents an arbitrary but reasonable assignment of ships, shows that a substantial force can be withdrawn in the last stage. The troops would be embarked over the course of a few days by helicopter, landing craft, and particularly in the case of the LST's, directly from the shore.

Note that all the ships are part of the active amphibious force, or the MSTS fleet. No use has been made of reserve fleet shipping (except for 8 MSTS troop ships, possibly), nor of this country's substantial airlift capability.

TABLE 1.—TROOP LIFT FOR AMPHIBIOUS AND MSTS SHIPS ASSIGNED TO THE WITHDRAWAL OPERATION

Type/class	Troop spaces per ship	Number in fleet	Number assigned to withdrawal	Total troop spaces available
LPH/Iwo Jima	2,090	7	5	10,450
LPD/Austin A	930	3	2	1,860

APPENDIX B—THE AUTHORS

Arthur L. Karp is a graduate of M.I.T. (B.S. physics), New Mexico State College (M.S., mathematics), and has studied at the University of California, Berkeley. He has done research at the Naval Ordnance Laboratory, the Hugh Aircraft Corporation, and the White Sands Proving Ground. Since 1956 he has been with the Center for Naval Analyses, where he has directed studies on a number of problems of naval interest. He has also served as systems analyst on the staffs of the Commander Seventh Fleet, Commander Task Force Seventy Seven, Commander-in-Chief of the Atlantic Fleet, and the Commandant of the Marine Corps.

Commander G. E. Everly, USN (Ret.), served on active duty in the U.S. Navy from February 1941 until September 1965. During World War II, Cdr. Everly served on destroyer duty in the North Atlantic and submarine duty in the Pacific. In the post-war years his sea duties included command tours in both the destroyer and submarine forces. Cdr. Everly holds the Silver Star, Presidential Unit Citation, and Navy Letter of Commendation (with combat "V"), and Submarine Combat Insignia (six successful patrols). In 1965, Cdr. Everly joined the professional staff of the Center for Naval Analyses.

A NEWSPAPER DIES

Mr. PROXMIRE. Mr. President, it is a sad day when a newspaper dies. It happened last Saturday in Oshkosh, when The Paper for Central Wisconsin announced that it was suspending daily publication and would become a twice-a-week "shopper."

The Paper was a bright experiment, as bright as its generic name. It was begun in 1967—publishing for the first time on October 9 of that year—by the Miles Kimball Co. Mrs. Alberta Kimball, head of the firm that bears her late husband's name, wanted to do something for her community. She wanted to enliven it and make it live up to its potential as one of the fine places in a wonderful State and a wonderful country in which to live. Mrs. Kimball and her vice president, Ted Leyhe, were copublishers of The Paper.

It was a remarkable newspaper—alive, alert to the problems and assets of its community, and at the same time a tribute to the technology of printing. Twice, 2 years in a row, it was cited by the Inland Press Association for the best typography of any offset daily in the country. Twice, 2 years in a row, its women's editor won the Missouri-Penney award for content and makeup. Its photographers, individually, won many national awards.

But, most important, The Paper for Central Wisconsin was a force for good in its community. It pressed for open housing legislation by the Oshkosh Common Council, and that was adopted. It pressed for retention of the council-manager form of government, and the voters retained it. It pressed for bond issues for a needed second high school, and the voters responded in favor of education when the voters in many other jurisdictions were rejecting school bond referendum questions. It pressed for minimum housing legislation for Oshkosh to preserve it, and that, too, was accomplished.

The Paper was a public-spirited publication, dedicated to the betterment of its hometown. It was what every good newspaper should be—locally oriented.

But the times were not right economically for a new newspaper.

Competition is the life of the newspaper business. It can also be its death, as has been demonstrated in Oshkosh.

Nevertheless, newspapermen everywhere are dedicated to competition—for the advertising dollar, but also for the good of the readers. Competition to tell it first and accurately is the hallmark of a good newspaperman. It was remarkable that a city of 50,000 should have two independent newspapers dedicated to competing for the news.

Both kinds of competition are necessary to make a newspaper successful. The end of The Paper for Central Wisconsin as a 6-days-a-week publication is proof that it could not compete for the advertising dollar. In the other area, however, The Paper did compete, and it competed well. It was a noble experiment by a fine lady—Mrs. Kimball.

It is unfortunate that The Paper should die just as another of Mrs. Kimball's ventures, designed for the betterment of Oshkosh, is coming to fruition—Park Plaza.

Park Plaza is a $15 million shopping center. But it is different. Park Plaza is really an example of urban renewal in the private sector, for the Miles Kimball Co., without governmental help, cleared some 18 acres of blighted area in the heart of downtown Oshkosh and revitalized it. A modern, enclosed mall shopping center is nearing completion. It is bound to stimulate Oshkosh and bring more business to all merchants in the downtown area. If Mrs. Kimball wanted only a personal fortune, she would have built a shopping center on the outskirts of the city; she would not have started a morning newspaper.

One of her ventures designed to help Oshkosh has failed, for which the citizens of Oshkosh will become poorer. May she and Oshkosh be more fortunate with the other.

DEVELOPMENT OF AIR FORCE MANNED BOMBER, B–1

Mr. GOLDWATER. Mr. President, just recently before this distinguished body, the Senator from New Hampshire (Mr. MCINTYRE) provided a most thorough capsulation of how the Armed Services Subcommittee on Research and Development, under his able leadership, reached its conclusion to recommend to the Senate that we proceed with the development of the Air Force's manned bomber, the B–1. Following his astute

presentation, the Senator and I, plus the distinguished Senator from Wisconsin (Mr. PROXMIRE) and the Senator from South Dakota (Mr. MCGOVERN), engaged in a rather comprehensive discussion of the B–1 program. I have had time to review this discussion and I would like to take this opportunity to further clarify several points which I feel are critical to the debate on the B–1 program.

First, you will recall my earlier remarks that the B–1 is designed to operate with the KC–135 tanker. At this point in time, I think this is a premise well known and accepted. What might not be as well appreciated is that as a normal course of action the Air Force continuously conducts studies as to the necessity and feasibility of replacement aircraft, be they tankers, fighters, bombers—whatever. Such studies necessarily involve the generation of cost and performance estimates for new systems in comparison with estimates for continuing or modifying existing systems. It was in this context that the Air Force prepared cost estimates for a replacement tanker. These were feasibility studies, not proposals.

I think it is important to realize that the Air Force employs aerial refueling in nearly every aspect of flying one might consider. Every day fuel is being transferred in the air from Air Force tankers to fighters, bombers, interceptors, transports, and even to helicopters. Not only do they serve as airborne service stations for the Air Force, but they refuel Navy combat aircraft as well. My point here is that the overall requirements for the tanker fleet are based upon much broader considerations than just those of the strategic bomber force. In the future, with due consideration of all pertinent factors, I certainly would imagine that the Air Force may well propose to procure new tanker aircraft as additions to or replacements for the current tanker force. But, I hasten to add that the Air Force has continuously and consistently planned the B–1 on the premise that it would be supported by the KC–135 tanker. The original performance specifications and all subsequent analyses have been worked on that assumption.

Next, I would like to discuss the B–1 strategic and tactical application. Before pursuing this further, let me clarify how the terms are normally used. Strategic air power is often considered synonymous with the use of nuclear weapons. On the other hand, tactical air power seems to imply the use of only conventional weapons. Neither implication is entirely correct. Strategic air operation deals with destroying enemy targets which primarily support their warmaking potential. Normally these are the heavy industries and command and control centers located deep in his homeland. The use of strategic air power was aptly demonstrated by our B–17 and B–24 raids against Germany in World War II. These raids were conducted entirely with conventional ordnance, however, in the future we could use nuclear weapons. Tactical air operations, as it applies to bombers, normally includes interdicting routes of supply and enemy massing areas. The ordnance carried may well be conventional as it is today by the B–52's in Southeast Asia. However, if the military political situation dictated and the President so directed, it could very well be nuclear.

How does all this affect the B–1?

As we all know, the primary purpose of our bomber and missile forces is to underwrite our strategy of nuclear deterrence with the unmistakable capability to inflict unacceptable levels of damage on any potential enemy. This is unequivocally the primary mission of the B–1. Granted that the B–1 will possess significant capabilities to deliver conventional weapons, however, these capabilities are inherent in the B–1 and provided on virtually a cost-free basis. The fact remains that the request for funds to develop the B–1 is based on the need for a manned strategic nuclear bomber for use during the 1980's. The capabilities of the aircraft to perform in either a strategic or tactical mission using conventional weapons are merely an added contribution to our ability to deter that level of warfare.

Now I wish to comment on what at first examination may to some persons look like an unwarranted luxury; that is, the supersonic capability of the B–1. Let me preface my comments on this subject by restating my belief, that trite as it may seem during these trying days of tight money and mounting domestic concerns, we must be certain that the taxpayer is receiving maximum defense for his dollar. However, I think that we, the Congress, may be going a bit far when we attempt to tailor weapon systems for the military to such an extent that we in effect dictate or limit the combat operational tactics. Those who believe that the B–1 should be only a subsonic capable aircraft may not be considering the total impact which speed can have on operational tactics.

I think that it is especially significant that the Air Force has proposed supersonic speed for the B–1 and limited it to high altitude only. This demonstrates to me that they have studied the B–1 speed requirements very thoroughly, as evidenced by their admission of their inability to justify in terms of incremental gain and added cost the requirement for supersonic speed at low altitude. In my opinion, the basic need for a supersonic capability at high altitude can be explained very easily. High speed is a very effective means for reducing the effectiveness of interceptor defenses. More simply, it means that you are within detection range a much lesser period of time and if detected are vulnerable to attack for a shorter period of time. Said another way, a supersonic B–1 permits enemy interceptors fewer attacks, whereas slower aircraft such as the distinguished Senator from South Dakota flew in World War II were subjected to repeated attacks by interceptors and ground to air defensive weapons.

Another consideration is that low altitude penetration, though it looks more favorable than high altitude penetration for the foreseeable future, might conceivably become less desirable. For example, since the Soviets are building surface to air missile and interceptor forces with improved low altitude capabilities, only time will tell the extent of their ultimate threat. It is conceivable that this growing low altitude defensive capability might require the penetrating bomber to utilize to a greater degree the presently higher risk high altitude penetration. It is important to realize, however, that supersonic speed will lessen that risk. Furthermore, coupled with the B–1's smaller radar image, reduced infrared emission and improved electronic counter measures, all of which degrade the effectiveness of ground launched and air to air defensive missiles, the high altitude penetration probability of success will be significantly enhanced.

In the final analysis, the capability of supersonic speed at high altitude provides our bomber force with the widest range of options. If the character of the Soviet defenses changes in the future, we will still have the flexibility to counter these changes with revised tactics. It is this flexibility that we should demand, not condemn, when we are considering the development of a bomber capable of providing a vital keystone in the strategic deterrence posture of our country through this perilous century.

THE CHIEF JUSTICE CALLS FOR SPEEDY TRIALS

Mr. ERVIN. Mr. President, the other morning in St. Louis, the Chief Justice of the United States addressed the American Bar Association. His address was noteworthy for a number of reasons. It was the first time the Chief Justice had ever given what he calls a state of the judiciary message to the country. Second, it was noteworthy because the Chief Justice's speech was carried live by the radio and television, and was an address to the Nation, and not only to the legal profession.

Noteworthy as are these two aspects of his address, the Chief Justice's message was far more important for its content than for its precedents. The Chief Justice warned the country that the court system was in danger of breaking down. Indeed, more than that. In some parts of the country—and one would have to include Washington, D.C.—we have to recognize that the court system has broken down. Surely, if the test is: Justice, fairly and speedily rendered, no one would contend that that is the case in this city, nor in most of the larger cities of the country.

The Chief Justice has no panaceas to offer to correct the deplorable state of our judicial system. No panaceas are possible when, as he said, the warning was given 64 years ago, in an address by Roscoe Pound, and not yet heeded. But if there are no quick and cheap cures for the progressive decrepitude that besets our courts, there are a number of slow, expensive treatments we can apply to start them back on the road to recovery.

One of the major points in the speech dealt with delays in criminal trials. The Chief Justice mentioned two legislative reforms in which I have been interested for many years. One is the Criminal Justice Act of 1964, which provided Government paid lawyers free to any criminal defendant who could not afford to

pay for his own. This reform did not confer the right to counsel on criminal defendants. It merely fulfilled the constitutional obligation that every man have the assistance of counsel during trial. The other reform is the much maligned, little understood Bail Reform Act. The Bail Reform Act did not revolutionize bail practices. It merely made effective a right of pretrial freedom which had been abridged and denied many citizens over the years on the simple ground of poverty.

I do not agree with an assessment which suggests that the delays in our criminal courts can be attributed to the passage of these two laws. But whatever the cause, the fact still remains that justice in our criminal system is an uncertain, cumbersome thing. The Chief Justice put it well when he said:

> There is a widespread public complaint reflected in the news media, in editorials and letters to the editor, that the present system of criminal justice does not deter criminal conduct. That is correct, so far as the crimes which trouble most Americans today. Whatever deterrent effect may have existed in the past has now virtually vanished as to such crimes.
>
> If ever the law is to have genuine deterrent effect on the criminal conduct giving us immediate concern, we must make some drastic changes. The most simple and the most obvious remedy is to give the courts the manpower and tools—including the prosecutors and defense lawyers—to try criminal cases within 60 days after indictment and let us see what happens. I predict it would sharply reduce the crime rate.

I agree fully with what he said. For many months I have tried to convince Congress that expedients such as preventive detention were no answer to the problem of ineffective criminal justice. I have tried to convince the Congress that speedy trial and speedy punishment, and then effective rehabilitation—these are the ways that criminal conduct can be deterred and then corrected. Congress has chosen to enact preventive detention. Thus far, it has shown little predilection to move to assure speedy trials.

I have introduced a bill, S. 3936, cosponsored by 22 Senators, which I believe has the potential for being an effective device toward achieving criminal trials within 60 days of indictment. Quite simply it requires each Federal district court to prepare a plan which will enable it to meet the 60-day deadline. After a certain period of time, 60-day trials will become mandatory. If the Federal court has insufficient resources to meet the 60-day goal, then it must ask for a dispensation from the Judicial Conference. But in doing so, it must present the Conference with a plan and a request for additional resources which will enable that court to meet the legislative goal. That plan and its accompanying requests will be forwarded to Congress. Then the burden will be on this body to provide the resources necessary to carry out the legislative objective of the act.

Many persons have always been skeptical of any legislative obligation of 60-day trials. I include myself in that category, as well. But I believe that this approach has certain benefits which may point the way to a solution. In the past, there have not been 60-day trials because the judges have been under no obligation to meet such a deadline. Thus, there has been no pressure for them to tighten their procedures, or to impose strict rules upon themselves and the lawyers who practice before them. When delays have occurred, the tendency has been to point the finger at Congress and blame its refusal to authorize more judges. Congress, for its part, has seen little interest on the part of the courts to use their resources efficiently to modernize their workings, or to show a real concern for speedy justice.

Thus far, in other words, both Congress and the courts have been able to avoid carrying out their responsibilities simply by pointing the finger of blame at each other. I believe that the speedy trial bill can break this vicious circle. It provides, first, the incentive to speedy trials which has been lacking. The incentive quite simply is a legislative imposed obligation of trials within 60 days. Second, it requires the courts themselves to develop on their own initiative the plans and procedures which will satisfy the legislative obligation. Finally, if the court has insufficient means to meet the legislative goal, it must then present Congress with a carefully thought-out plan which will enable the court to meet its obligation. Congress then will have before it a clear choice: Are we willing to provide the resources which are necessary, or are we going to accept second-class justice? I believe that S. 3936 will get us off the circle of finger-pointing between the two branches.

I am pleased that the Chief Justice has taken this opportunity to address the country on the needs of the courts. I hope that his remarks will produce a renewed willingness on the part of the bar and of Congress, and the courts, to address themselves to the needs of justice in the 20th century.

I believe one place to start would be to enact a speedy-trial bill. But there is much else that should be done, and I urge all concerned to heed the Chief Justice.

Mr. President, I ask unanimous consent that excerpts from the speech by the Chief Justice, as it appeared in the New York Times on August 11, 1970, be printed in the RECORD. I also ask unanimous consent that an editorial entitled "The Chief Justice's Plea" published in the Winston-Salem Journal of August 12 be printed in the RECORD.

There being no objection, the excerpts and editorial were ordered to be printed in the RECORD, as follows:

EXCERPTS FROM BURGER'S TALK

ST. LOUIS, August 10.—Following are excerpts from an address by Chief Justice Warren E. Burger today before the opening assembly of the American Bar Association convention:

When President Segal and the board of governors of this association invited me to discuss the problems of the Federal courts with you, as leaders of the legal profession, my mind turned at once to one of the great statements on the problems of the administration of justice.

That was Dean Roscoe Pound's famous speech to this association at your meeting 64 years ago. He said then that the work of the courts in the 20th century could not be carried on with the methods and machinery of the 19th century.

If you will read Pound's speech, you will see at once that we did not heed his warning, and today, in the final third of this century, we are still trying to operate the courts with fundamentally the same basic methods, procedures and machine he said were not good enough in 1906.

In the supermarket age we are like a merchant trying to operate a cracker barrel corner grocery store with the methods and equipment of 1900.

The changes and improvements we need are long overdue. They will call for a very great effort and they may cost money; but if there are to be higher costs they will still be a small fraction, for example, of the $200-million cost of a C-57. The entire cost of the Federal judicial system is $128-million. Military aircraft are obviously essential in this uncertain world, but surely adequate support for the judicial branch is also important.

MODERN TECHNIQUES NEEDED

More money and more judges alone is not the real solution. Some of what is wrong is due to the failure to apply the techniques of modern business to the administration or management of the purely mechanical operation of the courts—of modern record-keeping, systems planning for handling the movement of cases. Some is also due to antiquated, rigid procedures which not only permit delay but often encourage it.

In the Federal courts today the problem areas are essentially in large cities. Here we find in the judicial system no more than a reflection of the complexities created by the population shift to large urban centers. The problems exist where the action is.

How did this situation come about in the face of numerous additional judgeships added by Congress in the past 30 years?

We can see three key factors that are important to our discussion:

First, the legal profession—lawyers and judges and Congress, with few exceptions—did not act on Dean Pound's warnings to bring methods, machinery and personnel up to date.

Second, all the problems he warned about have become far more serious by the increase in population from 76 million in 1900 to 200 million in 1970, and with it came the growth of great cities and the increase in the volume of cases.

Third, entirely new kinds of cases have been added because of new laws passed by Congress and decisions of the courts.

From time to time Congress adds more judges, but the total judicial organization never quite keeps up with the caseload. Two recent statutes alone added thousands of cases relating to commitment of narcotics addicts and the mentally ill. These additions came when civil rights cases, voting cases and prisoner petitions were expanding by the thousands.

Meanwhile, criminal cases, once a stable figure in the Federal courts, were increasing. The records shows that in all Federal district courts it now takes twice as long as it did 10 years ago to dispose of criminal cases from indictment to sentence.

But the increase in volume of cases is not by any means the whole story. Experienced trial judges note that the actual trial of a criminal case now takes twice as long as it did 10 years ago because of the closer scrutiny we now demand as to such things as confessions, identification witnesses, and evidence seized by the police, before depriving any person of his freedom. These changes represent a deliberate commitment—some by judicial decision and some by legislation—to values higher than pure efficiency when we are dealing with human liberty.

YARDSTICK GETTING AGED

It is an elementary fact, historically and statistically, that the system of courts—the number of judges, prosecutors, and of courtrooms—has been based on the premise that approximately 90 per cent of all defendants will plead guilty, leaving only 10 per cent, more or less, to be tried. But that premise may no longer be a reliable yardstick of our needs.

Changes in the laws that are part of what we lawyers call the "revolution in criminal justice," which began as far back as the 1930's, have brought this about. Anyone who questions these changes must recognize that until recently criminal law was the neglected stepchild of the law.

The consequence of what might seem on its fact a small percentage change in the rate of guilty pleas can be tremendous. A reduction from 90 per cent to 80 per cent in guilty pleas requires the assignment of twice the judicial manpower and facilities—judges, court reporters, bailiffs, clerks, jurors and courtrooms. A reduction to 70 per cent trebles this demand.

There is a widespread public complaint reflected in the news media, in editorials and letters to the editor, that the present system of criminal justice does not deter criminal conduct. That is correct, so far as the crimes which trouble most Americans today. Whatever deterrent effect may have existed in the past has now virtually vanished as to such crimes.

If ever the law is to have genuine deterrent effect on the criminal conduct giving us immediate concern, we must make some drastic changes. The most simple and the most obvious remedy is to give the courts the manpower and tools—including the prosecutors and defense lawyers—to try criminal cases within 60 days after indictment and let us see what happens. I predict it would sharply reduce the crime rate.

The price we are now paying and will pay is partly because judges have been too timid and the bar has been too apathetic to make clear to the public and the Congress the needs of the courts. Apathy, more than opposition, has been the enemy, but I believe the days of apathy are past.

As to the future I can do no more than emphasize that the Federal court system is for a limited purpose and lawyers, the Congress and the public must examine carefully each demand they make on that system. People speak glibly of putting all the problems of pollution, of crowded cities, of consumer class actions and others in the Federal courts. We should look more to state courts familiar with local conditions and local problems.

MAJOR RECOMMENDATIONS

Let me list some major steps for the future—steps to begin at once:

(1) The friction in relations between state and Federal courts presents serious problems in both the review of state prisoner petitions and other cases. I strongly urge that in each state there be created a state-Federal judicial council to maintain continuing communication on all joint problems. Such a body could properly include a member of the highest state court, the chief judges of the larger state trial courts and the chief judges of the Federal district courts. In some states such bodies have already been created on an informal basis.

(2) State and Federal judges should continue their cooperation with the appropriate committees of the American Bar Association to establish standards of conduct of lawyers and judges that will uphold public confidence in the integrity of the system we serve.

(3) We should urgently consider a recommendation to Congress to create a judiciary council consisting of perhaps six members, one-third appointed by each of the three branches of government, to act as a coordinating body whose function it would be to report to the Congress, the President and the Judicial Conference on a wide range of matters affecting the judicial branch. This council could:

A. Report to Congress the impact of proposed legislation likely to enlarge Federal jurisdiction.

B. Analyze and report to Congress on studies made by the Judicial Conference and the Federal Judicial Center as to increase or decrease in caseloads of particular Federal districts.

C. Study existing jurisdiction of Federal courts with special attention to proper allocation of judicial functions as between state and Federal courts.

D. Develop and submit to Congress a proposal for creating temporary judgeships to meet urgent needs as they arise (some state legislatures authorize such appointments based on a formula of population and caseloads in order to adjust promptly to population changes in rapidly developing areas.

E. Study whether there is a present need for three-judge district (trial) courts and whether there is a present need for Federal courts to try automobile collision cases simply because of the coincidence that one driver, for example, lives in Kansas City, Kans. and the other in Kansas City, Mo.

(4) The entire structure of the administration of bankruptcy and receivership matters should be studied to evaluate whether they could be more efficiently administered in some other way. (Pending studies on this problem should be pressed to conclusion.)

(5) Over the years various statutes and decisions of courts have altered many aspects of criminal procedure. Meanwhile, some of the states have experimented with innovations and have developed new procedures to improve justice. Since Congress is now considering an entirely new Federal criminal code, we should soon undertake a comprehensive re-examination of the structure of criminal procedure to establish adequate guidelines reflecting adjustment both to the new code and judicial holdings.

(6) The system of criminal justice must be viewed as a process embracing every phase from crime prevention through the correctional system. We can no longer limit our responsibility to providing defense services for the judicial process, yet continue to be miserly with the needs of correctional institutions and probations and parole services.

(7) The whole process of appeals must be re-examined. It is cumbersome and costly and it encourages delay. Some courts, notably the overworked Fifth Circuit, have developed procedures to screen out frivolous appeals. Finality at some point is indispensable to any rational—and workable—judicial system.

(8) We made a wise choice in guaranteeing a lawyer in every serious criminal case but we must now make certain that lawyers are adequately trained so that the representation is on a high professional basis. It is professional representation we promise to give—nothing more—and within accepted standards of conduct. This association has now provided lawyers for the first time with comprehensive and authoritative standards and it is now up to the courts and the bar to make sure they are followed.

THE CHIEF JUSTICE'S PLEA

What we know of Chief Justice Warren Burger's judicial philosophy seems modest when compared with what we know of his opinions on how to run a courtroom.

True to his word on taking office, the chief justice has spent much of his off-bench time seeking support for his ideas on reforming the courts. In his most significant effort to date, he appeared this week before the American Bar Association to plead for reforms that would transform the federal judiciary from top to bottom and at the same time allow the state courts to play a more active role in the judicial process.

Not least among his recommendations was a proposal to bring every criminal suspect to trial within 60 days of his indictment. Sen. Sam Ervin is seeking the same thing in a bill now before Congress. To those familiar with the delays and frustrations of American courtroom procedure this may seem a wholly unrealistic idea.

But is it?

Though no provision of the Constitution is more widely ignored than the right to "a speedy and public trial," this guarantee is at the heart of Anglo-Saxon law.

And in Chief Justice Burger's eyes it has a practical as well as moral justification. What better way to reduce the rising crime rate than to make certain that defendants are brought to trial on time? By bringing a halt to unnecessary trial delays, we would eliminate the need for the unwelcome and probably unconstitutional "preventive detention" measure recently enacted by Congress as part of the District of Columbia crime bill.

It is true, as the chief justice says, that "the public may well be called upon to pay something more for the federal judicial system to increase its productivity."

The courts are undermanned, and courtroom space itself is lacking; but money alone is not the answer. We will not solve the problem of delay and confusion simply by hiring more lawyers, prosecutors and judges—not as long as the courts are in the habit of putting off cases at the slightest urging.

What Chief Justice Burger says must be taken as a piece with what he has said previously on the subject. His concerns do not stop with courtroom procedures, however. He seems thoroughly committed to the idea of reforming our penal institutions so that a convicted man will not come out of confinement more embittered against society than when he went in. This, in fact, was a central preoccupation of his before he became chief justice.

The sooner we put our faith in remedies of the sort he has recommended, rather than in the kind of repressive measures proposed by the administration, the safer our streets and playgrounds will become.

AN ALL-VOLUNTEER ARMED FORCE

Mr. HATFIELD. Mr. President, as the debate on an all-volunteer armed force draws nearer, I think it only prudent to study this question from a number of perspectives. Because hearings which were to have been held in the Senate Committee on Armed Services on this subject have been postponed, many individuals who had hoped to testify have not had the opportunity to be heard on this vital issue. Consequently, I ask unanimous consent that the statements by the Right Reverend Paul Moore, Jr., bishop coadjutor of the Episcopal Diocese of New York—Bishop John Wesley Lord, Bishop of the United Methodist Church, Washington area—Arlo Tatum, national secretary of the CCCO—Gerard B. Noonan, chairman, Dubuque, Iowa, county selective service board 13–31—George Wald, Higgins professor of biology, Harvard—Robert E. Jones, executive director, joint Washington office for social concern, representing the American Ethical Union, American Humanist Association and Unitarian Universalist Association—and the Reverend Rodney Shaw, representing the board of Christian social concerns of the United

Methodist Church—be printed in the RECORD.

There being no objection the statements were ordered to be printed in the RECORD, as follows:

DRAFT REPEAL NOW

TESTIMONY IN BEHALF OF THE HATFIELD AMENDMENT TO THE MILITARY PROCUREMENT ACT OF 1970

I am the Rt. Rev. Paul Moore, Jr., Bishop Coadjutor of the Episcopal Diocese of New York, 1047 Amsterdam Avenue, New York, New York.

I served in the United States Marine Corps for four and one half years during World War II as a rifle platoon leader in combat in the Tulagi-Guadalcanal operation, where I was wounded, and later served on the Division Staff of the Third Marine Division, and also as Battalion Operations Officer and Company Commander. I attended the Marine Command and Staff School at Quantico. For the last three years I have been increasingly disturbed by the impact the Vietnam War is having upon our country and increasingly dubious about its validity. I have counselled many young men who are facing the draft.

I feel it is appropriate for a Churchman to present testimony at this hearing, because the Church has traditionally served as an institution responsible for preserving the ethical and human values of our society.

Christian (and Jewish) teaching, from the earliest times, has questioned the right to kill another human being. Because of the openness of the Church to all men, soldiers have never been excluded from the Church, and war has been tolerated as part of the sinful fabric of our society. Nonetheless, even when the Church has encouraged particular wars, there has never been a question as to the right of a person to refuse to fight for conscience's sake. The draft, in coercing persons to join the army, trespasses against this right. Nor does the presence of the Conscientious Objector section of present legislation protect this right, for the following reasons: The judgment as to the sincerity of the petitioner is made by a less than qualified board in most instances; the system is irregular, so that young men in different communities are subject to different standards; the sincerity of a citizen in a democracy should not be subject to the judgment of the state, no matter how impartial the judicial process; becoming a C.O. prejudices the future employment of the individual in our present society; and finally, the poor and uneducated do not have equal access to draft counselling, which works a hardship upon them.

For those who are drafted and who are sent into a battle situation, and indeed for anyone who participates in the military life, I have an even deeper concern. Having experienced the horrors of war myself, I am convinced that the exposure to this life does deep damage to the human spirit. It is bad enough to force a man to give his life involuntarily. It is even more evil that a man should be forced to take the life of another.

Military training has as one of its goals the brutalization of the human spirit so that the taking of human life becomes natural or even seems good. I have known that process within myself. I have calmly shot at another human being without the slightest twinge of conscience. Thus the so-called Mylai massacre did not surprise me. In my pastoral work I have frequently seen the scars of war distorting a life as much as twenty-five years later, and affecting the lives of other human beings, such as family members, who live in close association with the veteran. It took me many years to regain my own sensitivity after the war was over. I have seen sensitive young men go mad at the sight of human bodies bloated by the tropic sun; and well they might.

This process of brutalization not only affects the lives of individuals and their families, but also takes a deep toll on the life of our nation. It dulls compassion, encourages brutal behavior, and elevates violence to a virtue.

I also have a pastoral concern for the young people of our land, because of the effect the draft is having upon their spirit. Many of them have progressed in their thinking to the point where war is seen as an unmitigated evil, often perpetrated for unworthy cause, whatever the rhetoric used to rationalize. Because the draft forces upon them a way of life they totally reject, they are losing faith not only in our country's use of military power, but also in all those institutions of government which our culture has carefully built up over the years and without which, I believe, we cannot live as a free people. As one who loves our country and reveres our flag, I shudder at the lack of respect shown by many young people, but at the same time understand their feelings that much of our national life is hypocritical and works against the very values which we pretend to be protecting. The major symbol of this, the part of our system which touches the young most immediately is, of course, the draft and the seemingly useless and evil war which it forces them to support.

I feel that if a war does not have enough popular support to elicit a voluntary army, that it is undoubtedly unjustified. To draft a man to fight in a war which his own representatives have not declared is a further indignity. I also feel that if it is decided by Congress that our nation needs an army of a particular size, we should be willing to offer sufficient pay and benefits to compete for men's services on the open market.

I also reject the concept of universal service with the option to chose non-military service as a sop to the military draft. I feel it is dangerous to submit every young man to the control of the government for two years of his youth.

Enclosed is a statement against the draft passed by the House of Bishops of the Episcopal Church in the Fall of 1969.

THE HOUSE OF BISHOPS OF THE PROTESTANT EPISCOPAL CHURCH OF THE UNITED STATES OF AMERICA

SEPTEMBER 4, 1969.

Whereas, the Selective Service System, however necessary it might be in times of unlimited national emergency, deprives persons of their personal freedom, tends to lead us as a people to an increasing dependence on war and violence as a means for solving international problems and seriously undermines the morale of many of our youth; and

Whereas, the President of the United States on May 13, 1969, called for draft reforms "that will eliminate conscription as soon as feasible"; therefore be it

Resolved, the House of Deputies concurring, that this Special General Convention II calls upon the Congress to enact legislation to end the draft at the earliest possible moment.

POSITION FAVORING A VOLUNTEER MILITARY AND IN SUPPORT OF THE GATES COMMISSION REPORT

(By Bishop John Wesley Lord)

AUGUST 10, 1970.

In 1940 the Congress of the United States and the American people reluctantly accepted military conscription as a temporary measure to meet a drastic international emergency. At that time it was recognized that the draft constituted a serious curtailment of personal freedom and human rights and now in permanent form has been linked with the course of militarism in many nations.

It seems incredible that during the intervening years this great democracy has accepted this un-American and harmful influence to exist within the nation. We have lived with the draft so long, President Nixon has pointed out, that too many of us accept it as normal and necessary. The evils and inequities of the draft do not have to be recounted but its repeal would be the first step to regain control of our runaway military establishment. The two most serious consequences of the Selective Service System reside in its ruthless disregard for the rights and moral principles of our young men of draft age and its blank check authorization to the White House and to the Pentagon to prosecute the war they may choose. It is an evidence of spiritual erosion within the nation.

Our first President, George Washington, recognized in his Farewell Address to the people of the United States that "reason and experience both forbid us to expect that national morality can prevail in exclusion of religious principles;" and that the permanent felicity of any nation is not only related to its virtues but is "rendered impossible by its vices."

Many religious leaders and church bodies have noted from time to time that military conscription in the United States is linked to the vast growth of the military establishment and have urged that a voluntary system be substituted. They have also noted that the present draft permits the President to expand armed forces and to intervene overseas without effective congressional control or restraint. It is not in the American tradition to place this grave responsibility upon our President.

Most Americans think that the draft is simply a device by which men are forced into the army. This would be bad enough but there is more to it. Actually the draft has been used as a device to force young men into jobs or studies they would not otherwise have chosen. In the words of General Hershey, one time Director of Selective Service, the major purpose of the draft is not alone the "delivery of manpower for induction. . . . It is in dealing with the other millions of registrants that the System is heavily occupied developing more effective human beings in the national interest." Who is to determine what is in the national interest? "The problem," he says, "is how to control more effectively the service of individuals who are not in the armed forces. . . . There isn't anything that can't be solved now by having an individual pursue the things you want him to pursue and then use him. . . ." He illustrated his point by showing how he had forced upward the number of persons with engineering degrees from 27,000 annually in the 1950's to 48,000 annually by 1963–64. Might not this very fact threaten the free enterprise system of our land and lay the groundwork for an authoritarian society in still other ways? Has the "climate" in which men now live and move and have their being, been determined in part by such maneuvering and manipulation by draft boards under the Selective Service System? It is not pleasant for the writer to admit that there are men in our seminaries today who are there to secure military deferment from military service but who are not qualified for the Christian ministry. The church will suffer through such ministry and because of those whose motivations are suspect.

General Hershey writes, "The deferment is that carrot that we have used to try to get individuals into occupations and professions that are said by those in charge of government to be the necessary ones." Here is one carrot the nation can do without.

For these and other considerations, I support the report of the President's Commission On An All Volunteer Armed Force, now known *as* the Gates Commission Report. It comes with force and clarity and "with healing in its wings." It is the greatest national "antipollutant" measure yet received and, if

accepted, will remove much of the moral turpitude of our nation.

It calls for the abolition of the whole Selective Service System no later than July 1, 1971. In summary, the following recommendations should commend themselves to every thoughtful and patriotic American:

1. That voluntarism is preferable in our society to compulsion.

2. That a volunteer army will cause only a small budget increase, and will actually be cheaper in real economic terms than the draft.

3. That the all-volunteer force can be achieved by July 1, 1971 and that the draft can and should be ended then.

4. That a volunteer force is adequate to defend the nation, and that a peace time draft is not required to protect the nation in case of sudden attack.

5. That a stand-by draft should be minimal, and should be reactivated only by a joint resolution of Congress upon recommendation of the President. This is a vital provision and will prove to be the most controversial.

6. That an end of the draft will terminate the practice of "channeling" which provides the military and government with powers bordering on those of a dictatorship.

7. That a volunteer military would not vary in makeup from the present mixed system, particularly with regard to the number of Negroes serving and the economic profile.

STATEMENT ON THE DRAFT

(By Arlo Tatum)

AUGUST 11, 1970.

For eight years now I have headed up CCCO, An Agency for Military and Draft Counseling, founded in 1948 as the Central Committee for Conscientious Objectors. CCCO is a political, non-sectarian, and non-profit. Its three offices tie in with a few thousand draft and military counselors and draft information centers across the country, most of which use CCCO's technical memos, *Handbook for Conscientious Objectors* and *Advice to Conscientious Objectors in the Armed Forces*. About 400 attorneys cooperate with CCCO and its General Counsel, Marvin Karpatkin.

I have been and am highly critical of the draft system, which simply cannot function the way Congress intended. The explanation is simple enough; part-time volunteer board members cannot go through each man's file before making a decision. In metropolitan areas this would be a physical impossibility. One local board member told me he doubted it could be done even if they worked full-time.

As we know from court cases and Senate hearings, the same situation prevails at many state appeal boards and the Presidential appeal level. We therefore find ourselves in the extraordinary situation where a registrant can go through the entire appeal process without his file having been even opened by anyone with the legal and moral responsibility of classifying him. These part-time volunteers rely on the résumés or advice of professionals, which at best is a procedure of questionable legality.

But this should not be taken as a criticism of either the volunteers or their over-burdened secretaries and clerks. I think on the whole State Selective Service Directors and National Selective Service Headquarters honestly try to see that each registrant ends up with the proper classification, by whatever means. But surely this World War II relic is not something which should be preserved, even on a stand-by basis.

Reforms are good and fine persons in positions of responsibility are good, but neither can make the draft "good." There is no way to make provision for all genuine conscientious objectors, excluding those whose objection to military service does not spring from conscience. There is no way to establish objective criteria for "extreme hardship to dependents" deferments. To me these are not theoretical statements but are based on day-to-day experience.

I like President Nixon's phasing out of certain deferments and his desire to eliminate deferments for study. All deferments and exemptions should be eliminated if the draft continues, including the IV–B exemption for young Congressmen who vote to continue drafting others. Deferments and exemptions, like any lottery system, are designed to conceal the massive excess of manpower available—for this available manpower is the clearest indication that a draft is unnecessary.

Why preserve an institution which is so devisive in its social and political impact? Intrinsically, the draft favors those in our society already at an advantage and takes advantage of those already in difficulty. If all deferments and exemptions were ended, the military would still need to have standards for rejecting draftees. Who do you think would come to a pre-induction physical armed with letters from medical specialists and psychiatrists? The same young men whose parents are now paying their way through college. This is not a criticism of the middle class of which I am a part, but of a system which by its nature adds to the burdens of those young men who are already disadvantaged in this most competitive of societies.

In fact, the draft worsens every serious problem we have as a society seeking to be democratic. Have you considered the possibility that conscription is an institutionalization of the hostility we middle aged people feel toward the young? Whether a young man goes into the army or into prison, he will at least get the haircut which means so much to us. There is no solution to the generation gap so long as we compel young men to bend to our collective will. There is no solution to our racial problems, no solution to our urban/rural problems, no solution to our economic problems, no solution to the problem of violent, destructive dissent, until we end the draft.

To me the most discouraging proposed substitute for military conscription is the National Service concept. While it must be acknowledged that Hitler eliminated slums in Nazi Germany by this method, it would move us in a direction very few of us want to go. Let us recognize that "compulsory service" is self-contradictory. Voluntary service is true service. Compulsory service has another, more appropriate name in the 13th Amendment of our Constitution—"involuntary servitude".

There are pressing reasons to restore the traditional concept of what was once the American ideal of a citizen's relationship to his government: that the sole legitimate function of government is to serve its citizens; the role of citizens is to oblige the government to fulfill that function.

Involuntary servitude, even for purposes we might all endorse, has no place in the United States of America. The draft must be ended before the society wounds it is aggravating are beyond cure.

POSITION FAVORING A VOLUNTEER MILITARY

(By Gerard B. Noonan)

My interest in the Draft and Selective Service Procedures goes back over the past ten years. I am Registrar of a College of 1300 male students located in Dubuque, Iowa and became a member of the County Board with a special concern with problems of student deferments. I have been a member of this Board for six years, and am now the senior member in time of service and have been elected Chairman for the past three years. I have also participated in two panel sessions (National Association of Collegiate Registrars and Admissions Officers) with various State Directors and Washington officials over matters concerned with Selective Service. Although my first concerns were mainly problems regarding student deferments, I have gained a great deal of insight into the problems regarding all types of deferments and various selective procedures. I have missed one meeting of the Dubuque County Selective Board since my appointment six years ago, and believe that unless one has sat in this situation and attempted to make the decisions called for, you cannot understand the personal frustrations caused by such an event. You might ask: Why remain a part of a system you feel cannot work? I answer that according to my philosophy of life, one works for change as a part of the system rather than attempting reform through other more devious methods. I believe in change through legislative action and as such, present this testimony on behalf of a Volunteer Military.

REASONS

1. We should not attempt to run a system, that even if deemed necessary, cannot possibly function efficiently under its present procedures and standards. The document "Who Serves When Not All Serve?" National Advisory Commission On Selective Service points up some of the serious problems within the present system. Problems that I consider so great that it is not possible to have any type of a draft when needs for personnel are low, and a large number of deferments are issued by all Boards. We should just for a minute consider the following points taken from the publication: "Who Serves When Not All Serve."

a. The state of Alabama with 275 Draft Board members and thirty percent of the state's population Black and not one Black Draft Board member.

b. The state of Mississippi with forty-two percent of its state population Black with not one Black Draft Board member.

c. My own state of Iowa with large Black communities in Des Moines, Sioux City and Waterloo and not one Black Draft Board member.

d. The average age of Draft Board members at this time was 58. One-fifth of all board members were over 70, and of these, 400 were over 80 with 12 between 90–99. People at this age level are being asked to communicate with, have discussions with, and make decisions for 19–20–21 year old Americans.

e. The many different procedures as conducted from Board to Board and State to State as pointed out within this document.

The message from The President of The United States: 90th Congress First Session: House of Representatives: Document No. 75 which promoted the above study contained the following statements:

"We cannot lightly discard an institution with so valuable a record of effectiveness and integrity."

"Neither can we afford to preserve it, if we find that in practice it cannot adapt to the new controlling concept of equal and uniform treatment."

2. The Gates Commission states: Reform the inequity in the pay of first-term servicemen. Promote the efficiency and dignity of the armed forces by better training and recruiting. Allow every American man to determine his own life in accord with his own values.

If I did not feel that a volunteer force was adequate to defend the nation, I would not be in favor of such a program but as pointed out in the Gates Commission report, the improved incentives and training for the Ready Reserves are far more important in case of emergency than application of conscription. This Commission also points out that a voluntary military can be created, without great additional cost, without creating new internal threats or political or social problems, or without endangering external defense.

3. The Civilian Advisory Panel on Military Manpower Procurement: Report to the Committee on Armed Services House of Representatives Ninetieth Congress First Session, February 28, 1967 makes the following statement regarding a Completely Voluntary Military Establishment:

"That the concern of attempting to satisfy all future military manpower requirements with volunteers attracted by massive increases in compensation be rejected as an alternative to the draft."

This Commission puts forth its only objection on financial grounds but page 29 of the Gates Commission report states "When the hidden costs of conscription are fully recognized, the cost of an all-volunteer armed force is unquestionably less than the cost of a force of equal size and quality manned wholly or partly through conscription."

We should also call to mind that the Civilian Advisory Panel on Military Manpower also recommended the following regarding the Lottery System: "The Panel is firmly of the opinion that re-adoption of a lottery would be unwise and retrogressive." Almost everyone connected with Selective Service would agree that while the Lottery has failed to eliminate most of the problems of Selective Service it is an improvement in order to selection.

4. I believe that during the past six years, I have been as close to Selective Service as any single person except for those employed in this area. I believe most strongly that the Congress and the President of the United States owe to the young people of this nation the test as stated in the Hatfield Amendment:

POINT NO. 4

"A voluntary system should be instituted and given a fair test as soon as practicable while providing necessary safeguard in the event that unforeseen circumstances create a need for additional military manpower;"

I think that this bill is most important at this time in our history. It seems that many people are always searching for the perfect answers to difficult social problems, before making any attempts at solution. It seems that in this issue like many others we should be willing to try new and sometimes dramatic solutions.

Each of you should have the experience of being on a local board and attempting to decide the classification of various registrants. After a few such meetings, I'm sure many would be asking the question.

WHO SERVES WHEN NOT ALL SERVE?

The only answer to this question is an all Voluntary Military.

ACADEMIC PROBLEMS CREATED BY THE DRAFT

(By George Wald)

Nothing now so poisons academic life in America as the draft. It distorts and disrupts our colleges and universities, distracting and harassing students and faculties alike. Many persons who would not otherwise wish to attend college come and stay to avoid the draft. Students who should go off for a time to work, or to study elsewhere, cannot do so because of the draft. One sees this at once by comparing the behavior of men and women students. At Radcliffe College, for example, about one student in six takes a year off during her stay; and the College regards this as highly advantageous for educational, economic and other reasons. At Harvard, largely because of the draft, such leaves of absence are rare.

There has been a great deal of public and Congressional interest lately in student unrest, and the ways in which the colleges and universities have dealt with it. It should be understood that the draft has much to do with both these problems. It accounts directly for much student unrest, and greatly hampers faculties in attempting to deal with it. Faculties that would like to discipline students by making them withdraw for a time or by expelling them must face the embarrassment of thereby exposing them to the draft. It does not help that draft boards and the services may be particularly severe with such cases. A faculty wanting only to send a student away for a time, or for good, must face the prospect of learning a few months later that it may have condemned him to fight and perhaps die in a war that most students and faculty members reject. Just as worthy young men, frequently worthier, who are not students are exposed to those hazards too; but college faculties didn't put them there.

Important aspects of undergraduate education that depend upon graduate students are now badly undercut by the graduate student draft. Many types of instruction, including almost all laboratory teaching in the sciences, are ordinarily done by graduate students. It is very much in the national interest that this go on, and be done well. Yet we now face disastrous cuts in graduate student enrollment. Many graduate students have been drafted, many others have abandoned graduate study for occupations that offer deferment. The country is losing many potential scientists, mathematicians and other highly trained persons that it is going to need; and is suffering now a serious lack of graduate students to teach our undergraduates in the sciences and other fields.

Some of these disabilities might be relieved by a wider exercise of student deferment; others again are the direct result of student deferment. In any case, student deferments provide no solutions, only delays. They only prolong the agony. It should be said also that neither faculties nor students are inclined to plead for special treatment for students, even though it be in the national interest.

There has been much talk lately of "equity" in this connection. Equity however is an ideal only when coupled with justice. To distribute an injustice equally only makes it worse. It means doing to all what should not be done to anyone. That is the essential effect of spreading the draft more widely.

If Congress wishes to improve the condition of our colleges and universities and their relations with the public and with government, probably the most effective thing it can do is to repeal the draft.

POSITION FAVORING A VOLUNTEER MILITARY

(By Robert E. Jones)

Mr. Chairman, my name is Robert E. Jones. I am Executive Director of the Joint Washington Office for Social Concern, representing three religious liberal groups—the American Ethical Union whose national headquarters is in New York, the American Humanist Association whose national headquarters is in San Francisco, and the Unitarian Universalist Association which has its continental headquarters in Boston.

We are presenting joint testimony today because we have nearly identical positions on the draft and conscription, and because our religious positions are similar. Just a word about the religious positions. All three groups take as their central belief a faith in freedom. We grant to our members individual freedom of belief, feeling that in matters of religion the individual conscience must be sovereign. We are, therefore, churches or religious associations without a fixed religious creed or dogma, though our members may have a consensus of belief in ethical and social matters. We are not in the category of "peace" churches but our members hold a range of positions on the questions of participation in war, including the pacifist position but not excluding members who support the use of force when deemed necessary in international relations.

We have reached the position, today, that the best interests of the United States and of its citizens will be served by termination of the authority to induct—an end to the draft—and a return to the all-volunteer armed forces which have characterized our nation's military preparedness for most of its history.

Until the Korean and Vietnam wars, this country had resorted to the draft only in time of major conflict—in the Civil War with its imperfect draft law, and in the First and Second World Wars. The tradition since the Revolution had relied heavily on volunteers to fight the smaller wars. Conscription, for most of our history, had been viewed as an undesirable use of governmental power, usually associated with European despotism, and resorted to by a democratic republic only in the gravest emergency.

Though Korea and Vietnam represented serious international crises, it cannot be said they represented a peril to the survival of the nation, as did the three major wars in our history—one domestic and the other two foreign—cited above.

In those three major wars the United States Government had little difficulty securing volunteers for its armed services and one is led to conjecture whether the draft was necessary at all in World War II, for instance, after Pearl Harbor united the nation and impelled thousands to enlist. It has been said by some that the popularity of a war with the citizenry can be gauged by the rate of enlistments in the fighting branches. If heavy enlistments are not forthcoming the war is obviously unpopular and may be unjust as well. Perhaps only wars of self-defense, as World War II, will rouse enthusiastic approval.

A good case could be made that if a war does not bring out volunteers to fight it, then that war is not worth fighting, for the people, in their wisdom, have decided not to support it.

We are concerned with the inequities of the draft and have supported reforms in the law such as the random selection method and liberalization of the conscientious objector provision.

We were pleased with the Seeger and Welsh decisions of the Supreme Court which made it possible for ethical and moral beliefs to qualify for conscientious objection recognition on equal footing with conventional religious belief. We are therefore, encouraged by the response of the Director of Selective Service, Dr. Curtis W. Tarr, to the recent Supreme Court decision on the non-religious objector, and feel that Local Board Memorandum 107, issued by the Selective Service System on July 6, 1970, gives local boards much-needed guidance in evaluating the sincerity of conscientious objector applicants and follows faithfully the Supreme Court dicta in the Welsh case.

However, pleased as we are with the trend toward liberalizing the conscientious objector section of the law, and with other steps which have been taken to make the law fairer in its administration and in its impact on youth, all three of our organizations have come to the realization that draft reform, though desirable, will never totally erase the inequities of Selective Service. We will still have to contend with local draft boards, with all their frailties, some of which exhibit the meanest kind of prejudice against conscientious objectors.

Unfortunately, in the case of the military draft, the rain does not fall on the just and the unjust alike. Indeed, the draft singles out certain segments of the young male population and subjects them to a disproportionate share of the burdens of citizenship. We are not in a frontier society where every able-bodied man and youth was expected to turn out for muster when the Indians or Redcoats appeared. Not everyone of draft age is needed.

Some 1.5 million young men turn 19 each year and become draft-eligible, but cur-

rently Selective Service is drafting about 180,000 a year. Selective Service was designed to meet the limited manpower requirements, over and above enlistments, where not every eligible young man is needed. Over the years, the Selective Service System has resorted to various deferments and exemptions as a way of narrowing the pool. Occupational and student deferments enabled many to avoid military service. Inevitably, this system of deferments and exemptions militated against the uneducated and the unskilled, and the channeling processes of Selective Service, for those not inducted or assigned to civilian service, robbed the individual of his freedom of choice.

In spite of the institution of a random selection, or lottery, method, the problems of inequality of sacrifice and general inequities remain. For, however the draft law is tinkered with, we come back to the reality that conscription is a denial of individual freedom; that it is a form of involuntary servitude.

Conscription has another aspect to it which is frightening in its implications. It stimulates foreign adventurism, and weakens democratic control over the Nation's foreign policy. The Chief Executive, armed with the draft, possesses the manpower to undertake quick, massive responses to crisis situations the world over. There is a temptation on the part of the President to commit troops quickly, without having to face adequate public discussion and debate, when the troops are available. Large standing armies, historically, have tempted their rulers to use them—either for foreign adventures or domestic repression—and often, for both purposes.

Another compelling reason for our opposition to the draft is what it is doing to the social climate of America. Large segments of our student and youth population are in resistance to the draft. Like Prohibition in the twenties, a significant portion of the citizenry are not obeying the law. The draft and the war, which many deem unnecessary and unjust, have caused a widespread disaffection with American society and institutions. Ending of the draft should do much to eliminate the anxieties and insecurities which plague our youth, and diminish the ferocity displayed in the revolutionary sectors of the student population.

It will be a healthy thing for this country to do away with conscription.

For these reasons, we endorse the voluntary system of military manpower procurement embodied in the legislation introduced by Senator Hatfield of Oregon, Senator Goldwater of Arizona, and others. It is our understanding that, in the absence of hearings in the Armed Services Committee, this will be presented as an amendment to the Military Procurement Act of 1970.

We urge its adoption.

POSITION FAVORING VOLUNTEER MILITARY

(By Rev. Rodney Shaw)

My name is Rodney Shaw. I am a minister of The United Methodist Church and served as a chaplain in the U.S. Army during World War II. I work in the Division of World Peace of the United Methodist Board of Christian Social Concerns and would like to present the general position of The United Methodist Church and also the more detailed position of the Board of Christian Social Concerns, an official agency of The United Methodist Church.

The 1968 Uniting Conference of The United Methodist Church, the only body that speaks for the whole church, has said: "We affirm the opposition of The Methodist Church to compulsory military training and service in peacetime."[1] This clearly means that the United States should return to the traditional voluntary system of raising manpower based on adequate pay and other inducements.

It is not only the violation of personal freedom, but the flexibility provided by conscription in determining the size of the armed forces that leads us to oppose strongly the renewal of the draft. This flexibility is simply another name for a blank check on the nation's young men that permits the Executive branch of government quickly to expand the army, to send troops into other countries, to engage in hostilities and to escalate into full scale war without a Congressional declaration of war or a debate on manpower.

A voluntary system of raising manpower in peacetime would make it necessary for the Executive Department to consult Congress and hence the people, before embarking on a major war overseas. Congress would thus regain the constitutional control over use of the armed forces that it lost when it allowed military conscription to become part of the American way of life.

For Congress to continue the draft is to abdicate its responsibility to the Constitution and to the people by facilitating the ability of the Chief Executive to launch and conduct an undeclared war. For the continuance of the draft is the continuance of an advance pledge of almost unlimited manpower for any military venture the Executive wants to launch.

If the White House and the Pentagon had to ask Congress to conscript men whenever they wanted to engage in an undeclared war, a national debate would be precipitated that might result in a substantially different course than the Administration had intended.

In fact, no Executive would dare try to authorize the escalation of troops from a few thousand military advisers to some hundreds of thousands of combat troops if he had neither a peacetime draft nor a Congressional declaration of war in his pocket.

When official spokesmen talk about the inequity of the draft they are operating on the principle that the issue before us is how to draft people equitably and not human freedom from such servitude. There is a real inequity in that the draftee's substandard pay means he is subsidizing society when there is no need to do so except to keep down the taxes.

However, the real issue is "the impact of conscription on the freedom, education, and vocations of young citizens."[1] The draft unnecessarily denies these young men freedom for a period of years, forcing them into a role they would not otherwise have chosen and delaying or jeopardizing plans for education, vocation, and marriage.

It is estimated that 40,000 young men have fled the United States so that they would not be subject to the draft. We need to recall that it was for essentially the same reason that many of our ancestors fled compulsory military service in a highly militarized 19th century Europe. The flight of these young Americans should be regarded as a danger signal, warning of the heavy burden of militarism and consequent loss of freedom in the United States even as the action of our ancestors was an indictment of Prussian militarism.

There are many responsible people in our society who believe that the United States is too deeply influenced by what President Eisenhower called the military-industrial complex, that the United States, in its power contest with Russia, has chosen to establish order in the world through its own might rather than through the strengthening of international institutions, that such a course inevitably involves more and more interference in the internal affairs of other nations, and that the draft is in a real sense the symbol of this whole trend and a key to its continuance.

In conclusion, as the United Methodist Board of Christian Social Concerns stated at its annual meeting in October, 1969, "The Board of Christian Social Concerns of The United Methodist Church . . . calls for an immediate end to military conscription in the U.S., through repeal of the Selective service law."[2]

---

[1] "The United Methodist Church and Peace," resolution of the 1968 Uniting Conference of The United Methodist Church, paragraph 7.a.

THE VICE PRESIDENT AND THE AMENDMENT TO END THE WAR

Mr. CRANSTON. Mr. President, the Vice President yesterday made some unfortunate and, I believe, unjustified conclusions about the amendment to end the war. Regrettably he chose to cloak his conclusions with some of his now familiar florid rhetoric and predictably he impugned the motives of those who have drawn conclusions different from his own on how best to disengage from Indochina.

Mr. President, Vietnam is a national disaster. We should be discussing it in a rational and temperate manner rather than using it as an excuse for partisan political bomb throwing. Those of us who support the amendment to end the war have attempted in speeches and in publications to outline in great detail the reasons why we believe a commitment to a fixed timetable for safe and orderly American disengagement offers the best way out of our disastrous involvement in Indochina. I should hope the Vice President would give us the benefit of the reasons which led him to draw different conclusions about the effect of our amendment.

Our President has promised to try to bring us together again. I am sure the Vice President shares this desire as do all the Members of this body. Our country is deeply divided today over many issues.

What we need to bring us together again is more reason and less emotional rhetoric. When we must disagree over the difficult problems we face we should discuss our disagreements with temperance and hopefully with some measure of charity and respect for the other fellow's point of view. We are after all discussing the problems of the greatest democracy the world has ever known, not wrangling at some lodge meeting. If we cannot conduct ourselves like gentlemen, how can we expect the people of this country to respect and uphold the rules of reason and of law which are the foundations upon which our social compact rests.

Mr. President, the Vice President, despite his verbal excesses, is a man of courage and conviction. I know that he has acted quietly and with great dignity to bring the moral weight of his office to bear against the military junta in Greece. While I disagree with him on many issues, I respect his convictions. I know he cares as deeply about this country as I do. But I hope he tones down his rhetoric before it causes deeper tears in our social fabric.

We desperately need reasoning men and reasoned debate today.

Our Vice President should be one of the first to recognize this.

OIL POLICY COMMITTEE MAKES RIGHT DECISION ON OIL IMPORT QUOTA SYSTEM

Mr. PEARSON. Mr. President, yesterday Brig. Gen. George A. Lincoln, Director of the Office of Emergency Preparedness, announced that the Oil Policy Committee, of which he is chairman, had decided to recommend retention of the present oil import quota system. In announcing this recommendation, General Lincoln also indicated that President Nixon concurred in the decision of the Oil Policy Committee.

This is a most significant decision, and I believe it is the right decision.

It would have been a great mistake to have adopted a new policy which might have served to weaken the domestic petroleum industry, particularly at a time when we face the prospect of a fossil fuel shortage of major, possibly crisis, proportions.

In announcing this recommendation, the Oil Policy Committee cited the following factors: Increased demands for the petroleum products in the last 6 months, decreased domestic supplies, growing shortages in other fuels such as natural gas and coal, sharp increases in Mideast oil and tanker costs, and the uncertainty as to when the great oil resources of the North Slope of Alaska will be available for consumption.

Some of these factors are fairly recent in origin. Most have been there all the time but have not been given their proper weight in the making of previous recommendations on oil import policy. The Oil Policy Committee, under the chairmanship of General Lincoln, is to be commended for its thorough and realistic appraisal of all the significant factors. The oil quota system has served this country well. Internal modifications of the program during the past few months have improved its operation.

Mr. President, I salute this action by the Oil Policy Committee and the President. It is appropriate and sound. It will serve to protect and advance the interests of the Nation as a whole.

RESOLUTION ON POW'S PASSED BY THE GRAND LODGE OF A., F. AND A.M. OF OREGON

Mr. HATFIELD. Mr. President, whatever policy is pursued by the United States with respect to our involvement in Southeast Asia does not alter the fact that the North Vietnamese have life and death control over the unknown number of Americans held captive over the years of conflict. As the Senate's attention becomes focused on a series of amendments which will have a direct bearing on American involvement and policy in Southeast Asia, I believe we must give important consideration to the effect these amendments will have on the status of American prisoners of war.

Secretary of Defense Laird's efforts in asking the North Vietnamese for a release of all Americans being held captive, or at least compliance with the 1949 Geneva Convention provisions relating to POW's, should be highly commended. But as our Nation continues to be a major combatant in the Southeast Asian war, our Nation's sharp protestations and invocations of international law have met with little success. I and the other cosponsors of the amendment to end the war—Senate amendment No. 609 to H.R. 17123—believe that our amendment, however, holds out a hope for these men not available under the alternative of continued conflict. We believe that Hanoi will hold Americans as prisoners of war only as long as they are fighting against American forces. When it is certain that we are determined to withdraw completely and end our own military involvement in this Asian conflict, then they will have no further incentive for maintaining these Americans as prisoners.

The Grand Lodge of the Ancient, Free and Accepted Masons of Oregon has passed a resolution regarding American prisoners of war urging, among other things, that our Nation not forget American POW's in their consideration of treaties, accords or agreements relating to our involvement in Southeast Asia. I commend the Grand Lodge for their concern in this area and can assure them that careful thought was given to this area in the formulation of Senate amendment No. 609. I ask unanimous consent that the resolution be printed in the RECORD.

There being no objection, the resolution was ordered to be printed in the the RECORD, as follows:

RESOLUTION

Whereas, there is an undetermined number of United States citizens interned as prisoners of war by the Government of North Viet Nam, and

Whereas, some of these members of the military service of the United States have been imprisoned as long as five years, and

Whereas, the intelligence reports and information from those who have been released or escaped leaves no doubt that these men, while imprisoned, are subjected to unusual, cruel and inhuman treatment, to-wit: physical torture, psychological terror, public display, insufficient medical care and treatment, neglect of health, dietary and sanitary necessities, and are denied correspondence with relatives, and

Whereas, by inflicting such treatment upon the members of the military service of the United States of America, the Government of North Viet Nam has violated the fundamental standards of human decency and has grossly deviated from civilized concepts of international accords and agreements on prisoners of war, and

Whereas, the Geneva Convention of 1949 requires the fair, humane treatment of prisoners and the Government of North Viet Nam in 1957 became a signatory to said agreement and the said Government of North Viet Nam has refused to identify the prisoners whom it holds, to release the seriously sick and wounded prisoners, to permit inspection of the prisoner of war facilities and has refused to permit exchange of mail between the prisoners and their families, and has refused to permit the International Red Cross to inspect the prisoners, and

Whereas, the acts of the Government of North Viet Nam in this conduct have violated all standards of decency toward members of the military service, many of whom are members of Free Masonry.

It is, therefore, resolved that the Grand Lodge of the Ancient Free and Accepted Masons of Oregon at its annual Communication assembled June 11, 1970, does condemn in the strongest terms the conduct of the Government of North Viet Nam in its treatment and confinement of these members of the military service of the United States and does hereby petition to the United Nations and all of the free governments associated therewith for the Government of North Viet Nam to be censured and required to act as follows:

(1) To observe the terms and conditions of the Geneva Convention of 1949 as signed by the Government of North Viet Nam in 1957;

(2) To allow the International Red Cross and United Nations to immediately visit said prisoners to determine the number confined therein and advise their families and loved ones;

(3) To immediately release the seriously sick and wounded prisoners;

(4) To provide continued impartial inspection of the facilities of the prisoners by the International Red Cross and other appropriate organizations;

(5) To provide proper medical treatment of the sick and wounded;

(6) To provide a regular supply of sufficient food, medicines and other items to maintain a decent standard of living;

(7) To cease using prisoners for purposes of propaganda, public degradation and mental torture.

We do further resolve that the United States of America enter into no treaties, accords or agreements that will in any way prevent or delay repatriation of these members of the military service of the United States and their prompt return to the Government of the United States and to their wives, children and families.

It is further resolved that a copy of this resolution in appropriate form be sent to the President of the United States; the Vice-President of the United States; the Secretary of State of the United States; the Majority Leader and the Minority Leader of the Senate of the United States; the Speaker of the House of Representatives of the United States; and to the Secretary of the United Nations.

In witness whereof, the Grand Lodge of Ancient, Free and Accepted Masons of Oregon, has caused this Resolution to be executed by its Most Worshipful Grand Master and Right Worshipful Grand Secretary and the seal of the Lodge affixed thereto.

B. D. DOTSON,
Most Worshipful Grand Master.
W. L. ELLIOTT,
Right Worshipful Grand Secretary.

TO EVERYTHING THERE IS A SEASON

Mr. PROXMIRE. Mr. President, I believe it was Victor Hugo who once said:

Greater than the tread of mighty armies is an idea whose time has come.

We are drawing nearer to the time when we must make a momentous decision on a significant advance in international human dignity. I speak of the Genocide Convention.

To paraphrase a famous and poignant folksong, I firmly believe that "to everything there is a season." The season has come for courageous decisions on matters of human rights.

To everything there indeed is a season; a season for soul searching and a season for courage, a season for doubt and a season for decision, a season for council and a season for commitment. I ask that the Senate act on its con-

science when the United Nations Convention on Genocide comes to the floor of the Senate.

ADMINISTRATION TESTIMONY ON RIGHTS OF THE MENTALLY ILL

Mr. ERVIN. Mr. President, on August 12, 1970, the Subcommitee on Constitutional Rights resumed its hearings on the constitutional rights of the mentally ill. The purposes of this hearing were to ascertain the policies, programs, and plans of the Federal Government affecting the rights of the mentally ill and to evaluate the implementation of the 1964 District of Columbia Hospitalization Act.

Witnesses who testified at the hearing included Dr. Roger O. Egeberg, Assistant Secretary for Health and Scientific Affairs, Department of Health, Education, and Welfare, and Dr. Sherman N. Kieffer, Director of the National Center for Mental Health Services, Training, and Research of the National Institute of Mental Health. The witnesses were requested to comment upon the steps that have been taken over this decade by the Federal Government, and to describe the plans for the future, to: First, promote mental health research: second, encourage enlightened policies for effective and early treatment of mental illness; and third, assure better laws for protection of the constitutional rights of mental patients.

Dr. Egeberg outlined national trends in the medical and legal fields affecting the rights of the mentally ill. He pointed to a decrease in the mental institution population and emphasized the advantages of treating mentally ill persons in the community. He acknowledged the growing concern with the patient's right to treatment and the adequacy of treatment for those involuntarily committed to mental institutions. Dr. Egeberg said:

> The rights issue is extremely important and objective judicial and administrative review of the quality of services are crucial in a democratic society. It is the responsibility of health care professionals, however, to stay in the vanguard of changes in the service we are offering. The question of quality is not restricted to whatever are the levels of adequacy that can be legally enforced. Our responsibility and challenge is to assure the value of what we offer to those who come to us for help.

Dr. Sherman Kieffer, in discussing the implementation of the 1964 District of Columbia Act, said:

> A review of the past five years of operating experience indicates that the Act's legislative framework has generally proved to be both durable and flexible, and that the principles it embodies have ably withstood the test of time.

Dr. Kieffer strongly endorsed the concept of voluntary commitment, one of the fundamental purposes of the 1964 act. He summarized the position of the National Institute of Mental Health:

> We are opposed professionally to any practice which would tend to discourage patients from entering treatment on a voluntary basis.

Mr. President, in my opinion, Dr. Egeberg and Dr. Kieffer presented testimony which will be of great value to the subcommittee in its continuing study of the rights of the mentally ill. I believe that their statements will be of interest to every American concerned with the problem of mental illness. For that reason, I ask unanimous consent that these two statements and the brief remarks which I made in opening the hearing be printed in the RECORD.

There being no objection, the statements were ordered to be printed in the RECORD, as follows:

OPENING STATEMENT OF SENATOR SAM J. ERVIN, JR., RESUMPTION OF HEARINGS ON THE CONSTITUTIONAL RIGHTS OF THE MENTALLY ILL, AUGUST 12, 1970

With today's hearing the Subcommittee resumes the series of hearings we began in November of 1969 to consider the constitutional rights of the mentally ill. The lapse of time between the earlier hearings and this one was caused by the demanding responsibilities of the Subcommittee in other areas and the problem in scheduling additional witnesses.

Our hearings have been undertaken to provide a comprehensive "decade review" of the state of the law governing those who are subject to loss of liberty and to involuntary hospitalization because of mental illness. We have focused upon recent legal and medical developments in the field, commitment procedures and practices in various states, the availability of legal assistance to persons subject to commitment and to persons actually hospitalized, the significance of a patient's moral and legal "right to treatment" under the law, the implementation of the 1964 District of Columbia Hospitalization Act, and various suggestions for improvements in policies and practices affecting those persons in our society determined to be "mentally ill."

Thus far, we have heard from a distinguishing group of witnesses with experience and expertise in all areas of this subject. Our witnesses have included representatives from the American Psychiatric Association, the American Medical Association, the National Association of State Mental Health Program Directors, the National Association for Mental Health, the Medical Committee on Human Rights and the American Civil Liberties Union. We have also had the benefit of testimony from representatives of the District of Columbia Medical Society, the District of Columbia Health Department, the District of Columbia Judicial Conference, the District of Columbia Mental Health Association, the Neighborhood Legal Services, the District of Columbia Legal Aid Agency, and professors of law with knowledge in this area.

Today we are focusing upon the Administration's programs and plans concerning the mentally ill in our nation. We shall also hear first-hand from those charged with administering the new law for the District, how well it is working, and how it has been implemented. The 1964 Act was largely the product of this Subcommittee's study and hearings in the early 1960's. There is general agreement that this legislation constituted a significant improvement in protecting the rights of the mentally ill and in encouraging voluntary commitment. We have evidence to suggest that some of the purposes of this legislation have been realized. However, there is also evidence—including the testimony of previous witnesses—to underscore my belief that certain provisions of the 1964 Act have not been effectively implemented.

I am confident that the witnesses scheduled to testify today will be of great value in pointing out our shortcomings and in helping us to understand what should be done to remedy the areas of neglect. I also look forward to the testimony to be presented on behalf of the Administration as to its plans for coming to grips with the complex problems involved in responding to the needs of those who are mentally ill.

Finally, I hope that this entire series of hearings will encourage the Congress and the public to re-examine old assumptions and outmoded approaches concerning the problem of mental illness in this country. In a free society, a determination that any man shall be denied his liberty—even upon a good-faith belief that it is in his own best interests—should be made with the greatest caution and with the full protections of due process afforded the individual by our Constitution.

I would like for the record to show that in the appendix of the hearings, there is to be inserted a letter which we have received from Mr. Robert J. Golten, of the District of Columbia Legal Aid Agency. Also, I understand that the Center for Study of Responsive Law has undertaken a study of the rights of the mentally ill. The Center has given permission to include its report in our hearing record when it is available. In addition, in response to a Subcommittee questionnaire sent to the National Institute of Mental Health, we have received a very helpful collection of reports and statistical information which will also be included in the record with the questionnaire.

STATEMENT BY SHERMAN N. KIEFFER, M.D., ON CONSTITUTIONAL RIGHTS OF THE MENTALLY ILL

Thank you, Mr. Chairman. I appreciate the opportunity to appear before this distinguished Subcommittee to convey the professional opinions of the National Institute of Mental Health and the National Center for Mental Health Services, Training, and Research regarding the District of Columbia Hospitalization of the Mentally Ill Act.

A review of the past five years of operating experience indicates that the Act's legislative framework has generally proved to be both durable and flexible, and that the principles it embodies have ably withstood the test of time. I shall, however, comment on certain amendments to the Act which were proposed in S. 2869 as originally introduced, about which you ask our opinion.

When Saint Elizabeths Hospital was first established in 1855, its mission was stated as the provision of "the most humane care and enlightened curative treatment" for persons suffering from mental illness. This, Mr. Chairman, you translated into legislative language establishing the corresponding right of every patient to receive such treatment. What has changed over the years is not the goal itself, but the definition of "humane care" and of "enlightened curative treatment."

Through our accumulated research findings and clinical experience, we know that most mental illness can be treated more effectively when detected and diagnosed early and properly, and when the positive relationships between the individual and his family, his job, his friends, and his community are not severed. We also know that custodial care alone, no matter how compassionate, how enlightened, or how restitutive it may be, will not provide the kind of active support required to effectively rehabilitate an individual suffering an emotional crisis and to return him to a productive life in the community.

Dr. Egeberg has described the national efforts to bring about desired changes in the pattern of delivery of mental health services. He has traced the development of the Community Mental Health Centers program and, equally important, the growth of clinical research and training programs, without which programs of services would fail to grow in excellence.

The National Center for Mental Health

Services, Training and Research embodies all three elements of the national program in microcosm. It consists of three closely interrelated and interdependent Divisions—the Saint Elizabeths Hospital-Division of Clinical and Community Services, the Seymour D. Vestermark Division of Intramural Training, and the Winfred Overholser Division of Clinical Research. The Hospital Division forms the essential base for the delivery of clinical and community services. The Vestermark Division is a laboratory for the development of new and more effective techniques for the training of professional and paraprofessional personnel to provide such services. The Overholser Division carries out clinical and social science research programs which can be utilized by the other Divisions and by the Institute as a whole in exploring and evaluating innovative treatment approaches.

It is anticipated that the accomplishments of the National Center as a whole will be replicated by communities throughout the United States. The model provided by the Hospital Division should be particularly significant to them because it did not spring full-blown from a mental health planner's drawing board. Existing resources—in this case, the old Saint Elizabeths Hospital—are being utilized in new and creative ways. The hoped-for result will be a pattern of services which goes far beyond the old functions of providing intermediate or long-term inpatient care only. The services we are presently providing for the 155,000 residents of the District's Health Service Area D in our model community mental health center include, in addition to inpatient care when needed, a full range of alternatives to such care, for children as well as for adults. In addition, consultation to community agencies and concerned personnel, improved screening and diagnostic techniques, and intensified follow-up care for patients moving back to the community are available. These programs have all been developed in collaboration with the District Health Department officials.

The statements made before your Subcommittee by Dr. John Schultz, Associate Director for Mental Health and Retardation, D.C. Department of Public Health, last November 12, 1969, need clarification. He stated that ". . . the right to treatment of a patient presented to Saint Elizabeths Hospital for care includes the right to precare and the right to aftercare in his community and the full range of alternative services which Saint Elizabeths cannot provide. Saint Elizabeths can only admit or not admit." No one mental institution alone can effectively serve the entire population of an area the size of the District of Columbia. This is, in effect, the role Saint Elizabeths has been forced to assume ever since the District closed down its only security inpatient psychiatric facility at D.C. General Hospital in late 1966. For patients requiring security confinement, Saint Elizabeths is often the only available resource.

Mr. Chairman, we are willing and eager to, and do admit any and all residents of Health Service Area D and provide them with the most comprehensive range of services possible. For fiscal 1970, for example, we admitted a total of 1,650 patients from the other three health service areas of the District. We feel, however, that it is time that the parallel responsibilities of the District of Columbia to provide the same full range of services for residents of the other health service areas of the city were implemented in those areas. Until such time, however, we will certainly continue our cohort services to residents of Areas A, B, and C, and our overwhelming burden of services to patients committed for pre-trial examinations through the criminal process. We must frankly admit, however, that our resources are becoming strained to the breaking point. For many patients it is quite true that we cannot always offer the kind of comprehensive treatment services which in our professional judgment constitute an "adequate" program.

I have detailed the strengths and weaknesses of our treatment program not only because it is the only honest response to your question about the implementation of the "right to treatment" which your statute guarantees, but because the woeful lack of alternatives to inpatient care for three of the city's four health service areas renders inoperative another innovative feature of your statute—the right of the court to commit to such alternative resources in lieu of natory of the convention.

A number of studies conducted or supported by the NIMH or others have demonstrated that an extremely small percentage of civilly committed patients meet the statutory standard of danger to themselves or others to an extent that in our judgment necessitates inpatient care. Despite the legislative language, they are committed and retained because they are in need of care and treatment, they do not have the insight to seek such care voluntarily, and—there is nowhere else to send them. We hope the day is not too distant when, in the District of Columbia at least, commitment to partial hospitalization or outpatient care will be the rule rather than the exception.

Most of your questions regarding implementation of other specific sections of the Act are answered in the Addendum which I have submitted for the record. There, too, will be found a number of tables and charts which provide background statistical information about admissions and releases of patients in the years since the Act was passed. I would like to call attention to two charts which are particularly significant.

Table I presents a 3-year comparison of patient status at the end of each of the last three fiscal years. You will notice that in fiscal year 1969 particularly (the first year of the National Center's operation), the resident patient population was decreased from 5,476 to 4,865. This decrease of 611 resident patients represents an 11.16 percent annual rate of decline, or a 179 percent improvement compared to the average for 1962–1967. What is particularly significant is that this was accomplished in spite of a 70 percent increase in the admission rate for the five year period prior to 1969. This we attribute to our redoubled efforts to place patients in the community when hospitalization is no longer necessary. Since the establishment of the National Center in November 1968, we have reduced the average daily resident population by 1600. This marked reduction has enabled us to evacuate and close the 12 antiquated patient buildings constructed during the Nineteenth Century. It should be noted here that of the 6,000 patients discharged since November 1968, only 188, or about 3%, are currently rehospitalized. The national average for readmissions under similar circumstances has been about 50%.

Table IV is also of interest because it confirms what several witnesses have told the Subcommittee—that the number of D.C. resident patients alone seeking care on a voluntary basis has increased since the Act has been in operation. In fiscal year 1965, the first year of operation, of 1,011 civil D.C. resident admissions, only one-third (357) were voluntary. In fiscal year 1969, of 2,418 civil D.C. resident admissions, nearly one-half (1,180) were voluntary.

The increased utilization of the voluntary admission procedures is a trend we encourage in every way possible in the national mental health program. There is no question but that the prognosis for a motivated patient who takes the first hard step of acknowledging his need for help and seeking such help on his own initiative is very much better than for patients forced to enter treatment against their will. In addition, voluntary patients for the most part seek assistance at an earlier stage of their illness, at a time when therapeutic intervention can be maximally effective. For these reasons, we are opposed professionally to any practice which would tend to discourage patients from entering treatment on a voluntary basis.

We share the conviction of the great majority of mental health professionals throughout the country—whose representatives, I believe, have already testified to this effect before your Subcommittee, Mr. Chairman—that any procedure which would undermine the therapist's credibility and break faith with the patient should not be approved. The very meaning of the term "voluntary" implies a lack of coercion. In accepting a patient on this basis, we have obligated ourselves, ethically and professionally, to respect his right to seek or to reject our help as he may choose. If we fail to live up to this obligation by placing roadblocks in the way of his release, we have destroyed the very foundation of a meaningful therapeutic relationship.

In this connection, we would invite your attention to the amendment to section 21–512(a) of the D.C. Code proposed in section 5 of S. 2869 as originally introduced. The amendment would provide that if the chief of service has reason to believe that a voluntary patient is mentally ill and, because of such illness, is likely to injure himself or others if not detained, and if the chief of service applies for emergency hospitalization within 48 hours, then the hosptial would be permitted to detain the patient even though 48 hours had expired since he has asked to leave.

We believe this amendment requires some refinement so as to assure that it would not have the effect of discouraging patients from entering treatment voluntarily, while nevertheless assuring that the D.C. Public Health Department was notified in the case of a voluntary patient who seeks release while a danger to himself or others. We hope to complete our consideration of proposed changes in this amendment in the very near future and will at that time make our recommendations to the Subcommittee.

Turning to the emergency commitment procedures, we would recommend a modification of the D.C. Code as recently amended by the District of Columbia Court Reform and Criminal Procedure Act of 1970. The Code now provides that *any* physician of the person in question, and not merely a *family* physician, should be authorized to file for admission of a patient under emergency procedures provided for in section 21–521 of the Code. While we agree that the term "family physician" is perhaps a bit anachronistic for much of the population we serve today, and approve the change made by the new Reform Act in deleting the qualifying word "family", we do not think it is wise, from a therapeutic standpoint, to permit physicians employed by the treating institution to initiate a petition for involuntary hospitalization. It is no solution to limit the right to file emergency applications to physicians licensed to practice in the District of Columbia, as some witnesses have suggested. Many staff physicians at Saint Elizabeths Hospital are so licensed. We would prefer to see the language changed so that any physician, except one employed by the institution to which admission is sought would be qualified. I am advised by our Counsel that this may require an amendment not only to section 21–521 but also to section 21–582(a) which expressly deals with the question of the qualifications of hospital staff physicians to initiate such petitions.

In connection with the detention of persons upon application to the court by the Commission on Mental Health, we note that sections 6(d) and 7 of S. 2869 would author-

ize the court to issue an "attachment for the immediate apprehension and detention at a hospital" of a person "not otherwise in custody" for whom a petition for judicial hospitalization has been filed. In such cases, the Commission could detain the person for examination and a hearing for a period of up to seven days, unless the person or his counsel requests a recess. Proponents of the proposal, in testimony given to the House District of Columbia Committee, stated that its purpose is to handle the situation of the clearly mentally ill and highly dangerous person who refuses to submit himself to the Mental Health Commission for examination. We believe, however, that there should be a provision for notice and opportunity for a hearing on this matter, both with respect to the question of whether there is sufficient probable cause to *order* an examination and to consider the possibility of an examination conducted at home or otherwise on an outpatient basis. If the situation warrants, the emergency procedures under Subchapter III of Chapter 5 of Title 21 of the D.C. Code would be available.

I would like to make just one comment regarding the amendment to the D.C. Code, section 10(b) of S. 2869, which would add a new procedure by which hospitalized patients could submit a motion for release to the court which entered the order for hospitalization. The amendment would allow the court to restrict the patient to only one release motion, unless he claims that his mental condition has changed, there has been no court hearing to determine his present mental condition for a period of six months, and he has exhausted the remedy pursuant to section 21–547 of the Code and all other administrative remedies. He may thereby be precluded from offering to the court, in a proceeding under the proposed section 21–548 of the Code, evidence that what has changed is not his own condition but an outside factor, such as the existence of a suitable alternative to hospitalization. If he were to be so precluded, it would not appear to be consistent with the spirit and aims of the District of Columbia Hospitalization of the Mentally Ill Act. We would suggest that the amendment be studied further with this consideration in mind.

As mentioned before, the procedures, directives, forms, etc., developed to implement the various rights guaranteed to patients under the D.C. Code have been included in the Addendum to this statement, but the subject of competency to exercise a number of civil rights requires some further discussion in the light of our experience over the past 5 years. I hasten to assure the Subcommittee that the National Institute of Mental Health and the National Center for Mental Health Services, Training, and Research have always supported—and continue to support—the validity of the provisions which separate determinations of the need for hospitalization from determinations of incompetency. We have taken our responsibilities under Section 21–564 of the Code very seriously. Between September 15, 1964 (when the District of Columbia Hospitalization of the Mentally Ill Act was passed), and September 15, 1965, the hospital examined over 5,000 patients who had previously been considered incompetent solely upon the basis of an order of involuntary hospitalization. Since that time, every patient is examined at the time of or soon after his admission to the hospital to determine his competency to exercise each of the separate rights enumerated in the statute. (The form used to record this information and the results over the years are part of the Addendum). Although we are required to notify certain persons of the patient's mental inability to exercise particular rights, the statute does not require any of the persons so notified to take any legal steps to have the patient's alleged incompetency judicially determined. The subject of followup steps to protect such patients more adequately should also receive further study and consideration.

Before closing I would like to mention one provision in the present D.C. Code which may cause considerable administrative difficulties if or when the District of Columbia develops adequate services for the residents of Health Areas A, B, and C. As presently written, Sections 21–511 and 21–513 of the Code provide that voluntary applicants and non-protesting persons whose conditions justify hospitalization are entitled *as a matter of right*, to be admitted to the public hospital of *their choice*. As a result, the Administrator of Saint Elizabeths Hospital may not transfer a patient who resides in Health Areas A, B, or C but asks to be admitted to Saint Elizabeths Hospital to the appropriate facility in his own catchment area nor may the Administrator of an Area A, B, or C facility transfer a patient who lives in Health Area D to Saint Elizabeths Hospital. This means that any plan for more effective utilization of public facilities in the District would be nullified if the patient chose to request admission to a facility not located in his own residence community. This problem was first pointed out to your Committee in 1964 by both the District of Columbia and the Department of HEW at the time the legislation was under consideration but no action was taken at that time since the District had not yet developed its own facilities. We are now bringing the problem to the attention of this Committee once more so that it may consider the advisability of amending the present Sections 21–511 and 21–513 of the Code to make it more flexible.

Mr. Chairman, I want to say again how much I appreciate the opportunity to talk with you about the District of Columbia Hospitalization of the Mentally Ill Act, and to discuss our successes and our failures in carrying out the directives it embodies. I assure you that we share your determination as professionals and as concerned citizens that every possible protection will be given the human rights of persons afflicted with mental illness. We will now be happy to answer any further questions you may have about the statement or about the materials submitted in the Addendum.

STATEMENT OF ROGER O. EGEBERG, M.D.

Mr. Chairman, Members of the Committee: I am happy to appear at these hearings on the legal rights of the mentally ill to talk about the development of our national mental health program. The rights issue and, in particular, the legal-psychiatric concerns and discussions about the right to treatment have focused attention on changing emphases in American public and professional responses to the mentally ill.

These emphases have resulted in a shift from custodial care to community based treatment of the mentally ill. Essential to this shift have been growing public and professional expectations that almost all the mentally ill will be returned to meaningful and productive lives, and, increasingly, the prospect that with early community-based help, they should never have to seriously disrupt work and family relationships.

I know you are familiar with the custodial "snake pits" reported by Deutsch in the thirties, where the mentally ill were often treated inhumanly as outcasts, often by other outcasts from society who were charged with their care (Deutsch: *The Mentally Ill in America*, 1937). The shift from the "institutional solution," which again flourished after World War II with larger and larger public expenditures for new structures and equipment, has been relatively recent and significant. For one thing, since 1955, there has been a striking reduction in the number of hospitalized mentally ill at State hospitals.

In the ten year period prior to 1955, the number of resident patients in mental hospitals increased each year. This number rose to 559 thousand in 1955, when—with the introduction of psychoactive drugs and a new community centered approach to the care of the mentally ill—the trend was reversed. Since then we have seen a decrease of more than thirty percent so that at the end of 1968 there were only 367 thousand resident patients. If the decrease in the number of resident patients continues, we can predict that by 1973 we will have only 186 thousand resident patients in mental hospitals—a reduction of two-thirds in the period 1963–1973.

This will be quite a remarkable achievement, in view of the fact that if the upward trend prior to 1955 had continued there would have been 809 thousand resident patients by 1973. This decline in resident patients is even more remarkable in that total admissions to mental hospitals during the same period have been rising.

Several factors have contributed to the reduction of resident patients in mental hospitals. Progress in research into the care and treatment of mental illness, in large measure Federally supported and stimulated, recently has made it possible for the Nation and its States and communities to begin to establish a program of comprehensive community mental health services providing effective and early treatment of the mentally ill.

Increased knowledge about mental illness and its treatment has also increasingly resulted in new public acceptance and understanding of the mentally ill and of community-oriented treatment.

I would like, very briefly, to elaborate on these national trends.

Since 1948, the purpose of the Federal assistance program in the mental health field, administered by the Department of Health, Education, and Welfare through the National Institute of Mental Health, has been to provide grant-in-aid support for research, training and manpower development, and the development of mental health services.

In addition to financial support, the NIMH also provides stimulation in each of these program areas through staff consultation with State and community personnel, demonstrations of new programs, and the evaluation of their merit.

The dual role of Federal leadership and support was demonstrated with the advent of psychoactive drugs in the 1950's, when research in psychopharmacology became one of the major areas of successful effort in the Federal research support program, in terms of both basic and clinical research studies.

Fifteen years ago, psychiatry possessed no clearly useful drug treatment for any form of mental illness. Today, in large measure through Institute efforts, psychiatrists, using chemotherapy, have been able, in many cases, to shorten the length of inpatient treatment and to treat persons who remain in the community without serious disruption of family and work relationships.

I mention the progress of psychopharmacology as one example of the importance of research which we believe is the foundation of the entire mental health program. There are many other examples.

Suffice it to say that Federal support of mental health research has grown from 38 projects in 1948 to some 2,000 in Fiscal Year 1970. In FY 1970, 28.6 percent of funds available to NIMH—about $116 million—were allocated to the support and conduct of research. This amount represented approximately 65 percent of all support for mental health research in the United States.

Some of the most pioneering and outstanding work on schizophrenia and depression has been carried out in the Institute's intramural laboratories.

While there has been no breakthrough in treatment of schizophrenia, the most serious

and most prevalent of the mental illnesses, our understanding of the disease grows daily. Research in the treatment of depressions shows definite progress and the results are now being tested in treatment. Mania—long resistant to treatment—now responds promptly to lithium carbonate.

Throughout the Institute's extramural research program, basic scientific research is being augmented with new investigations into the multiple causes of psychopathology.

Research by physical and biological scientists is being examined and further interpreted by social scientists and practitioners, including psychologists, sociologists, anthropologists, economists, lawyers, and political scientists. These specialists contribute a broad perspective within which to explore properly the nature of such special mental health problems and phenomena as suicide; the difficulties of adolescence; the mental health problems of the aged; abuse of and dependence on drugs and alcohol; and the alienation of groups within our society.

This Department has long recognized the need to reform the laws affecting the rights of the mentally ill, and the restriction of liberties that often accompanied earlier approaches has come under increasing scrutiny during the transition from custodial to community-based treatment. Many State laws were enacted at a time when alternatives to confinement in large isolated State hospitals were nonexistent, when long-term hospitalization was the rule rather than the exception, and when in many States all judicially committed persons were automatically considered incompetent. On the premise that good treatment can only be based on enlightened laws, the NIMH has continued to support studies related to commitment and court procedures and to forensic psychiatry, and has provided consultation at the request of a few States in the updating of their commitment laws.

For example, since 1961 it has supported an American Bar Foundation study of civil and criminal commitment procedures. This study has documented the tendency of States to apply involuntary commitment procedures to any one considered mentally ill and in need of immediate inpatient treatment. Voluntary procedures were generally ignored in addition to the statutory requirement and safeguard, in those States in which it existed, that a person must be dangerous to himself or others as well as mentally ill in cases of involuntary commitment. An early Public Health Service Draft Act for Hospitalization of the Mentally Ill, while stressing voluntary hospitalization, permitted commitment even in the absence of danger if the individual was in need of custody, care, or treatment in a mental hospital and because of his illness lacked sufficient insight or capacity to make a responsible decision. Psychiatrists apparently acted on the theory that commitment was for the patient's own benefit, and legal safeguards were often reduced to routine and automatic administrative actions.

Differences between statute and practice are not an unfamiliar issue to this Committee. This is one reason for our keen interest in the D.C. experience with the Ervin Act and our grant support for the recently reported Judicial Conference study of the Mental Health Commission, which functions under the Act. It is also the reason we believe it important to carefully study the effects of changes in commitment laws and practices. The New York law which provides continuous review of the status of committed patients through a number of Regional Mental Health Information Service offices is an example of an effort that we have watched with great interest. The Pennsylvania Assembly has held hearings on a "right to treatment" bill to establish treatment criteria and standards. This effort also should be carefully observed and analyzed.

Recent California legislation has drawn particular attention to the growing emphasis on early voluntary and community-based treatment. The NIMH is supporting a study of California's handling of the mentally ill before and after the enactment of their new law.

The Lanterman-Petris-Short Act, as the California law is known, became operative in July of 1969 (Welfare and Institutions Code Sections 5000 et seq.), and has been described as the "Magna Carta of the Mentally Ill." While this may be an overstatement certainly its emphasis on voluntary treatment and alternatives to hospitalization is worthy of careful observation.

There are significant provisions in the California law for maintaining the mentally ill person's civil rights. Prompt administrative and judicial reviews are provided in the case of involuntary certification, and particularly interesting is the requirement that involuntary certification is allowed only after a bona fide effort has been made to have the person accept voluntary treatment. Furthermore, involuntary certification is for a period not to exceed 14 days and may be used only when a person's condition renders him dangerous to himself and others or gravely disabled. This is a far cry from routine involuntary commitment for treatment or custodial purposes.

Not all professionals agree that patients should be treated on a voluntary basis, but the trend toward early, voluntary, and community oriented care is unmistakable. Some in the mental health professions claim that mental illness requires not merely the restraint of the individual for the protection of society but also for his treatment for his own benefit. A recent decision by the California Supreme Court sustaining the State's right to provide a 14-day period of involuntary intensive treatment on medical certification under the new law [see Thorn v. Superior Court of San Diego County, 83 Cal. Rptr. 600 (1970), and County of San Diego v. Superior Court, 83 Cal. Rptr. 607 (1970)].

In any case, there is generally agreement that some individuals need to be restricted and treated, although the number is far fewer than were previously committed and thought to be a "danger to themselves and others."

The legal-psychiatric discussions on the right to treatment have focused primarily on insuring adequate treatment for persons involuntarily committed. That this issue is of growing concern is especially understandable in a period when society's response to the mentally ill has been shifting from custodial care to treatment.

The rights issue is extremely important and objective judicial and administrative review of the quality of services are crucial in a democratic society. It is the responsibility of health care professionals, however, to stay in the vanguard of changes in the service we are offering. The question of quality is not restricted to whatever are the levels of adequacy that can be legally enforced. Our responsibility and challenge is to assure the value of what we offer to those who come to us for help.

There is a certain amount of submission by the patient to the professional in every professional-patient exchange. Our responsibility for quality services is only made more explicit by the specific legal limitations of liberties in the case of involuntary commitment. The net result is a check on whether the individual receives some help in the facility to which he has been committed. Our professional concern extends much further; in this broader context, we need to make much more explicit the quality of care that should be provided in all health care situations. We need to identify standards of care and the extent to which new knowledge modifies previous treatment approaches.

In the light of these developments, it is important to understand that treatment no longer takes place only on an inpatient basis in public mental hospitals. Increasingly, patients are being treated as outpatients in their own communities, or with day or night care involving partial hospitalization. Facilities providing such services may be those of a non-profit, private organization. In addition, there are outreach efforts, where community mental health workers go into neighborhood areas to intercept crisis events such as suicide attempts. The mentally ill are less often locked up in wards, without treatment. It is now less necessary for the mentally ill to be hospitalized before mental health workers respond to their needs. Although the availability of these types of services is not yet universal, there has been much progress through the community mental health centers program.

To keep treatment procedures abreast of research findings, it has been necessary to accelerate our training programs. Federal support for training mental health manpower has produced a nucleus of professional and supporting personnel capable of treating mentally ill and emotionally disturbed individuals within their home communities. This is an extremely important advance, since the majority of mental health manpower in the United States are still trained in and oriented toward hospitals or large institutions. From its beginnings, the Federal program has attempted to emphasize the training of community mental health manpower, but sufficient public demand and Congressional support to make more than a token effort in this regard has been forthcoming only since 1963, with the passage of the Community Mental Health Centers Act.

With the adoption of this statute, the Congress recognized the need for increased Federal responsibility in upgrading and expanding mental health manpower training efforts. Through this support program, training facilities have significantly increased the numbers of mental health professionals now in practice. Many of these trained people serve in Community Mental Health Centers.

By the end of fiscal year 1970, approximately 420 community mental health centers will have been funded. These are located in every State in the Union and will make services available to approximately 57 million people.

There are still not enough of these facilities, but the effect of those centers now in operation has already been demonstrated. The National mental health program has reached the point where neither the professions nor the public would countenance a regression to the custodial character of the 19th and early 20th century mental hospitals.

I can only give you a brief summary today of the elements of community involvement in the fate of the mentally ill which were catalyzed by the Community Mental Health Centers Act.

In 1962 and 1963, Congress authorized funds to make grants-in-aid available to each State to help them develop plans for comprehensive mental health services programs as a first step in qualifying for center support.

Literally thousands of men and women—most of them volunteers—served on the first mental health planning committees and task forces. This was the Nation's first real commitment to a program in which each community's objective would be to provide total mental health care to a defined group of people.

From its outset the community mental health program brought individuals together from all of the helping disciplines. Their primary purpose was to assure not only adequate treatment of individuals who were already mentally ill but, simultaneously, through the establishment of consultation and education services in each community mental health center, to provide services for the prevention of mental illness. In addition, the development of emergency mental

health services available on a 24-hours-a-day basis made early intervention possible.

This is one of the clearest examples of a public policy of prevention in the health care field. From that experience has emerged a public policy of stimulating comprehensive health planning, with responsibility shared by Federal, state, and local governments, and the private sector.

In conclusion, Mr. Chairman, this Administration is committed to the extension and expansion of Federal Support for the community mental health centers program. We think it is a responsive, consumer-oriented effort. Congress recently enacted Public Law 91-211 which extended and broadened the scope of the Community Mental Health Centers Act, provided special support for community-based treatment and rehabilitation of mentally ill children, alcoholics and drug abusers; and provided preferential Federal support for the establishment and provision of mental health services in urban and rural poverty areas.

My purpose here has been to give you an overview of progress in the National mental health program. The experience of the Department of Health, Education, and Welfare, through the NIMH, has demonstrated that the public now considers adequate treatment of mental illness an important right and community responsibility. Mere custodial institutionalization of the mentally ill for indeterminate periods is no longer defensible therapeutically, legally, socially, or politically.

This concludes my prepared statement, Mr. Chairman. I would ask that Dr. Kieffer now be permitted to deliver his statement, after which we shall both be pleased to answer any questions the Committee may have.

MILTON FRIEDMAN ON THE VOLUNTEER MILITARY

Mr. HATFIELD. Mr. President, Milton Friedman, professor of economics and member of the President's Commission on an All-Volunteer Armed Force, is one of the most articulate spokesmen on the subject of voluntarism versus conscription with regard to military recruitment.

Due to the imminent debate on the issue of an all-voluntary Armed Force, I ask unanimous consent that a series of articles which Professor Friedman has written for Newsweek magazine on this subject be printed in the RECORD.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

THE DRAFT

(By Milton Friedman)

The arbitrariness and deficiencies of our present method of manning the armed forces are highlighted by the recent directive ending automatic exemption for hitherto protected occupations and automatic deferments for most graduate students (the exceptions are students already in their second year or beyond, and students going into medicine, dentistry and related fields or into the ministry).

Academic administrators are expressing great concern that graduate-student enrollments will decline sharply and that teaching assistants will be scarce. This concern would be fully justified if all the young men who would have been deferred or exempted under earlier rules will in fact now be drafted—except of course for those who do not meet physical or mental standards or are granted status as conscientious objectors.

ONLY COLLEGE GRADUATES?

But arithmetic plus the needs of the military assure that this will not occur. The number of young men added to the eligible rolls is at least double the number who will be drafted. Supposedly, the oldest are to be drafted first. If that were done, all of the new draftees would be in their middle 20s, and most would be college graduates. Not one of the roughly 2 million young men turning 18 would be taken. Would the military be satisfied with this outcome? If there be conscription, it is certainly inequitable to give special treatment to young men who go to college. But, on the other hand, is soldiering one of the occupations for which college graduation should be a prerequisite? Is that a reasonable use of our manpower?

What is likely to happen is that, by one expedient or another, most college graduates and persons now exempt on occupational grounds will continue to be deferred. Public pronouncements will be one thing, practice another. But that does not mean that the pronouncements do no harm. On the contrary, hundreds of thousands of young men will be subjected to needless uncertainty and distress. They will find it more difficult to get employment because of the risk that they will be drafted. Employers will be induced to get along with less satisfactory employees. Thousands of colleges will take measures that will prove unnecessary or harmful. We shall have another striking example of the defect of compulsion as a method of deciding which young man shall serve in the armed forces and which two or three or four shall not.

Over a year ago, I wrote in this column that "a military draft is undesirable and unnecessary. We can and should man our armed forces with volunteers—as the United States has traditionally done except in major wars" (Newsweek, Dec. 19, 1966).

WHY NOT VOLUNTEERS?

In the interim, Congress has passed a bill extending conscription for another four years, yet there has also been increasing recognition of the defects of conscription. The case for a voluntary system has been presented in testimony before Congressional committees. Several bills have been introduced in both the Senate and the House providing for the early transition to a fully voluntary system of manning the armed forces.

Three books on the subject have recently appeared: "The Draft," which summarizes a conference held at the University of Chicago in December 1966 and presents evidence on all the alternatives (edited by Sol Tax, University of Chicago Press); "How to End the Draft," by five congressmen (edited by Douglas Bailey and Steve Herbits, National Press, Inc.); and "Why the Draft?" by seven young men connected with the University of Virginia (edited by James C. Miller III, with an introduction by Senator Brooke, Penguin Books). These books demonstrate that conscription is neither necessary nor desirable, that it is entirely feasible to man our armed forces by voluntary means provided the military stop underpaying new recruits and take effective steps to make a career in the services more attractive. These books consider and meet every objection that has been raised to a voluntary army.

Draft or no draft, this country would be now engaged in a searching debate over Vietnam. But the virulence and the divisiveness of the debate have been greatly increased by the draft, with its threat to civil liberties and with its closing of all alternatives except open revolt to young men who disagree strongly with our policy. Must we continue to add to the strain on our society by using a method of manning our armed forces that is inequitable, wasteful and basically inconsistent with a free society?

THE END OF THE DRAFT?

(By Milton Friedman)

At long last, the end of the draft is in sight.

Two months after his Inauguration, President Nixon appointed a commission "to develop a comprehensive plan for eliminating conscription and moving toward an all-volunteer armed force." That commission has now unanimously recommended a plan that it believes would permit conscription to end on June 30, 1971, when the present legal authority expires. It would retain only a standby draft to be put into effect in case of emergency by action of Congress on the recommendation of the President.

As a member of the President's commission, I was much impressed by the emergence of unanimity out of initial disagreement. As our deliberations proceeded, and especially as our knowledgeable staff developed a growing body of factual evidence, it became ever clearer to all of us how superficial are most arguments in favor of conscription and how inefficient conscription is both as a method of taxation and as a method of recruiting manpower.

MOSTLY VOLUNTEERS NOW

The often hysterical claims that an all-volunteer force is undesirable because it would be all black or all this or all that or because it would strengthen militarism or because . . . all these claims are contradicted by one simple yet overwhelmingly important fact: *our armed forces today consist predominantly of true volunteers.*

Many men "reluctantly" volunteer for a first term of service because of the threat of the draft. But we know that all men beyond the first term of service are true volunteers, and they alone number nearly 40 per cent of the total forces. In addition, our best estimates are that at least one-third of the first-termers are also true volunteers. In all, therefore, at least 60 percent of the armed forces are true volunteers. A change in the method of recruiting the remaining 40 per cent—mostly enlisted men in the very lowest ranks—cannot produce drastic changes in either the composition or character of the armed forces.

Enforced service by a conscript is a tax imposed on him no less than the check you send to Internal Revenue is a tax imposed on you. The size of his tax is the difference between the sum of money for which he would have served voluntarily and the pay he actually receives. Currently, this tax amounts to about 50 per cent of the potential civilian income of draftees. So unfair a tax imposed on so small a minority would never be passed explicitly by Congress. It persists only because it is hidden.

The tax is not only unfair, it is also inefficient. Every tax involves costs in addition to the amount of the tax itself. For conscription, these indirect costs are the heavy burdens imposed on actual and potential draftees, their families, universities, employers—and most important, on all of us through the weakening of the political fabric of society.

Most of these costs cannot be assigned a money value. But for those that can, the commission estimates that "for each $1 in tax-in-kind collected, an average of $2.50 is forgone by the public"—i.e., that it costs $1.50 to collect $1. That is one reason why, when the books are kept properly to show all costs and all returns, a volunteer force is far less costly than a mixed force of conscripts and volunteers. But it is not the only reason.

A young man is conscripted for two years. He spends the first six months or so being trained, the last few months being processed for his discharge. We are lucky if he spends one year in active service. In addition, the time of other men must be used to train him and move him in and out of service.

To man a mixed conscript-volunteer force of 2.5 million men (the middle of the range of force levels considered by the commission) requires recruiting each year about 440,000 enlisted men (excluding officers). Even with today's low first-term pay and

conditions of service, at least 250,000 would be true volunteers, leaving 190,000 who would have to be conscripted or induced to volunteer by threat of the draft.

An all-volunteer force of equal effectiveness has less turnover and uses manpower more efficiently. As a result, it requires recruiting each year about 325,000 enlisted men, or only 75,000 in addition to the present number of true volunteers.

THE REAL ALTERNATIVES

Compel 190,000 men per year to serve. Or improve pay and conditions of service to attract an additional 75,000 volunteers out of the 1.5 million who each year turn 19. These are the real alternatives.

(By Milton Friedman)

President Nixon's proposal of a draft lottery as an interim step to an all-volunteer military force has received generally favorable notices in the public press. These notices have stressed the reduction in uncertainty for men aged 18 to 26. Under the proposed plan, a young man would know by age 19 how large a chance he ran of being drafted, and this chance would not be affected significantly by his future behavior. He could then plan for the future in light of this knowledge. He would not, as now, have to keep a weather eye out year after year for how his current behavior will affect the likelihood that he will be drafted.

This is certainly a significant advantage. But there are also disadvantages of the lottery, less obvious to the naked eye, that have been overlooked. When account is taken of these disadvantages, it is by no means clear that the lottery would be a major improvement. What is abundantly clear is that either the present system or the lottery is distinctly inferior to an all-voluntary military force. Yet, by reducing the decibel level of protest to the draft, enactment of the lottery might delay or even prevent the introduction of this fundamental reform.

HIGHER CALLS

The lottery shares the key defect of the present system: compulsory service by a minority of the young men of the relevant age. It requires one out of three or four young men to serve, regardless of their willingness to do so and often at great sacrifice, while their fellows pursue their careers.

By comparison with the present system, an obvious disadvantage of the lottery is that it makes service in the military subject to Lady Luck. It reduces the solemn obligation to serve one's country to the level of the Las Vegas gaming tables. The present system at least purports to select on the basis of rational criteria.

A less obvious yet far more basic disadvantage of the lottery is that it would increase sharply the number of young men who would have to be conscripted—possibly to more than double the roughly 200,000 a year who are now conscripted. The lottery would raise draft calls because it would reduce the number of volunteers. Many men now volunteer partly in order to avoid the uncertainty involved in present draft procedures. The new plan would largely remove this uncertainty. Hence many men who now volunteer would not do so. Their places would have to be filled by conscripts even more reluctant to serve—as demonstrated by their unwillingness to volunteer even reluctantly under present arrangements.

If the lottery were the only alternative to the present system, the choice would be very difficult indeed. The number of young men who would gain from the lottery is much greater than the number who would lose—but the gain to most of the gainers would be small, while the loss to many of the losers would be large. There is no problem in the human calculus that is more difficult than to balance quality against quantity. Nonetheless, if this were the only alternative, I would probably prefer the lottery.

A BETTER ALTERNATIVE

Fortunately, there is a third alternative. We can start immediately to move toward an all-volunteer armed force by improving *substantially* the conditions offered to new recruits. The entering pay is disgracefully low—about $50 a week including cost of food, clothing and housing. Other conditions of service—quality of food and housing, the matching of skills to tasks and so on—are deplorable. Every other consideration aside, simple humanity demands a major improvement in the compensation and other conditions of military service. Such an improvement would convert many reluctant volunteers into true volunteers and many who are now drafted or who do not now serve into volunteers of either category.

These measures would not only reduce the residual number of young men who would still have to be conscripted but they would also provide invaluable information on how responsive the supply of volunteers is to the conditions offered. President Nixon has committed himself to moving to an all-volunteer force once the demands of Vietnam have eased. Perhaps experience would show that his object can be achieved even sooner.

Whether that be so or not, a major step toward a system of military recruitment fully consistent with our traditions and values is greatly to be preferred to a minor improvement in a system of compulsory service that denies the very basis of our existence as a society of free men.

A VOLUNTEER ARMY

(By Milton Friedman)

A military draft is undesirable and unnecessary. We can and should man our armed forces with volunteers—as the United States has traditionally done except in major wars.

Only a minority of young men now enter the armed forces. Hence, some method of "selective service"—of deciding which young man should serve and which two or three should not—is inevitable. But our present method is inequitable, wasteful and inconsistent with a free society.

On this point there is wide agreement. John K. Galbraith and Barry Goldwater, the New Left and the Republican Ripon Society have all urged that conscription be abolished. Even most supporters of the draft regard it as at best a necessary evil.

The draft is inequitable because irrelevant considerations play so large a role in determining who serves. It is wasteful because deferment of students, fathers and married men jams colleges, raises the birth rate and fuels divorce courts. It is inconsistent with a free society because it exacts compulsory service from some and limits the freedom of others to travel abroad, emigrate or even to talk and act freely. *So long as compulsion is retained, these defects are inevitable.* A lottery would only make the arbitrary element overt. Universal national service would compound the evil—regimenting all youth to camouflage the regimentation of some.

THE PAY IS LOW

Two principal objections are made to a volunteer force:

(1) That a "professional" army endangers political freedom. There *is* a real danger, but it arises from a strong armed force not from the method of recruiting enlisted men. Napoleon and Franco both rose to power at the head of a conscript army. However we recruit, the essential need is to maintain close links between the officers corps and the body politic.

(2) That a volunteer army is not feasible because, at present terms, too few men volunteer. Little wonder: the starting pay, including cost of keep, is about $45 a week! We could readily attract more volunteers simply by paying market wages. Estimates of how much total military pay would have to go up vary from $4 billion to $20 billion a year.

Whatever the extra amount, we are now paying a larger sum in concealed form. Conscription is a tax in kind—forced labor exacted from the men who serve involuntarily. The amount of the tax is the difference between the sum for which they would voluntarily serve and the sum we now pay them—if Joe Namath were drafted, his tax might well run into hundreds of thousands of dollars. The real cost of manning the armed forces now, *including this concealed tax,* is greater than the cost of manning a volunteer force of the same size because the volunteers would be the men who find military service the most attractive alternative.

THE COST IS HIGH

Moreover, a volunteer force would need fewer recruits. We now waste manpower by high turnover, unnecessary training and retraining and the use of underpaid servicemen for menial tasks.

Adding to cost, low pay for men in service encourages extravagant veterans' bonuses—currently more than $6 billion a year (over 40 per cent as much as total military pay). Young men seeking shelter from the draft impose unnecessary costs on colleges and universities. Other young men fritter away their time in stopgap jobs awaiting conscription, while industry seeks men to train.

The monetary savings that would come from abolishing conscription are dwarfed by even greater nonmonetary advantages: young men could arrange their schooling, careers, marriages and families in accordance with their own long-run interests; draft boards could be freed from the appalling task of choosing which men should serve, deciding claims for conscientious objection, ruling whether young men may leave the country; colleges and universities could be free to pursue their proper educational function; industry and government could hire young men on their merits not their deferments.

One of the greatest advances in human freedom was the commutation of taxes in kind to taxes in money. We have reverted to a barbarous custom. It is past time that we regain our heritage.

NO DRAFTEES TO VIETNAM

(By Milton Friedman)

President-elect Nixon is committed to ending military conscription and establishing an all-volunteer armed force as soon as manpower needs in Vietnam decline substantially. That is a consummation devoutly to be desired. But, in the interim, the new Administration could reduce enormously the bitterness, dissension and division arising from the Vietnam conflict by taking a major first step toward an all-volunteer army: sending no more draftees to Vietnam.

This proposal raises two basic questions: Is it desirable? Is it feasible?

The first question hardly needs discussion. Men who agree on little else about Vietnam would agree on the desirability of not using conscripts to fight the war.

The key question is, therefore, whether it is feasible to man the Vietnam war with volunteers. I believe the answer is, Yes. Will it be easy to do so? The answer is clearly, No. But that is hardly decisive. The aim of national policy should not be to make life easy for government officials, whether civilian or military.

THE FACTS

Here are the basic facts. Currently, about 540,000 men are in Vietnam: 360,000 in the Army, the remaining 180,000 in the Marine Corps, Air Force and Navy. The Air Force and the Navy use no conscripts; the Marines, a negligible number. Hence, only the Army raises a problem.

The strength of the Army worldwide is about 1.5 million. Only about 600,000 are conscripts; the other 900,000 are volunteers.

On a purely arithmetic basis, it seems clearly feasible to provide 360,000 men in Vietnam out of the 900,000 volunteers plus any conscripts who might waive their exemption. But this is misleading. The problem is harder than these numbers suggest.

1. The adoption of the new policy, *if nothing else were done,* might well reduce the number of "reluctant volunteers"—those who volunteer mostly under the threat of conscription. To offset this reduction, it would be highly desirable to raise substantiallly the pay of men who serve in Vietnam—a step that is called for in any event on grounds of equity.

Even substantial increases in combat pay are clearly feasible on budgetary grounds. A rise of $1,000 a year for all men in Vietnam would cost around a half billion dollars. Yet this rise, even if flat and across the board, would raise the pay of enlisted men by something like 40 per cent. And the rise should not be across the board. It should be concentrated on the positions for which volunteers are fewest.

2. Currently, the term of service of enlisted men in Vietnam is limited to twelve months. Disregard officers, and suppose that all of the nearly 900,000 volunteers in the Army enlisted for a single term of three years. Then each could spend only one-third of his service in Vietnam, so that a maximum of 300,000 men could on the average be in service in Vietnam.

The policy of limiting the term of service in Vietnam to twelve months has been strongly criticized on strictly military grounds as highly unsatisfactory and inefficient. It takes several months for men to learn their jobs; their last several months are homeward-looking; at most, six of the twelve months are useful service. In addition, the perpetual rotation makes it impossible to establish those informal lines of communication that are at least as important in every large administrative structure as the formal channels. Lengthening the normal term of service would cut sharply the number of men needed in Vietnam and thus doubly facilitate a policy of no draftees to Vietnam.

3. A third possible difficulty is that the Army needs units rather than individual men in Vietnam and it is undesirable to segregate all Army recruits from the outset into conscript and non-conscript units. However, this difficulty is not relevant. Initially, units as a whole were sent to Vietnam but currently men rather than units as a whole are sent as replacements.

THE CHALLENGE

The difficulties are real. But they are far from insuperable. They offer a challenge to the men who run the armed forces, not a reason for rejecting a policy that offers so many advantages. President Nixon and Secretary of Defense Laird should set a definite and near date after which no more draftees will be assigned to Vietnam—unless they volunteer for that duty. There is no other measure that they can take that will do more to unify the country and at the same time increase the effectiveness of our military forces in Vietnam.

REORGANIZATION OF OUR ENVIRONMENTAL PROGRAMS—SENATOR MUSKIE'S VIEW

Mr. EAGLETON. Mr. President, I am concerned that the agencies responsible for our programs in environmental control and improvement be provided enough manpower and funds to accomplish the tasks assigned to them by the Congress and the President.

Consequently, I am disturbed by an implication that the reorganization of these programs and agencies in the proposed Environmental Protection Administration will bring about reductions in Federal expenditures for environmental control and improvement.

As the Senator from Maine (Mr. MUSKIE) pointed out in his statement before the Committee on Government Operations, these programs already are underfunded and undermanned. The shortages are particularly critical, for example, at the National Air Pollution Control Administration.

Mr. President, I wish to join Senator MUSKIE in warning that "we should not expect expenditures for these already unerfunded, undermanned programs to decrease." I ask unanimous consent that his statement be printed in the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY THE HONORABLE EDMUND S. MUSKIE ON REORGANIZATION PLAN NO. 3, CREATING THE ENVIRONMENTAL PROTECTION AGENCY, BEFORE THE SUBCOMMITTEE ON GOVERNMENT ORGANIZATION, SENATE COMMITTEE ON GOVERNMENT OPERATIONS, JULY 28, 1970

Mr. Chairman, as Chairman of the Senate Subcommittee on Air and Water Pollution, I appreciate the opportunity to testify today in favor of the President's Reorganization Plan No. 3, creating the Environmental Protection Agency.

The President has proposed to do by reorganization what I had proposed to do by legislation. Last December I proposed the creation of an independent watchdog agency to protect the environment, and on April 6 of this year I introduced a bill (S. 3677) to create the environmental quality administration.

Removing environmental regulatory authority from promotional agencies was the goal of my proposal, and it is the primary importance of the President's reorganization plan. At the same time, concentrating environmental protection programs in one independent agency should give our environmental quality efforts a measure of stability and coordination they have never known.

Few Federal programs and executive agencies have undergone the constant change in a relatively short period of the time that has marked our environmental efforts. Few Federal "Wars" are being fought with as much room for administrative improvement. Without a thorough reorganization—of the kind that the President and I have proposed—the pursuit of environmental quality will never achieve preeminence in the Federal government.

Even more important than the question of preeminence and organizational stability is the narrow focus of environmental protection without which no program will ever be successful. If the control of pollution is assigned to those responsible for the promotion of polluting activities at the same time, we compromise our goal of environmental protection. This is what happens now in the Department of Interior, in the Department of Transportation, in the Atomic Energy Commission and in several other agencies.

To meet these two criteria, organizational stability and autonomous environmental regulation, some have suggested the creation of a Department of Natural Resources or a Department of Conservation.

Whatever the merits of such a department to serve other purposes, such a move for these purposes would be a mistake for several important reasons.

First, it would ignore the fact that our environmental protection problem involves competition in the use of resources—a competition which exists in any department which must develop resources for public uses.

The agency which sets environmental quality standards must have only one goal: protection of this and future generations against changes in the natural environment which adversely affect the quality of life.

Second, we must recognize that environmental protection is not the same as conservation, although sound conservation practices should enhance the environment.

Finally, the traditional concerns of conservation activities have been too closely identified with the protection of natural resources separated from the population centers. Our primary concern must be man where he lives and the interrelationship between the natural environment and his man-made environments.

An independent agency, charged with the responsibility for developing and implementing Federal environmental quality standards, supporting basic research on problems of environmental quality, and providing technical and construction assistance to state, interstate and local agencies would reflect the national commitment we need if we are to avoid ecological disaster.

The President's reorganization plan meets these criteria. It transfers to the new agency the research, standards-setting, and grant-making authorities of the Federal Water Quality Administration and The National Air Pollution Control Administration. It includes in the new agency many of the other important environmental regulatory functions now scattered among The Atomic Energy Commission and other Federal agencies. At the same time, it excludes from the EPA any responsibilities for resource development or promotion. The single mission of the EPA will be the protection of the environment.

At the same time, there are several aspects of the President's plan which concern me. I hope that Administration witnesses will discuss these questions in detail.

First, there are important environmental protection programs that are not included in this reorganization.

Noise pollution control does not belong in the Department of Transportation. It should have been transferred to EPA in the plan.

The fragmentation of sewer construction grant programs confuses many communities and impedes effective coordination of water pollution control programs. Although the grant program administered by the Federal Water Quality Administration has been placed in this new agency, the programs of the Departments of Housing and Urban Development and Agriculture have not. Further transfers might be appropriate in this area.

NAPCA and FWQA have been criticized for their failure to monitor air and water quality adequately. These capabilities presently exist in the geological survey and the Environmental Science Service Administration, and we should consider transferring them to the new agency.

The *second* focus of my concern with the reorganization plan is the ability of the new agency to evaluate health matters quickly and to act on those evaluations. The National Institute for Environmental Health Services was *not* transferred to the new agency.

There needs to be assurance that the new agency will have the capacity to identify potential environmental health problems. Had the FWQA used the capacity of the Bureau of Water Hygiene, earlier identification of the present mercury crisis might have resulted. The committee should be assured that the EPA will have the environmental health personnel to set the adequate standards for radiation and pesticides which are needed immediately.

My *final* concern with the President's plan is reflected in the message that accompanied transmission of the plan to Congress. The message states that the EPA should result in more efficient operation of the government

It goes on to say: "It is not practical, however, to itemize or aggregate the exact expenditure reductions which will result from this action."

We should not expect expenditures for these already under-funded, under-manned programs to decrease.

The manpower shortage is especially serious at the National Air Pollution Control Administration. At the time of enactment of the Air Quality Act of 1967, the projected need for NAPCA manpower was for 1,900 in fiscal 1970. Instead, they are staffed about half that strength. The current employment is 961. The budget request for only 117 additional positions for NAPCA in the next fiscal year is clearly not adequate.

To demonstrate the effects of this shortage, one need only look at the progress on the first vital procedural step under the Air Quality Act. Of the 57 air quality regions which should have been designated in 1969, only 28 were designated. The Agency has only eight workers doing this essential work. A report prepared by NAPCA, but not released, shows that an additional 2,000 workers will be required by 1974 to implement the provisions of the Act.

A look at the funding history of NAPCA gives a good idea why there are manpower problems. In fiscal 1968, $109 million was authorized, but only $64 million was appropriated. In 1969, the authorization was $185 million, but the appropriation was only $89 million. And in fiscal 1970, $179 million was authorized but only $109 million appropriated.

The picture in water pollution control is not a great deal brighter. In fiscal years 1966 through 1969, the Federal Water Pollution Control Administration (now known as the Federal Water Quality Administration) remained from 1,000 to 600 positions below its authorized manpower, partly as a result of ceiling levels set by the Bureau of the Budget. The Agency is now within about 125 of its authorized level, but that is because the authorization has been cut back from 2,800 to 2,400. A 1969 study by the General Accounting Office showed that as a result of manpower shortages, there was insufficient technical assistance to the states and in some cases a hindering of the research effort and insufficient supervision of construction grants. Some additional positions have been added to the construction grant program as a result of additional appropriations for that program for fiscal 1970, but much improvement still is needed. We should not be cutting back authorized manpower when we should be greatly strengthening our water pollution control efforts.

The committee should request from the Administration accurate estimates of projected funding and manpower for the new agency over the next three years. The Congress should make clear its commitment to fund and staff the EPA. Without that commitment, EPA will be merely another example of unfilled promises.

I hope that the Administration witnesses who appear in the next two days will respond to the questions that I have raised.

On balance, the President's plan is a good one. If it is augmented by the additional transfers I have suggested and if it is administered and funded properly, the EPA would mark an important commitment to environmental quality.

These are big "ifs," but they represent the opportunity EPA would create. We could translate our concern into effective action, our financial commitments into results and our determination into strong enforcement. EPA will give us this chance, and I urge the Congress to approve the reorganization plan.

NO CONCRETE SUCCESS

Mr. COOK. Mr. President, Astronaut Frank Borman reported yesterday, August 17, that his efforts to obtain information about American prisoners of war in North Vietnam "had met with no concrete success" in Moscow and Stockholm.

This is indeed sad and disheartening news.

It may be recalled that President Nixon had requested Mr. Borman to make such inquiries during his tour of Europe. This was a part of the continuing effort of the administration to use every channel, official and unofficial, to persuade the North Vietnamese to comply with the Geneva Convention on Treatment of Prisoners of War. The North Vietnamese Government is a signatory of the convention.

Mr. Borman also announced he would not seek an interview with North Vietnamese representatives in Paris, inasmuch as Hanoi has already announced that any such request would be refused.

We wish to thank Mr. Borman for seeking information which would mean so much to the wives and families of the Americans held prisoner by North Vietnam.

We pledge ourselves to continue to use every channel in the hope that Hanoi will change its strange and inhumane policy with respect to prisoners of war.

I ask unanimous consent that a news dispatch on the subject be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

POW MISSION CALLED FRUITLESS

PARIS, Aug. 17.—Frank Borman, the retired American astronaut on a presidential mission to obtain information about American prisoners of war in North Vietnam, said today he has met "with no concrete success" in Moscow and Stockholm.

He arrived here from Stockholm after stopping earlier in Moscow.

"I have had a very sympathetic reception" Mr. Borman said and then added: "It's a very difficult undertaking but with no concrete success that I can point to."

He said he would not seek an interview with North Vietnamese representatives in Paris. A Hanoi spokesman said last week that any such request would be refused.

DEVASTATING CRITICISM OF WELFARE REFORM BILL

Mr. TALMADGE. Mr. President, the administration sent back to the Finance Committee what was supposed to be a rewritten bill aimed at reforming the welfare mess. The revisions were intended to stifle serious objections that arose when the committee began its careful study of the legislation as passed by the originating body.

The bill as it now stands is not improved. It is unacceptable for many varied and valid reasons.

Severe and devastating criticism of the reworked bill is being loudly voiced by individual citizens, some of whom—it might be anticipated—would be its most fervid champions.

A distinguished nationally syndicated newspaper columnist, Mr. Richard Wilson, correspondent of the Des Moines Register and Tribune, seriously questions the wisdom of passing the legislation. He says in his analysis that it would more than triple the welfare rolls in 13 States, and add millions in other States.

But three well-known advocates of welfare reform have made the most surprising arguments against the legislation, questioning it in clearly understood language before a national television network audience.

In my opinion, it will be worth while for every Senator to read and ponder the words of the three principals who appeared on the "Today," NBC television program on the morning of August 5, 1970.

They were Mrs. Betty Whaley, of the National Urban League; Chauncey Alexander, of the National Association of Social Workers; and Dr. George Wiley, of the National Welfare Rights Organization.

In the event that Senators are unfamiliar with the activities of the last named, Dr. Wiley, I also draw attention to an editorial published in the Washington Post of August 5, 1970.

In the transcript of the remarks by the participants on the "Today" show, they make the following points, should the administration's rewritten welfare bill be enacted:

First. That it will not bring about a reduction in the number of the Nation's large corps of social workers.

Second. That the proposal to furnish the so-called working poor families a guaranteed family income should be separated and dealt with apart from the provisions in the bill concerning welfare reform so the public can examine the Government income plan, especially its high cost and inequities.

Third. That the bill will create an even larger bureaucracy of Government social workers whose initial assignment will be to register on the welfare rolls 2 million persons who now have jobs.

Fourth. That the bill is also branded a very cruel deception as far as getting jobs for the poor.

Fifth. That the administration's chief developer of the welfare bill is labeled a clever "propagandist" who has oversold the bill as a reform vehicle.

Sixth. And that the true objective of advocates is a guaranteed income of $5,500 or $6,000 a year.

I ask unanimous consent that the transcript of the NBC telecast, Mr. Wilson's column which appeared in the Washington Star, July 31, and the Washir gton Post editorial concerning Dr. Wiley be printed in the RECORD.

There being no objection, the items were ordered to be printed in the RECORD, as follows:

NIXON ADMINISTRATION'S WELFARE BILL

RON NESSEN. We have in the Washington studios this morning Mrs. Betty Whaley, Chauncey Alexander and Dr. George Wiley. They all represent organizations which are opposed to President Nixon's welfare reform proposal. In a few minutes we'll talk to them about why they are against it and some ideas they have of how they think it should be improved.

The three guests are Mrs. Betty Whaley who represents the Urban League, Chauncey Alexander who represents the National Association of Social Workers, and Dr. George Wiley who represents the National Welfare Rights Organization.

Mrs. Whaley, let me read you something.

About ten days ago on this same program Daniel Patrick Moynihan, the President's counselor who played a big part in writing the President's welfare bill, said this: "The Urban League has a long and respected tradition of social work, but you know I'm afraid social workers are against this program because they feel it might put social workers out of work." Now, is that the reason the Urban League opposes the welfare reform bill?

Mrs. WHALEY. Well let me say at the outset that that is a glaring example of a half-truth. The National Urban League has been on record for the past ten years as being in support of a basic minimum income for all people. And in fact, Mr. Moynihan will recall that the National Urban League testified on request before the House Ways and Means Committee and at that time endorsed the concept of a basic minimum floored income. And even though we have some reservations about that legislation as presented to the House Ways and Means Committee—particularly around the inadequacy of the level of income—we were prepared to support it.

Since that time we've had serious questions about the revisions which are being presented now before the Senate Finance Committee. In direct response to the question about social workers being out of jobs—if you really look at, very carefully at the legislation—the kind of investigative methods, the kind of tracing fathers, the kind of trials that social workers would have to undertake under that legislation—we would not be out of work. Social workers would not be out of work—in fact we would be busy at work doing jobs that would completely negate the principles that we have been fighting for for so long.

RON NESSEN. Mr. Alexander, you are the representative of the Association of Social Workers. Are you or your members afraid they'll be put out of business if this bill is passed?

Mr. ALEXANDER. Indeed not! We feel, however, that the American public should know what this bill contains and we have fought for the principle of an adequate income base for many years.

We feel that there should be a direct separation of the income payments from the social services so that the American public, taxpayers, and the consumers can see what goes into money payments and what goes into social services. Then you can measure it and see what is being produced.

We're asking for a program that will clean up this bill. We're working for amendments to the bill in order to separate the money payments from the social services aspect.

We feel that there should be an adequate income floor. This bill mixes the two together.

It is administratively inefficient. It will provide—instead of additional money to the poor—only about $2 billion of the program will go to the poor. The rest will go in supplements to the states for administration and a number of other programs of that sort.

RON NESSEN. In principle, you accept the idea of a Federal floor on welfare?

Mr. ALEXANDER. We have fought for that for many years, and we have asked for it, and we have tried to inform the American public of the fact that this is important in order to establish a base line in the country for adequate living for poor people.

RON NESSEN. But if this works the way the President says it's going to work, eventually the people on welfare would all go to work and there wouldn't be any more people on welfare—not very many. Wouldn't that indeed put your members out of business?

Mr. ALEXANDER. No indeed! We have plenty of business in a whole series of problems. Because just having a job does not eliminate some of the social problems that people have.

RON NESSEN. Do you agree with the President that his bill would indeed either force people to get jobs, train people to get jobs, encourage them to get jobs?

Mr. ALEXANDER. No we do not. We think that it, in effect, will create a large bureaucracy.

RON NESSEN. Larger than we have now?

Mr. ALEXANDER. Yes indeed. It proposes to register two million people—half of whom have jobs, and then in turn will only take care of about 250,000 people for job training, etc.

RON NESSEN. It holds out false hope then of getting a lot of jobs for people?

Mr. ALEXANDER. It's a very cruel deception and I think that it's important that the American public look into it.

RON NESSEN. Dr. Wiley, your button pretty well tells the story of your views. You think that $1600 is much too low.

Dr. WILEY. It's totally inadequate. The bill, as originally proposed, was a token change—it would make a small step toward changing the welfare system, and with the amendments that the Nixon Administration proposed to the Senate, it actually is an attack and denies income to more than seven and a half million people presently on Aid to Families with Dependent Children. These are the female-headed families who are the most vulnerable people in the population.

They are women and children who will be denied up to a $1,000 a year of present benefits that they are receiving under the old fashioned welfare programs who will be denied under Nixon's Family Assistance Plan.

That's a direct attack on poor people which is typical of the kinds of things that the Nixon Administration has been doing—to attack black people and poor people in a lot of subtle ways throughout their Administration.

And I think it is fraudulent on Daniel Moynihan's part. I've known him for a long time. He's one of the cleverest propagandists in this country—to sell this.

He's oversold it as a great sweeping reform. When it is not a great sweeping reform and when you undoubtedly examine the fine print, it actually denies a lot of money to a lot of poor people. And the fact that social workers have not been enthusiastic about it, is entirely because they don't understand the bill and most of the American public only understands Moynihan.

RON NESSEN. Let's go back a little bit. Now you do agree with the other two guests here that in principle the idea of a Federal floor on welfare is good, right?

Dr. WILEY. Oh yes, the principle of a Federal floor is excellent. The question is if you get the form of having a reform without the substance you have nothing. And if you take the momentum that has been generated by the militant pressure of welfare rights organizations on the welfare system which have exposed the inadequacies and the creaks and cracks which have caused a lot of people to be concerned about welfare problems, you take that initiative and you propose a token reform that does not really basically change the system. It seems to me that you're doing something that is deluding—doing a disservice to the entire country.

RON NESSEN. I'm not clear as to why you say this—not changing the substance. You're taking the responsibility for welfare away from the states.

Dr. WILEY. You're not, and that's what the people do not understand. This program is at least as complicated as the present program. It has layers and layers of administration in it. There will be a Federal Family Assistance Program. There will be a federal-state program to aid the aged, the disabled and blind. There will then be a supplemental state program to AFDC recipients—recipients would go to one place for food stamps, to another place for Family Assistance, to another place for supplemental aid. It would be, in fact, more complicated to the recipient than it is now.

Mrs. WHALEY. I think one of the major points that has to be recognized is that this legislation has been touted as finally giving some relief to the working poor.

What we have worked for is a federal subsistence for the working poor. In the original bill they were included. Now they are included in the state-supplemented program and we all know that in several states, particularly those in the South, can claim very little of the benefits now, and under this legislation now be able to forego their participation—simply give it to the Federal Government to administer—which certainly means the level of payments will be grossly inadeqaute.

The other population which is excluded is the unemployed head of the household. And Dr. Wiley has alluded to this and this is extremely crucial.

We've been concerned about keeping families intact. Mr. Moynihan himself said this bill would keep families intact. And immediately we see that this group is excluded from the Federal assistance.

RON NESSEN. Without meaning to contradict you, the bill is still being formed in Congress and some of these parts you mentioned—the Administration has said it would like, for instance, it would insist on including the working poor. I do want to ask Dr. Wiley, despite what you say in public I've always known you to be a realist—you don't really believe that $5500 minimum is at all politically realistic.

Dr. WILEY. With the reactionary Congress we have, with Russell Long and Wilbur Mills controlling those committees, no I don't think it's going to happen, that is likely to happen this year with those people. But the country has got to set the goal for itself for an adequate income for all people. It has just to say what it takes to live in our country today. And the Bureau of Labor statistics produced the figures upon which our $5500 demand is based. It wouldn't cost the country a nickel to set a goal of an adequate income. To define that $5500 is really what it takes. I might mention those figures were 1969. In 1970, it's $6000 for a family of four.

But we're talking about net income. Now you've got to set a goal of that kind of net income and when you talk about eliminating poverty you've got to talk about getting everybody, by work or by Federal income assistance, up to that kind of level. Now we have the money in the country to do it. We just don't have the political will.

Our organization is fighting to raise that issue and to fight for it and we say "$5500 or fight" and we mean just that.

RON NESSEN. In how many years would you think it would take them to reach that goal?

Dr. WILEY. We think it should be done this year.

RON NESSEN. But realistically.

Dr. WILEY. Realistically, it's as soon as the political muscle can be generated. As soon as a few of the Moynihans of this world start coming up for adequate income and get with the legitimate interests of poor people, we'll begin to move in that direction.

Mr. ALEXANDER. I think we ought to study positive what needs to be done in this country. We need to set an adequate goal for income payments. We also need to have Federal administration to oppose the kind of different standards that are set in the various states, and thirdly we need a work program—or we need the government to back a work program, not a program to push people off relief but rather a program where the government says we will make jobs. We have 5% unemployment today where poor people could not get jobs even if they were trained for them.

Mrs. WHALEY. May I say the National Urban League says by 1976, the 200th anniversary of

this country, should be the goal to eradicate poverty.

RON NESSEN. Thank you very much. Well, we've heard three guests who represent organizations which seem to agree with the President's welfare proposals, in principle, but have a lot of disagreement with some of the details. This is Ron Nessen in Washington.

MR. WILEY'S HARD-NOSED BARGAIN

Washington's welfare families are about to receive some money to help meet their furniture needs, aid that should bring at least a bit of comfort and cheer to their often barren but over-crowded surroundings. Things many people take for granted—chairs, dressers and beds—simply have not made the meager shopping lists of people dependent on public assistance. The money is coming because Mayor Walter E. Washington was able to raise a $50,000 donation from the United Givers Fund's dividends and interest, another $50,000 from an undisclosed source and, from these two gifts, the possibility of a matching $100,000 from the Department of Health, Education and Welfare.

All of this is welcome news, but it leaves out the events that led to it. They focus on George A. Wiley, director of the National Welfare Rights Organization, who took charge of the bargaining with Mayor Washington and gave it this particular character. After Mr. Wiley learned that the city government itself had no money for the furniture, he led welfare recipients in two demonstrations at the welfare department headquarters, that wound up with rock and bottle clashes and more than 50 arrests.

Furthermore, he realized all along that most of his followers believed they were marching there to pick up checks. At a subsequent set of sessions with the mayor, Mr. Wiley hinted that he would reject an initial, good-faith effort by the mayor that had produced the UGF offer and the probable $50,000 matching grant from HEW. The ever-patient mayor somehow rounded up the rest, and after a total of seven hours and much speechifying by Mr. Wiley about how the first offer was a pittance and how the city was shirking its responsibilities, the aid was accepted.

Now many welfare families will cheer Mr. Wiley for his victory, and there's little doubt that he deserves some sort of an award for perseverance. But Mayor Washington, who didn't have to take this kind of treatment and the ugly tantrums that preceded it, seems to have taken the time and sheer hard work to do what Mr. Wiley might have been able to do just as well on his own—or *with* the mayor instead of against him. There are times when the politics of pressure may be necessary, and times when city hall must be the victim because Congress, the real overlord, wouldn't stand for it for a minute. But Mr. Wiley's antics have severely tested the sympathies of those who can do the most for the people he is attempting to serve.

SENATE UNIT SPOTLIGHTS "WORKFARE" ANOMALIES

(By Richard Wilson)

President Nixon called it "workfare" when he proposed to Congress in August 1969 a wholesale revision of national welfare policy with a $1,600 floor under the income of all families. It sounded attractive, even though more expensive.

Incentives to work would replace an unsatisfactory system that encouraged idleness, was unfair and was generally judged a monstrous failure.

The House passed a version of the Nixon welfare plan in April this year which required the working poor to register for jobs or work-training while receiving federal assistance.

But it was not until the "workfare" plan reached the Senate Finance Committee that there could be said to be anything like a firm grasp on its meaning, cost and magnitude.

On the probably sound assumption that hardly anyone outside the Senate Finance Committee, and certainly not the public at large, has the foggiest idea of what this colossal measure provides, here is some information:

Federally assisted welfare recipients under the present law numbering 10 million would automatically rise to 24 million, or an increase of one and a half times, in the first year of operation.

In 13 states the welfare rolls would be more than tripled.

In 16 states more than 15 percent of the population would be on welfare, led by Mississippi with 35 percent—yes, more than one-third—of its population on relief.

The total cost to the federal government of welfare would nearly double, from the present estimated cost of $4.5 billion to $9.1 billion.

Other information brought forth by Senator John J. Williams of Delaware in hearings before the Senate Finance Committee includes:

An unemployed woman heading a four-person family in New York on welfare and without income would receive more net income than a woman with an income of $7,000 earned at work. So who should work?

In Phoenix, Ariz., a woman with four dependents and $5,000 in earned income would take a drop of $5 in welfare benefits if she was promoted to a job paying $6,000. So how does promotion get you off welfare?

In Chicago a woman with four dependents and an earned income of $720 would receive total benefits of $6,142. But if she earned $6,000 a year at work, received housing benefits and paid her taxes, her total would be only $6,001. So why get a full-time job?

These are a few of the anomalies and contradictions which neither former Health, Education, and Welfare Secretary Robert Finch nor the present secretary, Elliot Richardson, has been able to explain with any clarity to the Senate Finance Committee. They have arrived before the committee with their charts, beaming with confidence, and departed in confusion, not to say dejection.

What emerges is that there is a borderline, a shadowland, where incentive to work become highly problematical and subjective, depending on the personality of welfare recipients. It has to be borne in mind also that it costs money to work, in the form of transportation, clothing and meals away from home. For some the incentive to work must be powerful, indeed.

It becomes clearer that the Nixon welfare plan, if adopted, will be attended by a continuous procession of horrible examples which have aroused so much popular despair all through the history of publicly financed relief.

The Senate Finance Committee is probably the only barrier to the final adoption of some version of the Nixon welfare plan. Once this measure reaches the Senate floor, if it does, there will be attempts to increase the $1,600 income floor by double.

The idea was good. It was plausible in the beginning that the high "start-up" costs could be justified because the new system would lift people out of dependency and ultimately reduce the chronic costs of a permanent underclass in America.

Now, with the disclosures in the Senate Finance Committee, this premise becomes more doubtful, and the mind turns to the basic facts that federally supported welfare rolls will be more than doubled, the cost will be nearly doubled, and the incentives to work may not be sufficiently powerful.

AFL–CIO SPEAKS OUT ON HIGHER EDUCATION

Mr. YARBOROUGH. Mr. President, at its meeting in Chicago on August 3, 1970, the Executive Council of the AFL–CIO issued a statement on higher education policy.

In that statement, the AFL–CIO stresses the urgency of financial aid to students. As education costs go up and tuition goes up and living expenses go up, our young people will be priced out of higher education unless we also maintain a rising level of student assistance.

The statement by the council describes the issue very well. I ask unanimous consent that it be printed in the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY THE AFL–CIO EXECUTIVE COUNCIL ON HIGHER EDUCATION

Today, more than ever before, it is essential that every young person have opportunity available for education beyond high school. There is need for a wide range of possibilities—colleges and universities, technical institutes, community colleges—designed to accommodate the varied interests, abilities, desires of young Americans.

Yet the United States today faces a serious crisis in higher education which may wipe out the progress we have achieved over the years and again create a situation in which only the rich will be able to afford college. The sons and daughters of working people will find college beyond their means if present trends continue.

On the one hand the costs of higher education have increased sharply and on the other hand federal funds and private contribution for higher education have both diminished. The result is that students and their families are having to carry an increasing share of the financial burden through higher tuition. Mounting unemployment has further added to the problem by making it more difficult for students to find summer jobs.

Tuition and required fees, on the average, have more than doubled in the past ten years. Dormitory charges have also doubled in the same period. Four years at the average state university costs $6,000 and as much as twice that for students from outside the state. At private universities a four-year education can cost as much as $18,000 to $20,000. These trends are rapidly accelerating to the extent that union members who have come to take it for granted that their children should go to college are now having to ask themselves whether they can bear the financial burden which would be entailed. For most families with more than one child of college age, the hope has already faded.

The problem is further compounded by Administration cuts in work-study funds, a program which has been particularly helpful to students from labor families. Even more dangerous is the Nixon proposal to discontinue federal subsidization of student loans for all young people coming from families with an annual income of $10,000 or more, a category which includes many union families. A student, each of whose parents is employed and earning only $5,000 a year, needing student loans of $2,500 a year and having to pay the current interest rate of 9¼%, would have to pay back $27,822, including interest, over a 20-year period. If he marries a girl from a similar background, the young couple could begin married life owing a mountainous debt of almost $56,000.

These facts add up to the question of whether higher education is to be available only to a rich elite or whether the opportu-

nity for higher education is to be the common heritage of all American young people. The AFL–CIO has always been firmly committed to the second of these alternatives.

If, then, higher education should be available to all, the second question remains: who is to pay for it? We reiterate the view, which we have often stated before, that tuition-free higher education like elementary and secondary education, is to the benefit of the entire society and the cost should not have to be borne by the students who receive it. Tuition-free community colleges located within commuting distance of students' homes provide the best hope for expanding higher educational opportunities. In addition, every young person should have available free higher education in a wide variety of institutions.

Today this cannot be regarded simly as a hope for the future; it is an urgent and present need if working people are to know that their children, as well as those of the rich, will be able to obtain the benefits of college education.

PERSPECTIVE ON DISENGAGEMENT

Mr. COTTON. Mr. President, seldom in our history has anything touched off more controversy and more inflamed oratory than the war in Vietnam. Feelings throughout the country have been intense and passions aroused.

Because of the high degree of volatility involved it is always welcome to find in the press a cool, objective, and analytical examination of exactly what is happening today and the course of recent events. Fortunately, there is such an examination available in this morning's Baltimore Sun, in the form of a column by the distinguished journalist, Mr. Richard Wilson. In the column he scrutinizes the train of events starting last summer when President Nixon made his historic tour of the world.

In the column he discusses the changed course of history that followed this Nixon visit to Vietnam, and he analyzes what has happened to our military and foreign policy since.

His column is well worth reading and I commend it to the Senate. I ask unanimous consent that it be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

NIXON IS MOVING CAUTIOUSLY FOR MILITARY DISENGAGEMENT

(By Richard Wilson)

WASHINGTON.—It is a year now since President Nixon flew around the world, stopping in Vietnam and Communist Europe among other places, and the shape of events has changed. The change has been in the direction indicated by the President a year ago, but something new may have been added.

This new thing is hard to define and largely speculative but it would appear that the United States is in the first stages of what may prove in the next several years to be a large-scale disengagement from what were once considered its unavoidable world responsibilities.

Having said this, it at once becomes suspect as an exaggeration or as posturing some kind of profound insight. But it at least should be agreed that we are getting out of the fighting in Vietnam and not getting into a new fight anywhere else, including Israel.

But that is not all. We are beginning to talk about getting out of South Korea and to think about getting out of Western Europe. Once this process begins it takes on a velocity of its own as a kind of principle guiding separate actions, a subconscious sense of direction.

That is what has happened in the Nixon administration and it is not in practical effect so much different than what Senator Mike Mansfield (D., Mont.) and Senator J. William Fulbright (D., Ark.) have been advocating in varying degree all these years.

The element which threw them off was that in the process of disengagement Mr. Nixon does not propose to be badgered or have the United States taken advantage of. Senators Mike Mansfield and Fulbright could not see Cambodia in that light but only as an extension of the war and a reversal of the process of disengagement. Mr. Nixon viewed the Cambodia incursion as a modus operandi on the way to disengagement with the secondary effect of giving notice to the Soviet Union and other Communist nations that the United States would not permit itself to be taken advantage of while the process was under way.

The same conditions seem to apply in the matter of deploying anti-ballistic missiles. Mr. Nixon is not undertaking to do so anywhere near the scale projected by the Johnson administration, but because he does so at all blinds the peace forces in the Senate to this further modification of previous policy.

Foreign and defense policies have in fact been modified drastically in the year since Mr. Nixon flew to Asia and around the world to spread the word of the Nixon Doctrine. It was only a little more than a year ago since he turned American policy around beginning with the first announced withdrawals from Vietnam.

At this rate he will have completed the turn-around by the fall of 1972 and it is at least conceivable, with luck in the Middle East, that the United States will not be engaged anywhere in the world in a direct military confrontation. It could happen that a week would pass without a single American combat death. And if it prayerfully does, the change will have come so slowly that it may be scarcely recognized.

TEXAS TOURIST DEVELOPMENT AGENCY BOOSTS BIG THICKET

Mr. YARBOROUGH. Mr. President, I have fought to establish a Big Thicket National Park in southeast Texas for many years. My bill, S. 4, would provide a park of not less than 100,000 acres in this beautiful area of Texas.

The establishment of the Big Thicket National Park would provide many benefits to the people of Texas and the Nation. One of the important benefits would be the increased tourism in this area.

The designation of an area as a national park greatly enhances its attractiveness to tourists. When the Big Thicket is made a national park, more people throughout the Nation will be informed of its beauty and aware of its fascinating and amazing natural features.

One of the many organizations which have endorsed and supported the proposal to establish the Big Thicket National Park is the Texas Tourist Development Agency.

The chairman of this agency, Mr. John R. McCarty of Dallas, Tex., was one of the many witnesses who appeared to testify in favor of my bill, S. 4, when field hearings were held in Beaumont, Tex., on June 12, 1970. These hearings were conducted by the distinguished senior Senator from Nevada (Mr. BIBLE), chairman of the Parks and Recreation Subcommittee of the Committee on Interior and Insular Affairs.

Mr. McCarty testified strongly in favor of my proposal for a park of not less than 100,000 acres and stressed the importance of tourism to the state and its economy.

The newsletter of the Texas Tourist Development Agency carried a very interesting article about the Big Thicket and the hearings held on my bill in their June 1970, issue, on page 1. This issue was No. 10 of their volume 3.

Mr. President, I ask unanimous consent that the article be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

BIG THICKET IN HANDS OF COMMITTEE

(By Ben Holub, Jr.)

The fate of the proposed 100,000-acre Big Thicket National Park is now resting in the hands of a nine-man parks committee of the U.S. Senate with Senator Alan Bible of Nevada as chairman.

Thirty-five witnesses testified at a federal hearing in Beaumont June 12 before Bible, National Parks director George Hartzog and members of the parks staff.

John R. McCarty of Dallas, vice-president of Frito-Lay Inc. and chairman of the Texas Tourist Development Agency board, was among those testifying at the hearing.

Anyone wishing to submit further testimony that has any bearing on the creation of the park had two weeks following the hearing to file a statement. Bible's committee will evaluate all testimony, then wait for the parks service recommendation on how the area should be developed, if at all. Chief controversy at the Beaumont hearing centered around the size of the proposed park.

Senate Bil 4, introduced by Senator Ralph Yarborough, who attended the hearing to speak on behalf of his bill, asked Congress to claim 100,000 acres of the Southeast Texas wilderness area for creation of the park.

East Texas interests, including some chambers of commerce and owners of land on which the park would be located, favor a 35,000-acre park.

In his statement, McCarty stressed the importance of tourism to the state and explained how the addition of the Big Thicket National Park would help increase the number of visitors coming to Texas for a vacation. He said research by the Texas Tourist Development Agency clearly shows people are inclined to visit an area containing more than one national park. Texas now has Big Bend National Park and Padre Island National Seashore.

Congressman Bob Eckhardt of Houston spoke out for the larger park saying he did not think the 35,000 acres would be large enough. He also suggested a section of the park be named for the late Lance Rosier, the noted East Texas conservationist whose lifetime dream was the creation of a Big Thicket National Park.

O. R. Crawford of Evadale, president of the Texas Forestry Association; Arthur Temple of Diboll, owner of Temple Industries; Cecil Reid of Austin, executive director of Sportsmans Clubs of Texas; Jim Webster, Kirby Lumber Co. of Houston; and Herman Brown of Lufkin, manager of the Angelina County Chamber of Commerce, were among those testifying in favor of the 35,000-acre park.

Dempsie Henley of Liberty, chairman of the Texas Indian Affairs Commission and considered one of the authorities on the Big Thicket, endorsed the 100,000-acre park, noting that tourist dollars would well offset any loss that area industry might suffer.

SUMMER NEWSLIGHT ON TEXAS

Copy continues to appear across the United States as the result of TTDA's travel writer tour last November. Here are some of the latest entries:

Deane Heller of Key West, Florida, writing for King Features Syndicate, which is distributed nationwide, lends help in the cause to save the Big Thicket of East Texas. "Down East Texas way there's a new battle cry to save the Big Thicket, an unbelievable wilderness and last refuge of some of Texas' rare wildlife. It's being waged by a small but hardy group of dedicated citizens who have banded together to form the non-profit Big Thicket Association of Saratoga."

Continues Mrs. Heller: "The wealth of flora and fauna is staggering to the imagination. For example, there are an estimated 1,000 specimens of fungi and algae along in the Thicket that have not as yet been classified."

Of the Big Thicket, the magazine states: "Way down deep in the pine and magnolia shadows of East Texas, in a land called 'the biological crossroads of North America,' the Big Thicket Association is battling to save the last remaining botanical wilderness in Texas from the deadly hum of a chain saw. Time is running out. Once the big thicket blanketed 3,350,000 acres. Now only 300,000 acres remain."

THE B–1 BOMBER

Mr. GOLDWATER. Mr. President, earlier today I made a few remarks on the B–1 bomber, which we have known as AMSA up until this past session of Congress. Those remarks were directed at an attempt to clear up what might have been some misunderstandings from a debate held earlier in this discussion of the military authorization bill.

Because we shall be voting tomorrow on the so-called Brooke amendment. While I do not think the Senate will be foolish enough to accept it, that chance always exists; so I think it is necessary now, more than ever, to back up a real blue chip in the deterrent stack; namely, the B–1.

A very fine article has been written by John L. Frisbee, senior editor for plans and policy, for the April 1970 Air Force Space Digest. I ask unanimous consent that it be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE B–1—BLUE CHIP IN THE DETERRENT STACK

(By John L. Frisbee)

The B–1, USAF's heavy-bomber candidate to replace the B–52, was conceived in 1963 as AMSA (Advanced Manned Strategic Aircraft). Ever since, there have been almost continuous attempts to destroy it in embryo.

The B–1 has been attacked on grounds of nonutility, marginal utility, and disutility. Its critics have ranged from Whiz Kids to members of Congress to intellectuals of the campus, the think-tanks, and the mass media. Their analytical methods cover the spectrum from slipstick and computer to gut reaction. Notably—almost uniquely—the opposition has included no military men of renown from any of the services. The B–1 has been more than thrice-blessed by the Joint Chiefs of Staff.

Not even the most dedicated B–1 opponent has questioned the ability of the US aerospace industry, with the technology of the 1970s, to build a better bomber than the B–52, basically a product of the early 1950s. Rather, B–1 critics have questioned the rationale underlying the requirement. Their key question has evolved from, "Will we need *this* bomber ten years hence?" to "Will we need *any* bomber by the end of the decade?"

So far, a majority of legislators has answered "Yes" to both questions, or has at least been unwilling to say "No" to either. And so the B–1 has survived. In mid-May a prime contractor will be selected to produce five prototype and two test models. If all schedules are met, the first true strategic bomber to be developed in this country in nearly two decades will fly in 1974. This says much for the viability of a concept that has been under siege for seven years.

But the B–1's greatest battle is yet to come—the fight for a go-ahead on production. If that battle is won, the new bomber could begin to join SAC's operational forces in 1978. By that time, the newest B–52s—the G and H models—will be from sixteen to eighteen years old. Their maintenance and modification costs, though not precisely predictable, are bound to be extraordinarily high.

The B–52 could, certainly, be kept operational for another ten years—perhaps longer—if we were willing to pay the cost. But how effectively it could penetrate Soviet defenses a decade from now is quite another question.

Visualize the odds against the B–36 (the newest of which would have been sixteen years old in 1970) in penetrating today's Soviet defenses. The performance gap between the B–36 and the B–52H is comparable to that between the B–52H and the B–1. And a weapon system that will not perform creditably in war is not a credible deterrent to war.

This brings us back to the key question, "Will we need *any* bomber by the end of the 1970s?" It is primarily a conceptual—not a technical—question. The answer will be affected by economic considerations (how soon and how many), but fundamentally, a decision must be based on need.

The question of need has to be examined in the context of US defense strategy, which is in a state of transition. During most of the past decade, our strategy has been to deter nuclear war by Assured Destruction—the ability of US strategic forces to survive an enemy attack, and in retaliation cause unacceptable damage to the aggressor. A corollary of Assured Destruction has been Damage Limitation, or the capacity to hold down the level of damage an attacker could inflict on this country. Damage Limitation received considerably less attention than Assured Destruction. Until recently, we have not had the technical means to defend against enemy missiles or to construct bomber defenses that promised to stop a high percentage of attacking aircraft.

Assured Destruction was achieved through a combination of land-based missiles, sea-based missiles, and bombers. As the missile force grew in size and reliability, the bomber was thought by earlier Administrations to contribute less and less to deterrence. Bombers took several hours longer than missiles to reach their targets. The bomber was believed easier to defend against, and to some it appeared needlessly duplicative of the destructive capacity of the missile forces.

Nevertheless, a reduced number of bombers was retained in the deterrent forces as insurance and because of certain characteristics unique to the bomber. It could, for example, be used effectively in a show of force, as in the Cuban missile crisis. It could carry much larger weapons than missiles, and was acknowledged to be useful against very hard targets that could not be destroyed by smaller warheads delivered less accurately by missiles. In this respect it provided a Damage Limitation dividend, as a counterforce system to be employed against hardened enemy missiles that might be held in reserve after an initial attack. The bomber also could be launched on ambiguous warning and recalled if the warning proved to be false. And the continued existence of US bombers forced the USSR to invest heavily in air defense systems, presumably diverting resources that might otherwise be used to build stronger offensive forces. Finally, the bomber force was regarded as a hedge against Soviet technological breakthroughs that might cancel or reduce the value of our missile forces.

All of these reasons for keeping the bomber alive and well were valid. And they will remain valid, along with other bomber contributions to deterrence, which will be noted later.

Nevertheless, many—probably a majority—of those who believed the bomber only marginally useful were convinced that a relatively low level of US Assured Destruction capability (perhaps twenty to twenty-five percent of the Soviet population and industry) was enough to deter nuclear war regardless of how many Americans might die in a Soviet attack on this country. Therefore, they questioned the need for *any* bombers and rejected the requirement for a new bomber to replace the B–52. This rejection has come to a head at a time when the bomber has, in fact, assumed more, rather than less, importance. The reasons relate both to strategy and to conceptual changes caused by technology.

For many months the Nixon Administration has been conducting an exhaustive study of national-security policy and strategy. There have been vague but persistent rumors that the President intended to revive a strategy resembling the "Massive Retaliation" of the Eisenhower-Dulles years, though it was difficult to understand the feasibility of such a strategy in view of the size and sophistication of Soviet strategic forces.

The first comprehensive, but still general, statement of the new Administration's defense policy was contained in President Nixon's "State of the World" message to Congress—UNITED STATES FOREIGN POLICY FOR THE 1970'S: A NEW STRATEGY FOR PEACE. Many questions were left unanswered, but the message roughed in a nuclear strategy that is neither Massive Retaliation nor Assured Destruction at a minimum level.

Several passages in the President's message are pertinent to the future makeup of our strategic forces. (*Italics have been added.*)

The overriding purpose of our strategic posture is political and defensive: to deny other countries the ability to impose their will on the United States *and its allies* under the weight of strategic military superiority. We must assure that all potential aggressors see unacceptable risk in contemplating a nuclear attack *or nuclear blackmail or acts which could escalate to strategic nuclear war*, such as a Soviet attack on Europe.

For the foreseeable future Europe must be the cornerstone of the structure of a durable peace.

Our NATO allies . . . view the U.S. commitment to deter Soviet aggression as being based mainly *on our maintenance of a powerful strategic posture.*

The United States will keep all its treaty commitments. We shall provide a shield if a nuclear power threatens the freedom of a nation allied with us, or of a nation whose survival we consider vital to our security and the security of the region [referring to Asia] as a whole.

[*And in the section on General-Purpose Forces*]: The prospects for a coordinated two-front attack on our allies by Russia and China are low because of the risks of nuclear war and the improbability of Sino-Soviet cooperation. *In any event, we do not believe that such a coordinated attack should be met by U.S. conventional forces.*

A U.S. strategic posture adequate to prevent other countries from imposing their will not only on us, but on our allies, must meet two tests if it is to be credible to a potential aggressor. First, it must leave no

doubt in his mind that the U.S. would emerge from a nuclear exchange with some relative advantage over the attacker, in a position to defend itself against third nations, and able to recover more rapidly than could the attacker. Second, other nuclear powers must believe it a reasonable possibility that the U.S. would take some form of positive strategic action against them if they were to threaten really vital U.S. external interests. Such a U.S. force should have a stabilizing influence because of its multiple deterrent effect and since it could not be used rationally to initiate unprovoked aggression.

The strategy outlined in the President's message will require relatively large and versatile strategic forces, including a bomber that can retain its effectiveness well into the future. Also, some of the Soviet technological advances that the bomber has helped insure against have actually occurred. Since they threaten principally the effectiveness of US strategic missiles, they have the effect of enhancing the value of the bomber as a deterrent system. For example, the security of our land-based missiles is sensitive to the accuracy and warhead yield of enemy missiles. The unexpectedly rapid expansion of the Soviet missile force—particularly of the very accurate SS–9, which can carry a twenty-megaton warhead or three five-megaton warhead or three five-megaton weapons—is a real and present threat to American ICBMs.

The invulnerability of our sea-based missiles is sensitive to enemy antisubmarine warfare. In his Fiscal Year 1971 Posture Statement, Defense Secretary Melvin R. Laird stated that our Polaris submarines are still invulnerable, but that he could not guarantee continued invulnerability beyond the next five to seven years. For that reason, advanced developmental work was proposed on the Underseas Long-Range Missile System (ULMS), which would enable our missile-carrying submarines to operate in a vastly larger ocean area and still hit targets in the USSR or China.

The now-modest Soviet ABM system has an undetermined growth potential, and hence poses a future threat of uncertain proportions to both land-based and sea-based missiles. While ULMS will increase the Soviet problem of *detecting* US missile submarines, the longer flight time of ULMS probably will simplify the Soviet ABM *defense* problem so far as submarine-launched missiles are concerned.

In view of these Soviet counterforce developments, it would be a dangerous risk to allow the bomber element of the US strategic forces to deteriorate through obsolescence.

One of the bomber's greatest values as a deterrent has been given all too little attention. The bomber, in combination with missile forces, creates an almost impossible timing problem for an enemy planning an attack on the US. Put yourself in the shoes of the Soviet tactician considering a first strike to disarm the United States. The situation might look something like this:

Any one of the three US strategic systems, if used independently of the others, can cause an unacceptable level of damage to the USSR. For a surprise attack on the US, I must, therefore, plan it so that his missiles and bombers are reduced in effectiveness to a point where my defenses can handle them. It's particularly important that I get his bombers, since I want to hit only military targets. The bombers, because of their accuracy and high-yield weapons, have by far the best capability to hit my own hardened or mobile military targets in return. If I knock out the US bombers, the American President's options are reduced pretty much to attacking my cities with missiles. It then becomes a war against populations—a hard choice for any President. He may prefer to negotiate with us. How shall I plan my attack?

Now, US officials have said that they will not fire their missiles at my country until one of my warheads has actually exploded over US territory. It's reasonable to assume they mean this. Launching missiles on warning that may be ambiguous—perhaps even false—is simply too risky for them.

I'll use my land-based ICBMs with high-yield warheads against the hardened US land-based missiles. My submarine-launched missiles (SLBMs) are shorter range, less accurate, and have smaller warheads, but they will do very well to destroy his bombers if I can catch them on the ground.

The US Ballistic Missile Early Warning System (BMEWS) gives the Americans about twenty minutes' warning of attack by my ICBMs. Other US warning systems can pick up my SLBMs five to ten minutes before impact on SAC bases.

I'm going to optimize my surprise attack so my ICBMs will *arrive* over the enemy's missile silos at the same time my SLBMs hit his bomber bases. But wait a minute. That won't work. His radars will pick up my ICBMs even before I launch my SLBMs from a few hundred miles off the US coast. He'll flush his bomber force under positive control and, after my missiles have exploded over US territory, he'll give his bombers a go-ahead. And his surviving missiles, too.

Let's try it the other way. I'll optimize my attack against his bombers. I'll have to launch SLBMs and ICBMs for simultaneous *detection* by the US so as not to flush his bombers on warning. But that won't work either. If all goes very well for me, US radars will detect my SLBMs five to seven minutes from the most exposed SAC bases. Simultaneously, his BMEWs radars will see my ICBMs about twenty minutes' flight time away from US missile sites. That leaves the Americans twenty minutes to alert their National Command authority and maybe fifteen minutes after my first SLBM detonates over a SAC base to make a final decision, transmit orders, and launch their ICBMs.

Let's leave the Soviet planner with this dilemma. It will get worse for him when our satellite warning systems are perfected and when the B–1 becomes operational, with its faster reaction time, ability to disperse widely—even to highways if necessary—vastly improved penetration capability, and varied load of standoff and gravity weapons.

Several leading B–1 opponents have suggested that our need for a bomber may be obviated if the US adopts a policy of launching missiles on warning of an attack. That proposition can be put in a different way. If we do not have a bomber with a credible ability to penetrate Soviet defenses, *we would have to* launch missiles on warning, accepting the horrifying possibility, however remote, that the warning might be fallacious. That is a sobering thought.

Another plus for the strategic bomber is its usefulness in limited conventional warfare, as the B–52s have proved in Vietnam. Where heavy, concentrated firepower is needed, there is no substitute for the big bombers. The B–52s have had no fighters to contend with and very little ground-to-air opposition. But equally ideal conditions will not always be present. The B–1's supersonic speed, low-altitude capability, and advanced electronics will allow us to continue to use heavy bombers in a far less permissive conventional-war environment if future contingencies demand it.

But the B–1, a sophisticated and expensive aircraft, can be justified only if it makes a major contribution to the primary task of our strategic forces—deterrence of attack on the US and our allies.

The fundamental question, "Will we need *any* bomber by the end of the 1970s?" has been answered affirmatively by the Nixon Administration. So, it appears, has the next logical question, "Will we need *this* bomber—the B–1?" An economy-minded Administration is not likely to endorse a nearly $2 billion investment in developing and testing the prototype of a system unless it believes that system essential to national security. A reversal by DoD is unlikely unless there should be a gross reduction in the Soviet/Chinese threat, perhaps as a product of the SALT talks. The decisive arena has shifted from DoD (until two years ago strongly anti-B–1) to Congress (until two years ago overwhelmingly pro-B–1).

In his "State of the World" message, President Nixon said:

"Because planning mistakes may not show up for several years, deferral of hard choices is often tempting. But the ultimate penalty may be disastrous. The only responsible course is to face up to our problems and to make decisions in a long-term framework."

There is no decision on weapon systems to which that warning applies more pointedly than to the B–1.

A RAVE REVIEW

Mr. HART. Mr. President, it is not often these days that a group of young people gets a rave review. I suspect that that fact says more about what adults say and read than it does about what our young people do.

Therefore, it gives me a great deal of pleasure to report that "The Suitcase Theater," a group of high school students from Michigan, has been performing in Europe this summer and has been receiving high praise for their production, "These Truths."

Mr. President, I am indebted to a letter from the Honorable Jerome H. Holland, U.S. Ambassador to Sweden, for a report on the success of this group in Europe. Ambassador Holland saw excerpts of the production at our embassy in Stockholm July 29.

However, I must admit their success comes as no surprise, for the Suitcase Theater has received good reviews in this Nation.

As a matter of fact, when I wired the troupe on the eve of its departure in June, I said:

> So let me thank the troupe in advance for the fine job you are bound to do in Europe this summer.

Now I would like to say thanks again, this time for making my prophecy correct.

To document the fact that I know a good thing when I learn about it, I ask unanimous consent that Ambassador Holland's letter be printed in the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

EMBASSY OF THE UNITED STATES OF AMERICA,
Stockholm, Sweden, August 4, 1970.

Hon. PHILIP A. HART,
Senator from Michigan, U.S. Senate, Washington, D.C.

DEAR SENATOR HART: On July 29, our Embassy was honored by the visit of the group of high school students from the Greater Lansing area known as "The Suitcase Theatre." The group was accompanied by their director, Mr. Powell Lindsay, Mrs. Lindsay and other interested citizens. It was a magnificent and heart-stirring experience to see and hear these talented youngsters present excerpts from their production ". . . these truths . . . ," a story of the life and times of the Negro in America. And of course their Embassy audience is but a small part of the vast group of people whom they are reaching here in Sweden and throughout

Europe. We have heard nothing but praise for their exceptional talent and for the wonderful appearance they make. What is even more important is the fact that the group represents various racial and religious groups—a hallmark of the American system.

Junior ambassadors such as these from the great city of Lansing help to make our tasks easier in explaining the American way of life and our accomplishments to the Swedish people. May I take this opportunity to add my congratulations to those of the many other people who have been privileged to hear and see this group.

I know that the President is very interested in young people such as these, and I would certainly appreciate it if you would use your influence to see if they might be invited to visit the White House at some time.

With best wishes,

Sincerely yours,

JEROME H. HOLLAND,
American Ambassador.

VIRGINIA'S CONTRIBUTION TO THE PARTNERS OF THE ALLIANCE

Mr. BYRD of Virginia. Mr. President, four Virginia specialists in dentistry are traveling in Brazil as voluntary instructors under the Partners of the Alliance program.

The Partners of the Alliance is a nonprofit, private organization which seeks to develop economic and social self-help programs throughout the Western Hemisphere. I believe it is a strong adjunct to the Alliance for Progress.

The Virginians now visiting Brazil to conduct seminars in dental techniques are: Dr. Paul Bauman, an orthodontist; Dr. Douglas C. Wendt, a specialist in prosthodontics; Dr. Albert Paulsen, a specialist in periodontology; and Dr. Charles F. Fletcher, who has worked extensively in the fields of dental trade and laboratory relations.

Virginia has made a number of contributions to the Partners of the Alliance.

I ask unanimous consent that a listing of Virginia's contributions to this program be printed in the RECORD.

There being no objection, the list was ordered to be printed in the RECORD, as follows:

THE STATE OF VIRGINIA'S CONTRIBUTION TO THE PARTNERS OF THE ALLIANCE

Virginia joined the National Association of the Partners of the Alliance at the end of the year, 1967. At this time, Santa Catarina, Brazil, was designated as the Sister State of Virginia.

Before that time, contributions for the partner's program were made primarily by high school students to various parts of South America as follows:

Yorktown High School raised $550 for materials for desks for students in 2 villages in Bolivia, $550.00.

Mount Vernon High School students raised $200 for hand tools to be used in a training center in Peru, $200.00

Falls Church High School students donated $200 for teaching aids to be used in Piaui, Brazil, $200.00.

Herndon High School students sent $70 for educational materials for a rural school in Ecuador, $70.00.

After Virginia joined the Partners of the Alliance, and Santa Catarina became its Sister State, the following contributions have been made:

Herndon High School students (Herndon, Va.) raised $450 for the Escola Serte (school) in Santa Catarina. The Herndon Business and Professional Women's League assisted in this project, $450.00.

The Business and Professional Women's League of Virginia contributed funds to equip a language center in Florianopolis, Santa Catarina, $100.00.

Dr. Roscoe Hughes of the Medical College of Virginia contributed several boxes of scientific books to the University of Santa Catarina, $100.00.

The Virginia Partners Committee sent hospital equipment and fishing equipment (the Atlantic Ocean borders the eastern coast of Santa Catarina) to the Partners Committee in S.C., and distribution was accomplished under the auspices of the Ministry of Health there, $26,000.00.

The Virginia Partners shipped medical supplies consisting of polio vaccine and worm infection medicine. (Varig Airlines of Brazil assumed the cost of travel) A U.S. Public Health doctor, a nurse, and a student went to Santa Catarina and established an immunization program for polio, and a worm eradication program, $18,950.00.

Chesapeake Seed Corporation of Virginia donated 100 pine tree seeds for experimental tree farm in Santa Catarina, $100.00.

POLLUTION OF THE ENVIRONMENT BY GOVERNMENT CONTRACTORS

Mr. HART. Mr. President, mercury contamination of our Nation's rivers and lakes has been very much in the news lately.

In recent months, witnesses appearing before the Senate Commerce Committee's Subcommittee on Energy, Natural Resources, and the Environment have described the widespread presence of this chemical in our Nation's waters and the threat it poses to human life and health.

In the other body of Congress, the distinguished Representative from Michigan, Mr. O'HARA, has responded to the discovery of mercury with an imaginative piece of legislation. His bill would use the Federal Government's contract authority to require industries doing business with the Federal Government to take appropriate action to curb pollution of both air and water.

This legislation is particularly significant in terms of mercury pollution. An investigation by the Representative from Michigan has disclosed that of eight industrial firms charged by the Justice Department for contaminating waters with mercury, no less than five either presently hold Federal contracts or have held them in the past.

Recently, a House Judiciary Subcommittee held a hearing at which Mr. O'HARA testified on his bill. I found his testimony very enlightening on the extent that Government contractors contribute to the pollution of our environment. I ask unanimous consent that it be printed in the RECORD at this point.

There being no objection, the testimony was ordered to be printed in the RECORD, as follows:

TESTIMONY BY REPRESENTATIVE JAMES G. O'HARA BEFORE JUDICIARY SUBCOMMITTEE NO. 4, AUGUST 6, 1970

Mr. Chairman, I sincerely appreciate the opportunity to appear before the subcommittee today to testify in behalf of my bill, H.R. 17222.

This legislation, Mr. Chairman, deals with the federal government's responsibility to do everything within its power to discourage the pollution of our environment.

I will not spend the committee's time with rhetorical descriptions of polluted air, which we all observed in abundance over the eastern seaboard last week, nor with the deteriorating condition of our rivers and lakes.

Volumes have been written about the environment and the damage wrought daily by man's ecological insensitivity and headlong rush to increase the gross national product, often at the sacrifice of the quality of our air and water, and often with real threat to human health and life.

I do want to mention recent discoveries of mercury contamination of some of our greatest lakes and rivers—contamination which competent medical experts believe could prove deadly to humans.

Adjoining my Congressional district, a great natural recreational resource—Lake St. Clair—has been damaged, possibly irreparably, by mercury contamination.

Mercury is an insidious element, difficult to detect, and, in fact, was only recently discovered to be present in quantity in our waters.

Other pollutants are more obvious, and anyone with eyes and a relatively sensitive nose is well aware of what we are doing to our air and water.

Happily, more and more Americans are recognizing that our environment is being degraded. They are calling for action to reverse this trend.

Congress several years ago stepped to the forefront of the environmental conservation effort with landmark legislation to curtail air and water pollution. Today, with Americans demanding action and offering their strong support for legislation, Congress has stepped up its activity in this area.

Typical of this activity are the two bills before you today. Both apply old, accepted principles to the subject of conservation. If enacted into law, they will attack pollution in bold and effective ways.

At this point, let me say that I wholeheartedly support the legislation introduced in the House by my able colleague, the gentleman from Arizona. This legislation would enable every citizen who feels strongly about pollution of his environment and wants to do something about it, to fight it through the courts.

I hope that the subcommittee will see fit to recommend its enactment into law. Mr. Udall's legislation could be used by any citizen against any polluter. My bill is more limited, but I believe it would have a most beneficial impact on the quality of the nation's air and water.

The legislation I have introduced is aimed at a specific group of industries and businesses—those that do business under contract with the federal government.

Mr. Chairman, for many years the Congress has required that private firms doing business under contract to the Federal government guarantee their employees safe and healthful working conditions in performance of the federal job and that the employees be paid the prevailing wage in their area or industry and not less than the national minimum wage.

We did this through a series of bills, the first dating back to the early 1930s. The pace-setting bill, commonly known as Davis-Bacon, dealt with construction contracts. Walsh-Healey applied similar rules to procurement contracts.

The third bill, dealing with suppliers of services, was enacted in 1965. I was pleased to have had a hand in writing that law, along with a great Senator, the late Pat McNamara.

It has been a most effective instrument, benefitting hundreds of thousands of workers.

These three pieces of labor legislation threw the weight of federal contract authority behind fair wages and safe working con-

ditions for employees of firms doing business with the federal government.

These laws simply require that every federal contract contain guarantees in the area of wages and working conditions. Those firms who will not sign such a provision, cannot be considered for federal contracts. Those firms who accept federal contracts and then violate the provision applicable to safe working conditions and fair wages can be placed on a list which is then circulated to all federal departments and agencies and be denied contracts with the federal government for a period of three yeras.

Recently, it occurred to me that the Service Contracts Act could be used as a legislative template for application to pollution control by federal contractors. H.R. 17222 is the result.

This bill would require that all contractors hired by the federal government to perform work in excess of $10,000 pledge, as part of the contract, that they will comply with all local, state or federal regulations against air and water pollution which apply to them, and further with any additional standards or regulations which the Secretary may deem proper in keeping with his responsibility to prevent damage to the environment. The bill further requires that any federal contractor failing to abide by this clause, and whose contract activities result in further air and water pollution, will be required to take any corrective measures necessary to abate the pollution.

To protect the public interest, no payment will be made to the contractor until the Secretary of the Interior determines that the anti-pollution clause has been satisfactorily met.

Following the pattern of the labor bills which I described earlier, the Secretary is directed to prepare a list of contractors who do not abide by their obligations under the terms of this act. The list is to be distributed to all federal agencies and those on the list can be barred from receiving federal contracts for a period of three years or until the Secretary certifies that the firm has agreed—again to the Secretary's satisfaction—that in the future the contractor will comply with the terms of the contract.

Finally, the Secretary is directed to prepare, and to distribute to the appropriate federal agencies, a list of those firms whether federal contractors or not, located either in this country or outside it, whose activities have significantly contributed to pollution of United States air and water. This list would also be circulated among federal agencies and those firms would be denied federal contracts until the Secretary certifies that they have provided assurances that they will control pollution by their plants and facilities.

Mr. Chairman, this is a tough bill, and it is meant to be. I do not for a minute believe that the federal government should be in the position of subsidizing a polluter, or of tacitly endorsing pollution in the execution of a federal contract.

To our credit, we are moving forward in the national effort to control air and water pollution. We can assume that by exercising the present air and water pollution control laws, we will eventually catch up with the federal contractor who either wantonly or carelessly pollutes the environment.

But we would do so after the fact, and would have no way of forcing him to clean up what he has already messed up. In addition it could take months—and in some instances it has taken years—to force compliance under the present laws.

Finally, under present statutes, the federal government must be invited by the governor of a state to take action against an intrastate polluter.

My legislation, Mr. Chairman, would put industrial firms interested in lucrative federal contracts on notice that they could not pollute in performance of those contracts. It would encourage those firms who have been federal contractors in the past to begin immediately to take corrective action against pollution. In any event, any firm who wants federal business would be forewarned that no pollution would be tolerated.

Since pollution control devices installed by a plant in order to comply with federal contract obligations would in all probability be used for *all* plant production, this legislation would have a generally salutory effect on industrial anti-pollution efforts.

The power of such action should not be underrated.

The federal government is, undisputably, the nation's largest purchaser of goods and services from private enterpise. The General Services Administration informs me that it enters into some 700,000 procurement contracts annually. The Defense Department reports more than 250,000 contract "actions" amounting to $10,000 or more.

Mr. Chairman, there is at this time little factual data available on the extent to which federal contractors are guilty of pollution.

However, in preparation for my testimony today, I attempted to gather information which would indicate the scope of the problem.

You will remember that last week the Justice Department filed suit against 10 firms which it accused of discharging mercury into rivers and lakes in seven states.

Of those 10, two (Oxford Paper Co., Rumford, Me. and Weyhauser Co., Longview, Washington) are presently working on federal contracts amounting to more than $10,000. Three others. Diamond Shamrock Co., Muscle Shoals, Ala., Olin Mathieson Chemical Corp., Augusta, Ga., and the Pennsalt Chemical Co., Calvert City, Kentucky, have previously held substantial federal contracts and can reasonably be expected to seek federal contracts in the future.

Another major mercury polluter, which claims to have halted discharges into the Detroit River and Lake Erie but was one of the first linked to mercury pollution of those waters, is the Wyandotte Chemical Corp., which also possesses contracts with the federal government.

This is just the tip of the iceberg. Virtually every expert with whom I talked indicated that they believe that a considerable number of federal contractors number among the polluters now being identified in lawsuits and legal actions across the nation.

If this bill becomes law, we will be able to move immediately to require that they do their work for the federal government in a manner that will not dirty the air or foul a river.

The idea of using the federal government's contractual power to achieve such an objective is not new. In 1965, President Johnson issued Executive Order 11288, which was primarily aimed at abating pollution from federal facilities.

However, Section Seven of that Executive Order went beyond federal facilities and directed that the "head of each department, agency and establishment shall conduct a review of the loan, grant and contract" and I emphasize contract, "practices of his organization to determine the extent to which water pollution control standards similar to those set forth in this order should be adhered to by borrowers, grantees or contractors with respect to their operations in the United States."

The results of this executive-ordered review were to be submitted to the Bureau of the Budget.

It is, I think, appropriate to say that this section of the Executive Order received little attention. I have reviewed the reports. Most of them dealt heavily with their loans and grants, and only lightly, if at all, with contracts.

Some agencies, notably the Defense Department and the Tennessee Valley authority, did report the inclusion of anti-pollution clauses in certain contracts, but generally these contracts had to do with construction or the use of land, not procurement contracts, to which my legislation is primarily directed. The present administration has also directed the agencies to review, as part of their responsibility to abate pollution, how contract practices affect pollution control efforts.

In his executive order 11514, President Nixon asked the heads of all federal agencies, consistent with Title I of the National Environmental Policy Act, to "review their agencies statutory authority, admnistrative regulations, policies and procedures, including those relating to loans, grants, contracts, leases, licenses or permits in order to identify any deficiencies or inconsistencies therein which prohibit or limit full compliance with the purposes and provisions of the Act."

The Executive Order calls for submission of agency reports to the Council on Environmental Quality by September 1, 1970.

Mr. Chairman, I want to be frank about this legislation. It was introduced early this year in response to discovery of the contamination of Lake St. Clair and Lake Erie by Mercury from Dow's plant in Sarnia, Canada, and from the Wyandotte Chemicals Corp. plant in Wyandotte, Michigan.

The contamination from the Dow facility has had a devastating effect upon sports fishing in Lake St. Clair. In addition to the dollar loss to businesses that rely upon sports fishing to generate customers, there has been an incalcuable loss in recreational opportunity on the lake.

It was in response to this serious situation that I introduced this legislation. I saw it as a vehicle for informing the public and the Congress about the extent to which companies holding federal contracts contribute to environmental pollution and the destruction of our ecology.

The legislation itself is not perfect. For one thing, it emphasizes water pollution, when I intended that the legislation would apply to all types of pollution. If President Nixon's plan to form a National Environmental Protection agency becomes reality, then the authority vested in the Secretary of the Interior in my bill should properly be transferred to the director of that agency.

But, I have full confidence in this subcommittee and know that it will use its wisdom and expertise to temper and perfect my bill.

In conclusion, let me just repeat two main points: my preliminary evidence indicates that a number of industrial firms doing business with the federal government are among the nation's major polluters.

Until our present laws catch up with them, which may be some time, they can continue to pollute while collecting money from the federal government.

This legislation would provide a tool for swift action against those firms, while serving notice to all firms who hope to do business with Uncle Sam that they will have to take appropriate anti-pollution action.

We have enacted general legislation, and we are making progress in the fight against pollution. But we would remiss, Mr. Chairman, if we did not take every opportunity to control pollution.

At the present time, the federal government is in a position of passing laws against pollution while at the same time sanctioning pollution by its contractors. This legislation would put an end to that.

DR. LESTER HUSSEY, NEW PRESIDENT OF AMERICAN OPTOMETRIC ASSOCIATION

Mr. JACKSON. Mr. President, in the course of an individual's career, there is no greater honor than to be chosen as

the top elected officer of the organization which represents one's own field of activity.

Recently, Dr. Lester Hussey, a Spokane, Wash., optometrist, was elevated to the position of president of a major national health care organization, the American Optometric Association. This was duly reported by the Spokane Spokesman-Review and the Spokane Chronicle.

Dr. Hussey is a native of Spokane, where he attended high school and was graduated from Whitworth College.

Following completion of his studies at Whitworth, Dr. Hussey attended the Los Angeles College of Optometry, from which he was graduated with the doctor of optometry—O.D.—degree in 1938. He has been in practice ever since that time in Spokane, where he has become a highly regarded leader in his church, in civic and service organizations, and within his own profession.

Dr. Hussey has given himself unstintingly to the work of such community service organizations as the Spokane Central Lions Club Blind Aid Committee, the Spokane Rehabilitation Center, the Washington State Society for Crippled Children and Adults, the Spokane Employ the Handicapped Committee, and a number of other civic groups.

During more than 32 years of service to his community and his many patients, Dr. Lester Hussey has also found time to serve effectively as lay leader of the Spokane District United Methodist Church. He and his wife have raised two fine sons. One son attends the Claremont, Calif., College of Theology as a graduate student preparing for the Methodist ministry; the other will soon enter his second year of preoptometry studies at the Pacific University College of Optometry in Forest Grove, Oreg.

Dr. Hussey has also been a powerful force in his local and State optometric organizations. He has served many years in various capacities within the American Optometric Association, which he now serves as president.

I congratulate Dr. Lester Hussey on his record of achievement which lead to selection by his fellow optometrists for the highest and most respected position his profession can bestow. I am proud to note that, again, one of our native Washingtonians has come to the forefront when effective leadership in his area of interest is of paramount importance. I feel sure that Dr. Hussey will do an effective job as president of the American Optometric Association, and I know all the members of the Washington State congressional delegation share my hope that the year ahead will be satisfying and productive for Dr. Hussey and the organization of the 15,000 members he represents as president.

TRIBUTE TO SENATOR MONDALE

Mr. INOUYE. Mr. President, the TV-radio section of the Saturday Review of August 15 contains an excellent article entitled "Mondaleism," written by Robert Lewis Shayon. The article commends one of our most able and articulate Senators. I hope that this kind of forthright, honest appeal to the American people will gain additional advocates and practitioners.

I ask unanimous consent that it be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

MONDALEISM

(By Robert Lewis Shayon)

Television news recently exposed Senator Walter F. Mondale to national audiences in a big way, and, having discovered him, it would do well to put him on camera more frequently. He practices a vivid, new style of political communication, which I christen Mondaleism and which ought to replace the old style, called McLuhanism. The latter, as all political disciples of the Canadian prophet now know, adjusts one's rhetorical image to the medium employed.

If you use radio, get hot; if television, stay cool. Heat and cold in TV politics are mutually exclusive: The life of one is the death of the other. If you're hot on television (like the Nixon of 1960 and 1964) you repell; if you're cool, you involve. The thermal difference between the old and the new Nixon on TV, according to his McLuhanized brain trust that fashioned his 1968 campaign image, meant the difference between success and failure.

Since then all politicians have obeyed McLuhan's First Law of Politics, and the result has been civic entropy. This concept, borrowed from the Second Law of Thermodynamics, suggests that effective energy depends on transacting states of being: As long as hot and cold interact, there is life; when the contraries are neutralized, there is rundown, nothing, frozen assets.

Senator Mondale illustrated how much useful, civic energy can be radiated by being hot and cold at the appropriate moments. First, *CBS Evening News* showed him pounding the table during a Senate subcommittee hearing, while he heatedly told the chairman of the Florida Citrus Growers that employers of migrant workers are mangling and destroying the lives of underpaid and undereducated workers.

The witness had indicted NBC News for smearing all migrant workers as "bums" in that network's recent documentary on migrant labor, *Migrant—An NBC White Paper*. Senator Mondale slammed the polished Senate table in moral indignation and told the witness that it was a migrant worker boy on the program who had described himself despairingly as a "bum," because of the rootless, hopeless conditions of his youth. The Senator's action was intensely human, a reflex of the years of dedicated commitment he has made to the improvement of the plight of the migrant laborers (years, oddly enough, during which no TV cameras were present, until NBC made the hearings news with its own program). The heat was truly on, and it was quite a welcome shock to see a politician acting like a man and not a politician.

The cool part of the Senator's energetic behavior pattern came a few days after the hearing, when CBS invited him to be the guest of its weekend program *Face the Nation*. There were no explosions as he talked about the state of the powerless poor in America: the blacks, the Indians, the people of Appalachia, the Mexican-Americans. But there was controlled conviction as he warned of the dangers inherent in the South's resistance to desegregation of the schools, and he expressed shock at the continued apathy of the American people over the wretched conditions of the subgroups in our nation who have no one to speak up for them in the councils of power. "I can't live with what I've seen," said the Senator, "and I feel it is my duty to do all that I can to get the nation to shift policies." The assertions were dispassionately made, or, so it appeared, superficially, but the heat in them was apparent. Politicians do not usually make such personal statements on television programs.

Senator Mondale, questioned about the resistance of blue-collar workers to the demands of black citizens, declared his faith in the former. They helped to elect him in industrial Minneapolis. They are decent citizens, the Senator said. But his expressions of shock at the "apathy" of the electorate to injustice to minority groups stood in contradiction to his faith. He was hot and cold, here as well, but that is also a good thing. A politician who is all hot or all cool suggests a computerized mind busily clicking as it manipulates. Senator Mondale transacts within himself as he does with his fellow citizens. He may blow hot or cold, but he blows an honest breath. As long as there is an energy gap between American ideals and American practices, there is a need for politicians who are two and one at the same time. Television, take note of Mondaleism.

AWARD OF 30-SHIP DD–963 PROCUREMENT TO LITTON INDUSTRIES, INC.

Mrs. SMITH of Maine. Mr. President, on June 29, 1970, I made a statement in this Chamber in which I seriously challenged the award of the 30-ship DD–963 procurement to Litton Industries, Inc. I challenged it on several bases. Among my observations were the following:

First. The rationale for awarding a $2 billion shipbuilding contract to a company already carrying the largest new ship construction backlog in the industry—a backlog already so diverse as to test management capability even without the addition of 30 new highly complicated destroyers. It is to be remembered that the Navy has already awarded a contract for nine LHA ships to this same shipyard. And prior to that the Navy announced this shipyard as winner of the as yet unfunded FDL program.

These contracts are in addition to submarine and merchant contracts presently under construction. The problems connected with handling a complex and diverse shipbuilding backlog are well-known. And the Pascagoula facility is a new and untested facility with no experience in handling a huge and highly diversified backlog.

Second. The dangers from the standpoint of the U.S. Government of concentrating a large portion of our new shipbuilding programs—including $2 billion plus total package procurements—under one corporate entity in the very face of the problems engendered by doing this in the Lockheed Aircraft Corp. case. A failure on the part of this shipyard's management in just one of these programs could have a severe impact upon our Navy's posture for the 1970's.

Third. Use of the "multiyear" contract developed by the McNamara regime, which requires that Congress pay tremendous "Cancellation Charges" should it decide in future years not to make appropriations for continuance of the program. This concept transfers control, for all practical purposes, out of the hands of Congress and virtually precludes an effective congressional review on an annual basis.

Fourth. The dangerous impact on fu-

ture competition leading in the long run to higher procurement cost in destroyer construction of an award of the Navy's entire destroyer program for the 1970's to a shipbuilding company which has already constructed a new shipyard on the basis of prior total package awards enabling it to drive out the proven destroyer-building capability throughout the country with a resultant serious impact on our defense mobilization base which the Congress has tried to protect over the years.

Recently, the President's Blue Ribbon Defense Panel Report of July 1, 1970, was released. In connection with the Blue Ribbon Defense Panel Report, I was fortunately able to obtain a copy of a staff report on navy ship procurement and construction made to the Blue Ribbon Defense Panel but which has not as yet been made public although no classification restriction has been placed upon it.

That staff report of outstanding experts, prepared under the cognizance of the first Comptroller of the Department of Defense, Wilfred J. McNeil, corroborates independently the very points that I made in my challenge of the Litton award.

Among the observations, conclusions, and recommendations of these highly knowledgeable and qualified experts are the following:

(1) Yet, if the Navy goes ahead with its announced intentions to seek series type production contracts for major ship programs in a single yard, there will be almost total concentration of major Navy work in three . . . yards—Newport News, Litton, Electric Boat . . . over a significant period of time. During this hiatus for the remainder of the yards, they may well lose their capability to respond to Navy shipbuilding requirements or go out of business altogether. Although the Navy cannot and should not attempt to keep all its former suppliers of ships in business the maintaining of a responsive production base and a healthy, competitive environment . . . is certainly as important as experimentation with new procurement techniques.

If recent history on moderately large Navy ship orders is any indication, large package ship procurements constitute a serious risk to the contracting shipyards' corporate survival. The DD963 destroyer program currently planned for 30 ships represents about $3 billion. A ten percent loss in performing on this contract ($300 million) would exceed the net worth of either of the shipyards competing for that program by at least a factor or two.

(2) As concentration of work in a few yards progresses with a high degree of specialized in each, there will be serious reduction in competition for Naval ships. In addition, there could also be a substantial reduction in the nations' total shipbuilding capability. This loss of a competitive environment in itself could offset the economic advantages of series production . . . The Navy . . . with respect to its combat vessels, must be concerned not only with the maintenance of an adequate production base but also with the continuation of a healthy competition within that base . . .

(3) In order to (a) insure an adequate production base for combat ships and (b) Continue to generate competition between shipyards for most classes of ships—The Navy should take such action as is appropriate to distribute major multi-ship prime contract awards among two or more yards.

(4) In order to (a) maintain a healthy competitive environment and (b) Insure a viable production base for Navy combat ships and auxiliaries—Prime contracts for series production of a single class of Navy ships should be awarded to more than one yard whenever the total order exceeds ten ships.

(5) In the case of the DX (DD963), the Navy could by now have a prototype ship virtually ready to sail and less money would have been spent than has by now been paid for paper only.

There it is, Mr. President, straight from the experts picked by the Department of Defense—experts who never consulted or contacted me—and experts with whom I have had no contact with regard to this subject or the DD–963 program.

It would appear, Mr. President, that the Department of Defense does not let its right hand know what its left hand is doing—that the Department of Defense acted directly in opposition to the strong advice and recommendations of its own chosen experts.

FEDERAL-AID HIGHWAY ACT OF 1970

Mr. PERCY. Mr. President, I am pleased and honored to cosponsor the Federal-Aid Highway Act of 1970 introduced today by the distinguished Senator from West Virginia (Mr. RANDOLPH). This bill is farsighted and seeks to meet directly many of the problems faced by this Nation in its transportation policies.

I am particularly pleased that the bill faces squarely the problem of housing destroyed by Federal highway construction. On June 19, I introduced S. 3992, a bill to authorize the use of highway trust funds to construct housing where necessary in order to assure that there is satisfactory, decent, safe, and sanitary housing comparable to the one from which a person is being displaced before the highway construction can go ahead. It provided that the funds needed to replace the housing would be included in the construction costs of federally aided highway projects.

Therefore, it is with a great deal of satisfaction that I see that section 17 of the bill provides that:

The Secretary shall approve as a part of the cost of construction of any project under any Federal-aid program which he administers the cost of (1) constructing new housing, (2) acquiring existing housing, (3) rehabilitating existing housing, and (4) relocating existing housing, as replacement housing for individuals and families whenever he determines that a proposed project on the Federal-aid system cannot proceed to actual construction because replacement housing is not available and cannot otherwise be made available as required by law.

Section 17 contains other provisions that are equally innovative and farsighted. Upon the affirmative recommendation of the Governor of a State, the Secretary of Transportation can approve the use of highway funds for the operation of public transportation facilities. The Secretary can approve funds for the operation of public transportation facilities including the purchase of equipment, to reduce losses in those cases which will facilitate expanded service, and facilitate the continuation of service which would otherwise be reduced or abandoned.

This fits in directly with the bill (S. 3499) I introduced February 24, 1970, which would provide Federal funds for retirement of debt incurred as the result of capital equipment purchases by public transportation agencies where otherwise service might be reduced or abandoned or where low-income riders would be adversely affected. I am hopeful that the Senate can make this greater commitment to public transportation this year.

I wish to again commend the distinguished Senator from West Virginia on his comprehensive and forward-looking legislation.

A REIGN OF TERROR IN AMERICA

Mr. EASTLAND. Mr. President, a reign of terror exists in America today.

One needs only to look at the headlines of the morning newspaper to prove this tragic and frightening fact.

Here is a sampling:

OMAHA.—Policeman killed when dynamite explodes in his face while investigating a citizen complaint.

MINNEAPOLIS.—Dynamite explosion rips Federal Building, causing a half-million dollars damage. Twenty sticks of dynamite shatter windows blocks away and hurl 300-pound concrete blocks through the air.

ATLANTA.—Three businesses damaged by firebombs.

COLUMBUS, OHIO.—Man charged with bombing two department stores.

WASHINGTON.—Telephoned bomb threat forces evacuation of United States Courthouse.

Mr. President, I hasten to point out this is only a single day in our country. Couple these terrorist activities with the sniper killing of a policeman in Chicago, add the death of a judge after he and his jurors were kidnaped at gunpoint from their own California courtroom, and place with this a dozen other such incidents which are occurring with an all-too-certain frequency in every part of this Nation. It is then that you realize the magnitude and significance of what is happening in America.

We do, indeed, live under a reign of terror.

The foundation of organized government is threatened by these terrorist tactics. No person is safe. No building affords any degree of protection. We are at the mercy of these killers who stalk every city day in and day out.

These anarchists have resorted to terror tactics in a determined effort to undermine organized government in this country. Public officials, policemen, and the average citizen are being forced to live in fear of another bombing.

This wave of terrorist attacks threatens now to sweep our entire country—from ctiy to town and from the campus to the streets.

It is imperative that we act without delay. Congress must take immediate and positive steps to see that these anarchists are dealt with promptly and severely. We must stop this wave of terrorists attacks before they undermine the structure of our government.

It is imperative that we arm our State and local police with the weapons they need to combat these attacks on our in-

stitutions and our way of life. We must give them the tools they need to operate in a climate of terror that exists in every part of this country.

It is for these compelling reasons that I have introduced S. 3924, a bill to prohibit the transportation and possession of explosives when not in compliance with the law. The bill is now before the Committee on the Judiciary. I will assure the Senate that I will encourage the committee to report this legislation to the Senate without delay. By the same token, I now ask that the Senate consider this bill at an early date after it is placed before this body and act on it with a sense of urgency demanded by the situation at hand.

We cannot afford delay. Lives are at stake. Property must be protected. All this—and more, too—for the life of our cities and even our country is seriously imperiled by the wave of anarchy and terror which is now sweeping America.

Our lives and our Government is threatened from within. We must act now—or I am afraid it will be too late.

EARTH WEEK

Mr. NELSON. Mr. President, on the motion of North Dakota Governor William L. Guy last week, the National Governors' Conference meeting in Osage Beach, Mo., unanimously supported a resolution for the Governors to declare the third week in April Earth Week in their respective States.

This is a very significant step toward making Earth Day an annual event, one which I enthusiastically support. Last fall, when I proposed the Earth Day effort, we felt it would have been a success had 300 to 400 colleges and universities joined in. However, last April 22, we saw a dramatic nationwide participation of 2,500 colleges and universities, 10,000 high schools and grade schools involving eight to 10 million students, and additional thousands of communities.

Earth Day represented a great national awakening to the crisis of our environment. And its greatest meaning will be if it is seen as a beginning—a beginning of a momentous, persistent, well-organized national effort built on environmental groups in every community in the land, to restore the quality of the American environment.

An annual Earth Week would be an invaluable event in continuing the involvement that is going to be essential to meet the environmental challenge. As the Governors' Conference resolution said, there is a compelling need to encourage a continuing commitment by all interests—including education, agriculture, business, labor, and civic and private organizations—to work to solve our grave environmental problems.

Furthermore, an annual Earth Week could provide a yardstick for our environmental progress. In looking back, it would assess whether we actually are making headway in dealing with this country's environmental crisis. In looking forward, it would greatly assist the Nation in establishing new objectives and priorities for meeting this critical challenge of providing quality as well as quantity in American life.

In addition to the Earth Week resolution the Governors' Conference adopted important resolutions regarding the mercury pollution disaster and the need to establish a national environmental clearinghouse to register chemicals of all sorts and monitor their impact in the environment.

As chairman of the Committee on Natural Resources and Environmental Management of the Governors' Conference, Governor Guy is to be commended for the excellent work of the committee and the conference in taking these important and forward looking environmental positions.

I ask unanimous consent that the text of the three environmental resolutions—Earth Week, National Clearinghouse, and mercury standards—be printed in the RECORD.

There being no objections, the items were ordered to be printed in the RECORD, at this point:

EARTH WEEK

Whereas, there is an urgent need to promote a broader awareness and understanding of the environmental crisis facing each and every state in the United States; and

Whereas, there is a compelling need to encourage a continuing commitment by all interests including education, agriculture, business, labor, and civic and private organizations, to work to solve these fundamental environmental problems;

Now, therefore, be it resolved that we as Governors assist in focusing the nation's attention on environmental problems and their solutions by declaring the third week in April "Earth Week" in our respective states and seek the broadest participation in its activities.

NATIONAL CLEARINGHOUSE AND REGISTRATION OF CHEMICALS

Whereas, over 6,000 chemicals are released into our air, water and land; and

Whereas, there is a need to study and analyze all chemicals before they are introduced into our environment; and

Whereas, there is a need to continuously monitor all chemicals in the environment;

Now therefore, be it resolved that the National Governors' Conference urges that a national clearinghouse be established to 1) register all chemical compounds released into our environment, 2) pre-screen each chemical as to its ecological effects prior to its introduction, and 3) continuously monitor these chemicals in our environment, and that this action by the member Governors be transmitted to the President as evidence of our sincere and genuine concern.

MERCURY CONTAMINATION STANDARDS

Mercury contamination of the Nation's streams poses danger to the health and well-being of our people and has brought forth expressions of protests and dismay from all parts of our Nation.

Approximately one-third of the states have streams which are involved with mercury contamination, thus indicating a need for corrective activity on the federal level.

The states directly involved with this grave problem have, by their respective separate actions, diligently pursued diverse courses of remedial and corrective measures, all well intentioned but lacking in uniformity so essential in interstate matters. Thus, due to the interstate nature of our streams any corrective activity involving regulatory measures should emanate on the federal level and should afford a just and equal criteria for all of the states involved.

It is imperative that certain measurable minimum amounts of allowable mercury outflow should be established which would not constitute a health hazard to the people of America. The Federal Water Quality Administration is the appropriate agency to initiate corrective measures which would be effective and binding throughout the several states; therefore, the National Governors' Conference urges the Federal Water Quality Administration to immediately initiate action for the determination of a minimum amount of mercury outflow which would not constitute a hazard to public health and upon such determination promulgate regulations having equal application throughout the Nation sufficient to insure that such minimum mercury outflow is not exceeded and that such regulations contain appropriate enforcement provisions.

COCA-COLA AND ITS MIGRANT AND SEASONAL FARM WORK FORCE

Mr. MONDALE. Mr. President, as chairman of the Subcommittee on Migratory Labor, I wish to share with Senators and the many other persons concerned with the plight of the farmworker, the testimony of Mr. J. Paul Austin, president of the Coca-Cola Co., before our committee last month.

Coca-Cola was called to testify following the public revelation in the recent television documentary, "Migrant—an NBC White Paper," that it was directly involved in the problems of migratory labor in its Florida citrus operation. Testimony by the Project for Corporate Responsibility further confirmed that Coca-Cola indeed had farmworkers that were living and working under less than desirable conditions.

In a forthright statement before the subcommittee, Mr. Austin recognized the problem and admitted to Coca-Cola's corporate responsibility for correcting this situation. In his prepared statement and in response to questions, he made specific reference to his company's knowledge of the problem for over a year. Since learning of the problem, a thorough study was commissioned to develop a comprehensive plan for correcting the problems.

Coca-Cola now has a plan of action which it believes will put that company on the track of correcting the situation. It is spelled out in some detail in their statement, which I will submit for the RECORD.

I think I can speak for most of my colleagues on the subcommittee when I say that we were impressed and encouraged with the ambitious efforts and intentions of Coca-Cola. We are all deeply concerned that Coca-Cola will institute the plan as soon as possible, and that it be carried forward to fruition without any undue delay.

The subcommittee will continue its interest in the plan, and we intend to maintain a close watch on its progress. Equally as important is our hope that implementation of the plan will set a precedent for all agribusiness throughout the Nation to institute similar plans. Perhaps with this action we will begin to see progress toward the solution of the plight of the farmworker—a plight which continues to be one of the greatest blights upon our American vision of economic and social justice for all.

Mr. President, in view of the significance of the Coca-Cola statement, and the great interest expressed by so many

persons upon the problems of the migrant, I ask unanimous consent that the statement of Mr. Austin be printed in the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT OF J. PAUL AUSTIN

I appreciate the opportunity to testify before the Subcommittee on Migratory Labor of the Senate Committee on Labor and Public Welfare. I am accompanied by Mr. J. Lucian Smith, the President of The Coca-Cola Company Foods Division.

Although The Coca-Cola Company grows only some three percent of the Florida citrus crop, we have become directly involved in the problems of the migrant worker. Throughout the United States, there are some three million farm workers; more than 250,000 of them are characterized, in the terms of this Committee's 1969 Report, as migratory workers. The Coca-Cola Company employs in its citrus groves in Florida approximately 300 full-time groves employees and a daily average of about 1,000 seasonal workers—migrants—over the eight month orange harvesting period.

As a citizen, I am concerned about the plight of every migratory worker in the nation; as a corporate executive I am directly responsible for the migratory workers employed by my Company. For the past year and a half, we have been examining the problem of the migrant in our citrus groves in an attempt to develop a program through which he can live and work in human dignity and economic security. The question we have asked is not whether to help the migrant worker; but how to help him—in a lasting way for himself and his family.

As this Committee well knows, the problem of the migratory worker in America is an enormously complicated one. It is, first and foremost, a human problem of severe psychological isolation. It is an economic problem involving health, education, citizenship and family structure. The migrant worker has problems of malnutrition, physical handicap and mental health, and most significantly, he suffers from a profound sense of futility.

To the migrant, the problem seems overwhelming. To the migrant's employer and the migrant's government, the problem is equally complex and frustrating. Money can build houses and buy food, but money alone cannot provide the environment in which a man can live and grow with human dignity, economically secure in a life motivated by hope for himself and his children.

We do not pretend to have all the answers to this complex question, but we are determined to do something about it. Portions of the program we have instituted may not work as we planned, but we are dedicated to a persistent and successful effort to place the employees in our groves on a parity with all other Company employees.

Our interest in citrus operations began with the acquisition of the Minute Maid Company in 1960. In the summer of 1967 these operations became part of a new Company Division. The Coca-Cola Foods Division, of which Mr. J. Lucian Smith was appointed President.

In late 1968 I began to read more and more about the crusade of Cesar Chavez in California on behalf of migrant labor. I called Mr. Smith in Houston and asked him to make certain that workers in our groves were not living in the sub-standard conditions that Mr. Chavez described for the workers in California. Mr. Smith personally visited the groves in December, 1968. He was so upset by what he saw that he came immediately to Atlanta to talk to me. He told me that many of the migrants in our groves were living in conditions that "could not in conscience be tolerated by The Coca-Cola Company." At that meeting he and I agreed that we must establish a program to correct these conditions and commit whatever funds and talent were necessary to do the job.

At that meeting I told Mr. Smith that my experience as Vice Chairman of the National Alliance for Businessmen had convinced me that the so-called "unemployables" could be placed on corporate payrolls and with appropriate job training and special care were capable of becoming permanent members of the nation's labor force.

Our first instinct was to move promptly and change the physical situation in which the migrant worker found himself trapped. We soon realized, however, that merely to provide housing and transportation, without facing up to the basic human problems involved, would do little more than temporarily ease the hardship of the migratory worker. A culture of despair and poverty, vested by generations of neglect, had to be rooted out and replaced. To do so involved the entire spectrum of social services and skills: child care, nutrition, adult education, psychological assistance and medical treatment.

We established a task force of both Company personnel and outside consultants, including Scientific Resources, Incorporated (SRI), of Union, New Jersey. The task force used a variety of study techniques.

During February, 1970, SRI sent three men and one woman into our citrus groves, one of whom worked as a migrant so that he could experience the life of the migrant in his job and his environment.

They talked to the migrant workers and their families and interviewed them in depth, to discover their psychological attitudes and their view of their major problems and needs.

They examined the housing of our migrant workers, and their problems in obtaining health care, education and other basic social services from the private sector as well as from government agencies.

They discussed the plight of the migratory workers with local, state and federal officials in Florida and representatives of local groups, religious and social, that had been active in the field for many years.

The task force made its recommendations to me in March of this year. I approved the recommendations and their immediate implementation. Mr. William Kelly, an experienced personnel executive of our Company, who was a member of the task force, was appointed a Vice President of the Foods Division with the sole duty of getting this job done.

We all realized that if the program were to be a success, it was essential that the migrant workers themselves participate in the development of the solution to their own problems. In recent years, as a result of our nation's experience with a variety of anti-poverty programs, we have come to recognize the importance of self-help and participation by the disadvantaged themselves in programs to raise their standard of living. We believe this is also true with respect to the migrant worker. He is the individual most immediately affected by our program and if it is to have its maximum impact, he must recognize that he has within himself the capability—the power—of improving his condition.

Many of the most important segments of our program were suggested by the migrant workers. For example, they repeatedly expressed the need to identify with the Company, the desire to own or rent their own homes at fair prices, the need for job security and life and health insurance, for training programs and grievance procedures, for better communication with their superiors, and a real measure of involvement in the communities in and near which they live.

From the Company's standpoint, we wish to identify those among our migrant workers with the basic talent and leadership ability to rise not only in our citrus operations but throughout the whole structure of our organization. Every migrant with the talent and ability to do so will have the same opportunities to rise in The Coca-Cola Company as any other employee. One of the key responsibilities of the vice president in charge of this program will be to identify and help motivate the migrant workers with this potential. In short, our plan is to place every groves and harvesting worker in the same status as every other employee of The Coca-Cola Company.

THE SEASONAL HARVESTING EMPLOYEES

Last year, during the eight month orange harvesting period, The Coca-Cola Company employed an average of 1,000 seasonal harvesting workers per day. Like most of the Florida citrus industry, they had no health, retirement or life insurance plans, and no job security. There are 86 housing units for their families and dormitories to accommodate about 400 male workers. In this group, we found a deep sense of hopelessness and futility.

These are the migrants who work only during the harvesting season, and then, often only a few days a week. We believe that our first responsibility is to provide as much full-time employment as we can for these workers. Beginning with a selected group, we intend to provide full-time employment with all the benefits that The Coca-Cola Company provides to its full-time employees. This will include the same retirement and life insurance plans, the same two to four weeks vacations and eight holidays, and the opportunity to enter the same training programs. As full-time employees, they will also be entitled to participate in the same tuition refund plans available to all Coca-Cola employees.

Currently the seasonal harvesting employee is paid by the piece. Beginning with this first group of harvesting empoyees, we will provide a basic hourly wage, on top of which piecework bonuses will be paid, somewhat similar to the salary and commission arrangement for salesmen of many major corporations. The combined salary and bonus will be significantly higher than the money they are presently making. In this way, we hope to combine a sense of security, both in pay and in job, along with the incentive necessary to maintain and increase productivity. If this program works and productivity increases—as we believe it will—we propose to extend it to cover 200 employees by the end of its first year of operation; 500 in two to three years and at least two-thirds of our harvesting employees in five to seven years.

We plan to organize our harvesting of oranges and lemons, and the work that must be done in the groves to maintain and care for the trees during the non-harvesting period, in a way that will provide full-time employment for the largest possible number of migrants. We must replace generations of despair, with hope and ambition and this will require a major and concerted array of social services. Sufficient time and patient understanding are essential.

Although our objective is to convert as many seasonal employees to full-time status as possible, the process will of necessity be gradual. During transition and thereafter we will need a number of migrant seasonal employees to handle the peak harvesting load. These seasonal harvesting employees will be placed in the same status as other seasonal employees of the Company, such as many of the men who work in our processing plants. Their pay will be increased, and they will be covered by special life insurance and health care plans. Their dormitories will be modern and sanitary with adequate recreational facilities. They will be offered three meals a day at cost and will be provided, free of charge, with transportation to and from neighboring communities. We hope to instill in these migrants the desire to become full-time employees of the Company.

FULL-TIME GROVES EMPLOYEES

Our task force revealed that the pay and benefits of full-time groves employees were in line with local citrus industry standards, rather than with the standards of the Foods Division. Thus, these employees had no retirement plan, only one week of vacation and five holidays per year. They received health benefits only after one year of employment and life insurance benefits of $1,000.

Effective September 1, our plan will place these employees in the same status as all other full-time Coca-Cola employees. They will be included in the Company retirement plan. They will receive two to four weeks vacation each year depending on their length of service. Their health insurance benefits will become effective thirty days after employment and life insurance benefits will be raised to $5,000. Their wages will be initially increased by 23 percent.

HOUSING

At present we provide housing rent free to approximately sixty percent of our groves employees. The remaining forty percent rent or own their homes. It will always be necessary for some of our employees to live in the groves. For them, we will provide modern and sanitary housing and dormitories and the maintenance services necessary to keep that housing clean, decent and liveable.

Early in our strategic planning, however, our long range objective was to have as many employees as possible own their homes. We have already surveyed forty acres of land, on which we are arranging for the construction of 60 to 70 houses at prices and mortgage payment schedules within the means of our citrus employees, and with appropriate recreational facilities and power and sewer service. These houses will be available exclusively for purchase or rental by our employees. We hope to use existing state and federal housing programs; but we are prepared, if necessary, to do this through Company-arranged private financing.

SOCIAL SERVICE CENTERS

We have decided to establish four permanent social service centers and one mobile social service unit for our groves and harvesting workers. The first of these centers and the mobile unit will be in operation at the beginning of the orange harvesting season in late November. The other three centers will be in operation within a year from that time. The centers will provide a one-stop service for the worker and his family. These centers will provide the physical facilities and professional personnel for: child care and pre-school training and education; adult education; medical care; family and social counseling; recreation; special tutoring for children attending local schools; and information centers on local, state and federal programs.

In addition to professionals, the centers and the mobile unit will be staffed by paid members from the migrant community itself. These staffs will be specially trained to work with migrant workers. The mobile unit will be operated in a manner similar to federal "outreach" programs. The unit and its personnel will seek out the migrants and their families, where they work and live and provide basic social services and medical care to them.

GENERAL PROGRAMS

There are a variety of other problems to which we have also directed our attention. For example, migrant workers spend substantial amounts of time in buses that break down too often. We have ordered twenty-five new buses, each with toilet facilities. Ten buses have already been delivered. These buses will efficiently transport workers to and from the groves and provide sanitary toilet facilities at the location of their work.

Finally—and most important in the long run—we have begun research into the tools used by the migrant workers. We will put forth our best efforts to the task of developing mechanical and other devices to ease the burden of this work and make the individual more productive.

This, in brief, is the program of our Company to deal with the migrant workers in our employ. I do not underestimate the difficulty of bringing hope to these men and women, for themselves and for their children. And I do not want to overpromise. Generations of abuse and neglect cannot be rooted out in weeks or even months. But we have looked at this problem with the best people we could find, and we believe the programs we are instituting will move a long way toward providing for the migrant and his family human dignity, motivation and hope.

Let me be absolutely clear on one point. As we begin our work on the program, we will meet many difficulties and certain portions may not work in the field as we have planned them on paper. We will seek other solutions where those we have do not seem to be working. We intend to put whatever resources are within our command to solve this problem and to do it promptly, humanely and permanently.

While I recognize that our major and most direct responsibility is to those in our employ, I am also mindful of our obligations as citizens and human beings. We have already informed other citrus growers and employers of migrant labor that our entire experience will be available to them as they begin to deal with their problems in this area.

CONCLUSION

Unfortunately, Mr. Chairman, neither you nor I alone can solve the problems of all the migrant workers in this nation. We employ only 1,000 migrants in 20 counties in a single state. There are more than 250,000 migrants working in 900 counties in 46 states.

These men and their families have been too long neglected by the entire nation in which they live and work. Only a massive, concerted and persistent effort by federal, state and local government can root out the sub-culture of poverty in which they barely survive.

Government housing programs specifically designed for the migrant must be enacted and funded. Special health and education programs must be created for the migrant and his children. Federal, state and local social services, now denied the migrant because of arbitrary residence requirements and out-right discrimination, must be opened to him. Outreach programs, by which government officials will seek out the migrant where he lives and works, must also be established. Until our citizens and their elected representatives, at every level of government, commit the resources and talent necessary to solve this problem, migrants and their families—one million human beings—will continue to live in poverty without hope. This nation and the states and communities in which the migrants live and work have the resources to solve this problem. The only question is whether they have the determination. We must, as a nation, show the migrant that there is hope for him in our country and that above all his children can aspire to break the cycle of poverty to which they have been condemned for so many generations.

Yet government alone cannot solve this problem. Through years of experience and the work of dedicated federal employees and legislators like yourself, the government has tried to help the migrant worker. Unfortunately, the impact of most of its programs has been marginal at best.

In 1968, largely because government, acting alone, met the same frustration in its attempt to deal with the problems of the hard core unemployed in our urban ghettos, the President formed a National Alliance of Businessmen. In partnership with the government, the NAB created the JOBS program to help train and employ the hard core disadvantaged in the ghettos of our largest cities. I was privileged to serve as the first Vice Chairman of the NAB.

I believe the time has now come to form a National Alliance of Agri-Businessmen to train and employ in dignity and with fair wages the migrant workers of our nation. I urge this Committee to consider such a program and recommend it to the Congress in its report. A National Alliance of Agri-Businessmen, working in partnership with the government, can do for thousands of rural migrant workers what the National Alliance of Businessmen has done for thousands of ghetto dwellers.

In closing, Mr. Chairman, let us recognize that the migrant represents a phenomenon in our society. The migrant and his family have the motivation to travel hundreds of miles across our country seeking one of the hardest jobs in our economy. If that motivation is fired with self respect and special training, we can reclaim hundreds of thousands of our citizens and create a major addition to our nation's work force. It is this inherent motivation of the migrant that gave me the confidence last March that the program of The Coca-Cola Company will work.

THE OEO LEGAL SERVICES PROGRAM

Mr. MONDALE. Mr. President, at this week's annual meeting the American Bar Association, the organized bar paid tribute to OEO's legal services program. It is legal services fifth anniversary, and the lawyers in this program have already had a major impact on our society.

For a basic principle of a democratic system is that it is a government of laws, not of men. But to those Americans who have been denied access to our judicial and legal institutions, there is a feeling that the system is repressive and unyielding. To them, America is a country governed by men, not laws.

OEO's legal services programs has gone a long way toward changing this fatalistic attitude. To many, legal services has meant the difference between hope and despair.

By insuring the opportunity to obtain counsel—to have representation in and access to courts and government agencies—we insure that grievances will be redressed through legal channels.

The attempt to provide legal representation to all Americans is not only a recognization of a basic flaw in our system—it is also an affirmation of our deep faith in the potential of this system. By accepting the necessity for society to be challenged in order to come viable, we have begun to breathe life into the words "equal justice for all."

On this fifth anniversary of the legal services program, it is appropriate to pay tribute to those lawyers and bar association officials who have struggled so long to make "equal justice" more than an empty slogan. As a result of their efforts, more and more Americans are able to depend on responsive institutions and forums for the redress of legitimate grievances.

Mr. President, I ask unanimous consent that two editorials on the legal services program—one from the New York Times

and one from the Washington Post—be printed in the RECORD.

There being no objection, the items were ordered to be printed in the RECORD, as follows:

[From the New York Times, Aug. 11, 1970]

ATTORNEYS FOR THE POOR

In what was once regarded as a citadel of rigidity, there are new stirrings on behalf of the legally deprived in the United States. At the annual meeting of the American Bar Association in St. Louis, the fifth anniversary of the Office of Economic Opportunity's legal services program as well as the fiftieth anniversary of the National Legal Aid and Defender Association are being celebrated today. The fact that the A.B.A. is choosing to honor these lawyers and programs for the poor is a symbol of their acceptance in the courts.

Nearly 2,000 attorneys now work in 850 neighborhood law offices in hundreds of communities. They are representing people as clients, not simply as charity cases; in the process these dedicated young lawyers are making legal history in many fields affecting the most disadvantaged of Americans. So well have these O.E.O. attorneys performed that, paradoxically, the big city law firms have had a hard time competing for the talents of top graduates who often choose to enter the less remunerative field of anti-poverty law and legal-defender representation.

In the course of serving nearly a million clients, the O.E.O. attorneys have won important judicial decisions protecting and broadening the rights of tenants, consumers, food-stamp users, migrant workers and families on welfare.

The O.E.O. legal services program was funded for $54 million this year; $61 million is proposed for fiscal 1971. At least this amount is necessary to expand the services of the nation's biggest legal bargain—the talents of its finest young attorneys working for the poor.

[From the Washington Post, Aug. 11, 1970]

POVERTY LAW HAS NOT BEEN POOR LAW

In his "State of the Judiciary" address—on which we shall be commenting at length tomorrow—Chief Justice Warren Burger paid tribute to the performance of the Legal Services Program of the Office of Economic Opportunity. Among the many antipoverty efforts begun in the mid-Sixties, this has been one of the more quiet and more effective. It began on the assumption that many of the poor are not only denied their rights by law, but that few lawyers are available to protect those rights which do exist. "As late as five years ago," writes Bernard Segal, president of the American Bar Association, in the current ABA Journal, "less than 2 per cent of the legal needs of the poor of the country—more than 20 million of our people—were being filled." Five years ago this week, in a move that it was proud of then and is prouder of now, the American Bar Association embraced and endorsed the Legal Services Program.

Today, approximately 850 LSP offices operate in 49 states, staffed by 2200 lawyers and funded by the Office of Economic Opportunity for $53 million. In a real way, it is the nation's largest and most powerful law firm. The major accomplishments of the program can be listed under a variety of headings. First, there has been the day-to-day service—consumer cases, divorces, garnishments, repossessions. Many of the LSP clients have problems that do not require court action; often, only advice is needed, or a phone call to the proper authority. Second, test cases brought by LSP lawyers have resulted in the expansion of such previously narrow areas as landlord-tenant law, welfare law, public interest law, the administration of food programs. Third, the program has developed new kinds of legal forums for the resolution of disputes outside the courts—to lighten the strain on an already overburdened court system.

The program has not been without failures, nor has it lacked critics. Regarding the latter, however, it has had the right kind of critics—like Sen. George Murphy and Gov. Ronald Reagan of California. They have repeatedly tried to undermine legal services lawyers, but their bumbling efforts have usually led nowhere. Elsewhere, the governor of Missouri recently vetoed two LSP projects in his state; but his veto was overridden by OEO director Donald Rumsfeld, who stood by the poverty lawyers in the field.

One reason the Legal Services Program has the backing of both liberals and conservatives in the organized bar is the awareness that law is above partisan ideologies. Contrary to the rantings of some current "revolutionaries," the system can be changed, the overthrow of injustice can be orderly and the law can be converted from an enemy to an ally.

The same law theoretically applies to everyone and there is no reason that an impoverished inner city client should not receive the same first class service and intelligence that is available to others. Increasingly, such service and intelligence are being provided; in thousands of cases, the practice of poverty law has proved to be anything but poor law.

NIXON ADMINISTRATION'S POLICY OF FORCED INTEGRATION IN THE SOUTH

Mr. ALLEN. Mr. President, I ask unanimous consent that an editorial of the Mobile Register, dated August 14, 1970, and an editorial of the Montgomery Advertiser-Journal, dated August 16, 1970, be printed in the RECORD as an indication of the thinking of the people of Alabama and the South regarding President Nixon's trip South in support of the Nixon administration's policy of forced immediate desegregation of the public schools of the South.

There being no objection, the items were ordered to be printed in the RECORD, as follows:

[From the Mobile Register, Aug. 14, 1970]

REPUBLICAN HOAX ACT ON SOUTH'S SCHOOLS

President Nixon and his bureaucratic entourage are coming South this Friday to bring more Republican political hypocrisy on school integration. Depend on it.

The junket to New Orleans for a huddle with "key Southern leaders" well may be the biggest hoax in the whole history of the "desegregation" crusade initiated and spearheaded by political liberals, an element diversely reported to be exercising increasing influence in and on the Nixon administration.

Out of the hypocritical political huddle in New Orleans will come nothing of value to the South. It will not produce freedom of choice for children in school attendance. It will not produce equal treatment for schools in the South on racial integration.

Its basic purpose is not educational but political. It is not designed to establish a policy of fair play between regions as a replacement for the double standard that wields a federal force blackjack in the South as other regions continue to practice wholesale segregation with impunity.

This hypocritical Republican political junket to put on an act of friendly understanding and helpfulness toward persecuted Southern states logically may be construed as stemming from the forthrightness of Sen. Strom Thurmond, Republican from South Carolina, in jumping down the Nixon administration's throat with both feet for its open sorry treatment of the South.

Even before and more particularly since Senator Thurmond delivered his blasts with no punches pulled, the question has been asked in political speculation among both liberals and conservatives whether Mr. Nixon could carry the South in 1972 if he offers himself for reelection and the Republicans renominate him.

The question may have been overtaken by obsolescence already. Whether George C. Wallace again becomes a third party candidate or not, the South may be beyond the reach of Mr. Nixon two years from now if the national Democratic party puts together a platform and candidate ticket of any substantial appeal in this region.

As of today, we would say that Richard Nixon has had it politically in the South if confronted with any promising alternative to which the majority of the electorate could turn.

Southerners who think and care will not be misled by the junket Mr. Nixon is leading into the South. They know in advance from bitter experiences that a soft-soaping on school integration is the most the South can expect from it.

They know the real motive, brought on by political fright, is to try to patch up the Nixon image that has just about struck rock-bottom in the South on the integration issue.

Most Southerners can recognize a hoax when they see it with their eyes wide open.

[From the Advertiser-Journal, Aug. 16, 1970]

FIDDLING WHILE THE SOUTH BURNS

Congressman William C. Cramer, Florida Republican, is only one among many who have predicted the nation (meaning the South) "may be headed for the worst school crisis in its history unless the Supreme Court immediately comes back off vacation and does its job."

Schools under orders to establish a "unitary" system in September have not been told what this means. Montgomery is one of the exceptions. At least we do have a plan, a zone plan, however it works in practice. In some areas, notably the new Carver district, the "white flight" courts have referred to is already on.

In a few other systems, Alabama federal judges have acknowledged that the effect of their orders, obeying the Fifth Circuit's mandate, will probably result in all-black systems. And even within some systems where this is not expected to happen there will probably be pockets of re-segregation as whites either move out or send their children to private schools.

As Cramer said, the Supreme Court must answer such critical issues as whether racial balance is required in schools, whether massive forced busing can be ordered, and whether the South must continue to live under a different set of rules than apply to other sections of the country.

In March, Chief Justice Warren E. Burger said the Supreme Court had a clear duty to resolve all these questions. It had the opportunity in the appeal of the Charlotte busing order, which covered most of the questions still dangling, but took off on vacation.

Normally the Justices do not return until October, well after many communities will have been involved in integration turmoil with no guidance provided by the Supreme Court. Many district judges are utterly baffled as to what the law is.

The court also recessed without hearing—as it has consistently refused to hear—a northern de facto case, this one from Cincinnati.

Administrators in many sections of the South have no earthly idea what is expected of them in September. They are to prepare

"unitary" programs without a definition of what this means. Cramer said:

"School officials are faced with a mass of confused, contradictory and often unreasonable rulings from the lower federal courts . . .

"This is no way to run our courts. It is no way to run our schools . . . Our courts seem determined to play some kind of numbers game with our children. For the first time in its history, America may be headed toward the establishment of racial quotas."

The neighborhood school concept, an ancient and honored one in this country, has been dis-established by the courts in many cases—whether by zoning (which pretends to recognize neighborhoods but does not), pairing, school closing and transfers, and other devices, most aimed at one result dictated by the social gospel of the times, a mix ratio.

Many of the future planners in Washington believe the whole thing could be solved by closing all neighborhood schools and busing students into one huge educational complex. This would be the ultimate solution, they say. But the burgeoning of private schools indicates otherwise. It could complete the job, already begun, of wrecking public education.

This is a totalitarian nightmare, but we are fast approaching it.

The Cramer Amendment to the 1964 Civil Rights Act is law, but totally ignored law. It says that "desegregation shall Not mean the assignment of students to overcome racial imbalance." The Fifth Circuit has ignored it, as have other southern courts, the most flagrant example being the Charlotte panzer plan to bus students by the thousands hither and yon to achieve the mix goal.

No one knows where it will all end. The reckless manipulation of school children has now acquired a momentum of its own, light years beyond anything mentioned in the original *Brown* decisions of 1954–55.

The Supreme Court, which could have at least tried to answer some of the riddles and inequities, needed its long summer rest too much to address itself to this, the most disturbing year in southern school integration. Maybe the Justices quietly decided they had no answers and would try to pick up the pieces in October, when it will be too late.

Even Senator Mike Mansfield has suggested that the court should abandon its long summer and go into an 11-month year. We fail to understand why a court constantly complaining of its heavy backlog should aggravate the situation by its extraordinary recess.

Not that we would expect any surcease or that the Justices could unscramble this egg. But it would be vaguely reassuring to know that they were trying, even as hundreds of school boards and superintendents are trying, fumbling in the dark.

Perhaps Chief Justice Warren E. Burger hinted of the reasons for the Supreme Court's strange withdrawal symptoms. In a speech before the opening assembly of the American Bar Association Aug. 10, he said the court was inundated by class action suits. He referred specifically to anti-pollution and consumer litigation, remarking that "we should look more to state courts familiar with local conditions and local problems."

That has a familiar ring. Just 15 years ago the Warren court turned over school desegregation cases to federal district judges for the same reason—they were more familiar with local conditions and problems. Then the appellate courts and the Supreme Court took these powers away from district judges, a fact lamented in the Sumter County decision by the three-judge court back in June.

The decision, written by Judge Frank Johnson, said that "effective with the commencement of the 1970–71 school year, the student body in the Sumter County school system will, in all probability, be composed of only Negro students."

The court's hands had been tied by Fifth Circuit orders, by the Supreme Court's action and inaction, and by the Justice Department. Johnson's rebuke was about as strong as a lower court could be:

"In the past 18 months, the United States Court of Appeals for the Fifth Circuit, under which Court's decision this Court is expressly bound, has reversed district courts in scores of cases for attempting to innovate in a manner such as the Sumter County board here suggests.

"Thus we find ourselves under a compulsion that requires the entry of an order in this . . . case that will probably result in an all-black student body, where nothing in the way of desegregation is accomplished and where neither the white students nor black students are benefited. However, the United States, through the . . . Department of Justice, insists upon a strict application of these legal principles to the Sumter . . . system. Faced with these clear mandates from the appellate courts and the insistence of the government that they be applied, we have no alternative except to apply them."

The Supreme Court, at the time this melancholy finding was handed down, still had more than two weeks before recessing. The three-judge court seemed to have made an unusual plea for the high court to take judicial notice of what was happening. But the Supreme Court did nothing on this, the Charlotte case or other critical school situations.

The Justices needed their rest and couldn't be troubled with such trivia as impossible orders which were to be effective before they returned.

NEED FOR ACTION ON INDIAN POLICY AND PROGRAMS

Mr. McGOVERN. Mr. President, history and events have converged to provide the Congress with a unique opportunity to address itself to one of our Nation's oldest domestic problems—the plight of American Indians. While Indians and the problems which beset them have been the subject of countless public and private explorations down through the years, with manifold theories, programs, and schemes being advanced for the ultimate solution of this long-standing and perplexing problem, the degree of interest and concern shown by the public and others for the Indian people has reached an all-time high.

The late Senator Robert F. Kennedy was chairman of a Special Senate Subcommittee on Indian Education, with the final work being completed by Senator EDWARD KENNEDY, Senator MONDALE, Senator FANNIN, and other equally dedicated Members of this body. Their findings and recommendations offer hope for improvement in at least one area of critical importance to the Indians and those in the Indian field. In addition, scholars, authors, journalists, advocate groups, and so forth, have, during the past several years, examined the full range of social and economic ills which combine to form a seemingly insurmountable barrier which prevents Indian citizens from sharing in America's bounty. And the Indian people themselves through new and traditional leadership are articulating their needs in a forceful manner with the just demand that their people be given an opportunity to enjoy a better way of life.

Our own actions here in the Congress during the Kennedy-Johnson years have contributed significantly to changing circumstances in the Indian field. Indians are now recipients of new-found aids emanating from several major Federal departments and agencies with an identifiable expenditure of more that $500 million in the 1970 fiscal year alone.

But what has this rediscovery of our Nation's first citizens and an infusion of new-found financial resources into the Indian field really contributed to the lives of the rank and file tribal members? Without belaboring you with a review of complicated statistical tables, one needs only to examine any set of standard indexes to know that Indians, as a group, continue to occupy the lowest rungs of our socioeconomic ladder.

The present administration has addressed itself constructively to the Indian problem through President Nixon's recent message to Congress on the America Indians. In reading the message, I was encouraged to note that the President has proposed several bold departures from traditional practices in the Indian field which reflect his own personal desire to cope with this longstanding problem. On July 15, I stated here in the Senate my support of these proposals in general. It is my hope that all of us will give careful considerations to the President's proposed Indian programs.

As chairman of the Subcommittee on Indian Affairs, I plan to launch a series of formal hearings on the President's proposal and accompanying legislation on September 21 and 25, 1970. These hearings will undoubtedly continue and I hope result in the passage of legislation, during the forthcoming 92d Congress.

This is a problem area that cannot be treated lightly. In order to realize lasting results, we will make certain that Indian people themselves become the center of any hearing process that we launch, so that their views and suggestions will have the proper influence upon the legislation before us.

In conclusion, I want to reiterate my belief that we stand on the threshold of an opportunity to contribute to an improved livelihood for thousands of Indian men, women, and children who are living under conditions of poverty through no fault of their own—other than that they are the victims of unfortunate historical and legal developments. I am hopeful that Members of both parties will join with me in an effort to consider the President's proposals at the earliest possible date.

I ask unanimous consent that a press statement by Senator JACKSON, released August 18, be printed in the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

SENATE HEARINGS ON INDIAN POLICY

Chairman Henry M. Jackson of the Senate Interior and Insular Affairs Committee today announced public hearings for September 21 and 25 on President Nixon's recent message to Congress on American Indians.

Jackson said the hearings would start at 10 a.m. each of the two days in Room 3110 of the New Senate Office Building, and be conducted by the Subcommittee on Indian Affairs with Chairman George McGovern presiding.

"President Nixon's message proposed a

number of changes which merit careful consideration by the Congress," Jackson said. "I will soon be requesting the views and positions of national and regional Indian associations and tribes on these recommendations.

As Chairman of the Senate Interior and Insular Affairs Committee I will also want to hear a discussion of other alternatives. New policies and new programs must, I believe, originate in and be shaped by the Indian community if they are to be effective.

"By the same token," Jackson said, "whenever it is desired, the Indian community must be given full opportunity to administer and make decisions concerning programs which determine the quality of community life."

Jackson also said, "The hearings will continue over several months and a full scale effort will be made to probe into the special problems of our first Americans."

OIL IMPORT

Mr. HANSEN. Mr. President, the decision by President Nixon to continue the present mandatory oil import program is good news not only to those of us from oil-producing States but, if properly understood, should be good news to American consumers in all States.

It is most fortunate that recent events in the Middle East have brought on a situation that several of us have warned of for more than 2 years, and I hope the higher prices and shortages of imported crude oil and industrial fuel oils that have resulted will be only temporary. But it seems that a crisis such as this is sometimes necessary to prove the fallacy of dependence on a foreign source for a commodity as vital to this Nation as oil.

Without again belaboring the arguments against a tariff plan, which the President has now rejected, I would like to remind my colleagues that this would have been another attempt at price and supply regulation that has already proved to be a dismal failure in the case of natural gas.

We are now confronted with a definite shortage of natural gas brought on by restrictive Federal pricing policies.

The oil import tariff plan was designed to control domestic crude oil wellhead prices and would have discouraged development of additional gas, as well as oil supplies.

I told the President last week that I was concerned about the ability of this Nation to meet its energy requirements and that I had worked hard for 2 years in an attempt to get Government officials to recognize the problem before it reaches crisis proportions. I commended him at that time for recognizing the problem and taking action to find a solution.

Also to be commended for his untiring and most effective efforts to bring the proportions and seriousness of the problem to the attention of the President is my good friend and colleague from the other body, Representative GEORGE BUSH, of Texas, as well as the distinguished Representative from Wyoming, JOHN WOLD.

A number of Senators have worked long and tirelessly in bringing the matter into the proper perspective and debating the merits of self-sufficiency in our prime energy resource. Among these are the able and distinguished Senator from Texas, JOHN TOWER, the Senator from Oklahoma, HENRY BELLMON, the Senator from Kansas, BOB DOLE, the Senator from Alaska, TED STEVENS, and others.

This and recent policy changes by the Federal Power Commission in natural gas pricing are the first steps in a national energy policy that will encourage the development of the abundant energy resources we have and provide assurance that we will never be dependent on sources beyond our control or subject to blackmail by the countries controlling those sources.

And it is a major victory, the dimensions of which hopefully will never be realized for the consumer who prefers to pay reasonable prices for a dependable supply rather than to save a cent or two on a gallon on a source that might double in price overnight or which could be cut off completely.

COMPETITION OF SMALL BUSINESS WITH INDUSTRIAL LEVIATHANS

Mr. HOLLINGS. Mr. President, it has long been the belief of the American people that small business and manufacturing is necessary for a healthy and vigorous spirit of competition. Today, as we all know, the small businessman finds it ever more difficult to compete with the industrial leviathans. Large-scale firms have made effective use of computers, electronic data processing, and other costly processes and have thereby reaped great competitive advantages.

Changing times and new challenges now demand that small businessmen alter their methods of operation to take advantage of computer technology. By doing so, smaller firms could make optimum use of data relating to payrolls, inventory, purchasing, billing, sales, and so on. Electronic data processing offers a tremendous potential for small businessmen to compete on more favorable terms. EDP systems are not only efficient, but for many of the time-consuming tasks which small business must perform, it can also be more economical. Some firms are already utilizing computers and electronic data processing, but most small businessmen are not yet aware of the promise which these methods hold for the future.

Mr. Robert L. Chartrand, specialist in information sciences to the Legislative Reference Service of the Library of Congress, recently wrote a penetrating and informative article on this question which was published in Business and Economic Review 1970. I call it to the attention of Senators to the business community in the belief that it can be of inestimable help in putting small business into the best possible competitive position for the trying decade ahead.

Mr. President, I ask unanimous consent that the article be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

COMPUTER SUPPORT FOR SMALL BUSINESS

(By Robert L. Chartrand) *

Electronic data processing technology represents man's innovative ability to overcome many of the problems inherent in collecting, indexing, storing, manipulating, and retrieving information. The impact of this technology on the public and private elements of our society has been pronounced. In the governmental realm, a recent report stated: "No single technological advance in recent years has contributed more to effectiveness and efficiency in Government operations than the development of electronic data processing equipment." [1]

The application of the computer and its ancillary tools to business problems also has proceeded at an accelerated pace. Today, while many larger corporations have tested and invested in electronic data processing (EDP) systems, a significant portion of the small business community remains unconvinced of the desirability or feasibility of using this new approach. At the same time, however, there is a growing awareness that the contemporary small entrepreneur must avail himself of those mechanisms and services which will allow him to survive in an age where competition is increasingly sophisticated and unrelenting.

There has been a recognized need on the part of the Federal Government—executive branch agencies and legislative branch components—and various private sector groups for an overall strategy to be conceived which would lead to a marshaling of resources to address the problem of linking the small business community with the potential of the computer.

An examination of the problem area has permitted the identification of three critical requirements for future action. First, a carefully coordinated investigation of user (that is, small business) needs for electronic data processing support should be initiated. The fragmentary data now in existence require updating, and should be analyzed in the light of state-of-the-art developments of the last few years. The responsibility for organizing this activity should be negotiated through discussions between cognizant government and business organizations.

The second vital requirement is related to identifying those hardware and software developments of the immediate past and foreseeable future in terms of their application to the multitudinous problems of the small businessman. The small business community is increasing at a substantial rate: 200,000 new small firms since 1961; 50,000 now taking their place in the competitive milieu every year. The role of industry in helping to match the new devices and man-machine techniques with the discrete applications cannot be underplayed, but the contributions of governmental groups also must be delineated and evaluated.

The third requirement, critical to an improvement of the status of the small business, is for a much enhanced program of orientation and education of the small merchant in terms of the support which can be gained from utilizing electronic data processing. The level of technical literacy must be raised, and a willingness to seek out and listen to counsel must be engendered. Although industry increasingly has provided information to the public about the pro's and con's of the new machine technology, the degree of understanding remains inadequate for the needs of our times.

INFORMATIONAL NEEDS OF THE SMALL BUSINESSMAN

The small businessman who would compete successfully in the complex, dynamic environment of mid-century America must

Footnotes at end of article.

be in a position to acquire, filter, correlate, store, process, and retrieve key information relevant to the present and future operation of his firm. This information may concern the day-to-day production of materials, analyses related to marketing surveys, fiscal planning, or data on counterpart organizations (both large and small) within the same competitive realm.

Changing times often require a change in the mode of operation of a business establishment. In many instances, the question of whether or not to use electronic data processing is raised. At this juncture, the owner or manager may wish to consult with one or more of several possible outside experts. These could include business equipment manufacturers, service bureau corporation representatives, management consultants specializing in information system design, trade association personnel, or, perhaps, a trusted accounting firm.

Before coming to grips with the many factors involved in considering the utility of EDP to a given company, its management may choose to review the basic elements and interrelationships existing within the organization.

When considering the introduction of a major innovation, such as electronic data processing, which may affect the future vitality and profit making capacity of a corporation, there are several questions [2] which might be considered carefully by management:

1. What new information can be secured through data processing to help me manage my business more efficiently?

2. Can the needed information be developed by organizing available data? In other words, is this a problem that data processing can solve?

3. Is the volume of data to be processed into the needed reports too great for manual handling, and is it sufficient to justify data processing?

4. How frequently is the information required?

5. Can the data to be processed be readily accumulated?

6. Can savings be generated by automating the present system? Or, to phrase it differently, will a better system necessarily increase profits?

The benefits from a survey of company operations and informational needs may be many, regardless of the ultimate decision concerning the acquisition (or not) of a data processing capability. The perceptive businessman knows that new retailing and manufacturing concepts and practices tend to reduce the margin for error. He also knows that he must obtain, on a continuing basis, that information which allows him to make the correct decisions: this may take the form of balance sheets, inventory records credit management listings, and other supporting data.

Many reasons have been offered by EDP users and providers as to why these devices should be employed, but predominant among these is the fact that for certain applications they are more economical. Four factors which reflect the economy being sought, and the ways in which EDP can contribute to attaining a more efficient working system, are:

1. computers provide new time dimensions for the working day and for the human concept;

2. computers provide more efficient and effective controls over human error;

3. computers provide large capacities for storing information, and the capability to access rapidly this information; and

4. computers provide automatic organizational, administrative, and management controls.[3]

Some information systems consultants will use the amount of paper work which must be created and handled in a company as a guideline for determining whether EDP is required. One rule of thumb is that, if you have enough paper work to keep one or more persons busy full time, you should at least check into the possibility of using electronic data processing; it may be cheaper than your present method.[4] Some companies which have chosen to use EDP declare that significant benefits may result even though costs remain essentially the same. In a number of recorded cases, decision making information has been made available as the result of processing routine paperwork. In an article entitled "Electronic Recordkeeping for Small Marketers," the example of using EDP to handle invoice billing is given, with this comment:

"As a byproduct you might get reports upon which you can base management decisions. Such reports might show: sales broken down by territory, item, or salesman; commissions and statements for salesmen; a history of accumulated past sales by customer; and credit analysis by customer." [5]

The problems faced by the retailer, the manufacturer, the marketing manager, and the wholesaler often are strikingly similar. When a confrontation of the problems takes place and the hard decision must be made regarding the allocation of existing or projected resources, the businessman must strive to understand definitely which personnel, equipment, and procedures he should add, delete, or change. The small businessman, in considering the integration of computers into his operation, must review the characteristics of EDP-oriented systems: first, thorough systematization of control and planning procedures must be effected; second, an array of problem-solving techniques must be reviewed, experimented with, and selectively applied; third, equipment selection must be based on an overview of the entire operating system; and fourth, delineation of current requirements of management must take place.

In determining which equipment is to be used and for what types of applications, it is imperative that the small businessman identify, assess, and then discuss with others his needs for information. He must review thoroughly the time constraints which govern his operation, the requirements for heavy volume processing of mathematical data, and the kinds of output which must be utilized in his operation. A number of small companies have expressed the opinion that they could not afford EDP if it were used only for the processing of routine records. They pointed out that the "real savings come when they use the information for making management decisions." [6]

Many retailers have found that EDP can help them. While small businessmen often were reluctant to invest in their own computers, corporative arrangements permitted utilization of the new tools. In New York City, the firm of Archie Jacobson, Inc., made the decision to invest $1,000 for an initial equipment capability and spend $140 per month for processing. The benefits were these: a pinpointing of weaknesses and strengths in their stocks, the ability to analyze supplies by units and prices, and better timing in scheduling merchandise arrival for less lag before it went on the selling floor.[7]

The small manufacturers also are using EPD. A small business requires a short delivery time and accurate, quick billing. In many instances, it must be able to respond rapidly to sudden market shifts, which result in rush requests, special billing and pricing situations, and the anticipated impact upon production projections. Several examples of small manufacturers' use of computers appeared in the volume prepared by Alexander M. Blanton and Joseph Traut and their associates at the Graduate School of Business Administration at Harvard University. In "Computers and Small Manufacturers," the following examples signified the role of EDP in this environment: [8]

"Cleveland Controls, Inc., a small firm with less than $2 million in sales and about 80 employees in the combustion instruments and controls industry is using a UNIVAC 1004 for a number of applications, including highly complex, nonstandard [sic] billing. The 1004 has not only solved the company's billing problems but as one company official expressed it, 'timely, highly detailed and accurate reports' are reeducating management about a business they thought they knew. 'In fact,' said Julius C. Weinberg, secretary-treasurer, 'they are providing us with solutions to problems we didn't know existed.' "

Her Majesty Underwear Co., a highly volatile apparel industry with approximately 500 employees, faces a common industry problem—an inventory of thousands of different styles, models, and sizes, coupled with the need for extremely fast response to sales demands. Her Majesty is using an IBM 1401 for inventory control, payroll (by piece rate), and other applications. The latest information available indicates that the company plans further applications, including automatic rescheduling of production integrated with existing inventory control. "This, along with the order-invoice processing presently being carried out on the computer," said T. J. Ford, director of data processing, "should provide a degree of scientific management never before realized—or even anticipated—in a garment concern."

Another company, Cooper Textile Mills, with about $3 million in sales and 90 employees, faces the problems of the textile industry—a squeeze on profit margins, intense competition, and high vulnerability. The company has been using an IBM 1440 since the first months of 1964, and Sanford Nemitz, comptroller, said recently that already the "net results have been vividly reflected in a widening profit margin." Nemitz went on to point out that the computer has become an important tool for management in the textile industry as a whole, because "in the most competitive industry in America, textiles, intelligent, alert management must use current data—not history—to survive."

A same-day-delivery policy on all orders has carved out a market niche for a $6 million, 80-employee company manufacturing high quality industrial control apparatus. According to the company's vice-president, "top management must recognize the computer's potential—in today's world the manager of a small company can no longer afford to operate with a green eyeshade and quill."

EVOLUTION OF ELECTRONIC DATA PROCESSING

During the past two decades, the ingenuity and production efficiency of computer manufacturers have resulted in increasingly more powerful and flexible EDP equipment and software. The evolution of data processing systems is thought provoking because it illustrates the fact that the need to process data is centuries old.

Perhaps the chief impetus to the invention and use of new data processing machines has been the much discussed and often maligned "information explosion." The needs of the user more and more are dictating the type of equipment produced. Similarly, software—sometimes defined [9] as "the ancillary techniques and aids needed for proper utilization of an EDP system"—is being designed for the tailor-made needs of various user groups. The power of the computer now surpasses even the most optimistic prognostication of 10 years ago. But the emphasis is changing perceptibly, many people believe, to devising, testing, and perfecting computer programs which will allow the fullest utilization of the hardware potential. A tremendous effort has gone into the writing and testing of software, and key personnel in consulting firms, equipment manufacturers, government, and private user

Footnotes at end of article.

groups continue to expend vital energy and money to this end.

The investment in equipment and software must be understood by the small businessman. Business applications are diverse and may require a modest computer configuration but a variety of computer programs. Some of these may be provided as part of a basic "package" by the computer firm which sells or leases the equipment. Other requirements may necessitate the writing of special programs. In planning for a computer installation today, the prospective owner must anticipate software costs which at least equal those of the equipment being obtained.

The technological development of electronic data processing usually is referred to in terms of "computer generations." The "first generation" of computers, which appeared in the middle 1950's, embodied the vacuum tube as the main electronic component. The "second generation," dominant in the late 1950's and early 1960's, utilized the transistor—the advantages: required less space and maintenance, could perform calculations more rapidly, and was more reliable. The "third generation" computers, introduced in 1964, featured miniaturization of components, which reduced costs, were faster than predecessor machines, and were even more reliable.

As the cost of computers has decreased in relationship to the benefits to be derived, as the space required for housing EDP units has lessened, and as the software has been more closely attuned to the needs of the small businessman, a realization of the potential of the second- and third-generation devices for use by the small business concern has come into being.

In 1950 the cost per bit—in this case, defined as "a unit of information"—was in excess of $2.60; today, the cost is 20 cents per bit. Time-sharing systems, where multiple users can simultaneously use a computer system, are expected to lower EDP costs to "one-tenth of that incurred under existing modes of operation." [10]

The cost of time sharing may be considered in two basic categories: (1) the cost of data processing per se, and (2) the cost of communications' circuits. Survey findings indicate that computer centers external to the business firms can perform many tasks on a reasonable price scale; "average" costs reportedly range between $325 and $350 per month. One computer center charges $350 for 50 hours of teletype console time, while another center charges $325 a month for 25 hours of shared time. The variations are many, ranging from a flat monthly charge to a yearly fee plus a per-item charge.[11]

The speed with which problems are handled often is a key factor in business applications. The speed of "first generation" computers was measured in seconds; "second generation" equipment in microseconds; and "third generation" devices in nanoseconds. To place this in a meaningful perspective, a nanosecond is to a second as a second is to 30 years.

The question of EDP support costs was disdiscussed in the hearings on "Economic Concentration" before the Senate Subcommittee on Antitrust and Monopoly; [12] the discourse between Senator Philp A. Hart and Byron L. Carter contains interesting information on the cost of EDP services to the small businessman. This discussion is reprinted below.

"Senator HART. In your prepared statement, which most certainly is interesting, you indicated, at least in a couple of places, the cost of the several services to the smaller retailer. I think you mentioned it in the case of the camera shop in California, which has a cost of about $125 a month, and you cited two other installments but did not identify the cost. What is the typical cost to the smaller retailer?

"Mr. CARTER. This varies according to reports produced and the work done. The average retail store pays about $100 a month. Now, this means that there are many below this figure and many above. An average accounts receivable job runs about $76 a month. In anticipation of the possibility of this question, I made some notes before I left. They are just pencil notes, but I called one of our data centers and said, 'Just read me over the phone some of your typical billings.'

"They read me figures of a pharmacy in Williamsport, Pa., their July billing, for their services. This particular store is a rather large pharmacy having 23,000 transactions processed by the data center for the month of July. They received a sales and inventory report, a clerk report, a profit and loss statement, and balance sheet for $119.50.

"Senator HART. A month?

"Mr. CARTER. This is a pretty good sized pharmacy.

"They also had us provide their customers with statements—265 statements at $63.38.

"There is a drugstore that received only the accounts receivable service, keeping the rest of his [sic] records manually, 336 statements, $68. There is a clothing store in Lancaster, Ohio, which received a retail sales inventory, profit and loss and balance sheet, for $83.80.

"There is a specialty store in West Virginia that got only a sales report on 5,000 input lines for $30.13. There is a photo processor in Dayton, Ohio, with 153 statements, profit and loss and balance sheet for $52.30.

"Senator HART. These are interesting to a person who believes that the presence of smaller manufacturers and businessmen is necessary for vigorous competition. They are very welcome. As you describe this advanced technology, instead of tolling the demise of the smaller entrepreneur, it would seem to indicate that it makes available to the smaller manufacturer a means for effectivley and more vigorously competing. Is that a fair conclusion?

"Mr. CARTER. I believe it is a fair conclusion. They will certainly be on a par, on an equal basis. There would be no opportunity, in our opinion, for a larger business to become more efficient than a smaller business if the smaller business is alert and takes advantage of the modern methods."

With the development of versatile EDP systems in the past few years, the small businessman has many more options available to him than previously. He may wish to perform certain routine functions on an in-house machine, while sending more demanding computer-oriented jobs to a service bureau. The use of keyboard or the more elaborate display terminals opens up many possibilities, and can free him of the problems which are concomitant with establishing and managing a company (i.e., internal) EDP facility.

APPLYING SYSTEMS TECHNOLOGY TO SPECIFIC BUSINESS PROBLEMS

The small businessmen of the nation, faced with a competitive situation that includes not only large companies but numerous new small firms, must reassess the ways in which they can operate more effectively. In selecting which applications (or company operations) are to be upgraded, either through the improvement of manual procedures or the introduction of EDP, they will have to consider the objectives they would like to attain as the result of their efforts.

Indicative of the objectives rating priority attention by American small business is the response of 100 companies—with an average number of 125 employees—to a survey discussed in Dr. Donald H. Sanders' "Introducing Computers to Small Business." [13] The eight classes of firms are: construction, durable manufacturing, nondurable manufacturing, transportation-communication, wholesale-retail trade, finance and insurance, service and miscellaneous, and petroleum. Table 1 represents the primary objectives of the sampled firms:

TABLE 1.—PRIMARY OBJECTIVES OF SAMPLED FIRMS, BY NUMBER OF FIRMS AND BY INDUSTRY CLASSIFICATION

Primary stated objectives	Number of firms, by industry class								
	Construction	Durable manufacturing	Nondurable manufacturing	Transportation and communication	Wholesale and retail	Financial and insurance	Service and miscellaneous	Petroleum	Total number firms [1]
Timesaving	4	4	4	1	8	9	10	8	48
Cost reduction		4	2	1	4	8	6	7	32
Greater accuracy		2	4		2	4			12
Better customer service						4	3		7
New information:									
Sales analysis		2			2				4
Cost analysis		1	1						2
Inventory control		2			1				3
Financial data					1	1			2
Greater prestige						1	3		4
Meet government rules						1			1
Better control					1	2			3
Expand business							2		2
Spacesaving						1			1

[1] Total does not equal 100 because several firms had more than 1 primary goal.

Within the realm of business activity, computers have been, and are being used, in conjunction with handling data on payrolls, inventory, record keeping, billing, purchasing sales data, the preparation of reports, and various types of management analysis and summary forms. Experience has shown that as users of equipment become more sophisticated in their understanding of

Footnotes at end of article.

what EDP can do, this awareness is followed by their expansion of requirements for EDP support. This may mean an increased in-house capability or additional support from a service bureau organization. It should be noted that the order in which applications are implemented is important. A small business firm may choose to "start small" with nothing more elaborate than an inventory listing on a weekly basis. Table 2 contains an example of an inventory analysis:

TABLE 2.—ILLUSTRATION OF INVENTORY ANALYSIS

Item No.	Item (card) count	Percentage (items)	Annual units	Unit cost	Annual dollar sales	Cumulative dollar sales	Percentage (dollars)

Source: "Scientific Techniques in Business Operations," Data Processing Information, Series B3 (White Plains: IBM Corp., Apr. 25, 1963), illustration of inventory analysis, p. 6.

As noted earlier, many small businessmen gain confidence in the role of EDP in performing useful support tasks and, as times goes by, plan to move into additional application areas. The need for a strategy often goes unrecognized, and there have been occasions when money has been spent unwisely because there was no allowance for controlled growth.

In summary, there is documented evidence that the small business community is taking seriously the potential of EDP and systems methodology for various routine and unique applications. A consensus is commencing to form that a more refined approach to management planning and scheduling is "paying off." Other benefits high on the list of those who have actually invested in EDP services are manufacturing control applications and the performance of sales analysis. Actual experience in implementing EDP-centered systems, however, shows that most small businesses start by converting routine accounting and finance operations, which may, in the long run, be of less benefit than some of the more sophisticated tasks.

ALTERNATIVE COURSES OF ACTION FOR THE SMALL BUSINESSMAN

In reviewing the needs of the small businessman for information, and in discussing the applications which lend themselves to EDP support, there is a third factor which requires intensive study. The management of the small business company must determine whether to establish a computer capability on the premises, owned (or leased) and staffed by the firm, or to rely upon external EDP equipment and personnel. Five alternatives may be posed, the first involving the "in-house" option and the latter four treating the "out-of-house" choices:

1. the establishment of an in-house EDP capability, including the purchase or rental of equipment, creation of an internal staff of programmers, analysts, data converters and operators, and possibly some form of educational course to orient managers and workers to the role of EDP;

2. the creation of a "joint usage" arrangement, where two or more companies establish an EDP center supported and used by each participating firm;

3. the use of a data center's EDP capability, which involves obtaining computer time on an hourly charge basis;

4. the contracting out to a service bureau, where charges usually are based on the fulfillment of an entire, clearly delimited, job; and

5. the utilization of a remote terminal, "timesharing," system, with keyboard or display devices tied via communication lines to a central processor.

The last four alternatives afford the small businessman a greater computer capability than he might otherwise possess. Service bureaus have been used heavily by small businesses for many years.

In selecting which alternatives to pursue, the small businessman may consult with organizations which retain professional staff experienced in EDP systems.

A national group which has concentrated on the technological needs of small business is the Association of Data Processing Service Organizations (ADAPSO). This association strives "to set performance standards, provide for the interchange of experience and data between members, and conduct a series of seminars, regional meetings, and conventions." [14] The American Management Association (AMA) also has become active in sponsoring orientation seminars discussing the role of EDP in the smaller company.

The decision to form an in-house automatic data processing facility usually is accompanied by a determination to unsettle existing procedures and personnel as little as possible. Redesign of an information system can be considered as having two equally vital facets: technical and political. The human element must understand and accept what is happening, or the firm may experience serious difficulties for longer than is necessary.

The selection of specific EDP equipment is based on the data processing requirements of the firm and the information which has been gathered on available equipment. The problem of gaining sufficient knowledge to make an intelligent decision is a significant one for the small businessman. Certain key factors should influence the selection of EDP equipment: [15]

1. which computer offers the greatest anticipated payoff,
2. how do costs compare,
3. what is the reputation of the manufacturer,
4. are other firms in the same locality using the equipment and capable of giving backup support in case of emergency,
5. what is the maintenance factor,
6. will there be product support by the manufacturer,
7. will there be compatibility with existing systems, and
8. what are its error-checking characteristics.

Along with studying the type of computer to be purchased or rented should be an investigation of what it would cost to establish and maintain an internal EDP staff. Should a full-time systems analyst be hired so that advice on the development of the system can be provided on an ongoing basis to management? What level of programing skills is needed, and are there shortcuts which can be taken? How many operators and data conversion personnel are needed, and should the latter function be performed out of house? These questions, and many others, may plague the prospective owner of an EDP facility. The number of business applications to be performed with EDP support also has a bearing on the number of computer personnel needed.

At this point in our discussion, it would be wise to consider seriously an important, but often neglected, point: is the small businessman basically dissatisfied with his present data processing capabilities? As the performance and costing ramifications of using an external capability, such as a service bureau, are set forth, the admonition of R. F. Neuschel should be remembered:

Footnotes at end of article.

"The choice of methods must be based on what work needs to be done, not on what a machine is capable of doing. This point may seem elementary, yet failure to heed it is probably the greatest single cause of unsound or unnecessarily expensive office machine applications." [16]

The decision to contract out is made for one or more reasons:

1. the service bureau can perform the job more cheaply;

2. the burden of operating an EDP center resides with the external systems group;

3. the requirement for EDP support does not justify the establishment of an in-house facility; and/or,

4. the staffing problems can be avoided, especially in the competitive (i.e., high-salaried) EDP categories.

The dilemma which may cause some "soul searching" is this: does the small businessman want to bring in an "objective" outsider to perform the feasibility study and system design, thereby revealing company secrets and problems, or is it better to train his own staff people and rely upon their knowledge of the operations and objectives of the company? These numerous decisions are difficult, but the alternatives posed should not be ignored.

Many service bureaus operate much as they did in the "early" days of the industry; that is, by collecting, processing, and delivering job-oriented data on a regular basis. The spectacular change of the industry in the past few years has involved the creation of "time-sharing" services. Some experts predict that by 1975, 90 percent of all computers will be on-line.[17]

The "time-shared" system allows multiple customer use of a central, remote computer external to their own firms through the placement of remote stations (usually keyboard-type terminals) in an office of each small company. Time sharing, it must be remembered, is only one type of service rendered, and the spectrum of service bureau-type corporations is broad.

Since the new emphasis is on time-shared systems, service bureaus, large and small, are analyzing the current and immediate future state-of-the-art offerings—EDP equipment (central processors and storage units), display devices, communications gear, and the large variety of software needed to support the families of new equipment—and are trying to decide which configurations will serve them and their customers best. Cost effectiveness is paramount in such considerations. In "The Challenge of the Computer Utility," the positive and negative factors related to the use of time-sharing services are listed.[18] These factors are reprinted below.

Cost effectiveness arguments

Positive factors:

1. Fast response.
2. Reduced user capital investment.
3. Better utilization of computer power.
4. Better balance between user needs and user costs.
5. Greater computer power for user.
6. Convenient access to broader data and procedure base.
7. Flexible system augmentation and modernization.
8. Reduced user maintenance and operating costs.

Negative factors:

1. Cost of communications facilities.
2. Executive control requirements.
3. Reliability and maintenance problems.
4. System saturation problems.
5. Lost time due to "swapping."

Much is being learned every day about the vast potential and limitations of time sharing. Both government and business elements are raising questions regarding the need to regulate the EDP communications duality which is coming into increasing prominence. The flexibility provided by time sharing is highly desirable for many business applications, but there is a recognized need for a study of this new development and its impact on both the EDP and communications activities of the nation. The figure below (not printed in RECORD) depicts a hypothetical basic time-shared system.[19]

As the small businessman surveys the types of support offered by the service bureau community, he will note that some firms specialize in only one application (e.g., payroll); others limit themselves to one to three task areas; while the remainder will contract for any type of a selected client industry. The scope of services may range from data conversion (key-punching) only to complete processing. Most service bureau firms concentrate on commercial applications, but a number of companies are willing to provide support for scientific applications.

The need for ready access to information regarding which service bureau companies will undertake what kinds of service is growing. In the field of computer programming, for example, a firm named International Computer Programs prepares a quarterly catalog listing operating programs used by others.[20]

CONCLUDING COMMENTS

The small businessman of today has reached a crossroads where he must decide which path of action to take. The criticality of his decision is affected by the number of competitors, a more volatile competitive environment, higher costs of investment and operation, and a need for ever better information for survival and attainment of his entrepreneur goals. The possibilities are many, and in order to arrive at a meaningful decision, a great deal of time and thought must be invested. The repeated demand for better tools and techniques with which to compete and attain success continues, and must be met by the innovative genius of American industry. Of equal urgency, however, is the requirement for the small business community to orient and educate itself regarding the proper role of EDP in its daily operations and plans for the future. If the public and private forces responsible for the vitality of the business sector of our nation cooperate and communicate, the prospects for the small businessman are excellent.

SENATOR ALLOTT REPLIES TO PROFESSOR GALBRAITH

Mr. HANSEN. Mr. President, the New Republic of August 15 contains a letter from the distinguished senior Senator from Colorado (Mr. ALLOTT) rebutting a number of arguments advanced by Prof. John Kenneath Galbraith in an earlier issue.

So that all Senators may benefit from the distinguished Senator's arguments, I ask unanimous censent that his letter be printed in the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

SENATOR ALLOTT REPLIES TO JOHN KENNETH GALBRAITH

The proposals Professor Galbraith outlines in your June 13 issue are sufficiently interesting, and his tone is (typically) sufficiently shrill to merit a substantial response.

Galbraith wants to unhorse all those legislators who want the United States to play the role of "universal gendarme and Communist hunter." If this is his objective, he can retire to his chalet in Gstaad, Switzerland, forthwith and write another book about the perils of affluence. I know of no Senators who want the US to play the role Galbraith describes. But let us press deeper into the causes of Galbraith's depression.

Galbraith is depressed by the fact that considerable power in Congress is controlled by what he calls "the committee mandarinate," and that turns out to be committee chairmen, many of whom do not agree with Galbraith about the politically true, good and beautiful.

The professor suggests three solutions to this terrible problem.

The first "and most conservative" is to disregard seniority and have an election between a liberal and a conservative for each committee chairmanship. The Speaker of the

House and the Majority Leader in the Senate would pick the two candidates. This raises a number of questions, three of which are: (1) Does the Professor think that the criteria of "liberalism" and "conservatism" are sufficiently objective and noncontentious that this would be feasible? (2) If, not, does the Professor think that the Speaker and the Majority Leader can be counted on to interpret these categories in a manner acceptable to the Professor? (3) Why does the Professor's obvious passion for participatory democracy not extend to an attack on the powers of committee chairmen?

The Professor's second and "practical" solution is for all congressmen and senators who are "serious" about "peace and racial decency" to vote for those Republicans as committee chairmen to replace those Democrats who do not interpret the public will and national interest the way the Professor prefers. The success of this proposal would depend on the truth of the assumption that "the Democrats would abandon the Southern warlords and white supremacists before they would abandon power to the Republicans." The Professor says this proposal is less "romantic" than his third proposal, but more about that in a moment.

Suffice it to say that this proposal fails on two grounds. First, the assumption is almost certainly false. Second, the assumption would never be tested because it would require very substantial blocs of what, for want of a better name, we shall call Galbraithians in both Houses of Congress, and it would require close cooperation between them. The Professor does not venture a guess as to how many votes he would count now, or how many will be hatched in November. His reticence on this point is eloquent.

The Professor's third and "more romantic" plan is for the Galbraithian Bloc to caucus before the party caucuses and threaten to vote for whichever party puts up the most attractive slate of candidates for chairmanships. Again, given the likely attendance at this early caucus, it is hard to underestimate the terror this threat would pose to the vast non-rebellious majority in Congress. Galbraith says that this proposal is "impractical" and I cannot imagine a more convincing appraisal.

The real solution to the Professor's problem is so simple, and straightforward that one does not need a Galbraith Doctrine of Social Reconstruction in order to discover it. If he is weary of the Democratic Party and its predictable committee chairmen, let him perform an act of radicalism which would be wondrous to behold. Let him vote Republican, and let those legions whose votes follow his guidance do likewise.

Of course Professor Galbraith will not be content with committee chairmanships that will result when the Republicans organize the Senate next November. Consider the following data, which lists current committee chairmen and their most recent ADA ratings, and *one possible* line-up of Republican committee chairmen and their ADA ratings:

Committee	Present chairman	ADA	Future	ADA
Space	Anderson (New Mexico)	44	Curtis (Nebraska)	0
Agriculture	Ellender (Louisiana)	17	Miller (Iowa)	17
Appropriations	Russell (Georgia)	17	Young (North Dakota)	6
Armed Services	Stennis (Mississippi)	6	Smith (Maine)	33
Banking and Currency	Sparkman (Alabama)	11	Tower (Texas)	0
Commerce	Magnuson (Washington)	78	Cotton (New Hampshire)	17
District of Columbia	Tydings (Maryland)	89	Prouty (Vermont)	39
Finance	Long (Louisiana)	0	Bennett (Utah)	6
Foreign Relations	Fulbright (Arkansas)	67	Aiken (Vermont)	56
Government Operations	McClellan (Arkansas)	11	Mundt (South Dakota)	6
Interior	Jackson (Washington)	78	Allott (Colorado)	6
Judiciary	Eastland (Mississippi)	0	Hruska (Nebraska)	6
Labor and Public Welfare	Yarborough (Texas)	78	Javits (New York)	100
Post Office and Civil Service	McGee (Wyoming)	39	Fong (Hawaii)	33
Public Works	Randolph (West Virginia)	78	Cooper (Kentucky)	50
Rules	Jordan (North Carolina)	6	Scott (Pennsylvania)	56

The average ADA rating for the current Democrat chairmen is 38.7. The average for the future GOP chairmen is 26.9. I should say two things. I for one do not accept the ADA catechism as a reliable index of liberalism. And a Senator's overall ADA rating often does not accurately reflect the performance of the Senator in the area of special concern to his committee.

Still, I think one thing is clear. Neither the Democrats nor the Republicans are pleasing to the ADA. This is, among other things, a sign of national health. It is also proof that Professor Galbraith and kindred spirits should quit looking for parliamentary gimmicks to inflate their minority position into a powerful force. The unadorned truth is that the American people do not want and, consequently, do not send to Congress men whose views conform to the Galbraith Vision of a Rational America.

I cannot conclude this response to Professor Galbraith without addressing myself to the tone and substance of his argument for new political alignments. Galbraith practices the Charles River Variant of that old phenomenon, McCarthyism. Those with whom the Professor disagrees are not merely mistaken, they are parliamentary lapdogs of the Pentagon. They suffer from "a knee-jerk response to the military establishment." They are unwavering spokesmen for the military. These people are not to be confused with those who consistently vote the preferences of those who agree with the philosophy the Professor espouses. These are not knee-jerk lapdog spokesmen for the ADA. Rather, they are creative statesmen seized with republican virtue. Of course all this is a tiresome, transparent semantic game which I should have thought readers of *The New Republic* would find distasteful.

Professor Galbraith, as is his wont, only interrupts his name calling long enough to venture one statement of hard fact, and the results are not such as to encourage future such departures. (He describes the District of Columbia, as "the nation's greatest urban concentration of black citizens," which, were *The New Republic* widely read on Chicago's South Side, would occasion widespread laughter. At the time of the 1960 census the black population of Chicago was 812,637, compared with 411,737 in Washington, D.C.)

The Professor also wants the United States to escape from "the superpower syndrome." This is an item from the Professor's inexhaustible inventory of social diagnoses. Its precise meaning is not self-evident, and the Professor does not see fit to make the general reader privy to it. Perhaps readers of *The New Republic* are supposed to understand this jargon; perhaps they are supposed to hold their peace and nod affirmatively when such jargon is dispensed. I am left to puzzle as to whether Professor Galbraith would prefer we were not a superpower; or thinks we are not; or should not be; or should follow his advice and cease to be.

Galbraith wants to reestablish civilian control over foreign policy and the military budget. Let us take these one at a time.

Who does he think controls foreign policy today? Perhaps there are Faceless Militarists who function in the Professor's cosmology the way the Gnomes of Zurich function in other conspiracy theories of history. Who does the Professor want to control foreign policy? Surely not the State Department; the Professor has never been bashful about broadcasting his derision of that Department. Readers will be pardoned for assuming that he wants more control vested in the Presidency. But that deathless doctrine has gone the way of all flesh. Thus summer's eternal verity is that Congress should control foreign policy. The only thing more puzzling than the Professor's tergiversations on this subject is the fact that he has not considered turning foreign policy over to the Supreme Court.

Now about establishing civilian control over the military budget. At the risk of being deemed a reactionary, I would like to inject some grubby facts into the vestal purity of the Professor's thinking. First, these are the facts about the way Secretary of Defense Laird—a demonstrable civilian—has reduced the military percentage of the budget:

Fiscal year	Dollars for defense (billion)	Percent of Federal budget
1960	$45.9	49.8
1961	47.4	48.8
1962	51.1	47.8
1963	52.3	46.9
1964	53.6	45.2
1965	49.6	41.9
1966	56.8	42.2
1967	70.1	44.3
1968	80.5	45.0
1969	81.2	44.0
1970	79.4	40.1
1971	73.6	36.7

The following are the facts about the nondefense origin of increases in the Federal budget during the last decade:

1960–68 Government spending, nonmilitary and military

[In billions]

1961	$97.8
1962	106.8
1963	111.3
1964	118.6
1965	118.4
1966	134.6
1967	158.2
1968	178.8
Nonmilitary spending:	
1961	50.4
1962	55.7
1963	59.1
1964	65.0
1965	68.9
1966	77.9
1967	88.2
1968	98.3
Total increase: $47.9 billion. Up 95 percent.	
Military spending:	
1961	47.4
1962	51.1
1963	52.3
1964	53.6
1965	49.6
1966	56.8
1967	70.1
1968	80.5
Total increase: $33.1 billion. Up 70 percent.	

Finally, some additional information about the defense resources.

THE TREND OF DEFENSE RESOURCES—CONSTANT DOLLARS IN FISCAL YEAR 1971 PRICES

[Billions of Dollars]

	Fiscal years—			
	Prewar, 1964	Peak VN War, 1968	1971	Change, 1968–1971
Defense budget	$66.8	$89.1	$71.8	−$17.3
Other Federal programs	$87.2	$117.2	$135.6	−$18.4
Intra-Government	−$3.6	−$5.1	−$6.6	−$1.5
Total	$150.4	$201.2	$200.8	−$.4
Gross national product	$775.8	$914.0	$1,020.0	
Percent defense budget to GNP	8.8	9.7	7.0	−2.7
Percent defense to total Federal budget	43.4	43.2	34.6	−8.6

One cannot help but notice the complete absence of data in the Professor's argument. I am reluctant to believe that American liberals are content with such vacuous theorizing. It does not constitute a solid case for reform of anything.

If the reforms Galbraith wants were achieved, would he be happy? I doubt it.

Readers will recall that the seniority system became entrenched in the House as a result of a successful liberal assault on the powers of the Speaker around the turn of the century. Now we are told that the seniority system stands between the Republic and bliss.

Again, the elephantitis of the Presidency is a contagion contracted from the Democrats. Galbraith, and his fellow hired pen, Arthur Schlesinger, Jr., have labored tirelessly for three decades to bring about an ever more powerful Presidency. (Of course in undertaking to improve upon the balance struck by the Founding Fathers, they were sustained by belief about political facts that was more important than all the theories they concocted: they believed that the Democrats would only take short and infrequent sabbaticals from the White House.) The seniority system and the expanded Presidency are, simultaneously, triumphs and aggravations for liberal "reformers." One can hardly suppress the suspicion that giving a reformer a victory is like giving a toddler a handgrenade. Neither gift is in the long term interests of the recipients.

Of course Galbraith has had some experience with the waywardness of current events. Professor Galbraith is in the running for the Millard Fillmore Political Effectiveness Trophy. Readers will remember Filmore had probems with parties disintegrating under him. Galbraith, when not pioneering a new literary form (the magazine article book), divides what must be his copious spare time between making Harvard what it is today (of diminished stature) and making the Democratic Party what it is today (of diminished strength). The latter is a service to his country for which a grateful nation will honor him when the last copy of *The Affluent Society* has been remaindered. Galbraith lashes Congress for tolerating a "gerontocracy." It appears the "youth movement" may have the same problem.

Galbraith, 61, speaking for the young, tells us that young people think "that the Establishment is not serious." There are many of us who, upon reading that, and upon reflecting that Professor Galbraith is a member in good standing of the Establishment, feel renewed respect for the judgment of young people.

GORDON ALLOTT,
U.S. Senator.

CONCLUSION OF MORNING BUSINESS

The PRESIDING OFFICER. Is there further morning business? If not, morning business is concluded.

AUTHORIZATION OF APPROPRIATIONS FOR MILITARY PROCUREMENT AND OTHER PURPOSES

The PRESIDING OFFICER (Mr. CASE). The Chair lays before the Senate the unfinished business which will be stated by title.

The assistant legislative clerk read as follows:

A bill (H.R. 17123) to authorize appropriations during the fiscal year 1971 for procurement of aircraft, missiles, naval vessels, and tracked combat vehicles, and other weapons, and research, development, test, and evaluation for the Armed Forces, and to prescribe the authorized personnel strength of the Selected Reserve of each Reserve component of the Armed Forces, and for other purposes.

The Senate resumed the consideration of the bill.

ORDER OF BUSINESS

Mr. BYRD of West Virginia. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The assistant legislative clerk called the roll.

Mr. GOLDWATER. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

ORDER OF BUSINESS

Mr. BYRD of West Virginia. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

ORDER FOR RECOGNITION OF SENATOR ALLOTT TODAY

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that immediately upon the conclusion of the vote today on the motion to override the President's veto, the able Senator from Colorado (Mr. ALLOTT) be recognized for not to exceed 15 minutes.

The PRESIDING OFFICER. Without objection, it is so ordered.

ORDER FOR RECOGNITION OF MAJORITY LEADER AND MINORITY LEADER TOMORROW

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that, at the conclusion of the vote tomorrow on the amendment offered by the able Senator from Massachusetts (Mr. BROOKE), the able majority leader and the able minority leader be recognized for not to exceed 1 hour.

The PRESIDING OFFICER. Without objection, it is so ordered.

OFFICE OF EDUCATION APPROPRIATIONS, 1971—VETO

The PRESIDING OFFICER (Mr. CASE), pursuant to the order of yesterday, laid before the Senate a message from the House of Representatives, which was read, as follows:

The House of Representatives having proceeded to reconsider the bill (H.R. 16916) entitled "An Act making appropriations for the Office of Education for the fiscal year ending June 30, 1971, and for other purposes", returned by the President of the United States with his objections, to the House of Representatives, in which it originated, it was

Resolved, That the said bill pass, two-thirds of the House of Representatives agreeing to pass the same.

The Presiding Officer laid before the Senate a message from the President of the United States to the House of Representatives

(For President's veto message, see p. 28170, proceedings of the House of Representatives of August 11, 1970.)

The Senate proceeded to reconsider the bill (H.R. 16916) making appropriations for the Office of Education for the fiscal year ending June 30, 1971, and for other purposes, returned by the President on August 11, 1970, without his approval, and passed by the House of Representatives, on reconsideration, on August 13, 1970.

The PRESIDING OFFICER. The question is: Shall the bill pass, the objections of the President of the United States to the contrary notwithstanding?

Mr. BYRD of West Virginia. Mr. President, I suggest the absence of a quorum, and ask unanimous consent that the time consumed be charged equally against both sides.

The PRESIDING OFFICER. Without objection, it is so ordered.

The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. MAGNUSON. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Under the previous agreement, the Senate will vote at 4:30 p.m., the time between now and 4:30 p.m. to be divided equally and to be controlled by the majority and minority leaders, or whomever they designate.

The Chair recognizes the Senator from Washington.

Mr. MAGNUSON. Mr. President, I do not think we really need a speech today—

from the Senator from Washington—before we take action on the overriding the President's veto of the Office of Education bill. We have had plenty of speeches and rhetoric about the needs of education already—what the schools and the students need now is their money.

We made every effort to get this bill to the President early this year. By acting upon the final conference version in July, we did get this bill to the White House months earlier than last year and earlier than at any time during the last decade. Not since 1959, when the fiscal 1960 appropriations was enacted July 14, had the Congress taken final action on an education appropriations as early as we did this summer.

All along, our goal has been to get the money in this bill to the states and local school districts as early as possible. In less than 2 weeks, schools reopen for the new academic year; 52 million children return to classrooms; hundreds of thousands of teachers commence new programs of instruction.

So as chairman of the subcommittee on the education money bill, perhaps it would be somewhat remiss of me if we did not review this matter in some detail.

Let me begin with the figure of 289 to 114—this was the vote last Thursday by the House in overriding the veto, and this figure provides the Senate with the opportunity it has today.

Only a short time ago, the Senate demonstrated its support of the education appropriations bill for fiscal 1971. We voted our approval 88 to 0. I repeat, 88 to 0. The House passed this same measure by 357 to 30.

Those of us who worked hard—and there were many on both sides of the aisle—in perfecting and refining this bill thought we had disposed of the matter for this year. We had turned our attention to other pressing problems—specifically, as far as the Senator from New Hampshire and I were concerned, to the other portions of the Labor-HEW appropriation bill involving health and welfare services and the labor programs appropriation, which are also pressing at this time.

We thought that 445 yea votes out of 475 voting Members of the House and Senate was substantial enough to impress the President on what the legislative branch considered an appropriate minimum amount of Federal money to help provide a better education for educationally deprived children in the elementary and secondary schools—for additional teaching equipment and audiovisual materials—for badly needed guidance, counseling, and testing—and for assistance in overcoming language barriers under bilingual education.

I repeat, we thought that 445 yea votes out of 475 Members voting from both Houses was an overwhelming, stamp of approval of the bill. So we turned to other pressing problems, because we thought we had reached agreement on what should be provided—the bare minimum—for educating the handicapped children and providing job opportunities for students and adults under vocational and adult education.

Education for the handicapped is not only a worthy humanitarian program—it is anti-inflationary. It helps make productive taxpaying citizens of thousands who might otherwise be tax burdens and consumers of welfare.

We agreed that something had to be done on student loans. We provided a small increase, I think too small, to help the students and parents who needed a little assist to complete their educational program. And we added a few dollars—sadly needed—for continued construction of our rapidly expanding community colleges.

We added $25.5 million for libraries and $50 million for instructional materials in elementary and secondary education—the vast bulk of those funds, matching grant programs.

Right now—this very day—in not one of our States is there a library in every elementary school. In 16 of our States, 50 percent or more of the elementary schools have no library facility at all for millions of elementary schoolchildren. To me, this is deplorable. This lack of library facilities seems to me to be truly inflationary.

Yes, we added funds for libraries and money for books and library equipment. Surely that cannot be a poor investment. The President's "right to read" program would truly be empty rhetoric without these library resources.

But now the President has disagreed with us—and here we are again.

The White House is saying that everything we did was wrong and that everything it does is right.

That really is what a veto is all about. It ignores compromise—and we made many compromises before reaching final decisions on this bill.

The Senate gave up $362.7 million in conference with the House. We understand what it is to reach a common ground. I, also, suspect that the Congress knows something about what causes and what does not cause inflation. For the life of me. I cannot agree that investing money in raising the educational level of young people and adults in our Nation is inflationary. Surely it has the opposite effect. No one would seriously suggest that kids in school are inflationary.

We in Congress are very concerned about inflation. We in the Congress are just as concerned about inflation—in fact, maybe even more, concerned than the President—who I know, in all due respect, has great concern.

High interest rates are the real villain of inflation, not education. Long ago—last December, to be exact—we granted the President authority to act on credit and high interest rates—but nothing has been done. So to raise a strawman, and blame education and young people in school for inflation, seems to me to be a most inconsistent and illogical approach to the problem.

Congress is not being political or fiscally irresponsible in giving a high priority to education. To neglect the needs for education and other domestic problems in this country is to court disaster.

The real inflation in this education money bill is the inflation that would be caused by the failure of the Congress to adequately support these programs.

If we fail to act today—and these Federal matching funds which are less than 10 percent of the total education investment fail to reach the States and local schools now, then the States and those schools will have to raise local taxes or they will be forced to add substantially to the unemployment roles in thousands of communities. If they have to go to local financing, which is most difficult, it usually comes from taxes raised on property, whereas the Federal Government, for its share, raises taxes by the more equitable method of the income tax.

I do not see how these thousands of local school districts can do otherwise. There the tax will fall upon everyone, high, low, and medium income alike—and it is not a very equitable tax for this purpose.

More importantly—Mr. President—if we in the Congress fail to support these programs for the education of our youth and adults, there will be a far greater price our society and governments will pay in the future. The price of ill-educated, undertrained young adults, finding it impossible to compete in the modern labor markets and dropping out of life, is too enormous to calculate.

Educational programs help make it possible for all to compete and not cop out.

ADVANCE FUNDING

Generally, it is conceded that the Congress agreed to a $453 million increase over the President's budget—but there is a point to be made here.

The administration's request was really for $5.3 billion—of which $1.3 billion was for advance funding. This is a 2-year program, I must say in all fairness, but the Senate agreed with the House in disallowing this amount even though the administration requested that the Senate restore that House cut.

The main reason for our doing that was that all of the school authorities in the United States, in the thousands of local school districts and institutions of higher education, agreed that if they knew what they were going to get early this year, they need not have the advanced funding. It was much more important, therefore, to get it settled now, than to be late with the education bill.

My point is that, considering the full amount of the budget request, if we add this request for the advanced funding of $1.3 billion, we would end up approximately $885,729,000 under what the President actually requested Congress to provide.

Of course, priorities within education are at stake here, together with the basic philosophy of Federal sharing in the costs of educational programs.

To sustain this veto is to scorn decisions arrived at after long, tedious, and painstaking deliberations.

Sustaining this veto would be turning our backs entirely upon all of the au-

thorizing legislation which also survived painstaking review by Congress. We would turn our backs upon 52 million schoolchildren returning to classrooms during the next few weeks. We would cancel the promise to share in these costs, which has been a long-standing promise of Congress, to all the schools, colleges, universities, and State and local officials.

Vocational education is another program in which we added $54 million. The President, in his message, deplored that increase.

We must neither scorn vocational education nor shortchange these programs. Local communities, especially the community colleges, are the special place where so much can and is being done to improve vocational education and the opportunities thus afforded youth and adults.

As John Gardner, a former Secretary of Health, Education, and Welfare so aptly put it—

> An excellent plumber is infinitely more admirable than an incompetent philosopher. The society which scorns excellence in plumbing, because plumbing is a humble activity, and tolerates shodiness in philosophy because it is an exalted activity, will have neither good plumbing nor good philosophy.
>
> Neither its pipes nor its theories will hold water.

Mr. President, let me make a point or two about the veto message.

The President has indicated that some education programs are outmoded and ineffective; this is true. The committee agrees with that premise. All of us at the Federal level, as well as in the States and local schools, must continue to do all that is possible to make these existing programs effective—or change them—or repeal them.

But the proper method of change—for any President and for any Congress—is the lawful process of modification or repeal by legislation, through the legislative committees, not fiscal strangulation.

Impacted aid is the best example to cite in this bill. The way to squarely approach this problem is by considering impacted aid a payment in lieu of taxes.

When we talk about evaluating, I do not know how many study groups, task forces, and commissions have been appointed in HEW over the past few years. I know that there has been a rash of them over the last 18 months, to study this program and that program, and that is fine; but most of them have not come to any conclusions. If they have, there has not been much change. This evaluation process, which seems to be a continuing one, is all right.

But while we are evaluating, while we are studying, we cannot say to the children of the Nation, "You stand aside while another study is being made." They have to report to school next month, and the schools have to go on while we are evaluating these things. They should run parallel, and we are working under the conditions as they are now, what the law is now and that is what we tried to do in this bill.

The veto message said that not enough had been provided for research and innovation. This bill provides more than $132 million for research, planning, and evaluation of education.

In the special research and training account alone, this bill provides $90 million—an increase of $9,752,000 or 12 percent over last year. Together with the House, we felt that the increase was more than sufficient. I applaud the fact that we are looking at these programs, but until we do something to make the change, until we do it legislatively or through administrative regulation or through administrative programing down in the Department, these children have to go to school. This is most important, and this is what the bill had to be geared to do. The President wanted $28.2 million more, but together with the House we felt this lesser increase more than sufficient. Outside of that special account, we approved funds for research, planning, and evaluation within all of the other major program areas. That places an additional $41,915,000 available for these research, planning, and evaluation purposes. That is a total of $132 million—an increase of $18 million or 16 percent over 1970.

Yet, the irony of the veto message was that it stated that not enough had been provided for research and innovation.

One of the startling ramifications of this veto is that the President vetoed his own desegregation plan in which the Congress included an amount of $75 million for this purpose.

It makes one wonder just how serious this administration really is about providing equal opportunity for all children in all our schools.

Mr. GRIFFIN. Mr. President, will the Senator yield?

Mr. MAGNUSON. I will yield, but I would like to finish my remarks first.

Mr. GRIFFIN. I am a little surprised at that statement. The President asked for twice as much money as the committee gave him.

Mr. MAGNUSON. The President asked for $150 million. Nevertheless, the two Houses—mainly, in conference—decided that we could make a good start for $75 million and the rest of it could be provided after legislation is enacted. But $75 million was cut out of this bill, because the need was justified under the premise that it must be spent and implemented by September 30—less than a month and a half from now. That is the answer to the question of the Senator from Michigan.

Mr. GRIFFIN. Except that the Senator suggested some lack of good faith on the part of the President. I certainly do not suggest any lack of good faith on the part of the conferees.

Mr. MAGNUSON. I did not suggest that.

Mr. GRIFFIN. The fact is that they cut the request in half in that particular area.

Mr. MAGNUSON. I did not say anything about lack of good faith. I said that I wonder how serious they are not to at least take the $75 million and make a start, when we have a definite understanding that the remainder will be asked for later when the authorizing committees have acted.

The Senator from New Hampshire and I suggested that in the beginning—that the entire amount be put in the supplemental bill and not in this bill, because we were well on our way toward beginning to mark up this bill. The money was all to have been spent by September 30, 1970, and $75 million would be sufficient to cover the necessary amount. That was vetoed. I never mentioned the words "good faith" in this speech at all.

That is the irony of it. Of course, the $75 million had to go out with the vetoed bill. But the legislative processes sometimes have to be considered in these decisions which involve the veto of a bill. We have all agreed that this will come up in a subsequent request and it will receive, I suspect, very sympathetic consideration. Some other educational requests probably will come up in supplementals before we get through here.

The President in vetoing this bill took some pride in the increases that he recommended for education and implied that this should be plenty.

Mr. President, I ask unanimous consent to have the full text of the President's veto message printed in the RECORD at the conclusion of my remarks.

The PRESIDING OFFICER. Without objection, it is so ordered.

(See exhibit 1.)

Mr. MAGNUSON. Now, what about the supplemental requests that Congress is bound to receive before it concludes this session? Should Congress now disallow all such additional requests that are bound to flow up from the Budget Bureau? Disallow them because they might be too much?

It is hard to determine whether the administration is suggesting that this is plenty for today, or whether before the end of the fiscal year or the end of this session we will need more. An increase will be requested before the end of this session, just as sure as I am standing here.

Mr. President, I am not going to take much longer. Other Members have remarks they wish to make. But I want to emphasize that the needs and the issues have not changed since July 28. They are precisely the same as they were when the Senate voted 88 to 0 in support of the bill.

I understand and I know this is correct—that part of the displeasure of the administration, and particularly the Budget Bureau, was that they had strong objection to the fact there was a great deal of mandatory spending involved in the bill. If there were not mandatory spending, they would have free rein to establish their own priorities within education. They do not want any mandatory spending for education. They want to be able to establish their own priorities. Yet Congress also has the high responsibility to establish its priorities.

In Congress, we do not operate in a vacuum. We listen and adjust. There was plenty of give and take on our committee, between the House and the Senate. There is no give downtown—no sitting down and reasoning together among reasonable men and over varied viewpoints.

We heard scores of witnesses, all of

them highly competent and dedicated and thinking people—for hour upon hour and on every aspect of this most important subject involving the future of our Nation.

We came up with a very reasonable bill—fiscally. A bill that helps meet the bare minimums required.

The Bureau of the Budget and the White House were not exposed to those same dedicated people and those well thought out views. We were and we are entitled to some respect for our conclusions and to our 88 to 0 vote in the Senate.

The House is entitled to some respect for its overwhelming verdict also. I must say that we arrived at our initial verdicts independently.

We should vote today on this veto in the same manner—independently—and know that we will.

The responsibility of what is needed to adequately maintain our school systems—to meet these needs within our capabilities—must be shared by the Congress with the administration.

Others, I am sure, will speak about the total Federal budget for 1971, but I want to stress that those of us on my subcommittee also had that in mind. We did not operate in a vacuum as we considered the educational priorities within the bill itself.

When all of the totals are in, appropriations this session will be under the President's total budget.

So, we get down to the nitty-gritty of priorities, of what the priority will be for education. On priorities, there can often be a matter of honest difference.

If one is in touch with the people, education of our young people is of the highest priority. We in the Congress have been in touch with the people on this important question.

EXHIBIT 1

MESSAGE FROM THE PRESIDENT OF THE UNITED STATES

To the House of Representatives:

I return herewith, without my approval, H.R. 16916, an Act making appropriations for the Office of Education for the fiscal year ending June 30, 1971, and for other purposes.

I am determined to hold the line against a dangerous budget deficit.

I am determined to hold the line against the kind of big spending that would drive up prices or demand higher taxes.

For that reason, I am today returning, without my approval, two bills the Congress has passed that would increase the Federal budget deficit by nearly one billion dollars.

1. *The Independent Offices Appropriations* bill, which includes funds for urban development, exceeds my budget request by $541 million. I am mindful of the urgent needs of our cities, which is why my original request for urban renewal, water and sewer grants and housing subsidies was *double* the outlays in the last fiscal year of the previous Administration.

I am vetoing this bill because it would help drive up the cost of living, harming the people it is most designed to help. This kind of excessive spending would also help cause the kind of huge deficits that drive up interest rates, which would make it impossible to speed the recovery of the housing industry.

2. *The appropriation for the Office of Education* is $453 million over my budget request.

My request would have produced 28% more spending than in the last fiscal year of the previous Administration.

My budget asked $3.97 billion for the educational purposes covered by this bill—an increase of $972 million in spending over fiscal 1969. In addition, I have committed myself to ask the Congress for an extra $350 million to fully fund the school desegregation program as soon as the Congress provides authorizing legislation.

This is only part of what the Federal government provides for education programs generally. *Total* spending on Federally supported education programs will reach nearly $12 billion in 1971, the highest figure in history and substantially more than was provided for 1969. Thus the question is not one of cutting the present level of school funds. It is not even one of whether to increase school funds. It simply is a question of how *much* they are to be increased—and for what purposes.

Last March I stressed the urgent need for wide-ranging reforms in Federal aid to education. This bill raises the spending on old approaches that experience has proved inadequate, rather than moving boldly on the new approaches that we need—and it cuts requested funds for such forward-looking programs as dropout prevention, educational opportunity grants and research.

My veto of both these bills is painful, but necessary to hold down the rising cost of living.

We cannot have something for nothing. When we spend more than our tax system can produce, the average American either has to pay for it in higher prices or in higher taxes.

At election time it is tempting for people in politics to say "yes" to every spending bill.

If I were to sign these bills that spend more than we can now afford, I would be saying yes to a higher cost of living, yes to higher interest rates, yes to higher taxes.

I flatly refuse to go along with the kind of big spending that is wrong for all the American people. That is why I must veto these bills which add an extra billion dollars of pressure on prices.

Taken individually, there is much that can be said in favor of every spending bill, including the ones I have vetoed.

But a President is not elected to see any one bill in isolation. He must see them as part of a whole, because his constituency is 200 million Americans.

Acting in the best interest of the nation as a whole, and concerned with the average family struggling to make their incomes meet rising prices, I have drawn the line against increased spending.

I urge the Congress to reconsider the spending course it has taken, and to place first priority on achieving our goal: a healthy economy, expanding through peacetime activities, with reasonable price stability.

RICHARD NIXON.

THE WHITE HOUSE, *August 11, 1970.*

Mr. MAGNUSON. Mr. President, that is all I have to say on the matter.

Before yielding to the Senator from New Hampshire (Mr. COTTON), I want to mention that he and the rest of the subcommittee have spent hours and hours, many weeks, with the chairman on the bill. I also want to say that at no time during the independent review of this matter, with all the witnesses, was there a single taint of any kind or a single suggestion of partisanship. We looked at this matter solely and independently. We looked at the bare, minimum needs of what is required for education in this country, and we arrived at that independent conclusion.

Now, Mr. President, I am ready to vote, and I am happy to yield to the Senator from New Hampshire (Mr. COTTON) such time as he may require.

Mr. COTTON. I thank the Senator from Washington very much.

Mr. President, I desire to make a brief statement because I find it necessary to vote to override the veto of the President of the United States on this bill.

If any man in the Senate on the Republican side of the aisle should be supporting the President's veto, ordinarily it should be the ranking Republican member of the Subcommittee on Health, Education, and Welfare.

I wish I could vote to sustain the President's veto. I am an administration supporter. I am a Nixon Republican, and I make no bones about it. I like, whenever possible, to take a position supporting my President.

When the bill passed the Senate, I was one of the four Members who voted against its final passage. The bill, although devoted to what is a primary need in this Nation, that of public education, had been increased in the House of Representatives over the budget, and had been increased in the full Committee on Appropriations of the Senate. Then, when it reached the floor of the Senate, between $115 million and $125 million was added by amendments.

So that it went beyond the amount the subcommittee, led by the distinguished chairman, the Senator from Washington, had originally reported to the full Appropriations Committee, and beyond the Appropriations Committee's recommendations.

I voted against it. I thought we had added too much.

Then it went to conference. I am frank to say that I had hoped, when we went to conference, that we could reduce the bill more than we succeeded in reducing it. But we did reduce it substantially, because when the bill went to conference, it was nearly $1 billion over the President's budget. We almost cut that figure in half. When it came out of conference, it was $453 million over the original budget, but it was nearly $375 million under the bill that passed the Senate.

Frankly, I felt that we had done an excellent job. I felt that we had reported a bill that was held in restraint and held as near the budget as we could accomplish on this very sensitive and important subject. I said on the floor that I hoped and believed in this case that the President would sign the bill, because we remember that last year this bill was vetoed and the veto was sustained in the House. At that time—and I was very active in that project—we succeeded in passing a new bill with a total 2-percent cut which the President signed.

I felt this year that we had produced as good a bill as we could and that if we had to do it over again, we would not be able to do any better. We should bear in mind that the real obstacle in this

bill is the impacted area funds. The reason that the school districts and the people of this country are so vitally interested in impacted area funds is that they are the only funds in this whole $4 billion bill that go into the school districts with no strings attached, so that the local school boards can use them for their most pressing needs.

I think everyone will agree that the formula under which the impacted area funds have to be appropriated is an outmoded and distorted one. For example, the money goes into some of the counties and localities adjoining Washington where Government employees who work in the District live. These counties are rich in resources and they receive a disproportionate share of the funds.

The way to attack that situation, as the Senator from Washington has just said, is through the legislative committee to give us a proper formula in lieu of taxes, a formula which would be more equitable.

Mr. President, I think I understand why I have trouble with the President on this matter. He has been kind enough not to put me on the spot, for which I am very grateful. I believe he knows of my embarrassment.

I still believe in my heart that if this bill had hit the President's desk alone in the course of the appropriation bills that came along, he would have seen his way clear to sign it. However, it came there with another bill. This bill was $453 million over the budget. The other bill was $600 million-plus over the budget, I believe. The President very justifiably felt that he should hold the line and he vetoed both bills. By his action the President was performing his sworn duty as Chief Executive. I admire his courage, and I respect him for it.

Mr. President, I am compelled to vote to override the veto for three reasons.

The first is that the field of education is so vital that if there is an exception to be made, I believe it should be made in this bill. Bear in mind that the same subcommittee, led by the same Senator, the Senator from Washington, must go on now and cope with a bill to cover the fields of health and welfare that involve many more problems.

The second reason why I feel I am compelled to vote to override this veto is that the Senator from Washington and the other members of the subcommittee who were conferees along with the House Members in working out a final bill were willing to make concessions and were willing to help reduce the bill by nearly half a billion dollars. Having obtained those concessions, I feel honorbound to stand by the collective results, because had I then turned and voted against my own committee and against the conferees and against those who had yielded on many points, I would be violating my own duty to the chairman and to the others who had worked so hard throughout so many weeks to bring this bill to final passage.

The third reason that I feel I must vote to override the veto is because it is my honest opinion, after 10 years on this subcommittee and after nearly 10 years as the ranking minority member of the subcommittee, that if this veto were sustained and the bill were sent back and we had to start all over again, we would delay getting the money to the districts and make it impossible for the school districts to know what money they could depend upon as they go into the coming school year for the hiring of their teachers and laying down their work. If we did all of that, I am quite positive that we would not come up with any better bill from the standpoint of holding to the budget than this bill. It would be just as big. We would have marched up the hill and marched down again.

So, to keep faith with the chairman and with the members of the committee and hoping that I can still be effective to an extent as we try to deal with the twin fields of health and welfare and bring in a bill on those matters, I feel that I am to the best of my ability supporting the cause of education in the legislative process we have been through and, yes, still supporting the President of the United States, even though he felt it necessary to veto this bill.

For those reasons, I am compelled reluctantly and sadly to vote to override the veto of the President of the United States.

Mr. CASE. Mr. President, will the Senator yield?

Mr. COTTON. Mr. President, someone else controls the time. However, I am glad to yield to the distinguished Senator from New Jersey.

Mr. CASE. Mr. President, I asked the Senator to yield because I am a member of his subcommittee. I know how much the position he has taken this afternoon means to him. He has been a loyal administration supporter. In fact, pursuant to his long training and experience, he has also been a great friend of education.

Now that the "crunch" has come, I, for one, am not surprised to find the Senator on the side he has taken, as announced this afternoon. He is always fair with the members of his subcommittee. That goes without saying, but I am happy to be able to say it again. He is also scrupulously honest with his own convictions. It is a pleasure to serve in the Senate and on the committee and on the subcommittee with him. I honor him for the statement he has just made.

Mr. COTTON. I thank the Senator for his very kind words. I appreciate them.

Mr. MAGNUSON. Mr. President, how much time do I have remaining?

The PRESIDING OFFICER. The Senator has 13 minutes remaining.

Mr. MAGNUSON. Mr. President, I yield 13 minutes to the Senator from Texas.

The PRESIDING OFFICER. The Senator from Texas is recognized.

Mr. YARBOROUGH. Mr. President, I congratulate the distinguished senior Senator from Washington, the chairman of the committee, and the ranking minority member, the distinguished senior Senator from New Hampshire, who has just spoken. It has been my privilege to serve with both of them for years on the Committee on Commerce, at which time the chairman of this subcommittee from the State of Washington was the chairman of the Committee on Commerce; and the distinguished Senator from New Hampshire was the ranking minority member of the Committee on Commerce. Through 7 years of close association with them I learned of their great impartiality, ability, and dedication to the Government.

Mr. President, no Senator rises to speak glibly about overriding a Presidential veto. It is not a "fun" course to override a Presidential veto. It is not pleasant for anyone and it is far more difficult for Senators across the aisle than it is for us. We realize that only patriotism moves them to vote to override a Presidential veto, especially when the President is a member of their own party. Mindful of that, and having served on the committee with them, I know of their dedication to education.

In more than 13 years on the Subcommittee on Education, I have served with Senators like Lister Hill, Wayne Morse, John Kennedy, Robert Kennedy, and Joe Clark; and from across the aisle Senator Smith of New Jersey, who is a Princeton man and who went back to some connection with Princeton, Senator Ives and others, all of whom worked devotedly. We worked together on the National Defense Act of 1958. Now we are about to determine if congressional or Executive judgment of education needs of the country shall prevail.

In its veto message on H.R. 16916, the administration devotes little attention to the state of the education system or its needs. I am chairman of the Appropriations Subcommittee which deals with the Bureau of the Budget. In questioning its spokesmen last year I found that of their 178 hearing examiners who pass on the whole budget of the United States and recommend to the President with respect to the needs of education and health, there is not a single health professional and there is not a single education professional in that group. So it is not surprising that they would recommend to the President that he whack away at education and health.

The reasons for the veto, as set forth in the message, in the press, and in the debate on the House floor, embrace the whole spectrum of the national economy. The bill was vetoed not because of its relationship to the education system, but for its relationship to the price structure.

I ask Senators to consider when they can recall any administration program for a military contract appropriation limited and cut back because of its impact on the economy.

When does any Senator remember an administration asking us to cut a military appropriation because it was inflationary? To the contrary, as we have noticed in administration after administration, let there be a desire to pursue war in Indochina, to construct fabulous boondoggles like the ABM, and Congress and the public are deluged with sophisticated technological information and rationalizations. But never a word of how the economy—the price structure—will suffer from expenditures for such

unproductive white elephants as the Indochina war and the ABM.

Fifteen to $20 billion this year for the war. While all other budget requests totalled are for less, there is a Defense Department budget request of nearly $75 billion. Where is the administration's fear for the inflationary impact of that budget request?

Why is the financing of education, housing, and veterans' care alone weighed for impact on the national economy, while the case for military expenditures for wild adventures overseas deals as though need were the only issue?

The administration does not deny the education system needs this money. It argues only with respect to its effect on inflation, spending, and the price structure.

The administration, in other words, does not deny that the education system needs this bill, because the administration cannot deny that the country needs it.

I say the school system of the country needs the $4.4 billion in this bill, which is about one-fifth of the cost for the war this year. The President said he did not veto it because of the $4.4 billion. As he said in his first message, in the first line on page 2, he was vetoing it because it is $453 million more than his budget request. However, all of it is only about one-fifth of the cost of the war in Vietnam for 1 year.

IMPACT AID

As I have said, the school system of the country needs the $4.4 billion in this bill. School districts educating children of Federal employees need to have the Government pay its share of local school costs, which is all that impact aid amounts to. For this, Congress provides 90 percent of the entitlement, $126 million more than the President asked.

At Randolph Air Force Base in San Antonio, Tex., 90 percent of the income for the school district serving that Air Force base is from impact aid. The few businesses around there would not begin to support the education system there.

We send military people overseas and then complain about building facilities to educate their children. Who lives in these areas? It is the soldiers, the airmen, the sailors, if it is a naval base, and their children.

We ask these military people to serve in foreign fields; should we not give their children a chance, the same chance as if they lived away from that base in a more affluent community?

If this money is not appropriated, who would make up that amount, other than parents and other local property owners? And why would not the economic impact be the same, no matter what the source? Or does the President contemplate that the Federal contribution would not be replaced, and education standards for these children should decline?

He does not bother to say that. He does not come clean with a full answer. He only states the veto is "necessary to hold down the rising cost of living." Is not a higher school tax in a local school district an increased cost of living? The districts do not have the resources, because of the loss of tax-exempt Federal property.

In order for a dollar to be spent for impact aid, two conditions must be present: First, children must be there by reason of a Federal activity. If 30,000 airmen were stationed at a base and there were no children, there would not be one penny of impact aid payable. Second, tax-exempt Federal property must be involved. In World War II, if there were 1,000 airmen going to school under contract with private companies, those companies were taxpaying; the impacted aid would not apply. So two factors must be present: children brought in as a result of activities of the Federal Government, and there must be tax-exempt property.

BILINGUAL EDUCATION

A $3,750,000 increase Congress made for bilingual education is part of the $453 million that prompted the veto.

This program is aimed at one of the most costly social conditions in the country—the failure of the education system to teach and train children from non-English speaking families. Two-thirds of these non-English speaking families speak Spanish. No group has a higher dropout rate than this one. The reason is that an English-language school system does not reach them, especially in the early grades.

The social and economic expense that results from this gap in the education system is many times $3,750,000. Every penny spent to teach these children in a language they understand means a gain in self-reliance and financial income for non-English speaking, who thereby become proficient in English also.

Bilingual education enlarges their earning capacity and reduces their dependence upon public services. It enlarges their contribution to the national income. It would be hard to find an activity where more can be accomplished with less money.

There are 3 million children from non-English-speaking families in this country and an appropriation of only $25 million, or only eight and a third dollars a child.

TITLE I—ESEA

Much the same can be said for the $161 million increase the bill carries for title I of the Elementary and Secondary Education Act. This title funnels money into better education for children from poor families.

How else will we break the poverty cycle that is such an expense to all levels of government, except by education that compensates these children for a lack of intellectual and cultural development at home? Money spent for title I is not inflationary; it is anti-inflationary, because it is the only way to reduce the infinitely greater financial expense to government of poverty.

There are 8 million children in these poverty brackets. The increase of $161 million is an increase of $20 per child. Education is not inflationary; war is inflationary.

Mr. President, there are 52 million schoolchildren in this country. Eight million come from poverty families; $20 a child for education in these areas is not inflationary.

SCHOOL EQUIPMENT

Another item that led to this veto was $50 million Congress added for the purchase of school equipment under title III of the National Defense Education Act.

At a time when technology is able to enhance teaching techniques, especially with children having learning problems, it is the worst kind of economy to eliminate this item, as did the President's budget. Congress has provided $50 million, not in addition to a budget request but as the entire amount that will be available.

It is a much smaller sum than the school system can profitably use. But it is a vast improvement over the false economy of the administration budget, and the President's veto message. A properly equipped school is a more economical school. Children learn better and faster. It is against every interest of our country to deny money to properly equip schools.

Mr. President, I taught in rural schools from the primary grade to the eighth grade. I taught in higher education. I taught at Texas University Law School. I can say that a school that is not equipped properly is half as efficient as a school that has proper teaching aids. We heard in our subcommittee how modern aids can help in teaching.

SUPPLEMENTARY SERVICES—GUIDANCE AND COUNSELING

Effective guidance and counseling are among education's most useful tools in helping children with learning difficulties. Children who lack parental guidance and motivation become the problems of the school system. Yet these services are difficult for local school districts to provide, and where they exist, they have been stimulated by Federal support. This is why we added $23 million to the program, bringing it to a level of $143 million. With the problems we have in schools today, this $23 million for counseling amounts to less than 50 cents per pupil per year for the 52 million schoolchildren in America.

VOCATIONAL EDUCATION

Another item in dispute is the $43 million more than was budgeted for vocational education.

Vocational education is the means whereby 8 million Americans last year improved their vocational skills. We are reading these days of skilled workers reaching a plateau of income, when their skills have taken them as far as they can go. These millions of people can advance only by learning. The $43 million is $5.33 per person for upgrading our work force.

CONSTRUCTION AT COMMUNITY COLLEGES AND LAND-GRANT COLLEGE SUPPORT

Community colleges are the bread and butter schools for over 2.2 million young people who cannot afford the expense of a 4-year education at an institution away from home. Community colleges go where the people are, and where the need for vocation-oriented courses is greatest.

The administration calls for a suspension this year of Federal grants for construction of these colleges. Should Congress accede, the education facilities for

middle-income Americans will be seriously crippled.

Federal funds make up less than 10 percent of the construction money for community colleges: but it is important "seed" money, stimulating much greater contributions from State and local governments. The working parents of college-age children will find themselves priced still further out of the education system unless we support community colleges.

Land-grant institutions are in much the same category. The administration wants to phase out payments to land-grant institutions, many of them serving poor rural areas and still developing into full-fledged colleges and universities. The budget provides nothing for them. Congress provides $10,080,000.

NDEA STUDENT LOANS

The largest item Congress added for higher education was for student loans out of the national defense student loan fund. The bill has $243 million for this purpose, $66 million more than proposed by the budget.

A low budget request of only $177 million was part of an administration effort to reduce direct loans and increase guaranteed loans from lending institutions.

That plan does not mean any longrun saving to the Federal Government. As loans are repaid and interest collected, the money will be returned to the Government, whereas Federal subsidies to private lenders will not be recouped.

Applications from educational institutions show that there is a great demand among students for NDEA loans. Both programs have a necessary role in student assistance. The bill will extend and support them both.

Mr. President, the whole point of the National Defense Education Act, of which I had the privilege of being a coauthor, was to make loans available to students. Now I go to different colleges and students tell me, "I do not know of anyone on the whole floor who was able to get a loan." Many more students need the loans. The budget request would reduce lending below the level of last year. We just heard this morning that the American Bankers Association want the student loans program phased out and all loans to be made through banks—at 9¼ percent interest.

This is no long-range way to save money for the Federal Government. The money is collected from the students. The same principle applies as did to building dormitories at the end of World War II, which the students paid back. There is a greater demand now for student loans under NDEA than ever before. These programs have a necessary role in student assistance. We have had five programs inaugurated in the time that I have had the privilege to be on the subcommittee. There was no previous Federal program for direct money to students except the GI bill. Now we have five such programs.

LIBRARIES AND PUBLIC EDUCATION

Another source of difference between the budget and the appropriation bill is in library support and educational television. Congress added $12 million for public libraries, $5 million for services and $7 million for construction. For college library services, we added $5.4 million, and for educational television, $7 million.

Every State has a backlog of applications for public library grants. These buildings and their materials are the information storehouse for the entire citizenry, for self-education as well as for entertainment and enrichment. The $7 million for construction could be used within many individual States. Yet the budget proposed nothing. The $7 million in the bill will be the only federal money available.

EDUCATION OF THE HANDICAPPED

The bill increases money to educate handicapped children by $10 million over the budget. Many school systems still have no special programs for the handicapped. We all know that great economic dividends flow from money spent to help these children. They, too, often become heavy consumers of public services, unless they are saved by specialized education. There are 5 million handicapped students in this country. This $10 million is only $2 per pupil. It takes far more in teacher training and equipment to educate a handicapped child than a nonhandicapped child.

In all these sectors, which comprise the major increases over the budget, Congress has added a minimal amount of money because we found it was needed for each specific program. The Appropriations Committees of the House and Senate go over these categories in minute detail.

A sound education system is the foundation of our national strength and our national economy. Approval of this bill by the Senate will help assure that we keep it sound. We do not have a large appropriation for the education of the 52 million schoolchildren and the 8 million college students in America. This total bill is only one-fifth of the cost of the war in Indochina. I think it more important to educate Americans than to kill Asians.

For this minimal bill, I beseech my colleagues on both sides of the aisle to vote to uphold the action of the Congress.

Mr. KENNEDY. Mr. President, I rise to urge that the veto by the President be overridden this afternoon when the Senate has an opportunity to address itself to that question, which will be in just about 1 hour.

Mr. President, earlier this morning I had the opportunity to meet in Boston with a distinguished group of educators from my State of Massachusetts. Among them was the commissioner of education, Neil Sullivan, and executives from the State board of education. There were also superintendents and representatives from several school systems in the State. There were representatives from the State associations for principals, for teachers, and for school committees. There were some college students who have studied the needs for students and there were several others. It was a broadly based and well-informed group of educators from Massachusetts.

I come back to the floor of the Senate with a renewed sense of urgency about the importance of the action to be taken by the Senate this afternoon in the vote on overriding the President's veto.

Mr. President, during the course of my meeting this morning, there were a number of very impassioned statements made by various representatives of those groups. These are men and women who have made careers in the field of education. They are professionals in their field, who have a deep understanding and a deep concern about the potential consequences of the President's veto being sustained.

Without exception, Mr. President, those men and women, one after another, as they spoke from their hearts about the educational needs of the people in my State, reiterated most emphatically and dramatically what would be the cost in terms of educational opportunity to the young people of Massachusetts if the President's veto were not overridden.

I remember the statement of Neil Sullivan, the commissioner of education for Massachusetts, who pointed out how the number of children of families on aid to dependent children, who are included in the formula for title I of ESEA, will increase in Massachusetts next year by some 22 percent, yet, he pointed out, even this bill vetoed by the President will increase funds for title I by only 11 percent. Even with this increase, there would have to be a curtailment of existing educational opportunities in the school systems generally around the State of Massachusetts. Without the increase, at the figure proposed by the President, consequences would be drastic. As Commissioner Sullivan said:

> The conference position would at least enable title I to absorb some of the cost represented by the added AFDC population; the President's position spells doom for many aspects of the current program.

In other words, Mr. President, even with these increases, the $453 million that we have added will be unable to meet the increasing demands to provide a continuing effort and to live up to expectations for the next year's school budget.

I remember the statement of Donald Graves, the director of the Southeastern Regional Vocational Technical School, one of the finest vocational technical schools in the Commonwealth of Massachusetts and generally throughout New England, talking about the progress that has been made in the field of vocational and technical training, and what would be the impact if we were not to receive the increased appropriations that have been provided in the conference report.

I have here a statement by Dr. William Ohrenberger, the Boston superintendent of schools, who says:

> The presidential veto of the Educational Bill is a serious blow to the children of not only the Boston Schools, but of schools throughout the country. Congress, through its passage of both this and preceding Education Bills, has truly recognized that education is the only means by which an individual or nation may move ahead. Nothing

is more important to the future of our nation than a proper investment in the education of our children.

He also talked about what the impact would be on the Boston school system if this veto were sustained.

Finally, Mr. Lawrence Creedon, superintendent of schools of Quincy, Mass stated in part:

If the President's veto is sustained Quincy will either be forced to abandon many of the programs that I have cited or redirect its limited funds from development in other critically needed areas to the support of those programs. A loss in federal assistance to the Quincy Public Schools would mean a re-assessment of the school building program, including the replacement of existing elementary schools that are now more than 100 years old and major renovation of existing high school facilities that have not been updated in the past fifty years.

This is only a sampling, Mr. President, of the comments and the statements made by distinguished Massachusetts educators.

I think the situation in Massachusetts is perhaps not unlike that in many other States. In 1967, Massachusetts received some $93.9 million, in terms of Federal help and assistance. In 1968, that amount was increased to $99.2 million. In 1969, the amount went down to $90.7 million, and in 1970–71, with the administration proposal, it would be only $90 to $95 million. In other words, under the original Nixon administration proposal, Massachusetts would actually have received a reduced amount of funding under what it received 4 years ago, in spite of the fact that tens of thousands of new students have been added to the school rolls, and in spite of the fact that the cost of education has risen approximately 13 percent per year.

Mr. President, in my State we rely, in terms of resources being made available to the various school districts, largely on the property tax. Seventy-four percent of all the funding that is provided for the education of young people in Massachusetts' primary and secondary schools comes from property taxes, as compared to a national average of some 52 percent of the funds for school districts that are raised from property taxes. Therefore, as in many of the old New England States that resort to the property tax for educational support, the sustaining of this veto would provide an extraordinary additional burden on all of the property taxpayers in the old communities and old cities of those older States that are already, at the present time, in an extremely tight and difficult situation.

Mr. President, the allegation has been made by the administration that this increase of $453 million is really an inflationary measure. But I wonder, Mr. President, why we do not hear any suggestion of a veto of the various authorizations and appropriation bills on weapons systems, which today are running to $24.5 billion in cost overruns. We do not hear the administration talking about vetoing any of those bills, though that is what we are today experiencing.

What Congress has provided is a $453 million increase in funds for the education of the young people of this country.

Mr. President, I reject this charge that this is an inflationary measure. We know that in providing quality education for the young people of this country, we are giving them the training for productive employment, and are hopeful of keeping them off the welfare and unemployment rolls. We believe the investment made now will save us untold millions of dollars in future family assistance programs and welfare payments.

Finally, Mr. President, I think it is important to realize that Congress appropriates some $125 a year for every person in South Vietnam; whether it is through Defense programs or AID assistance, or by whatever name we call it, it amounts to $125 for every South Vietnamese.

All we are asking is the provision of less than half of that for every American schoolchild, so that he can receive a decent education.

Mr. President, I feel that this is one of the most important votes we shall have the opportunity to cast. I disclaim the arguments which have been made in the past about the inflationary nature of the bill. There is an extraordinary need and demand for this kind of resource to provide quality education for people enrolled in our school systems.

I hope that the veto will be overturned.

Mr. President, I ask unanimous consent to have printed in the RECORD at this point a list of the participants at my meeting in Boston this morning, letters and statements which were submitted to me at that meeting, and a statement which I prepared and released in connection with that meeting.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

EDUCATION AT AUGUST 18, 1970, MEETING IN BOSTON WITH SENATOR EDWARD M. KENNEDY

Senator Edward M. Kennedy, Commissioner of Education Neil Sullivan.

Robert C. Graceffa, Michael J. Grealy, Donald Tye, Charles Avery, Coalition for Aid to Private Higher Education.

Daniel Coughlin, William G. Tobin, Title I Boston, Deputy Supt. Boston.

Everet G. Thistle, Asst. Commissioner, State Dept. of Education.

Wm. Philbrick Jr., Director, Bureau of Special Education.

Mrs. Laurence J. Kipp, Vice Chrmn., Board of Education.

Mrs. Mary E. Flynn, Mass. Bureau of Library Extension.

John A. Kariger, Director, Elementary Education, Pittsfield.

Superintendent Donald W. Dunnan, Peabody.

Don Torres, Bureau of Curriculum Innovation, Dept. of Education.

Donald E. Graves, Southeastern Reg. School District (Reg. Voc.).

Wm. A. Dwyer, Supt., Blue Hills Reg. Tech. Sch. District.

Joan M. McFarland, Asst. Dir., Project Lighthouse.

Richard J. Lavin, Director Merrimack Education Center ESEA–III.

James R. Howard, Asst. Director, Educative for Greater Boston, EDCO Title III.

Bryant Robinson, Springfield School Dept.

Thomas J. Donahoe, Springfield.

Harding J. Steward, Springfield.

Asst. Commission of Education Thomas J. Curtin.

Stewart Sargent, Quincy Public Schools.

Supt. Lawrence Creedon, Quincy.

Daniel P. Kulich, Brockton PS.

Blanche Martin, State Dept. of Education.

Fred Maffeo, Mass. Association School Committees.

Betram Holland, Mass. Assoc. of School Principals.

John Sullivan, Mass. Teachers Association.

David Cronin, Mass. Dept. of Education.

John E. Kearney, Mass. Dept. of Education.

George Membrino, Chicopee.

THE COMMONWEALTH OF MASSACHUSETTS, DEPARTMENT OF EDUCATION,

Boston, August 18, 1970

HON. EDWARD M. KENNEDY,
John F. Kennedy Federal Building,
Boston, Mass.

DEAR SENATOR KENNEDY: The Health, Education and Welfare Appropriation Bill that has been vetoed by President Nixon comes before the Senate for further deliberations on Tuesday, August 18, 1970. A determination to sustain the President's negative position will cause irreparable damage to the educational program in Massachusetts.

Without detailing the specific loss the Commonwealth faces within the $25,000,000 difference between the President's recommended budget and the House-Senate Conference Report, I would like to call to your attention important aspects of the bill. There has been an estimated 22% increase in the number of Aid to Dependent Children. From a 1970 figure of 68,220 the 1971 number is expected to raise to 86,500. The HEW Bill would increase the state's allotment under Title I, E.S.E.A. by 11% over the previous fiscal year. This disproportionate percentage rise will not allow Title I of the Elementary and Secondary Act to operate at its present program level. As unfortunate as this situation may be, the President has recommended a 1% decrease in this same program. The conference position would at least enable Title I to absorb some of the cost represented by the added A.F.D.C. population; the President's position spells doom for many aspects of the current program.

In another area, the President has recommended $10,000,000 less than the Conference Report for the education of handicapped children. The Department of Education records indicate that each year for the last three years we have been forced to deny more than 120 worthwhile projects to aid handicapped children in public schools and to deny traineeships or fellowships to more than 100 excellent candidates for further college and university training to teach handicapped children. In addition to inability to fund appropriate projects, the Department has been obliged to cut any approved project by approximately 35% in order to reserve funds to permit greater geographical coverage.

Among the results of these constraints are feelings of hopelessness among local educational agencies regarding any adequate funding, severe restrictions on the original comprehensive planning of individual or groups of local educational associations, and maximum difficulty in hiring administrators and teachers to staff Federally-funded projects.

The increases afforded by the present Federal appropriation act will alleviate these problems substantially.

Sincerely,

NEIL V. SULLIVAN,
Commissioner of Education.

SOUTH EASTON, MASS.,
August 18, 1970.

HON. EDWARD M. KENNEDY,
Senate Office Building,
Washington, D.C.

DEAR SENATOR KENNEDY: May I thank you for the courtesy extended to me in providing time for myself and my colleagues to appear

before you this morning in an attempt to obtain the Senate approval required to assure passage of the recent education bill currently under presidential veto.

While I am concerned that education continue to advance in all parts of the country I am particularly concerned with vocational education and most specifically with vocational education in Massachusetts.

In recent years vocational education across the nation has made significant strides in providing occupational training opportunities for a great number of our citizens both young and old. These are people who are looking for this kind of training in order that they may take their rightful place in our society.

In Massachusetts as in so many other states we have in the last ten years seen many wonderful changes take place in vocational education and indeed in all elements of education due in large part to the federal aid which has been forthcoming.

I believe that we are within a few years of seeing regional occupational training opportunities extended to practically every community in Massachusetts. I can assure you without question this effort could not have been successful without the help of significant federal funds.

There are many accomplishments to date which are a matter of record and there are many goals yet to attain, far too many to present in this brief delivery.

May I urge you to do all in your power as a Senator from Massachusetts to insure that the recorded progress in education may continue.

Respectfully yours,

DONALD E. GRAVES,
Superintendent Director.

BOSTON SUPERINTENDENT OF SCHOOLS URGES SENATE SUPPORT FOR EDUCATION BILL

Dr. William Ohrenberger, Superintendent of the Boston Public Schools, stated emphatically today that school systems throughout the nation need increased financial aid. Dr. Ohrenberger remarked:

"The presidential veto of the Education Bill is a serious blow to the children of not only the Boston Schools, but of schools throughout the country. Congress, through its passage of both this and preceding Education Bills, has truly recognized that education is the only means by which an individual or nation may move ahead. Nothing is more important to the future of our nation than a proper investment in the education of our children.

"Federal funding has been of great benefit to our schools. Without such assistance Boston would have been unable to extend and expand its enrichment program for the disadvantaged or to initiate many worthwhile experimental programs which have a far-reaching effect on the entire school system and will improve greatly the quality of education.

"The continuation of these educational programs and the initiation of others hinges directly on both continued and increasing federal support. The present Education Bill contains Funding for both the Elementary and Secondary Education Act and Public Law 874.

"I strongly urge for the sake of all school children in the nation, especially those in urban areas, that the Senate of the United States follow the action of the House of Representatives in voting to override the veto of this vital Education Bill."

THE PUBLIC SCHOOLS OF SPRINGFIELD, MASS.

August 17, 1970.

Hon. EDWARD KENNEDY,
Senate Office Building,
Washington, D.C.

DEAR SENATOR KENNEDY: I am deeply concerned that federal funds for the strengthening of educational programs in Springfield, are in danger of being cut.

Our federally funded projects during fiscal 1970, are listed on the attached sheet. In order that each of these highly successful, educationally significant, and sound projects be continued, it is imperative that their funding be increased or at least sustained.

It is difficult to single out any of these projects to emphasize the importance of this increased funding. They cannot be implemented without Federal help. Surely our Title VIII bilingual Elementary School program, which is unique in the Commonwealth, and which has been evaluated by an independent team as an excellent program to educate Puerto Rican children, deserves a $21,000 increase.

A city such as ours, needs the Title IV $67,000 to implement a positive program for the in-depth appreciation by our teachers of their changing role in an urban setting, vis-a-vis minority groups. The Teacher Corp has given the city a cadre of employees sensitive to the needs of disadvantaged children, and the Neighborhood Youth Corps furnishes needed jobs for the poor. We cannot disregard the effort which has put into the Career Opportunity Program which, if implemented, will give 50 individuals a chance for a college education, a profession, and a better way of life. I need not enumerate, the importance of the programs made possible by approximately $1,000,000 in ESEA Title I funds to our city.

All this and more will be placed in jeopardy unless the President's veto is overridden and anticipated funds are made available for the coming year. Please help us.

Respectfully,

JOHN E. DEADY,
Superintendent of Schools.

MEMORANDUM OF POSITION ON PRESIDENTIAL VETO OF EDUCATIONAL APPROPRIATIONS BILL, AUGUST 17, 1970

To: The Honorable Edward M. Kennedy.
From: Dr. William H. Hebert, Executive Secretary-Treasurer, Massachusetts Teachers Association.

Massachusetts stands to lose $25 million in federal funds ear-marked for education if the Senate does not override the Presidential veto. President Nixon wants to limit Massachusetts to a total of $52 million, while the proposed legislation calls for an allocation of $77 million. This 25 million dollar difference will have the most profound effect on current and planned educational programs in the Commonwealth. For example:

1. Massachusetts now receives $15 million for Impacted Areas (P.L. 874). This stands to be curtailed sharply and involved in 1969 approximately 200 cities and towns. A partial list of those communities includes Holyoke, Northampton, Pittsfield, Westfield, West Springfield, Chicopee, Granby, South Hadley, Springfield, Ayer, Concord, Fitchburg, Leominster, Waltham, Watertown, Framingham, Worcester, Bedford, Billerica, Burlington, Chelmsford, Lexington, Lowell, Methuen, Tewksbury, Wakefield, Woburn, Gloucester, Haverhill, Lynn, Peabody, Arlington, Belmont, Chelsea, Everett, Malden, Medford, Melrose, Revere, Saugus, Winchester, Winthrop, Brookline, Cambridge, Somerville, Boston, Fall River, Natick, Needham, Braintree, Brockton, Dedham, Quincy, Randolph, Bourne, Falmouth, Hingham, Hull, New Bedford, and Weymouth.

2. Funds allocated for Education for the Handicapped (Title VI A, Elementary and Secondary Education Act) will be reduced substantially. Programs for teachers and materials for the blind, hard-of-hearing and other unfortunate children will have to be eliminated or cut back.

3. The present allocation of $9.7 million for vocational and adult education would be increased to $10.8 if the Senate overrides the veto. This represents a gain of $1.1 million for Massachusetts.

4. The proposed bill calls for $17 million for Higher Education. The President wishes to allocate only $13 million, a potential loss of $4 million to the Commonwealth.

5. Student Aid programs would be reduced significantly if the President's wishes are carried out. For example, NDEA loans will be reduced, educational opportunity grants will be cut, and work study and cooperative educational programs will be curtailed. Further, money essential to permit construction at community colleges will also be pared.

6. Community Education, which involves a public library program, including funds for library materials, salaries and construction, will also be subjected to serious setbacks.

MASSACHUSETTS ASSOCIATION OF SCHOOL COMMITTEES, INC.,
Boston, Mass., August 18, 1970.

Hon. EDWARD M. KENNEDY,
Senate Office Building,
Washington, D.C.

DEAR SENATOR KENNEDY: The Massachusetts Association of School Committees respectfully requests that you vote to override the veto of the Office of Education Appropriations for the Fiscal Year 1971.

These funds make it possible for local school committees to improve the quality of education. The cost of these quality programs will need strong financial support from local, state and federal governments in order to achieve their goals. The increased cost of education requires that federal funds must be available to local communities if progress is to be made.

Your favorable action on the veto override will be most appreciated.

Sincerely yours,

Mrs. HELEN A BOWDITCH,
President.

MERRIMACK VALLEY REGIONAL EDUCATIONAL PLANNING CENTER,
Chelmsford, Mass., August 17, 1970.

Hon. EDWARD M. KENNEDY,
U.S. Senate,
Washington, D.C.

DEAR SENATOR KENNEDY: The recent veto of the Education Bill by President Nixon prompts me to request your leadership in the Senate for action reversing this veto.

Merrimack Education Center (MEC) has become a vital operating force in a large segment of Massachusetts. As a child of ESEA Title III, we serve approximately 100,000 students in twenty cooperative and contiguous communities in the Merrimack Valley area. It has become a vehicle to be used by students, teachers, administrators, and towns.

Enclosed are two recent newspaper articles describing some of the services provided through our "center". It is important that the momentum that has been estab-

lished through "seed" monies from the Federal Government continue.

Your continuing efforts in behalf of education are very much appreciated.

Yours very truly,

RICHARD J. LAVIN.

[From the Christian Science Monitor, July 20, 1970]

FARMHOUSE EDUCATIONAL MIDDLEMAN

In a 19th Century Chelmsford farmhouse a group of professionals are taking education into the country—and big business atmosphere out of education.

The Merrimack Valley Education Center can hardly be distinguished from any well-preserved New England homestead. The only outward concession to the center's being a public building is a discreet parking lot, post-card setting of the center.

Headed by Dr. Richard J. Lavin, executive director, the center is a cooperative of 20 surrounding communities hop-scotching from Ashby to North Andover. It was established in 1968 with federal Title III funds which provides for innovative education centers.

According to Dr. Lavin, the center is a middleman between the communities it serves and larger educational resources. It works both ways—with the communities seeking help at the center, and the center itself scouting areas it might help.

Dr. Lavin says the center is a grass roots organization close enough to the local scene to know what's happening, and yet independent of individual school districts. The center, he said, can offer objective evaluation and still be free enough to create new solutions to problems.

The Chelmsford center serves teachers who could otherwise get so tangled in bureaucratic tape over a new program they want to learn about, it would tie them in knots.

The Merrimack Center's staff is small—two full-time professionals, several parttime professionals, doctoral interns, and secretaries. The center also uses consultants on a per diem basis when it's necessary.

Education, as anyone else involved in a constantly changing and experimented-with process, could spend half their working hours, all their free time, and any appropriation given them on "keeping up." Since teachers rarely have the time to read all the extant journals of their profession and taxpayers are more reluctant to spend money on something not tested by the fire of time, experimental and innovative projects are less likely to be tried.

The center, for instance, can serve a Lawrence principal who also hears of a new teaching technique which he feels would be beneficial to his school. The center can detail the information for the principal and collect and collate other data he may need.

The center can also, for example, buy kits outlining various science curricula available to school systems. The kit costs about $75, but since it's only used once, it wouldn't be economically feasible for one system to buy it. The center can—and lend it to whoever in the cooperative wants to use it.

The Title II money runs out next year. After that it will be up to the member communities to keep the Merrimack Center in operation. The members are assessed 25 cents a pupil—so the cost to a community is in proportion to its school population, and the benefits it can receive. If the center is supported by its members, it will know it's serving its school districts well.

The Merrimack Center searches out and evaluates new educational processes and programs, according to Dr. Lavin, but it does not mandate any programs. It assists client towns in developing innovative projects; in applying for funding assistance; in solving problems of curriculum, staffing, pupil and personnel, in providing in-service professional and para-professional training, and in developing cultural and industrial resources.

Among the technological aids at the center is a microfiche (similar to microfilm) library which contains hundreds of pieces of professional educational material. The center also rents computer time which enables guidance counsellors to scan in minutes possible college choices for an interested student.

A New England organization, cognizant of the New England tradition for individuality, the center doesn't press for homogeneous systems. The center will help school districts develop and implement new programs, but the help is so tailormade, said Dr. Lavin, that the schools maintain their own stamps. Nothing the center offers, said Dr. Lavin, is so rigid it can't be shaped to suit the school system.

The main thrust of the center has been in the education of young children, the handicapped, career guidance, and in-service education. During the center's first year and a half of existence, it developed about 10 projects with member districts. In addition, about 15 proposals have been prepared and submitted on behalf of individual districts.

In the fall, according to Dr. Lavin, the center will be working on vocational education, among other things.

[The Christian Science Monitor, July 20, 1970]

OUTSIDE AIDS POOLED: 20 REGIONAL SCHOOLS TAP SERVICE STATION

(By Lorraine Karcz)

CHELMSFORD, MASS.—An old farmhouse napping in a Chelmsford meadow is the unexpected setting for an energetic educational service station.

"I see the Merrimack Educational Center (MEC) as a catalyst for change in the 20 communities surrounding us," said Dr. Richard J. Lavin, the center's director, from his desk overlooking the meadow.

Dr. Lavin, an intense, soft-spoken educator with experience as an industrial consultant, travels about his 20-town area promoting much-needed cooperation among the school districts.

School people from the towns now come to the center to get new ideas to take back to their classrooms and to avail themselves of services and equipment they could not afford alone.

MEC is a child of Title 3 of the Elementary and Secondary Education Act, which provides for supplementary educational centers. These centers, operating outside local school systems, have the task of developing and disseminating bright new ideas in education.

BROKER FEATURE DESCRIBED

MEC, staffed with a small core of educational professionals, perform a special "broker" feature. "It matches resources from the outside world with the urgent needs of the school systems," saws Dr. Lavin.

Outside the school systems, he explains, universities and industry have developed a wealth of new programs and creative educational techniques which still have to undergo the fire of testing in the schools. MEC gives innovations their test of practicality by bringing them to the attention of teachers who can put them to work.

The center has introduced and made available to teachers of the Merrimack Valley new technological aids. Among them is the microfiche, an instrument for storing information which provides teachers with a wealth of professional material not available to them in local libraries.

Hundreds of these documents are stored at MEC. Individual schools get a catalog of the material stored on the microfiche and a viewer, and the teachers can take out on loan articles and reports in their fields.

VARIETY OFFERED

The microfiche is one example of expensive, modern equipment that the schools in the area can afford when they pool their resources.

Another example of new equipment in the Merrimack Valley introduced by MEC is computer terminals for guidance and math.

Guidance counselors in 14 of the region's 15 high schools now can refer Johnny to a computer when he wants to know of a medium-size rural campus in the Midwest with a good history department and a black-studies program. Johnny uses a manual and a simple keyboard on a terminal that is linked to a computer in Boston to find the school that matches his specific interests and abilities.

While a computer cannot replace personal counseling, its vast store of facts can be a great asset to a busy counselor, teachers find.

The center is doing more than bringing the benefits of modern technology to the area schools. It also sponsors conferences and institutes. Participating educators from the 20 towns gather to hear consultants tell about new teaching methods and new administrative approaches.

PERSONNEL MIX

Dr. Lavin and his crew also organize forums where teachers or school-board members or administrators from one town mix with their counterparts from a neighboring school system, talk, and find that they share common needs.

Such get-togethers did not occur prior to the establishment of MEC. The individual towns were facing on their own a host of difficulties in their educational systems. Industrial buildup along Routes 495 and 128 had brought a population boom and subsequent crowning of classrooms and finance difficulties to all the area's schools.

Local taxpayers were refusing to give any more money than they were already giving for educational innovations.

The Merrimack Center has awakened the towns to the fact that, by jointly financing projects, they can afford to hire consultants and buy equipment without increasing revenues.

Peter Gerefoli, superintendent of schools in North Andover, praises the work of MEC. "A single town can't afford a top-notch consultant," he says. "Many together can."

TAILORMAKING POSSIBLE

An important part of the center's philosophy is that each town participating in MEC activities can opt for the programs it likes and can afford. Towns as small as Ashby and as large as Andover can each afford to participate. Dr. Lavin feels that the MEC thus helps maintain the autonomy and uniqueness so valued by staunchly independent New England school systems.

Title 3 funding lasts three years, and at the end of that time the local communities will have to support the center on their own if they wish to retain it.

It is hard to tell how tightly local purse strings will be held. But educators from the area indicate that the high return on the local investment of such a regional approach is convincing the towns of MEC's value.

TESTIMONY PRESENTED TO SENATOR EDWARD M. KENNEDY BY LAWRENCE P. CREEDON, SUPERINTENDENT OF SCHOOLS, QUINCY, MASS.

I appreciate the President's concern over inflation. We share his concern. However, the remedy does not lie in curtailing that which is our nation's best investment—Education.

Quincy is a city of ninety thousand people, located in the Eleventh Congressional District of Massachusetts. Quincy maintains a public school system for twenty thousand students, ranging from Kindergarten

through a municipality operated junior college. If the President's veto is sustained, the net result could be to seriously disrupt the educational program of the Quincy Public Schools.

The 1970 budget of the Quincy Public Schools amounted to fifteen million dollars, 85% of that sum going out in salaries, 10% to operate and maintain the physical plant, and 5% for instructional materials. Over the past several years the budget has been increasing at the rate of 15% per year, causing a serious strain on the financial resources of the local taxpayer. In the Commonwealth of Massachusetts, 77% of the cost of public education is raised at the local level, 18% is contributed by the Commonwealth, and only 5% by the federal government. It is inconceivable that the President would consider reducing the federal contribution.

During the 1969–1970 school year, the Quincy Public Schools received from state and federal sources approximately $3,400,000. Of that amount, $2,000,000 was received from the Commonwealth, while $1,400,000 was received in federal aid through grants or programs financed by the federal government.

Programs within the Quincy Public Schools that would be seriously affected as a result of the Presidential veto include the following:

Adult Basic Education;

Manpower Development and Training Programs;

Neighborhood Youth Corps;

Title I Programs for the Educationally Disadvantaged;

Higher Education Work-Study Program;

Libraries under Title II;

Teacher Aid Programs under the Professional Development Act, Public Law 90–35;

Close to twenty programs funded in part under the provisions of the National Defense Education Act;

Several programs under the new comprehensive vocational education bill, Public Law 90–576; and

Breakfast and lunch programs for needy children.

In addition, the Quincy Public Schools would lose approximately $300,000 currently made available through the federally impacted areas law, Public Law 874.

Under the Adult Basic Education program, the Quincy Public Schools have been able to maintain programs in the Norfolk County House of Correction in Dedham, as well as for Quincy residents who are in need of basic skills in reading, mathematics, and language arts. Beginning in the fall of 1970, arrangements were being made to extend the Adult Basic Education program to General Dynamics in Quincy.

In 1966 and 1969, the Quincy Public Schools administered grants amounting to more than $110,000 in order to provide opportunities for unskilled and under-skilled workers to increase their marketability for employment. Many of these programs were carried on in conjunction with General Dynamics and the Quincy City Government.

Since 1965, the Quincy Public Schools have administered a Neighborhood Youth Corps program, caring for the educational and employment needs of 100–150 underprivileged young adults each year.

Under Title I of Public Law 89–10, the Quincy Public Schools have developed and implemented an educational program for about 450 young people in grades 1–3 in five public schools and in three non-public schools. In addition, Title I programs have been developed in guidance and education for the handicapped as well as summer programs for disadvantaged youth. During summer activities every effort has been made to involve parents and community leaders in identifying the needs of the neighborhood school and developing programs for correcting limitations in school organization and administration as well as the educational program. Approximately $200–225,000 per year has been committed to these programs.

Under the Higher Education Act of 1966, the Quincy Public Schools developed and implemented a work-study program, providing work stations for sixty students from Quincy Junior College. The entire program was geared to providing teacher aides for the Quincy Public Schools, and as a result many young people who graduated from Quincy Junior College have gone on to four-year baccalaureate institutions and majored in teacher education.

As a result of the impetus received through Title II monies, the Quincy Public Schools embarked on developing a Department of Library Services that now includes thirty professionally trained librarians and has a local budget for library materials in excess of $90,000. This is in addition to the $14,000 received under Title II.

Under the provisions of the Professional Development Act, Public Law 90–35, the Quincy Public Schools secured a grant in the amount of $29,000 in order to train forty people to serve as full-time teacher aides within the school system.

For more than a decade federal assistance under NDEA, the National Defense Education Act, has served to upgrade educational programs; particularly in mathematics and science. Without this kind of assistance, it is doubtful that the limited resources of the Quincy Public Schools would have allowed for the inclusion of critically needed equipment in these areas. During the last two years the Quincy Public Schools have received over $70,000 from NDEA.

Consistent with the provisions of the new Vocational Education Bill, Public Law 90–576, the Quincy Public Schools submitted proposals in excess of $600,000 in order to develop relevant vocational education programs at the secondary, post secondary, and adult levels. Vocational aducation is a major concern of educators in Quincy in that 70% of our students are not four-year-college-bound and thus are in need of vocational competence by the time they graduate from high school.

In 1965 Quincy embarked on the development of a new vocational-technical school at a cost of five and a half million dollars. In addition, the school system received a grant from the U.S. Office of Education in the amount of $650,000 in order to develop a program of instruction for the new vocational facility. While Quincy has been making every effort to provide relevant vocational opportunities for its students, the fact remains that only 30% of those who could benefit from vocational education are involved in such programs. Public Law 90–576 will allow Quincy to continue its efforts in this area.

Under federally aided food and nutrition programs the Quincy Public Schools received close to $70,000 during the last school year. In 1966 the Quincy Public Schools established the first federally-financed breakfast programs in the Commonwealth.

It is disheartening to be concerned about the possibility of cuts in the amount of federal aid available to local communities when educators across the nation were looking to the federal government for increased assistance. In particular, I anticipated critically needed increases in the areas of comprehensive vocational education, school lunch and nutrition programs, and programs funded under the Elementary and Secondary Education Act.

If the President's veto is sustained Quincy will either be forced to abandon many of the programs that I have cited or redirect its limited funds from development in other critically needed areas to the support of those programs. A loss in federal assistance to the Quincy Public Schools would mean a re-assessment of the school building program, including the replacement of existing elementary schools that are now more than 100 years old and major renovation of existing high school facilities that have not been updated in the past fifty years. In addition, efforts at making educational programs relevant, particularly in the vocational area, and providing learning materials that are responsive to the many and varied ways in which young people learn would have to be curtailed. Programs in inservice teacher education, including the use of para-professionals and community resources, would have to be abandoned.

In the President's veto message he indicated that to have signed the education bill would have contributed to inflation.

Inflation can be most effectively curbed by the prestige and the power of the President being directed toward the major industries of the United States. The continued spiraling of prices in all areas are a direct and an indirect result of their practices. Without a major change by this segment of our economy, the amount of goods and services we will be able to purchase to help educate our students will continue to shrink.

Education is an *investment* that guarantees the continued growth and development of our nation. Continued and increased support for education at the national level is not only imperative to the local communities but also to the nation.

STATEMENT OF SENATOR EDWARD M. KENNEDY FOR MEETING WITH MASSACHUSETTS EDUCATORS ON FEDERAL APPROPRIATIONS FOR EDUCATION

I appreciate the opportunity to meet with school administrators, educators and parents from across the state to discuss federal spending for education. For I feel strongly that the Federal Government has a responsibility to help pay the cost of educating our Nation's youth.

Earlier this year, after extensive hearings and full consideration, Congress appropriated $4.4 billion for the Office of Education for the present fiscal year. Last week the President vetoed the Education Appropriations for the second straight year, indicating that he was upset that Congress chose to spend $453 million more for education than he requested. I am pleased that the House of Representatives last Thursday voted to override the President's veto, and I hope that the Senate will do likewise in the vote expected this afternoon or tomorrow.

Failure to override the President's veto of education funds would be a disaster for Massachusetts and for the Nation. The immediate losers would be school children, parents and educators. The ultimate loser would be the country as a whole.

First, failure to override the veto—and accepting instead the amount requested by the President—would mean $25–30 million less in federal education money for Massachusetts. That money is desperately needed. Expenditures in the state for public elementary and secondary education alone have now risen to over $1 billion annually. School budgets have been pared to a bare-bones minimum, with the result that per pupil expenditure in Massachusetts is less than the national average. Teachers salaries are inadequate, buildings and equipment are getting older, children in many cases have been crowded into half-day sessions. Without adequate federal help, we simply cannot achieve top-quality education in Massachusetts.

Second, failure to override the veto would most likely raise property taxes in Massachusetts. For the money must come from somewhere, unless we are willing to give up on our children's educational needs. Already residents of Massachusetts pay a staggering 74% of school budgets out of local taxes, compared to 52% for the nation as a whole. It would be an unfair and outrageous burden to force property taxes up even higher

because the President vetoed education spending.

Third, failure to override the veto would cause delay and irreparable harm in planning school budgets for the coming academic year. Students will return to classes within the next few weeks. But until administrators know how much federal money their school systems will receive, they cannot set priorities and make realistic plans. Last year, for example, our schools suffered because administrators were kept on the hook until March 5, 1970—less than four months before the end of the school year—before the Education Appropriations bill was finally passed. That is why this year Congress decided to split off education from the general Health, Education, and Welfare bill and consider it separately and early. All this will be undone if we have to scrap the bill passed by Congress and start all over again in September on a new bill.

Fourth, failure to override the veto would deny student assistance to thousands of needy and deserving students in Massachusetts. For the Nation as a whole, Congress passed $243 million for National Defense Student Loans, compared to $176.9 requested by the President. Of that $66.1 million difference, Massachusetts would lose $2.7 million if we took the President's figure. An estimated 4,500 students in Massachusetts would lose assistance—students whose parents are desperately trying to find aid so that their daughter or son can go to college. I sponsored a successful amendment in the Senate to raise the amount for National Defense Student Loans, recognizing that families with college-age children face rising tuition and costs, difficulty in getting bank loans, and a decrease in jobs available for students trying to earn their way through school. We should not cut back on our commitment to student assistance at this time of greatest need.

In general, failure to override the veto would simply reduce the quality of education in Massachusetts and in the Nation. It would turn back the clock on our attempts to achieve equal educational opportunity regardless of the financial resources of a child's family. It would be a step backward at the very time that a sound education is becoming more and more necessary for good employment and advancement in our society.

The President has claimed that the $453 million increase in education appropriations would be responsible for further inflation. Certainly I share the concern of all Americans that prices rose by 6% last year, that interest rates are at the highest level since the Civil War, that unemployment is rising.

It is misleading and absolutely incorrect, however, to single out the Education Appropriations bill as the scapegoat for the President's inability to control inflation.

First, the $453 million is miniscule compared to the economy as a whole. It is only about one-fifth of one percent of the total budget request. It is less than one-twentieth of one percent of the Gross National Product. As one of the President's own economic advisors has pointed out, a shift of this amount simply does not have an appreciable effect on inflation.

Second, education spending is less inflationary than military spending, for example. It trains people for productive employment—which means less people on welfare or unemployment rolls, and an increase in needed goods and services. Especially in light of the present welfare mess, not just in Massachusetts but in the United States generally, education spending is a sound investment in the future.

Third, if anyone deserves the label of "big spender" it should be the Administration, rather than Congress. Last year, for example, Congress appropriated $6.4 billion *less* than the President requested. I am confident that this year again Congress will appropriate several billion dollars *less* than the President has requested. We will make off-setting cuts, so that the increase in education does not contribute to inflation.

Fourth, I say let's cut back federal spending from war programs, not from education programs. Let's stop pouring billions of dollars a year down the drain for cost overruns on military weapons which are not needed in the first place. Let's not blame inflation on education spending, when the President himself has been pushing so hard to spend $1.46 billion this year, and many billions more in the future, on the ABM.

Priorities are badly misplaced indeed when the President vetoes a total of $4.4 billion for education and then asks for more than 15 times as much for military spending. Priorities are badly misplaced when the Administration seeks over half a billion dollars to bail out a railroad and an aircraft company but objects to Congress adding less than that amount for education. Priorities are badly misplaced when the Administration is more concerned about ABM's than ABC's.

I support cutting back far more than $453 million from the subsidies we pay farmers not to work; from the supersonic transport plane which will pollute the environment at the same time that it leaves an earth-shattering boom in its wake; from pork-barrel public works projects; and from the proliferation of costly and unneeded military weapons.

I will fight vigorously and hard to make these cuts and reduce the President's overall budget. But in the meantime, we cannot and we must not shortchange our Nation's youth by cutting the funds which Congress has already deemed necessary for education.

School costs are rising at a rate of over 10% a year. Yet still the Federal Government, on the average, pays less than 7% of public elementary and secondary school budgets—and last year the Federal percentage dropped substantially. Even under the bill vetoed by the President education programs will be funded at less than half of the authorized amounts.

Surely a Nation which spends more than $1400 a year in armaments for each South Vietnamese soldier can afford to spend more than $54 a year for each American school child.

For if we lack the will to invest in education today, our children in Massachusetts and across the Nation will be handicapped tomorrow.

I urge that the Senate override the President's veto, and support the badly needed $4.4 billion for education.

Mr. MAGNUSON. Mr. President, would the Senator from Delaware be willing to yield 2 minutes to the Senator from Rhode Island, who wishes to make a short statement?

Mr. WILLIAMS of Delaware. I yield 2 minutes to the Senator from Rhode Island.

Mr. PELL. I thank the Senator from Delaware for yielding to me from the time under his control.

Mr. President, the President's veto of the education appropriations bill raises not only the question of what should be our national economic priorities but, even more important, who should set those priorities. Should it be Congress or the President? From the founding of our country until now, it has been Congress. But President Nixon apparently believes that this responsibility, this determination, should belong to the President.

A key paragraph in the President's veto message bears out this assertion. It reads as follows:

> The appropriation for the Office of Education is $453 million over my budget request.
>
> My request would have produced 28% more spending than in the last fiscal year of the previous Administration.
>
> My budget asked $3.97 billion for the educational purposes covered by this bill—an increase of $972 million in spending over fiscal 1969. In addition, I have committed myself to ask the Congress for an extra $350 million to fully fund the school desegregation program as soon as the Congress provides the authorizing legislation.

The implication of that language is that a $350 million excess would have been acceptable if it were available for expenditure as the President desired. I fail to understand why money spent as the Congress determines is inflationary, while that spent under Presidential direction is not. If $350 million in additional spending is inflationary, it is inflationary regardless of which program absorbs it.

In my opinion, the President, in vetoing this bill, is challenging the right of Congress to set priorities within appropriations bills. The Congress has always maintained its authority granted by the Constitution to appropriate funds by law. I know of no other time in history when a President, by the use of the veto, has challenged the authority of Congress to direct use of funds. Regardless of the subject matter for which this bill appropriates funds, be it education, health, or the national defense, the veto must be overridden as a matter of principle, in order to turn back this challenge of the right of Congress to appropriate funds according to its own priorities.

Finally, there is no more sensible and frugal investment than that of the education of our young people. In fact, there is more than a tenfold return to the Federal Government alone in the form of increased taxes resulting from the increased earning base.

The PRESIDING OFFICER. Who yields time?

Mr. GRIFFIN. I yield myself 5 minutes.

Mr. President, I rise to indicate my support for President Nixon's veto of this bill. I recognize that it may not be very popular, politically, to support the President of the United States in this particular situation. It is seldom popular to appear to be in opposition to any education bill. Over the years, both in the other body and in this body, I have been a strong supporter of education in general.

I believe President Nixon has taken a very courageous and very statesmanlike position, one which provides the country with the leadership it needs at this very crucial time. His veto is not directed to this one bill alone; it is a veto on principle. I believe he deserves to be supported.

Those who are willing to vote for increases in taxes, those who are willing to have the value of the dollar eroded still further, and those who are willing to have more inflation, of course, can disagree.

Those who believe that President Nixon has not cut the defense budget far enough will say it should be cut still further. But those who think that a $12 billion slash in the defense budget—which has already reordered our priori-

ties significantly and dramatically—those who realize that significant increases have already been made in the educational budget, should support President Nixon in this situation.

The amount in this conference report is $453 million over the budget, nearly a half billion dollars. While it exceeds the President's budget by that amount, it also involves a cut of some $75 million from his request for emergency assistance to help in the desegregation of our school system.

As we have heard from the distinguished chairman of the subcommittee, some of the conferees apparently have in mind that at a later point they will provide the additional $75 million in a supplemental appropriation bill. So, I suppose, with that admission they are really saying that, although $75 million is not included here, it will be added later, which will bring the total appropriation to a figure which will be at least to $528 million over the budget.

It indicates, of course, a sharp disagreement on the part of the conferees with the President so far as priorities are concerned. This conference report says, in effect, that President Nixon's efforts toward educational reform are not to be implemented, because over half of the increases in this conference report go against President Nixon's efforts toward reform in education.

As already has been admitted, the big increases in the impacted aid program continue and increase—a program that desperately needs reform. It awards more money to the richest county in the United States, Montgomery County, in large amounts, while it does little or nothing for the poorest counties in the United States if they have a few Federal employees.

The money in this conference report actually cuts back on President Nixon's budget request for a dropout prevention program by some $5 million, indicating again that in the areas where President Nixon is seeking reform in education—reform that is desperately needed—as well as in the case of emergency assistance to help in the desegregation of our schools, this conference report is deficient. The conference report cuts back on President Nixon's requests in the areas of reform but, in other areas, it provides for increases far above his budget.

I believe that President Nixon has the support of the people in the fight he is making against inflation, in his fight to hold the line on taxes, and to try to hold the value of the dollar. No bill, not even an education bill, can be exempt or immune from the principles which must be applied if this important fight is to be won.

Every appropriations bill has to stand the test. If President Nixon had not vetoed this bill, which is nearly a half billion dollars over the budget request, his credibility in the fight against inflation would have been impaired. His credibility in this fight is very important; and I say, regretfully, that if the Senate votes to override the President's veto—and I suspect that will happen—surely the credibility of Congress, insofar as its determination to fight inflation is concerned, will be impaired.

Accordingly, I hope that the vote here today will be to sustain President Nixon in the courageous position he has taken.

Mr. President, I ask unanimous consent to have printed at this point in the RECORD a number of articles and editorials published in newspapers around the country, supporting the President's position.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

[From the Chicago Tribune, Aug. 13, 1970]

NIXON'S HEW CHIEF DEFENDS FUND BILL VETO—AGREES INFLATION COULD CRIPPLE PROGRAMS

ST. LOUIS, August 12.—Elliot Richardson, Secretary of Health, Education and Welfare, today defended President Nixon's veto of the $4.4 billion education budget as a move necessary to keep inflation from undercutting HEW efforts.

In a press conference at the American Bar Association's annual meeting here, Richardson said the appropriation was $1 billion above department requests.

Nixon yesterday vetoed both the education bill and $18 billion for the Housing and Urban Development Department on the ground that the increases added by Congress would mean "higher prices, taxes, and interest rates."

CITES BUDGET GROWTH

Richardson said his department could operate without the $1 billion. He noted that the HEW budget has been increasing 10 to 15 per cent every year. For the first time in more than 30 years, government spending for defense has been "massively reduced" to 34 per cent of the total budget, he said, while spending for human resources has been increased to 42 per cent of the total.

Richardson said his basic reaction to the vetoes is to urge Congress to pass some kind of education bill quickly, to avoid penalizing schools after the start of the school year next month, he said. Congress must now either override the vetoes, as it did recently with the federal hospital construction bill, or draft new measures to Nixon's liking, he said.

Richardson said that altho his department can always use money, he would not want to see any great increase in educational spending if it might seriously jeopardize national security.

BACKS WELFARE REFORMS

"From my experience in the State Department I recognize that spending for national security is also very important," he said.

Richardson was undersecretary of state until appointed to replace Robert Finch as HEW secretary.

In a speech before a session of the A. B. A., Richardson urged congressional passage of Nixon's family assistance program before the welfare situation becomes worse.

He acknowledged that many northern industrial states will be forced to supplement federal welfare programs even if the federal government takes over all administration of welfare. The change might also result in higher taxes, but most people would be willing to pay them, he said.

SIDES WITH FED ASSESSMENT: INFLATION'S STRENGTH IN UNITED STATES UNDERESTIMATED, SAYS OECD

(By Robert J. Samuelson)

The "clearest danger" of current Administration policies to expand the economy lies in a resurgence of inflationary pressures, the Organization for Economic Co-operation and Development warned yesterday in a report released simultaneously here and in Paris.

In its semi-annual review, the OECD declared that "the strength of the inflationary forces generated over the last two or three years has been consistently underestimated."

The OECD's assessment, written weeks ago, implicitly touches upon an open disagreement between President Nixon's Council of Economic Advisers and the Federal Reserve Board over the desirable rate of growth in the nation's money supply. The OECD seemed to side with Fed chairman Arthur Burns, who has claimed that the CEA's proposals for more rapid monetary expansion risk increased price inflation.

Nevertheless, the OECD predicted that the nation's "real" gross national product (GNP) would resume its upward trend in the second half of 1970, reaching a growth rate of 3.75 per cent in the first six months of 1971. During the first half of 1970, "real" GNP (actual GNP adjusted for price increases) declined slightly.

If the Administration's policies work successfully, the OECD said, the unemployment rate, now 4.7 per cent, should "peak" at about 5.5 per cent in early 1971, and the first half of 1971.

But the OECD—composed of the United States, Great Britain, France, Germany, Italy, Canada, and Japan—hedged all its inflation projections.

The current world-wide inflationary cycle ranks as the worst since the Korean War, the OECD said, because previous inflationary periods always left "one or more important countries in which prices remained fairly stable . . . Such islands of stability now hardly exist."

According to the OECD's latest data, reflecting April and May results, five of the seven OECD members are experiencing annual rates of price increases exceeding 6 per cent. Great Britain registered the largest gain (12.4 per cent), followed by Japan (7.2 per cent), the United States (6.7 per cent), France (6.1 per cent), Italy (6 per cent), Canada (3.9 per cent), and Germany (3.1 per cent).

The OECD gave an ambiguous endorsement to experiments with "income policies" aimed at halting the wage-price spiral. Big wage settlements, the OECD said, constitute the clearest threat to price stability. The latest information shows that manufacturing wages of OECD members increased from a minimum of 6 per cent (the United States) to a maximum of 19.7 per cent (Italy) over the past year.

Unlike previous inflationary cycles, the OECD said, the curernt price increases have spread to export products. Last year's export price rise amounted to nearly 4 per cent against an average of ¾ of 1 per cent between 1955 and 67.

The traditional stability of export prices, according to the OECD report, had reflected the competitiveness of international markets. "At any one time, there was one or more major exporter which, because of weak markets at home, acted as a check on other exporters," it said.

However, the combination of rising domestic expenses and strong export demand—OECD trade has expanded 40 per cent more since mid-1967 than it had in the previous five years—reduced pressures to keep prices low, the OECD said.

The universality of price increases contributed to inflation by raising costs for small countries, which import in bulk, and by weakening business' and governments' determination to restrain prices "since they have seen other countries similarly failing to hold the tide," the OECD declared.

[From the National Observer, Aug. 17, 1970]

OVERRIDING THE VETO

Not even the most imaginative economist has been able to devise an alternative way

of reducing the rate of inflation. There is only one way that works, and that is for the Federal Government to scale down or eliminate its budget deficits. To accomplish this, the Government must either raise taxes or cut spending or both. President Nixon long ago declared himself for controlling Federal spending.

It was in the light of this policy that the President decided to veto the education money bill that exceeded the Administration's request by almost half a billion dollars. Last week the House overrode the veto and this week the Senate is expected to take its own vote on the matter.

Throughout the hassle, many critics have attempted to depict Mr. Nixon as indifferent to the nation's school needs. And House Speaker McCormack has called the inflation issue a "scarecrow argument." Neither tactic will wash. Inflation is visible and ubiquitous, the Government continues to spend much more than it takes in, and a $4 billion request for education hardly suggests White House indifference.

The education measure would pump billions into the districts of congressmen, so its political appeal is large—especially in an election year. Too, there are few worthier ways to spend Federal funds than on the welfare of children. And whether to spend $4.4 billion, as Congress wants, or to spend slightly less than $4 billion, as the President prefers, is a question difficult for the average citizen to weigh on its merits.

But if one believes, as we do, that inflation is a paramount threat to the nation's economic health, then there can be no argument that steps should be taken to control it. Those steps involve meeting the nation's needs with careful consideration of the amount that can be spent safely for any given purpose. It is the President's judgment that $4.4 billion is too much to spend on education now.

Congress has replied that it disagrees, and in so replying it has cast doubt on its willingness to make the hard choices necessary if inflation is to be contained. At a time when the country faces yet another sizable Federal deficit, the action on Capitol Hill is regrettable. It is not within the power of the Administration to rein in inflation by itself, and Congress has now gone on record as saying that its help, to put it gently, will be exceedingly erratic.

[From the New York Daily News, Aug. 13, 1970]

TWO VETOES IN ONE DAY, HURRAY

In one of his most dramatic moves since he became President, Richard M. Nixon on Tuesday vetoed two big appropriations bills sent him by Congress.

One was for education—$4.4 billion—and the other called for $18 billion for housing, space and veteran expenditures. They added up, said the President, to $1 billion more than he wanted to spend under these heads.

Passages from his veto statement:

"If I were to sign these bills, that spend more than we can now afford, I would be saying 'Yes' to a higher cost of living, 'Yes' to higher interest rates, 'Yes' to higher taxes . . . a President is not elected to see any one bill in isolation. He must see them as part of a whole, because his constituency is 200 million Americans."

In other words, Mr. Nixon insists on being President of and for all the people, not of and for some of the people.

We think the majority of the people will back him enthusiastically in that instance, as we believe they should.

And if Congress overrides one or both of these votes, as Congress may do, the betting looks good that Congress thereby will improve greatly the prospects for election next Nov. 3 of a Republican-controlled Congress which will cooperate with the economy-minded GOP President, not try to sandbag him every other day or so.

[From the Baltimore Sun, Aug. 15, 1970]

VETO SCORE

The House of Representatives acted according to form on President Nixon's two vetoes, overriding his disapproval of a $453 million education item and sustaining him on his rejection of a $541 million housing item. The net effect, if the Senate joins the House next week in overriding the education veto, will be to reduce by half the inflationary impact of the two items as gauged by the White House. If the Democratic leaders in Congress can trim other Nixon administration budget recommendations by comparable amounts, or even more, the inflationary impact on the economy will be neutralized.

But the inflationary aspects of the vetoes cannot be separated from the political aspects, since Mr. Nixon is using the two bills to underscore his criticism of the Democrats in Congress as big spenders, a criticism which is to be used this fall in the Republican campaign for more seats in the House and Senate. Mr. Nixon has made a strong effort to impress this general point upon the American people, and he is on firm ground in declaring that total appropriations cannot be expanded beyond present limits without adding new inflationary pressures. But it should be noted that 77 House Republicans voted to override the President's veto of the education item, whereas 101 voted on his side. On the housing item the President fared better: 22 Republicans voted against the President and 155 for him. Some House Republicans, in short, are ready to qualify as big spenders along with the Democrats.

One more note: the Appropriations committee now has to rework the $18 billion Independent Offices bill which Mr. Nixon vetoed because of the increased housing item. If the President had the so-called item veto, as he should, he could have vetoed the single item without disapproving the entire bill.

[From the Washington Star, Aug. 14, 1970]

TALE OF TWO VETOES

President Nixon has won half a victory in his current skirmish with Congress over inflationary spending legislation. The challenge to his veto of the housing and independent agencies bill failed in the House yesterday. That bill, which would have spent $541 million more than the President requested, now must be rewritten more to his liking.

Whether the President scores a complete tactical success in the present confrontation will be decided next week. The House overrode his veto of the Office of Education appropriations bill, a matter of $453 million more than the budget request. The fate of the bill now is up to the Senate.

The President's vetoes of the two appropriations bills were justified as part of the deadly serious fight to slow inflation. For if that fight is lost, attempts to achieve adequate funding levels for domestic programs—such as many of those provided for in the two bills—are doomed to frustration as cost increases nullify the benefits of the larger expenditures.

Fiscal restraint is the keystone of the President's anti-inflation policy, so it was not too surprising for him to register his third and fourth vetoes on bills calling for $1 billion more than his budget requests.

Many of the spending increases sought by the congressmen would be for worthy causes, and the President conceded this point in his veto message. "Taken individually," he said, "there is much that can be said in favor of every spending bill . . ." But from the overall perspective of the Presidency, the ailing national economy needs to be brought back to full health or there'll be need for dozens more social programs to relieve those victimized by economic dislocation.

Mr. Nixon also made the point that his budget already called for substantial increases in programs aiding education and urban areas, so the argument between him and the congressmen is not so much about cutting expenditures as about how much they should be increased.

Whatever the course of the political arguments, the policy of fiscal restraint to control inflation is a vital one, and it already is under too much strain, with the administration estimate of a $1.3 billion deficit for fiscal 1971, and other estimates running to $15 billion. Though the vetoed bills together would have had a spending effect much less than $1 billion this fiscal year, because most of the outlay would have been deferred, the President was thinking about the continuing integrity of his anti-inflation stance, looking beyond next June 30.

While the President's general position is unassailable, one point should be made about the independent agencies bill. It provided a $105 million increase for Veterans Administration medical programs, including the VA hospitals housing the most seriously wounded veterans of the fighting in Southeast Asia. That these young men should get less than the best treatment is just as unthinkable as providing our men in the field with poor rations or inadequate ammunition. Yet there is much evidence that VA hospitals are not meeting the high standards expected of them, and that the spending increase is more than justified.

In the rewriting of this bill, the increase for the veterans' medical program should be preserved. The required anti-inflation economies can be accomplished elsewhere.

The education bill, which may survive its veto, has the potent backing of the education lobby and the advantage of $126 million more than was budgeted for the impacted-area pork barrel. The President complained that Congress neglected his proposals for new education approaches, while fattening old unsatisfactory programs. The bill could stand a through rewriting, in the happy event the Senate upholds the veto the House chose to override.

Mr. GRIFFIN. Mr. President, I yield 5 minutes to the distinguished Senator from Delaware.

Mr. WILLIAMS of Delaware. Mr. President, I join the Senator from Michigan in expressing the hope that the Senate will sustain the President's veto.

This bill as it was passed by the Senate provided for $984 million more than the President's budget. It is true that the conferees did a fair job, but the conference report still provides for $453 million over the budget. Perhaps that is as good as they could do, but I do not think it is good enough because this represents an increase of approximately 10 percent in the budget on this one item. I think that at some point we have to stop and draw the line.

The education bill as it is before the Senate calls for $3.97 billion in appropriations. That is $972 million—even at the President's request—more than was expended for the same programs in fiscal 1969, or a 28-percent increase. Certainly that is as much of an increase in education as we can afford at this time.

This is not the only educational spending bill at the Federal level. All together, Federal spending on education will amount to approximately $12 billion this year.

Much has been said about our concern over inflation and the high interest rates.

Certainly high interest rates are a part of the inflationary spiral, but I invite attention to the fact that our Government has spent during the past fiscal year a little more than a billion dollars a month more than it is taking in. Our national debt, on June 30, 1970, was $373.4 billion. Just 1 year ago it was $356.9 billion, or an increase in the national debt in the past 12-month period, the last fiscal year, of $16.5 billion. Even figuring that the Government can finance that deficit at interest charges of 7 percent, which is below the rate they have been paying recently, that means that we will be paying this year about one billion and a quarter million dollars in interest just on the deficit that was created by Congress last year. Next year the deficit is projected at approximately $20 billion if Congress does not take prompt action to curtail expenditures.

I repeat, it will cost us in this current fiscal year about one billion and a quarter dollars just to pay the interest charges on the deficits created in the last fiscal year. I think the time has come when Congress must stop this continuous increasing of expenditures over and beyond our income.

There is no question that if this spending spiral continues we will have a sizable request next year for a tax increase to collect the necessary revenues from the people. It will mean that Congress will have to raise taxes next year substantially, or we will have to borrow money and further increase the debt, which only devalues the American dollar. We must cut back on spending; that is the only answer.

I know that education is a popular program. We all like to support it. The argument has been made that a vote to sustain the President's veto will be a vote against education. The conferees have not used that argument, and I am sure they would agree with me that it is not a valid argument. Such an argument is no more valid than to say that those who oppose the President's veto and who will vote to override the veto are against the taxpayers. Certainly this deficit spending hurts all taxpayers. This Congress must accept its responsibilities in regard to inflationary spending. The President, with all his authority, cannot spend a single dime that is not first approved by Congress.

Much has been said by various Members about our concern for inflation. On this rollcall vote there will be an opportunity to back up such speeches and our concern with a vote where it will really count.

I hope that the President's veto will be sustained.

Mr. GRIFFIN. I yield such time to the distinguished majority leader as he may need.

Mr. MANSFIELD. Mr. President, the proposal before us has to do with impacted aid areas, where the need is great, as well as assistance to elementary and secondary education and title I, ESEA, which takes care of or attempts to take care of the education of deprived children, audiovisual equipment and teaching materials, guidance and counseling, and supplementary services which is also for bilingual education.

Under the title, "Education for the handicapped," that includes early childhood educational program grants, basic State grants, deaf-blind centers, specific learning disabilities, and special teacher training programs.

Under vocational and adult education, it calls for increased basic grants to States for vocational programs.

In the field of higher education, it covers national defense student loans, community colleges, construction matching grants, land-grant colleges under the Bankhead-Jones Act, and community services, as well as audiovisual equipment.

Then in the field of community education, there are public libraries, services and construction grants, educational television, equipment grants, college library resources, and Library of Congress cataloging services.

Mr. President, the education bill provides about $450 million more to the educational systems of our country than the President requested. The President requested $3.97 billion. This bill provides $4.4 billion.

The Senate has already saved, through cuts in the military bill now pending before the Senate, three times the amount added for educational programs in the vetoed bill. This is responsible action by the Senate. It puts the needs of the Nation in proper perspective.

Congress will appropriate this year about $135 billion for the Government to operate. This means that for every American man, woman, and child, this Congress will appropriate for Government spending approximately $670. For the educational systems of our country, the administration requested to spend about $19.97 of each taxpayer's $670 for the education of our youth. Congress wanted to do more. It raised the $19.97 to $22 for the education of our youth.

But this was called inflationary. Let me remind the Senate that of each American's $670 to be appropriated this year for Government spending, $375 of each American's $670 goes for Defense Department spending.

The ABM request for spending this year alone will cost each American $7.

The SST request of the administration for just this year is $290 million—or $1.45 for each American.

The increase for education by the Congress in this bill is about $3 for each American.

It is so easy to vote millions for ABM's and SST's and then to reject money for the ABC's. The issue here is not Government spending, but national priorities—not priorities by rhetoric but priorities by action.

Mr. President, I hope that the President's veto will be overridden this afternoon.

Mr. GRIFFIN. Mr. President, I yield 5 minutes to the Senator from Oklahoma (Mr. HARRIS).

Mr. HARRIS. Mr. President, I rise to urge the Senate to override the President's veto of H.R. 16916, the Office of Education appropriation bill. In vetoing this bill the President stated that it was inflationary and that he was "saying no to bigger spending and no to higher prices in the interest of all the American people."

The decision we are asked to make on the veto is not limited to being for or against inflation or a balanced budget. The Congress has reduced other, less important Presidential spending requests, adding some of these savings to education funds. The basic question concerns whether we will put first things first in this and future fiscal periods. This, I think, the Congress did when it passed the education bill and the independent offices and Housing and Urban Development appropriation bill, approved by overwhelming margins in both the House and the Senate. The vote on the Education bill was 357 to 30 in the House and 88 to 0 in the Senate. We also passed the HUD bill by a vote of 70 to 8, while the House passed the measure by voice vote.

Mr. President, within a week or so, approximately 52 million young people will be returning to school. We will seriously jeopardize the educational opportunities of millions of children if the veto is sustained. Oklahoma's allotment under the facilities construction section of the bill is approximately $600,000. There are at least three new junior college construction programs in Midwest City, Oklahoma City, and Tulsa, Okla., which will be seriously affected if Federal matching funds are not available. Over $8 million in funds for student loans, $21 million for title I, $13 million in impacted aid, and various other educational programs designed to help the disadvantaged and the handicapped in the State of Oklahoma will be in jeopardy. The result will be confusion and delays in educational planning. The Senate will recall that it was not until March 5, 1970, that the Congress approved the 1970 HEW appropriation bill. If the veto of the education appropriation bill is sustained, I am doubtful that we will be able to get another bill through the Congress before the end of this year.

The present bill contains approximately $453 million more than the administration requested. Yet the $4.4 billion appropriation will still not meet the needs of education in America. As a matter of fact, Mr. President, it will not meet the needs of America in education.

On August 13, the House voted 289 to 114 to override the Presidential veto. I might add that this was not an exercise in partisan politics, as 77 Republicans joined 212 Democrats to override the measure. By overriding the veto, the Congress is saying that this Government can ill afford the luxury of limited investment in the education of our young people, and that the priorities of this country should give increasing emphasis to the resolution of the many domestic problems which confront us.

Therefore, I will vote to override the President's veto of this important appropriation bill, and I hope that the necessary two-thirds of the Senate will do the same.

The PRESIDING OFFICER. Who yields time?

Mr. GRIFFIN. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. GRIFFIN. Mr. President, I ask

unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. GRIFFIN. Mr. President, I yield to the distinguished Senator from West Virginia.

Mr. RANDOLPH. Mr. President, I have genuinely regretted the action of President Nixon in vetoing the Office of Education appropriations bill which has had the strong approval of both the Senate and the House.

I agree that financial resources must be apportioned very carefully by the Federal Government during the present economic conditions. However, I disagree with the Chief Executive over the extent of the funding limitations and impact which can be absorbed by our educational programs.

The future of too many Americans depends on these educational support funds. Our school systems are unable to meet the requirements of today's society due to lack of money. New ideas cannot be tried; special and progressive programs must be dropped; and America's young people must bear the consequences. Such a stationary position or forced regression in our educational system leaves scars which may never be healed and which may spread with time.

We must continue to have purpose and progress in our programs of education. We must realize that education funds are an investment in our human resources.

I think it is important to stress just what the Chief Executive requested this year for the Office of Education. The President requested $3.9 billion for the Office of Education. Congress approved legislation amounting to $453 million over this budget recommendation from the President. I think this was a vital increase, but I also think it was a modest increase. We approved $232 million over the President's budget request for elementary and secondary education; $10 million for education for the handicapped; and $54 million for vocational education. I was gratified earlier this afternoon to listen to the able Senator from Massachusetts (Mr. KENNEDY), as he outlined and emphasized the value of our vocational educational facilities. The Congress also approved a $110 million increase for higher education in the United States. Certainly Members of this body who are familiar with the situation in these rapidly changing and complex times believe these to be wise investments.

Mr. President, the appropriations bill vetoed by the President would provide an additional $6 million to West Virginia. This measure is important to West Virginia because of the funds involved, but I do not advance my case on just the situation in the State of West Virginia. I think of the situation throughout the country. The need for additional funds for education is urgent in almost every area.

I am gratified that the House of Representatives last week voted to override the Preident's veto. I am confident the Senate will also be successful in the endeavor this afternoon in overriding the veto. What we do here will be to reinforce the commitment of Congress to our educational programs, even with the President's disapproval.

I shall vote to override the veto.

Mr. DOLE. Mr. President, I plan to vote to sustain the President's veto of the Office of Education appropriation bill, and in so doing affirm my belief in the importance and priority of education in America. President Nixon has given the highest priority to education, and has proved his devotion to this priority by his education budget request for fiscal 1971.

President Nixon asked the Congress for $3.97 billion for the Office of Education, an increase of $972 million or 28 percent over the last year of the last administration and $152 million more than the record level appropriated last year. But the President has not limited his efforts to improve education to one area. Indeed, all Federal moneys for education in general during fiscal year 1971, will reach a record total of nearly $12 billion—a record commitment for this administration or any other.

Mr. President, I am opposed to adding $453 million to the administration's carefully prepared and balanced program. The Federal Government cannot continue to allocate money which is not in the Treasury. It is time that the Congress join the President in exercising restraint and responsibility in coordinating appropriations and budget requests. The American public knows that higher costs of living, higher interest rates, and higher taxes simply cannot be tolerated merely to satisfy the congressional urge to appropriate more and more money, when less and less revenue is coming in.

Also, I have serious reservations that this additional $453 million will provide the best value for our educational dollar. In President Nixon's message to Congress on March 3, he proposed far-reaching educational reforms to eliminate the old approaches that have proven inadequate, and asked for additional research funds to provide continual reassessment. He stated that as new confidence is gained that our education dollars are being wisely invested, the administration will ask for increased funding. Unfortunately, this bill bypasses the forward-looking programs of the President and ask for an additional $453 million to continue the old approaches that have proven inadequate.

Mr. President, I shall vote to sustain the President's educational veto because the appropriation of these additional funds are clearly not in the best interests of the American people.

Mr. President, I ask unanimous consent to have printed in the RECORD an excellent editorial entitled "Overriding the Veto," published in the National Observer on Monday, August 17, 1970.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

OVERRIDING THE VETO

Not even the most imaginative economist has been able to devise an alternative way of reducing the rate of inflation. There is only one way that works, and that is for the Federal Government to scale down or eliminate its budget deficits. To accomplish this, the Government must either raise taxes or cut spending or both. President Nixon long ago declared himself for controlling Federal spending.

It was in the light of this policy that the President decided to veto the education money bill that exceeded the Administration's request by almost half a billion dollars. Last week the House overrode the veto and this week the Senate is expected to take its own vote on the matter.

Throughout the hassle, many critics have attempted to depict Mr. Nixon as indifferent to the nation's school needs. And House Speaker McCormack has called the inflation issue a "scarecrow argument." Neither tactic will wash. Inflation is visible and ubiquitous, the Government continues to spend much more than it takes in, and a $4 billion request for education hardly suggests White House indifference.

The education measure would pump billions into the districts of congressmen, so its political appeal is large—especially in an election year. Too, there are few worthier ways to spend Federal funds than on the welfare of children. And whether to spend $4.4 billion, as Congress wants, or to spend slightly less than $4 billion, as the President prefers, is a question difficult for the average citizen to weigh on its merits.

But if one believes, as we do, that inflation is a paramount threat to the nation's economic health, then there can be no argument that steps should be taken to control it. Those steps involve meeting the nation's needs with careful consideration of the amount that can be spent safely for any given purpose. It is the President's judgment that $4.4 billion is too much to spend on education now.

Congress has replied that it disagrees, and in so replying it has cast doubt on its willingness to make the hard choices necessary if inflation is to be contained. At a time when the country faces yet another sizable Federal deficit, the action on Capitol Hill is regrettable. It is not within the power of the Administration to rein in inflation by itself, and Congress has now gone on record as saying that its help, to put it gently, will be exceedingly erratic.

Mr. HART. Mr. President, I will vote to override the veto of the appropriations bills for the Office of Education.

Under our system of government, Congress has a responsibility to help determine national spending priorities. Many of us in Congress have been trying to change those priorities, to redirect more of our effort toward programs in education, health, pollution control, and law enforcement.

My vote today is part of that effort.

In voting to override the veto we will be voting for a level of funding approved earlier this month by a Senate vote of 88 to 0.

When we considered the appropriations bill for education for the last fiscal year I had printed in the RECORD a State-by-State, program-by-program breakdown comparing funding levels under the administration's budget request and under the figures approved by the Congress.

So that Senators may have that information available on this year's appropriation bill, I ask unanimous consent that a similar breakdown be printed at the conclusion of my remarks. The information was compiled by the Emergency Committee for Full Funding of Education Programs.

There being no objection, the material was ordered to be printed in the RECORD.

DEPARTMENT OF HEALTH, EDUCATION, AND WELFARE—STATE TABLES OF 1971 BUDGET ESTIMATES
OBLIGATIONS IN THE STATE OF ALABAMA

Program	1969 actual	1970 appropriation after 2-percent reduction	1971 amended request	House allowance	Senate allowance	Conference report
OFFICE OF EDUCATION						
Elementary and secondary education:

[1] Initial year awards only.
[2] The 1969 actual column shows obligations for project-type programs where the State-by-State distribution cannot be predicted in advance, and therefore, is not shown in the 1970 and 1971 columns. For this reason the 1969 comparable figure excludes obligations for project-type programs.

Mr. PACKWOOD. I support the President's veto of H.R. 16916, the Office of Education appropriations for fiscal 1971. I have always been a strong supporter of educational programs, all the way from construction to research to student assistance. The Federal education budget has expanded rapidly in the last decade—from $886 million in 1960 to $5,389 million in the 1971 budget—and while there is still room for vast improvement, to say the least, we have gone a long way toward quality education for all Americans. The authorizing and funding legislation required to sustain this effort will continue to have my wholehearted support.

But neither the administration's nor my commitment to education is the issue here. The fiscal 1971 budget requested education outlays nearly $1 billion higher than the education outlays during the last year of the previous administration. It is obvious that the question raised by the President's veto is not whether to increase education spending, but rather over the size of those increases, and the types of programs which will benefit. The bill, as sent to the President, would spend more money for outmoded programs while cutting back on some of the innovative ideas so badly needed in our school systems today. For example, it would provide $126 million above the administration's budget request for the outdated and inequitable program of assistance to schools in federally impacted areas. I have always supported the principle of "impacted aid"—but the program in its present form pays millions to some of the wealthiest school districts in the country, while depriving some of the poorest and neediest districts of support they desperately need. The past four Presidents have tried to reform this costly pork-barrel program without success, and once again Congress is inflicting it on the American people—and asking them to pay the bill.

Having increased funds for this inequitable program, Congress then went ahead and cut back on some of the most promising of the administration's requests, for example, dropout prevention, economic opportunity grants and education research. No one can convince me that the increases for impacted areas could not better be spent for these worthy programs.

No, this veto cannot be interpreted as a lack of commitment to quality education on the part of the administration. Nor is there any substance to the claim that this is a case of misplaced priorities. The record also needs to be set straight here. The administration's budget request for national defense is down $7.7 billion from the last year of the previous administration, and the space budget is down $1 billion. Savings from defense and space cutbacks have been channeled into physical and human resource programs: Requested spending for community development and housing has nearly doubled during the Nixon administration. Allocations for human resource programs are up $18.3 billion under this administration, including requested spending increases of $1.3 billion for education and manpower, $3.3 billion for health, and $13.9 billion for veterans and income security programs. Simply put, President Nixon's requested national defense budget is about 10 percent below the defense spending level when he assumed office; his requests for human resource programs are up 27 percent.

Those are the facts—those who would distort the administration's record for their own political gratification would do well to spend just a moment examining the administration's record before continuing their specious tirade. This administration has made a sharp turnaround from the practices and priorities of the previous two Democrat administrations. False political claims to the contrary should be labeled as just that—false political claims.

In addition to achieving a significant realinement of priorities, the administration has been waging a determined effort to halt the inflationary spiral which has all but devastated the American pocketbook. During a decade of deficit spending under the two previous administrations, or public debt rose from $290.9 billion in 1960 to $374.7 billion in 1970. Interest on the public debt alone costs the American taxpayers $19.3 billion a year, or $53 million every day. Not only is this a horrendous burden in and of itself; it also exacts a heavy toll by forcing prices and interest rates for business and the consumer higher and higher and higher. Continued deficit spending and the inflation it causes hit hardest the working man, and those on fixed incomes.

We in Oregon are even more particularly aware of the disastrous impact inflation has had on the housing industry. So long as Government must borrow huge sums to finance its operations, money will be in short supply for the potential home buyer—another fact of life that the big spenders always seem to forget. Inflation will continue so long as we have deficit spending, and deficit spending will continue so long as Congress insists on spending more than it takes in in revenues. But spending is popular, taxing is not. So Congress takes the most expedient political route—spending without taxing. It is especially interesting to note that many of the Members of Congress who last year voted to reduce tax revenues are now voting for huge increases in Federal spending. Having voted to cut taxes, how can they now in good conscience vote to spend money that is not there? Every American taxpayer has learned that you cannot spend money that you do not have. But until Congress learns this same basic lesson, and begins to help the administration balance the Federal budget, we will see no end to this inflation. No, Congress is not doing the American taxpayer any favor by spending more than it earns in taxes. So long as this goes on, Congress is guaranteeing larger and larger deficits in the Federal budget, deficits which are then translated into inflationary price and interest increases for every American. During the short 30-month period between January 1968 and June 1970, the cost of living—as measured by the Consumer Price Index—rose 14 percent, the effective annual interest rate for conventional mortgages soared from 6.1 to 8.5 percent—an increase of 38.4 percent—and the purchasing power of a dollar in take home pay shrank to 86 cents.

These are the figures that the big spenders have apparently not examined, for I cannot believe they would wilfully choose inflation knowing the real price it exacts of each and every American.

An urgent choice is ours to make here today. We can vote against the administration's effort to bring inflation under control—to bring fiscal responsibility back into the Federal vocabulary. Or we can vote for further Federal deficits, further inflation, and a continuing price spiral. These are the issues and these are the choices. Inflation is the taxpayers number one enemy, so my vote will be on the side of a balanced budget. Mr. President, I, therefore, vote to sustain President Nixon's veto of the education appropriations bill in its current form.

Mr. PEARSON. Mr. President, I shall vote to override the President's veto of the education appropriations bill. I do so for a number of reasons.

First, I wholeheartedly agree with a pledge made by the President to the American people on October 1, 1968, and I quote:

> When we talk about cutting expenses of government, either Federal, State or local, the one area we can't shortchange is education.

Second, after the disruptive delays in the Federal funding of educational programs last year, to me there seems to be no alternative to overriding this veto. It is absolutely essential that the school districts have a firm idea of what their spending can be before the school year opens—and within the next 2 or 3 weeks, 52 million children will return to school across this land. Further delay will hurt thousands of school districts and colleges.

Third, there are many important line items in this appropriations bill. Funds for aid to impacted areas; funds for the handicapped or for the special programs under the Education of the Handicapped Act; funds for aid to colleges or higher education, including loans to students and grants for college work-study programs; funds for the Library Services and Construction Act, as well as funds for the education professions development; and funds for emergency school desegregation assistance. These are only a few of the vital programs funded by this bill.

Fourth, this vote today is, in my opinion, the establishment of priority spending. It is my conviction that the immediate, urgent educational needs of the American people and of the cities and towns throughout this country are deserving of the highest priority in the allocation of Federal funds and that these essential needs must be met as completely as we can reasonably do so within our legislative responsibility.

Fifth, when this bill passed both Houses of the Congress, there was not one single dissenting vote against it. It

passed the House by a vote of 357 to 0 and the Senate by a vote of 88 to 0. These votes show, in my opinion, that the Congress places the highest priority on spending funds for education.

Mr. President, I am in full agreement with the President wanting to exercise control over Federal expenditures and keeping budget deficits as close to zero as possible. I believe the President is correct in saying again that unless we control the level of deficit spending, or eliminate it altogether, we only prolong the day when the battle against higher prices and higher interest rates is won.

Unfortunately, the decision we face today is not limited to being for or against inflation or a balanced budget. We also must consider where we will place our priorities for Federal outlays in this and future fiscal years.

To my way of thinking, funds for education are not really an expenditure of our assets, but a sound investment in our country's future. It is with a clear conscience that I will vote to override this Presidential veto.

Mr. BURDICK. Mr. President, today we in the Senate are presented with one of those opportunities of putting into practice what we have long been preaching. We have been voicing clearly and repeatedly our strong desire to redirect some of the priorities of this Nation. Today, we have been afforded the opportunity of proving that our rhetoric is not just that. Today, Mr. President, we can take firm and direct action toward this end by overriding the President's veto of the education bill (H.R. 16916).

The President stated that his veto of the education bill was painful—but that it was necessary to hold down inflation. The President has repeatedly stressed that while many programs are worthwhile and deserving of full funding when viewed separately—he must consider each program as part of the whole Federal budget. Let us then consider the education appropriation bill in the context of the entire Federal budget.

The amount at issue between the President and Congress—$453 million—amounts to about one-tenth of 1 percent of the total Federal budget for 1971, and about one-fiftieth of 1 percent of the Gross National Product. Furthermore, for each $1,000 the administration now requests for spending from each American, $7.50 goes for elementary and secondary education, as opposed to $375 for military defense. The size of the entire education bill—$4.4 billion, is less than the cost overruns for some of our overgrown military projects.

Mr. President, I am for fighting inflation as much as anyone, but I must question the President's logic in continually asking the poor, the sick, and the schoolchildren to carry the burden of this fight, while at the same time supporting high cost overruns in our Defense Establishment, the SST, and a large space program.

Mr. President, concerning the vetoed education bill before us today, let us look closely at what we did to it. We provided for increases totaling $556 million, but we also provided for decreases of $103 million, making a net increase of $453 million—the figure the President used. Of the $556 million increase, $492 million was for direct grants to States and local governments. This, Mr. President, is most important to remember. The $492 million of the total $556 increase was for State and local grants—and not for money to be spent in Washington or wasted. This is not inflationary, but is a shift of the burden of taxation in this country.

The Federal Government is now paying only 8 percent of the cost of education. Just last week, 40 Governors attending a national meeting in Missouri unanimously adopted a resolution which set forth their conviction that a greater proportion of funding for education be borne by the Federal Government.

Mr. President, I represent one of the least populated States in the Union, and yet I am no less concerned with the quality of education offered in our country's sprawling urban areas than in its rural areas. I firmly believe in accepting the challenge of John Adams who said:

> The whole people must take upon themselves the education of the whole people and we must be willing to bear the expense of it.

What affects one part of this country—affects us all, and we must all realize this.

About 72 percent of the Nation's population now reside in metropolitan areas. The local property owners of the city areas are bearing the heavy school tax burden of this influx of population into their communities. On account of the increasing cost of living and the added school tax load, the vast majority of our people in both urban and rural areas are demanding increased school aid from the Federal Government. The effect of increasing local property taxes has become so great as to result in the increasing regularity of local school bond issues being voted down.

Finally, Mr. President, it must be noted that a vote for increased spending for education is neither inflationary, but is wise and farsighted spending. Unlike many other appropriations, education spending offers a return on the investment. For every $1 spent on education, $14 is returned in the future through taxation. An investment in education is an investment in our country's future, and is repaid many times and in many ways. A better educated people produce more and pay more taxes.

To override this veto is not inflationary—it is good economics. To sustain the veto would not be a true saving. It would only be a postponement which would result in additional costs later.

Mr. President, President Nixon stated in the fall of 1968 that—

> When we talk about cutting the expense of government—either Federal, State, or local—the one area we can't shortchange is education. . . . When you cut expenditures for education, what you are doing is shortchanging the American future.

Mr. President, these words could not be more true. Education is the best investment in the future of America that one can make. It is only through education that the real problems of our society can be dealt with. Anything less, as the President has said—would be to "shortchange" the American future.

Mr. President, when this bill was finally approved by the Congress after careful consideration, it passed this body by a vote of 88 to 0. Today, we can do no less than to override this veto.

Mr. MONDALE. Mr. President, we have been told that increased expenditures for education are inflationary and that it is necessary to vote smaller sums for these worthy programs in order to "hold down the rising costs of living." The truth is that the administration is trying to make education and health programs pay the price of other ill-advised and inflationary policies.

The administration's budget reflected significant decreases in a number of education programs, as compared to 1970. The recommended figure for the Supplementary Centers Title was down $10 million from 1970. Funds for vocational education were $30 million below 1970. The recommendation for impacted areas was down by $95 million. Other vital educational programs like those under title I of the Elementary and Secondary Education Act were recommended at the same level as 1970. This allowed no room for program expansion and improvement but, more significantly, it provided no funds to meet the rising costs which are experienced by education as well as by other Federal programs.

The same pattern emerged in higher education programs. The administration proposed a decrease of almost $20 million for NDEA loans. It proposed to drop all higher education facilities grants and, at the same time, to reduce funds for the facilities loan program.

What the administration recommended was, therefore, not a forward-looking budget. It was not even a "standstill" budget. In reality, it was a backward-looking budget.

In these circumstances, the Congress had no alternative but to act responsibly, and selectively, to increase funds for a number of education programs. The overall increase of $453 million in a bill exceeding $4 billion can hardly be regarded as excessive or irresponsible.

The Congress will surely reduce appropriations in other areas in order to permit the holding down of expenditures which the President has called for. What we need is the administration's help in attempting to cancel or defer unnecessary or low priority programs. I would like to see some of the burden of the fight against inflation borne by the ABM and other wasteful and unnecessary weapons systems. I would welcome a plea from the President to make reductions in the space program budget as a contribution to holding down prices. I do not want to place this burden upon the shoulders of our children. Investments in education are investments in the Nation's future.

The cost to my State of reducing the education appropriations to the level requested by the administration has been estimated at $10 million. The major portion of funds involved is for support of ongoing educational programs. Therefore, if these funds were not approved,

it would be necessary for the State and local governments to levy increased taxes in order to avoid program cutbacks. This will merely put more pressure on the seriously overburdened real estate tax base.

To finance the cost of the funds which would be lost to Minnesota under the President's recommendations, an average increase in taxes of 4 mills would be required. This would cost the owner of a house assessed at $10,000 $40 per year.

In my State, returning to the budget recommendations of the administration would cost public schools approximately $1.5 to $2.0 million under ESEA title I. Another $1.5 to $2.0 million would be lost under the impacted areas program. We would lose over $1 million under ESEA title III and NDEA title III. Another quarter of a million dollars would be lost if we were to return to the administration's proposals for the library services and construction program.

One of the most unwise reductions proposed by the administration is in the programs to support vocational education. We should be sharply increasing efforts in this important area, rather than cutting back. The conference committee's bill provided only a modest increase for this valuable program over the 1970 level. Cutting it back to the administration's figure would cost my State more than $1 million.

In higher education, the same situation applies. The University of Minnesota, alone, would lose about $2 million under the President's proposals. Students throughout the State are hard pressed for loan funds. The increased funds included in the bill for the NDEA loan program should permit many of them to continue their education.

The reaction from educators and public officials from my State has been overwhelming. I do not believe I have ever seen such strongly worded criticisms of a Presidential action by people in the education community. For example, the Minnesota Education Commissioner, Mr. Howard Casmey, wired the President in these words:

Deplore your irresponsible and politically motivated veto of educational appropriations bill. All people pay for public education and federal assistance is not inflationary. Give priority to human needs.

I believe the people know that this veto was politically inspired. The President was advised to approve the bill by many Congressmen from his own party. The bill was passed initially with the overwhelming support of Members from both sides of the aisle, in the House as well as in the Senate. The President is attempting to make it look as if a "spendthrift" Democratic Congress is causing inflation. Members of Congress know that this is not the case. Just as we did last year, we are reshaping the Nation's priorities through the spending powers entrusted to us under the Constitution.

I do not believe in playing politics with education. I urge my colleagues to reject the President's veto and to join in the campaign for economies in other areas.

I ask unanimous consent that a number of telegrams from educators in my State be printed in the RECORD.

There being no objection, the telegrams were ordered to be printed in the RECORD, as follows:

MINNEAPOLIS, MINN.,
August 13, 1970.

Hon. WALTER F. MONDALE,
Senate Office Building,
Washington, D.C.:

Your support requested for overriding veto of Education Appropriations Act. Education basic human need and noninflationary and must have high priority.

HOWARD B. CASMEY,
Commissioner of Education.

MINNEAPOLIS, MINN.,
August 17, 1970.

Hon. WALTER F. MONDALE,
Washington, D.C.:

Minnesota education association representating more than 40,000 thousand educators in public and private elementary secondary and higher education urges that you support efforts to override the veto by President Nixon of the HEW appropriation bill. Candidate Nixon in the fall of 1968 made the following statement to the teachers of America "seeing to 1' that young Americans are the best educated in the world, seeing to it that education is available to all our people, seeing to it that those who don't have an equal chance at the starting line are brought up to the starting line—this is the primary American objective. At budget cutting time. This is one area that must not be short changed. To do so would short change the future of our children and of our Nation."

"Investments in education are investments in our children. The kind of country they will live in, quality of life they will lead. Education is the one area in which we must not be miserly in which we must do everything necessary to help achieve the American dream."

Not only is the President's action unconsciousably but a serious threat to Minnesota programs that are already under way for the fall term. His action would cost Minnesota schools approximately 10 million dollars and would wipe out a substantial amount of the vocational school aid program, at a time when vocational education is badly needed.

The Congress must insist on establishing realistic national goals and redirecting national priority. To cut educational efforts under the guise of economy is indeed false economy and far more serious than might be realized.

A. L. GALLOP,
Executive Secretary Minnesota Education Association.

ST. PAUL, MINN.,
August 14, 1970.

Senator WALTER F. MONDALE,
Senate Office Building,
Washington, D.C.:

Contrary to Nixon's belief that the education increase "is not in the best interest of all the American people" we urge you to vote to override Nixon's veto of the education bill in order that we may become minimumly equipped to meet the challenges of the 70s.

FLORA ROGGE,
President Minnesota Federation of Teachers.

ST. PAUL, MINN.,
August 12, 1970.

Senator WALTER F. MONDALE,
Senate Office Building,
Washington, D.C.:

350 superintendents of schools meeting in Saint Paul for their annual summer meeting urge passage of the educational bill over the Presidential veto. These funds are urgently needed.

LE ROY HOOD,
Legislative Chairman Minnesota Association of School Administrators.

MINNEAPOLIS, MINN.,
August 17, 1970.

Hon. WALTER MONDALE,
Old Senate Office Building,
Washington, D.C.:

Urge your continued support of public education. Minnesota students need better education.

JOHN B. DAVID,
Superintendent of Schools, Minneapolis.

RICHARD F. ALLEN,
Chairman. Board of Education.

ST. PAUL, MINN.,
August 17, 1970.

WALTER F. MONDALE,
Senate Office Building,
Washington, D.C.:

Urge you to override the President's veto of Education Appropriation Bill H.R. 16916.

Mrs. G. THEODORE MITAU,
Vice Chairman,
St. Paul Board of Education.

DULUTH, MINN.,
August 13, 1970.

Senator WALTER F. MONDALE,
Senate Office Building,
Washington, D.C.:

Urge that you vote to override the President's veto on education.

LEROY MESEDAHL,
Supervisor Audiovisual, Duluth Schools.

ST. PAUL, MINN.,
August 12, 1970.

Hon. WALTER F. MONDALE,
U.S. Senate,
Washington, D.C.:

It is imperative that Congress votes to override the President's veto of funds for education. Please vote to override the veto.

GEORGE P. YOUNG,
Superintendent of Schools.
ST. PAUL, MINN.

ST. PAUL, MINN.,
August 11 1970.

Hon. WALTER MONDALE,
U.S. Senate,
Washington, D.C.:

$350,000 addition to our vocational school depends on override President's veto urge your support.

A. L. NELSON,
Superintendent.
WINONA, MINN.

HIBBING, MINN.

Senator WALTER MONDALE,
Senate Office Building,
Washington, D.C.:

Presidential veto on education irresponsible priority of military over national educational needs urge continued dedication to children by overriding President's veto.

RON CARLSTROM,
Northern Organizer,
Minnesota Federated Teachers.

NEWBRIGHTON, MINN.,
August 12, 1970.

Senator WALTER MONDALE,
Senate Office Building,
Washington, D.C.:

Request that you vote to over ride the President's veto of education appropriations bill and expedite funding.

DON MURPHY,
Legislative Chairman Audiovisual Coordinators Association of Minnesota.

HIBBING, MINN.,
August 12, 1970.

Senator WALTER MONDALE,
Senate Office Building,
Washington, D.C.:

The Iron Range Council of Teachers strongly protest Nixon's veto of the education bill. We respectfully request that you use the prestige of your office and speak out publicly to tell the people of the folly of a veto that cuts aids to education while other less important budget items are being expanded.

GABRIEL BRISBOIS,
Iron Range Council of Teachers
Publicity Chairman.

MINNEAPOLIS, MINN.,
August 12, 1970.

Senator WALTER MONDALE,
Senate Office Building,
Washington, D.C.:

We urge you to continue your strong support of education by voting to over ride the veto of the education bill. Thank you for your past efforts.

GEORGE BESKE,
Legislative Chairman,
BOB HILLEMAN,
Executive Secretary,
Hennepin Division, Minnesota Education Association.

Mr. CURTIS. Mr. President, the question before us is—shall we support the President of the United States in the veto of the appropriation bill for education? All citizens are interested in education, but this bill has unusual significance for those school districts that have been designated "impacted areas."

An example of an impacted area is a school district close to Offutt Air Force Base in Nebraska. This happens to be the public schools of Bellevue. I understand that approximately 78 percent of the enrollment in the Bellevue schools is children coming from the homes of the military. This indeed has an impact—a very great impact—on that school district. Other schools in that immediate area are likewise seriously affected. This added cost of maintaining the school districts in such impacted areas should be borne by the Federal Treasury. The U.S. Air Force, as well as all branches of our military forces, exists for the benefit of all the people of the United States and all the people should share in the cost of maintaining our military.

The bill the President has vetoed calls for an appropriation of $4.4 billion. We should keep in mind that only about one-eighth of that amount is used for impacted areas. In my opinion, the impacted areas program should have first priority for all moneys appropriated because it is an education expense that should be borne by the Federal Treasury. I think it can be safely said that the controversial features of this appropriation bill center around those programs other than the funds for impacted areas and around the funds for impacted areas that in no sense involve the military.

I think it is well that we examine President Nixon's budget for education. President Nixon recommended a total appropriation for this bill of $3.9 billion. If we compare this with the last Johnson budget for education, we find that President Nixon has been much more liberal. The last Johnson budget was for $3.4 billion.

Last year's appropriation bill was likewise vetoed. That veto was sustained. Let us examine the figures. The Congress was 6 months late in getting that bill passed. It was not passed until January. On January 26 the bill was vetoed. This education appropriation bill that was vetoed at that time was for $4.2 billion. This veto was sustained by a vote of the House of Representatives on January 28. Within 22 days thereafter the House of Representatives passed a new bill. This was subsequently passed by the Senate and signed by the President on the 5th day of March 1970. It appropriated the sum of $3.8 billion. The taxpayers were saved $400 million by the veto power of the President.

It is interesting to see how the funds for impacted areas fared last year. The amount provided for impacted areas in the bill that President Nixon vetoed last year was $505 million. In the bill that Congress passed soon after the veto was sustained there was provided for schools in impacted areas $505 million. In other words, the veto of last year, which ended up in a savings to the Treasury of $400 million, did not reduce the amount of money provided for impacted areas. Practically the identical amount was carried in the second bill for this purpose as was carried in last year's bill that President Nixon vetoed.

Mr. President, no one disputes the fact that should the President's veto be sustained that the Congress would proceed immediately to pass another appropriation bill for a total amount acceptable to the President. No evidence has been submitted to indicate that in such a case the reductions for the new bill would be taken out of programs other than the program for impacted areas just as was done in last year's appropriation.

If my memory serves me correctly, the impacted areas program was brought into being because of the impact the military had on so many school districts. This program should be reformed to conform to that original intent. It has been expanded by Congress over the years to include many categories other than military. For instance, many Government workers in Washington, D.C., choose to live in nearby Maryland or Virginia. These people are permanent employees of the Government. They pay whatever income taxes, sales taxes, real estate taxes, and personal property taxes the other residents of those two States pay. They live over a wide area. They are well-paid, well-housed citizens and there is no equitable reason why the Federal Government should, from the impacted aid fund, make a payment to the school districts where these children attend. Yet that is the case to the tune of millions and millions of dollars. We desperately need a reform of the present law pertaining to aid for school districts in impacted areas. This problem will not be solved by overriding the President's veto. In fact, such action may contribute to further delay in meeting this issue squarely and paying in full the just cost of the education of the children whose fathers have been ordered into that particular school district by the Federal Government as part of the total defense of our country. The bill before us today calls for a total of $551 million for aid to impacted areas, but more than $250 million of that amount is for children whose parents are not connected with the military but fall in such categories as mentioned above in the Maryland and Virginia area near Washington, D.C.

The law for aid to impacted areas should be reformed, not only as to the categories that are to be included in what constitutes an impacted area but also attention should be given to the percentage of the children falling in such categories as compared with the total enrollment in the schools. It would seem to me that if the added burden on a school district by reason of a military installation does not increase the enrollment of that school by more than 8 or 9 or possibly 10 percent, that the school district involved should absorb that extra load without any special Federal aid because the existence of a military establishment does generate considerable business wherever it is located. If this problem is met, there would always be ample funds to take care of the full entitlement of those school districts that have been called upon to carry such a great extra load.

Finally, Mr. President, is there any broad, fundamental reason for supporting President Nixon's veto? The facts speak for themselves. I hold in my hand the last printed daily statement of the Treasury Department. The national debt, subject to limitation, stands at $378.9 billion. This statement shows that 1 year ago the amount was $360.3 billion. In other words, in 1 year the national debt has increased by $18.6 billion. This is because the Congress spends too much money. I would also like to call attention to the fact that this year the cost of paying the interest on the national debt will exceed $20 billion. This interest load must be carried before there is $1 available for any other purpose of Government no matter how meritorious. To go on increasing the national debt will not help the schools of the country. It will not help anything or anybody. It will mean, among other things, that the interest load which must be paid first will be greater next year and in all the years to come.

Mr. President, again I point out that there has been no evidence submitted that if President Nixon's veto is sustained that the schools in impacted areas will receive less than the amount carried in the vetoed bill. They did not last year. They ultimately got the same amount of money that was carried in last year's bill that President Nixon vetoed and which was sustained by the Congress.

The basic question before us is: Shall this bill in the overall be for the amount recommended by Mr. Nixon's budget of $3.9 billion, or shall that budget be exceeded by $500 million?

Mr. MILLER. Mr. President, it would be terribly unfair and unrealistic to draw the conclusion that the President's veto of the Office of Education Appropriations bill and a vote to sustain the veto are at all indicative of any lack of concern over the needs of education. In fact, if one realizes that the President's budget request for Elementary and Secondary Ed-

ucation was $138 million more than the fiscal 1969 appropriation under the previous administration, it is evident that the President is acutely aware of the need for increased funds.

This awareness and concern must, however, be measured against the availability of money in the Federal Treasury.

Early this year I pointed out that those in control of the Congress had made a decision on the No. 1 priority. That decision was made when, after doing an outstanding job on tax reform and picking up billions of dollars in additional revenue, those in control of the Congress decided to use that extra tax money for what I have termed excessive tax relief. The result was that the money needed for various high priority programs simply is not in the Treasury. It is gone. All other programs—education, health, pollution control, and the like have to take lower priority.

And so, looking at the availability of the money the Congress has given the Treasury, the President has had to construct a budget which, in some areas, does not call for spending as much as he wished. This leaves two alternatives: First, to keep spending within the limits of the Treasury's funds; or, second, engage in more multi-billion-dollar deficit spending, with the inevitable consequence of continued inflation and high interest rates. The President chose the first alternative, and I am quite sure that one reason he was elected was because the people of our country were deeply hurt and alarmed over the inflation which they were suffering under because of the unwise fiscal policies of the previous administration and the Democrat-controlled Congress which put them into effect.

Now we have a President with sound fiscal policies, but we still have the same control of the Congress and the same proclivity to spend billions of dollars more than our taxes produce. It would not be so bad if those in control of the Congress would be willing to impose tax increases necessary to meet the increased spending they promote, but they are unwilling to do this and prefer, instead, to let the people of our country continue to suffer under inflation and high interest rates.

I have consistently complained about the deficit spending by those in control of the Congress, and I have consistently voted for amendments to reduce expenditures so that our Federal Government would live within its means. Indeed, I am one of the few Members of Congress who has publicly advocated a continuation of the 5-percent surcharge in order to cover some of the additional appropriations being voted.

In looking at the conference report on the education appropriations bill, which the President vetoed, there are four major items to be considered. Moreover, these should be considered against the fiscal 1970 appropriations, because if the veto is sustained, the Congress will continue the appropriations for education at the level established for fiscal 1970.

The first item is elementary and secondary education, with the conference report $232 million over the fiscal 1970 level. Iowa's share of this overage would be only $3.2 million. The second item is Federal aid for impacted areas, with the conference report $31 million over the fiscal 1970 level. Iowa's share of this overage would be only $100,000. The third item is vocational and adult education, with the conference report $75 million over the fiscal 1970 level. Iowa's share of this overage would be only $1 million. And the fourth item is higher education, with the conference report $117 million over the fiscal 1970 level. Iowa's share of this would be none, because we would go down $500,000 on construction money and up $500,000 on NDEA loans. Moreover, the administration's program of guaranteed student loans—as distinguished from direct NDEA loans—is calculated to greatly increase the number of students who will be able to participate in loan programs; and a pending bill to improve the secondary market for such guaranteed loans is going to encourage banks and other lending institutions which are presently having a liquidity problem.

From the standpoint of my own State of Iowa, then, the impact of the veto and a sustaining of the veto would be minimal—compared to what would happen under a continuation of funds at the fiscal 1970 level. However, if the veto were sustained, I am entirely confident that a compromise could be worked out between the administration and the Congress, just as was done last January with the bill that was vetoed then, so that some of the increases would take place.

Measured against the inflationary harm arising from spending hundreds of millions of dollars more than is available in the treasury—not only in this bill but in others as well, against the very small difference to my State between the fiscal 1970 appropriation level and that provided in the conference report, I am satisfied that a vote to sustain the veto is the prudent course to follow. I might add that no one should realize the seriousness of the impact of inflation and high interest rates more than those directly involved in education. The single greatest aid to education the Congress could render would be to put a stop to inflation and high interest rates. And this means keeping Federal expenditures in reasonable balance with Federal tax revenue.

Mr. MONTOYA. Mr. President, the Wyoming primary election is being held today, which explains the absence of the senior Senator from Wyoming (Mr. McGEE). Senator McGEE has asked that I present his view on the pending question before the Senate, the President's veto of H.R. 16916. I am pleased to ask unanimous consent that his statement be printed in the RECORD.

There being no objection, the statement by Senator McGEE was ordered to be printed in the RECORD, as follows:

STATEMENT BY SENATOR McGEE

Mr. McGEE. Mr. President, there is a philosophical gap separating my view of this bill from that of the President, who said in his veto message that he flatly refused "to go along with the kind of big spending that is wrong for all the American people."

It is my unswerving opinion that funds spent for education cannot be called expenditures, really. They are in fact an investment in this country's future. And certainly they are not wrong for the American people. What is wrong, in my view, is any attempt to make education the scapegoat for inflation.

With the opening of a new school term just around the corner, it is imperative that the Senate join the House of Representatives and vote to get these funds on their way to the schools and colleges and libraries before the academic year begins, thus giving education the type of priority treatment it deserves in this country.

There really is no partisan issue involved here. We dare not make education a partisan issue, for it is so vitally essential to the future well-being of the country. That importance was recognized by the Senate before when it approved this bill and when it approved the Conference Report without dissent. We voted for increasing the Federal government's effort in education. We voted for greater allocations for impacted school districts, for education of the handicapped, for vocational education and supplementary services. We wanted to aid land-grant colleges and university community services, allocate more money for community college construction and for libraries and educational broadcasting facilities. I am sure we still want to do these things.

I am confident, Mr. President, the Senate will vote for the people once again and choose to override this veto.

Mr. MATHIAS. Mr. President, I shall vote to sustain the President's veto of the education appropriations bill.

The national priorities being established for the coming year by a majority of the Congress are not the priorities that I would wish to set myself. Yet the fact has to be accepted that we are now, or are about to be, committed to the expenditure of billions of dollars for various programs about which I have the severest reservations, such as continuing an agricultural subsidy program that is obsolete and purchasing an anti-ballistic-missile system that is premature.

This money has been spent—it is gone and we are not fiscal wizards who can spend it twice. No new sources of revenue open up before us.

The President is correct in pointing to the fiscal dangers that confront the Nation. The new economics impose restraints that are painful, but nevertheless mandatory. The plain fact is that we have eaten our cake, and cannot now have it too.

The educational community stands to lose as much if not more from increased or continued inflation as any other segment of our society. Today's high costs in elementary, secondary and higher education are directly related to inflation and the increasingly larger bite it takes each year from the needs of American students. I am deeply concerned about our educational system. I think it needs more financial help rather than less. But if inflation continues, perhaps rises this year, the additional 5 percent, 6 percent, or 10 percent it will cost will be deducted not only from Federal appropriations, but from local and State as well as National school funds and will be far greater than the amount in dispute in this bill.

The President has, in effect, asked us to take a second look. His request follows other significant congressional decisions, examples of which I have already mentioned. It is my opinion that

we should take that second look in the light of current conditions. It may well be that Congress will decide again that the amount provided in the bill is irreducible and will determine to risk the larceny of inflation. But the President has done his duty by flagging the Congress and the Nation of the danger. We should do our duty by reexamining it.

In addition to his specific warning with respect to this bill, President Nixon has accurately and helpfully highlighted the continuing fiscal problem of our generation: whether we can simultaneously have guns and butter. This question has been raised in the context of the war in Vietnam. President Nixon is himself directly addressing the problem by his participation in the SALT talks aimed at reducing our heavy expenditures for strategic arms. But the problem persists and must be confronted honestly and candidly each time it presents itself for a new determination. I do not like the answer I feel compelled to give today. In the past I have voted against farm subsidies and the ABM and other untimely expenditures and so could rationally justify another position. But no rationalizing will alter the facts or change the figures. Inflation is a real and present danger to America's schools, teachers, and students. I shall vote to avert that danger.

EDUCATION AT HOME DESERVES OUR COMPLETE SUPPORT AND OUR VOTE

Mr. McINTYRE. Mr. President, the House has seen fit to override Mr. Nixon's veto of the education appropriations bill. I hope that we in the Senate have the same foresight.

It is only fair to concede that adjusting our priority needs at home and abroad is a delicate procedure when inflation must be fought at the same time. But the administration erred when it measured educational funding with the same yardstick used to gage the worth of other programs.

Because its impact is so broad and so deep, the worth of education is, indeed, immeasurable, and this fact alone should assign it maximum priority.

The greatest wealth of any nation is its citizenry. And the citizens of tomorrow are the schoolchildren of today.

Any investment made in the cause of their education—be it time, energy, or money—will return dividends far beyond the original cost. By the same token, any cutback in funding will reap negative consequences which will be felt more and more profoundly with every passing year.

No one appreciates this fact more than the educator—the teacher, the principal, the superintendent of schools, the school board and all the others working at the vital task of educating our children. Sometimes I fear we may forget the devotion and dedication of those who go quietly about their work day after day to give our young people the kind of knowledge and training that will fit them for a life of accomplishment.

Mr. President, the amount at issue between the President and Congress is $453 million. On the surface, this would appear to be a substantial amount. But, when we consider that this figure represents barely one-fifth of one percent of the total Federal budget for 1971—and only one twenty-fifth of 1 percent of the gross national product—perspective is restored.

The expenditure of an additional $453 million for education—at a time when we are spending billions on many other programs—we spend 15 times this much for farm subsidies—quite obviously takes on a different appearance.

But this same amount will make a great deal of difference to our students and to the educators who are trying to upgrade the quality of schools and teaching, and, ultimately, the quality of national life itself.

If it is not overridden, the President's veto will be a blow to schools everywhere including those in my own State of New Hampshire, where the need for Federal support of education is great.

It means that New Hampshire will lose $3.8 million—or roughly $5 per taxpayer.

We will lose $2,740,000, for instance, in funds for elementary and secondary education.

Of this amount, $2,277,000 will be lost to our schools in impacted areas along the seacoast—Dover, Portsmouth, Newmarket and other communities.

We will lose $560,000 for our colleges and other institutions of higher education.

And we will lose $175,000 in funds for our vocational and adult education institutions—$98,000 in funds for education of the handicapped—and so on down the line.

New Hampshire can ill afford such a setback.

Then, too, Mr. President, there is another consideration—time.

If the veto is sustained, the whole process of drawing up, considering, and voting on new legislation will begin again, with no assurance as to when the new bill would be enacted.

This means that in just a few weeks 52 million children would return to a school situation fraught with uncertainty.

A delay in the allocation of Federal funds to thousands of school districts and to thousands of colleges will hurt—not just the schools and the teaching process—but most importantly, the students.

As many parents—and most teachers—recall, this was the case last year when the President vetoed the education bill.

To prevent any delays this year, the Congress resolved to complete action before the start of the school year, so that school administrators would at least be able to plan on the use of funds for the year. Both House and Senate were successful in finishing their work this July.

However, the veto has interrupted the action and if it is sustained, all of our efforts will have been in vain. A repetition of last year's unfortunate situation will occur. School districts will be forced to rearrange schedules, to cut back on important programs, and in some cases, to close schools altogether. And, most important of all, in order to maintain minimum educational standards, our taxpayers will be called upon to make up the difference between funds available and funds required in local taxes.

Mr. President, it is my sincere hope that we can prevent this situation. To do my part, I will vote to override the President's veto, and thereby reaffirm my conviction that education continues to be vital to our Nation.

CHILDREN HAVE RIGHTS, TOO

Mr. MONTOYA. Mr. President, last week America was taken aback by the veto of two critical appropriations measures by the President. The first bill contained funds Congress voted for housing, medical care for veterans, urban renewal, and water and sewer facilities.

We have heard much wailing these days about the plight of America in terms of domestic disorder. Our total national environment drastically requires reordering, restructuring, and reform. The vetoed funds I have already mentioned were a minimum attempt to hold back a tide that threatens to inundate the Nation. That veto has been sustained. What, then, will it mean? Urban renewal, new Government-aided housing, and other essential programs will be indefinitely delayed unless something is done.

In my own State of New Mexico, every metropolitan area will suffer accordingly. Those most in need of assistance will be hit most directly. Slums will continue to creep across the land. Urban blight will spread. Acute suffering and alienation will be their offspring. What we sow today, we shall reap tomorrow. Most lay people usually pass over water and sewer funds with but a passing glance. It is just not a subject that sets the national eyeballs atwitch, but I wonder how many people know how much a decent water and sewer system can and does mean to all the people in New Mexico. Their citizens have worked and scraped for years to come up with local money to make water and sewer systems a dream come true. Now, in many places across New Mexico, those dreams will be deferred.

Filth and danger of disease will have to be endured for still longer by thousands of people whose only sin is to want adequate water and sanitation facilities. Yet even more inexcusable is the veto of funds for medical care for our veterans. We are engaged in an endless struggle in Asia. Its harvest is death, disease, and crippling injuries. I shall not dwell now on arguments pro and con of this war. If we are to deny essential medical care to veterans of this and our other wars, we act in the most immoral, callous manner imaginable.

In New Mexico there is one old, short-of-funds facility to serve needs of 134,000 veterans, whose numbers are growing constantly. To veto funds for their treatment is one of the shabbiest ways of saving money any government ever indulged in. I wish to place myself on record as wanting to have no part of such a denial. In fiscal year 1969, my State received $51,333,403 for VA use for our veterans. That figure speaks for itself.

Yet it is the second veto, of the education appropriation measure, that has the least to recommend it. Here is where the Senate must act to override. The right of every American youngster to a decent educational opportunity is not negotiable. It is an utterly astounding act to veto such an integral portion of America's

future. Already, we can see decay setting in on various levels of our national education structure. Student loan funds are failing to meet requirements across the Nation. As inflation grows and grows, parents are finding it impossible to cope with skyrocketing education expenses. Student loan funds, which have meant a difference to so many young people by filling the gap, have been cut and cut again. How many will have to drop out of school because of their lack of availability?

Private schools are steadily closing across the Nation. We have just had several instances of this in Albuquerque. Everyone bemoans this. Everyone wails, wrings his hands, and murmurs about how it is too bad that a school had to close—that it could not keep its doors open any longer. But vetoing an education appropriations measure adds to it—compounding difficulties. Where are the bemoaners? Where are the sorrowers? Our children need help. This is not a partisan issue. Education is too essential for mere partisanship. The Senate affirmed this by approving the bill and the conference report without dissent. We all voted to increase the assistance of Government to education. To help impacted school districts with more money. For educating the handicapped. For vocational education. For libraries and educational broadcasting. We must continue to do these things. A shudder went through America's educational system because of this veto. It threatens the very structure of aid to education we have worked so hard over so many years to establish. This work was done by both parties over several administrations. It has been done in the name of our future—our heritage—our children. The Soviet Union does not shortchange its young in terms of education. While we battle to override a veto of education funds, they are building science cities and new technical institutes. So are the Chinese. So are our allies and industrial competitors.

My State of New Mexico is not a rich State. Our economy is fragile. Our tax base is slim, depending greatly on Federal aid to education, which has made significant differences across New Mexico in recent years. Many a child and young student in my State has received better educational opportunity because of Federal aid to our educational system. It is this lifeblood of finance that today stands endangered by the recent veto of the education appropriation.

In 1970, New Mexico received $29,033,563 in Federal aid to education. The President asked for $18,933,951 for my State in fiscal year 1971 in his budget request. Under the now-vetoed education measures, New Mexico would have received $33,379,172 in fiscal year 1971.

Just last week, Mr. President, the administration asked this body to approve an expansion of the ABM system. Here is what may very well turn out to be a $50 billion boondoggle. Here is a weapons system every physicist of stature in the Nation, when asked, has questioned the reliability of. Here is perhaps the ultimate in wasted military expenditure. Yet we are called upon to pass it, throw away the desperately needed cash, and call ourselves a responsible body.

But the education money is expendable. Surely this is an astonishing reversal of priorities. Surely there is something wrong when our veterans care is set aside. When sewer and water systems cannot be built. When housing and urban renewal funds are slashed and vetoed. And now we are told to watch helplessly while aid to impacted schools, to vocational education, to teacher training, bilingual education, student loans, all goes down the national drain. I think not, Mr. President. I believe education is too important. One does not try to reform transport by putting the horse into the cart. I shall vote to override the veto of the education bill.

Mr. GRIFFIN. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

The PRESIDING OFFICER (Mr. BELLMON). Under the previous order, the Senate will now proceed to vote on the question, Shall the bill pass, the objection of the President of the United States to the contrary notwithstanding?

The Constitution requires that this vote shall be determined by yeas and nays.

Mr. MAGNUSON. Mr. President, may we have order so that we can hear the rollcall?

The PRESIDING OFFICER. The Senate will please be in order.

The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. DOMINICK (when his name was called). On this vote I have a live pair with the Senator from Alabama (Mr. SPARKMAN) and the Senator from Wyoming (Mr. MCGEE). If they were present and voting, they would vote "yea." If I were permitted to vote, I would vote "nay." I therefore withhold my vote.

The rollcall was concluded.

Mr. KENNEDY. I announce that the Senator from Alaska (Mr. GRAVEL), the Senator from Wyoming (Mr. MCGEE), and the Senator from Alabama (Mr. SPARKMAN) are necessarily absent.

I further announce that, if present and voting, the Senator from Alaska (Mr. GRAVEL) would vote "yea."

Mr. GRIFFIN. I announce that the Senator from Arizona (Mr. FANNIN) and the Senator from Florida (Mr. GURNEY) are necessarily absent.

The Senator from South Dakota (Mr. MUNDT) is absent because of illness.

If present and voting, the Senator from South Dakota (Mr. MUNDT) would vote "yea."

If present and voting, the Senator from Arizona (Mr. FANNIN) would vote "nay."

The yeas and nays resulted—yeas 77, nays 16, as follows:

[No. 259 Leg.]

YEAS—77

PRESENT AND GIVING A LIVE PAIR, AS PREVIOUSLY RECORDED—1

Dominick, against.

NOT VOTING—6

Fannin	Gurney	Mundt
Gravel	McGee	Sparkman

The PRESIDING OFFICER. Two-thirds of the Senators present and voting having voted in the affirmative, the bill, on reconsideration, is passed, the objections of the President of the United States to the contrary notwithstanding.

Mr. MAGNUSON. Mr. President, I move to reconsider the vote by which the bill, on reconsideration, was passed.

Mr. PELL. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

AUTHORIZATION OF APPROPRIATIONS FOR MILITARY PROCUREMENT AND OTHER PURPOSES

The PRESIDING OFFICER (Mr. BELLMON). The Chair lays before the Senate the unfinished business, which the clerk will state.

The ASSISTANT LEGISLATIVE CLERK read as follows: A bill (H.R. 17123) to authorize appropriations during the fiscal year 1971 for procurement of aircraft, missiles, naval vessels, and tracked combat vehicles, and other weapons, and research, development, test, and evaluation for the Armed Forces, and to prescribe the authorized personnel strength of the Selected Reserve of each Reserve component of the Armed Forces, and for other purposes.

The PRESIDING OFFICER. The Senate will be in order. Under the previous order, the Senator from Colorado (Mr. ALLOTT) is recognized for 15 minutes.

Mr. ALLOTT. Mr. President, two or three Senators have asked that I yield to them for brief insertions. I ask unanimous consent that I may do so without the time they take being charged to my time.

The PRESIDING OFFICER. Without objection, it is so ordered.

S. 4260—INTRODUCTION OF THE FEDERAL-AID HIGHWAY ACT OF 1970

Mr. RANDOLPH. Mr. President, today I introduce the Federal-Aid Highway Act of 1970. The wide range of concern within the Senate for the important matters dealt with in this bill is expressed by the fact that 26 Senators have joined as cosponsors. They are Senators COOPER, ANDERSON, BAKER, BAYH, BOGGS, BURDICK, CANNON, DODD, DOLE, EAGLETON, EASTLAND, GRAVEL, GURNEY, HARTKE, HOLLINGS, INOUYE, JACKSON, MCGEE, MONTOYA, MOSS, PACKWOOD, PERCY, SPARKMAN, SPONG, STEVENS, and YARBOROUGH.

The Subcommittee on Roads of the Committee on Public Works has completed 15 days of general highway hearings, hearings conducted to build a body of knowledge and viewpoints on which to base this bill. The subcommittee will conduct additional hearings on August 25 and September 9, 10, and 11. On August 25 we will review the implementation of the National Environmental Policy Act as it relates to highways, and on September 9 the Secretary of Transportation will discuss the Federal-Aid Highway Act of 1970 with us.

At the outset of our hearings this year, I said that highways must be viewed not as entities unto themselves, but as a tool for achieving broader public objectives. It is essential that this concept be reasserted, and I have attempted to do so in this measure.

I fully anticipate and hope that the proposed legislation will be discussed in detail and that recommendations to perfect it will be made in the subcommittee, in the committee, and in the Senate. I expect, likewise, for some of the provisions of this bill to be controversial, but I do believe that each of them is fully justified in the light of today's transportation requirements.

I am, however, openminded on this proposal, as I consistently try to be on every bill that I introduce. While this bill is soundly based, I can conceive of its improvement as we bring the knowledge and experience of the Senate to bear.

I have said that I believe highway legislation we will consider this year to be of more than routine importance. There are several reasons for this. For the past 14 years the Interstate and Defense System has been the principal highway concern of the United States. The Interstate System was conceived and remains the greatest public works project ever undertaken by any nation.

The Interstate System is now more than 70 percent completed. Consequently, it is essential that we now begin looking toward and planning for highway programs of the future. During the past 14 years our preoccupation with the Interstate System has been so great and this network of freeways has been a drain on our roadbuilding resources to the extent that there now exists a substantial backlog of highway demands. The primary and secondary highway systems have been neglected while the Interstate System has evolved in directions that were not anticipated and could not have been foreseen in 1956.

At the same time, there have been many changes in public attitudes and in transportation requirements that must be given considerable weight in formulating national policy and writing highway legislation. Among these is the growing public demand, particularly in urban areas, for greater involvement by people in highway decisions that affect their lives and homes. Closely allied with this trend is the growing demand in many areas for improved and expanded public transportation facilities. Recent years have also seen increased concern with environmental quality, and certainly highways have a profound effect on the environment, an effect which must be taken into consideration in planning and designing roadways.

We recently witnessed the severe adverse effect automobiles can have on the environment in the smog conditions that prevailed over several major metropolitan areas, including Washington, D.C. The location and design of highways can help alleviate this situation, but the problem will never be completely solved until the automobiles themselves are so improved that they no longer emit dangerous substances into the atmosphere.

In the hearings by the Subcommittee on Roads, many aspects of highway construction and related activities were discussed. Appearing before us were Members of both Houses of Congress, Governors and mayors, administrators from Government agencies concerned with transportation, citizen groups, trade and professional organizations, and concerned individuals.

As you would imagine from such a diversified group, many viewpoints were expressed, and a number of recommendations were made for consideration of the Senate.

The Federal-Aid Highway Act of 1970, which I present today, is a response to the broadened concept of highways as not only the principal means of surface transportation in the United States but as an increasingly important factor in determining the style and quality of our national life.

In some respects, it is the continuation and refinement of earlier highway legislation. It enlarges considerably on provisions of the Federal-Aid Highway Act of 1968. But I also consider it significant in that it approaches new problems with new ideas. In that sense, there is much in this bill that is innovative, and there is much that will help determine national transportation policies and priorities for the rest of this century.

While the Congress is morally committed to the substantial completion of the Interstate System, it is imperative that we begin now to lay the groundwork for highway programs for the post-Interstate period. Many factors have contributed to the delay in completing the Interstate System beyond its original target. The cost of the system far exceeds the original projections of 1956. It is now anticipated that the Interstate System can be completed by 1977, and this bill includes provision for a firm cutoff date beyond which 90 percent Federal participation in interstate construction would not be available. I also anticipate that some highly controversial and expensive sections of interstate highways in urban areas will not be built, thus reducing the cost and time needed for completion.

Since highways affect virtually every aspect of our life, either directly or indirectly, it is logical that responsibility for their planning and execution should be broadly based so as to accurately reflect the needs and wishes of the people who will pay for and be served by these highways. This bill looks to filling this need by giving to Governors, mayors, and other local authorities a greater voice in highway decisions, since they are the direct and elected representatives of the people.

The effect of highways on the environmental, social, and economic life of our communities is widely recognized. This bill contains provisions seeking to assure that there are no adverse impacts on these factors as a result of highway construction. It plainly states what must be considered in the planning and construction of highways and provides the mechanism and money for meeting these requirements. To further assure that highways conform to the broader social objectives I have proposed a planning procedure under which highways and other public works facilities must be justified on the basis of and necessity in advancing community goals.

Recognizing, as we all do, that highways are not the exclusive domain of cars, I have included a section allowing highway funds to be used in support of public transportation systems.

Highways can be made to perform their functions more efficiently if there are sound, well-operated bus systems using them. It is only logical that if a bus can carry the same number of people as 15 or 20 cars, then highways are more fully utilized and congestion reduced through a public transportation system. This would likewise reduce the demand for additional highway construction with the associated problems and high cost, particularly in urban areas where these funds would be spent. The reduction of traffic loads on highways and the resulting speedier movement of vehicles would contribute to the lowering of air pollution levels.

I can conceive of a high ratio of benefits to the motorist from the relatively modest amounts that would be spent under this section to assist public transportation.

The problems facing public transportation in the United States were raised repeatedly during the subcommittee's hearings. This section of the Federal-Aid Highway Act of 1970 places them before Members of the Senate for further exploration and discussion.

The long neglected needs of our cities are provided for by the establishment and financing of an urban roadway system. The urgency for replacing the many old and deteriorated highway bridges virtually required the inclusion of a sec-

tion establishing a nationwide bridge replacement program.

One of the major problems of highway construction in urban areas is that of housing for people who are displaced. The Federal-Aid Highway Act of 1968 made great strides toward solving this problem by requiring replacement housing to be available before a roadbuilding project could be started. The proposal I present today expands the ability of highway authorities to provide the required replacement housing in instances where it is certified to be not otherwise available—a situation said to occur very infrequently.

This would not place highway departments in the housing business but would, I believe, expedite the construction of roadways that are delayed because of the nonavailability of replacement housing. In operation, this provision would doubtless be invoked infrequently to allow highway departments to build, rehabilitate or otherwise make housing available to persons displaced by road construction who would then purchase it from the departments.

I see this section as a last-resort tool to facilitate the start of work on highway segments so important that they cannot wait for housing shortages to be corrected through normal channels.

This bill provides that for the first time the highway safety and beautification programs be financed from the highway trust fund. Both of these programs, closely related to safe, efficient highway operations, have been seriously underfinanced in the past, so much so that their full implementation has never been possible. By utilizing the resources of the trust fund, both of these programs will have a reasonable assurance of continued financing that can produce results.

These are some of the major provisions of the Federal-Aid Highway Act of 1970. The complete measure is discussed in detail in a section-by-section explanation which I offer for inclusion in the RECORD.

American reliance on the motor vehicle for most transportation has become well established. There are now more than 100 million automobiles in the United States, and the growth in their numbers is much more rapid than had been anticipated.

"The love affair with the automobile," as quoted quite often, has brought with it many of the advantages of a personal, convenient mode of transportation. But this expansion of automobile use also has created severe problems associated with moving, servicing and storing them.

The bill I introduce today addresses itself to many of these problems and their solutions.

I conclude this discussion of the Federal-Aid Highway Act of 1970 by focusing attention on the highway trust fund. The trust fund was established in 1956 at the same time construction of the Interstate System was accelerated. There is a prevailing misconception that the fund was established solely to facilitate construction of the Interstate System. While the heavy demands of the Interstate System do take the largest proportion of the funds, the primary and secondary roads programs also are financed from the trust fund and actually have priority over the Interstate System.

In testimony before the Subcommittee on Roads, in speeches and other public statements by a considerable number of concerned individuals, in newspaper editorials, and elsewhere there have been many proposals in recent months for modifying the highway trust fund. At the same time, there has been a spirited defense of the fund and arguments for retaining it substantially in its present form to meet future highway needs. The most frequently advocated change is for the establishment of a single, unified trust fund to finance programs in all areas of transportation, including highways, airports and airways, railroads and mass transit. Many of the proposals are supported by strong and persuasive arguments.

From testimony heard by the Subcommittee on Roads, which I have the responsibility to chair, and from what I have heard and read recently, I believe that this year we are witnessing the first skirmish in what will become a major battle for the transportation dollar in the years immediately ahead.

I also detect a growing and unfortunate polarization between holders of differing viewpoints that could complicate the process of arriving at an equitable solution. There are those who accuse the so-called highway lobby of wanting to pave the country over with concrete. The other side maintains that their opponents are aiming for a complete halt in all highway construction.

I have listened carefully and I have read carefully, and I am convinced that neither of these assessments is correct. Those individuals and organizations involved in roadbuilding recognize the need for support of other forms of transportation, and even the most ardent supporter of mass transit sees the necessity to continue improving highway facilities.

I believe that there are essential truths on both sides, and I hope that all groups concerned with transportation can maintain the rational dialog that is necessary to meet the challenges we face. We recognize the need for a balanced national transportation system, and we can achieve it, but not without a lot of hard work on the part of all concerned.

Some modes of transportation certainly have been neglected. This can be partially attributed to the lack of coherent rational transportation policy as well as to a shortage of financing. The Congress is, I believe, aware of these problems and is concerned with solving them. The recently enacted airport and airways trust fund was a step in that direction. I hope we will likewise move quickly in other areas, particularly those concerning our national railroad system, which appears to be facing great difficulties, and the urban mass transit systems which are needed by many of our cities if they are to avoid traffic strangulation.

The highway trust fund is undoubtedly an attractive and appealing potential source of revenue to meet these needs.

The Federal-Aid Highway Act of 1970, in fact, expands considerably the area of highway related activities which are financed by the trust fund.

I cannot, of course, predict what will happen in the future, but it is imperative that no substantial changes be made in highway trust fund revenues until the Interstate System is finished.

Through the Federal-Aid Highway Act of 1970 we can make important progress toward creating and implementing a comprehensive national transportation policy in which highways and the other vital segments of our transportation system are utilized to the fullest to achieve the goals of American society.

Mr. President, I urge Members of the Senate to study this bill carefully, and I invite every Member to share with the Subcommittee on Roads and the Committee on Public Works their viewpoints and their knowledge so that we may produce an act that truly reflects the needs and aspirations of the people of the United States.

I ask unanimous consent that a section-by-section explanation of the bill be printed in the RECORD.

The PRESIDING OFFICER (Mr. BELLMON). The bill will be received and appropriately referred; and, without objection, the explanation will be printed in the RECORD.

The bill (S. 4260) to authorize appropriations for the fiscal years 1972 and 1973 for the construction of certain highways in accordance with title 23 of the United States Code and to provide for statewide public works planning, and for other purposes, introduced by Mr. RANDOLPH (for himself and other Senators), was received, read twice by its title, and referred to the Committee on Public Works.

The explanation, presented by Mr. RANDOLPH, is as follows:

SECTION-BY-SECTION EXPLANATION

TITLE I—FEDERAL-AID HIGHWAY ACT OF 1970

Section 101. Short Title. This Act may be cited as the Federal-Aid Highway Act of 1970.

Section 102. Revision of Authorization of Appropriations for the Interstate Program.

This section would provide authorizations for the Interstate Program through fiscal 1977. The fiscal year 1974 authorization presently set at $2.225 billion would be increased to $4 billion and the authorizations for fiscal years 1975 and 1976 would also be $4 billion with $2.125 billion authorized for fiscal year 1977.

Present authorizations as contained in the Federal-Aid Highway Act of 1968 extended to fiscal year 1974 and were based on a $56.8 billion estimate of the cost of completion of the Interstate System. The Interstate authorizations contained in the 1968 Act for the Federal share of the Interstate System totaled $50.35 billion.

The amounts which would be authorized by this section of the 1970 Act are based on the 1970 estimate of $69.870 billion to complete the Interstate System. It requires a $12 billion increase in the Federal share and therefore the new authorization years of 1975, 1976 and 1977 are added.

As of March 31, 1970, 29,906 miles of Interstate highway were open to travel. Construction on the entire system as of the same date has involved the expenditure of approximately $40 billion.

Section 103. Authorization of Use of Cost Estimate for Apportionment of Interstate Funds.

This section would authorize the use of the apportionment factors for the Inter-

state System contained in Table 5 of House Document 91–317 in making the apportionments through fiscal year 1974. It will be necessary to revise the table if Section 105 is adopted by the Congress to meet problems which would be encountered in North Dakota, Nebraska and other States.

Section 104. Extension of Time for Completion of System.

The time for the completion of the Interstate System would be extended to June 30, 1977. This section would direct the Secretary to submit to the Congress a revised Interstate System cost estimate in January 1976.

Section 105. Minimum One-Half Percent Appropriation Factor for Interstate System.

This section would amend Section 104(b)(5) of Title 23, United States Code to insure that no State shall receive less than one-half of one per centum of the apportionment for the Interstate System in any year. This provision is necessary because of the problem encountered in North Dakota and Nebraska and a few other States whose cost of completion of the Interstate System has become so small in relationship to the total cost of completion of the Interstate System as to make it difficult for them to maintain a meaningful level of construction activity on the Interstate System. This situation is the result in part of the designation of the additional 1500 miles of Interstate System provided by the Federal-Aid Highway Act of 1968 and the fact that the States involved have done an excellent job in bringing their portion of the Interstate System to early completion. This amendment would be an interim solution to the problem of the change over from the present Interstate program to any major post-Interstate program. The completion of the functional classification study required by the 1968 act and the results of the implementation of proposed Section 108 of this act will provide sufficient additional information by 1972 to enable the Congress to arrive at a permanent solution to the problem of the change over.

Section 106. Authorizations.

This section would provide authorizations for fiscal years 1972 and 1973 for the Federal-aid primary and secondary systems, their urban extensions, the Federal domain road program, including forest and public lands highways, and for the highway safety and beautification programs.

Subparagraph (1) would authorize $1.050 billion for the primary and secondary systems and their urban extensions in areas of less than 50,000 population. The funds would be divided 55 per centum for the primary system; 35 per centum for the secondary system and 10 per centum for their urban extensions.

Subparagraph (2) of Section 106 would authorize funds for the Federal-aid urban system which would be created by Section 107 of the bill. The authorization for this road program would be $450 million for each of the fiscal years 1972 and 1973.

The authorizations in paragraphs (1) and (2) are the first major departure in the authorization schedule for the Federal-aid road program since the creation of the secondary system and urban extension program in the Federal-aid Highway Act of 1944 and the acceleration of construction of the Interstate System in 1956.

The $1.5 billion which would be represented by the authorizations contained in paragraphs (1) and (2) is an increase of $75 million over and above authorizations for the Federal-aid primary and secondary systems and their urban extensions contained in the 1968 Act. In that Act, $1.1 billion was authorized for fiscal years 1970 and 1971 for the regular ABC program; $125 million for a special AB program for rural roads; and $200 million for the so-called TOPICS program, the Traffic Operations Improvement Programs in Urban Areas for each of those years.

The $1.050 billion, which Section 106 would authorize for the ABC program was arrived at by factoring the existing $1.1 billion authorization in accordance with the statutory division of 45 per centum primary; 30 per centum secondary; and 25 per centum urban and by factoring the $125 million AB program by factoring its statutory division of 60 per centum primary and 40 per centum secondary which resulted in the following amounts:

For the primary system:

	Million
45% x $1.1 billion equals	$495
60% x $125 million equals	75
Total	570

For the secondary system:

	Million
30% x $1.1 billion equals	$330
40% x $125 million equals	50
Total	380

The urban extension portion of the ABC system under existing authority amounted to $275 million. This was divided in the proportions in which urban populations are located in areas of more than 50,000 and less than 50,000. According to information from the Census Bureau, this is a 60–40 ratio. This results in an allocation for urban extensions in areas of less than 50,000 of $110 million. While these amounts when added together come to $1.060 billion, the figure was cut back to $1.050 billion. The amount in paragraph (2) of Section 106 was arrived at by taking the $200 million authorization in the existing TOPICS program which would be discontinued, adding to it $165 million, that portion of the existing "C" system, which was attributable to urban areas over 50,000, and adding $85 million.

This rearrangement excluding the additional $85 million roughly approximates how funds are being spent under existing authorizations.

All of these amounts will be appropriated from the Trust Fund and under existing law are drawn from the fund before any other highway funds are available for apportionment to the States.

Paragraph 3 of Section 106 would also authorize $33 million for each of the fiscal years 1972 and 1973 for forest highways and $16 million for each of these years for public lands highways. For the first time, these funds would come from the Highway Trust Fund. In addition, this section would authorize funds for the other Federal Domain Road programs from the General Fund in the following amounts.

[In millions]

Forest Development Roads & Trails:	
1972	$170
1973	170
Public Lands Development Roads and Trails:	
1972	3
1973	5
Park Roads and Trails:	
1972	----
1973	30
Parkways:	
1972	11
1973	11
Indian Reservation Roads and Bridges:	
1972	----
1973	30

Authorizations for the Highway Safety and Beautification Programs which for the first time would also be from the Highway Trust Fund are as follows:

[In millions]

Highway Safety Programs (Section 402):	
1971	0
1972	$100
1973	100
Highway Safety Research and Development (sec. 403):	
1971	0
1972	70
1973	115
Control of outdoor advertising (sec. 131):	
1971	20
1972	20
1973	20
Control of junkyards (sec. 136):	
1971	3
1972	3
1973	3
Landscaping and Scenic enhancement (sec. 319(b)):	
1971	20
1972	20
1973	20
Administration of Sections 131, 136 and 319(b):	
1971	1.250
1972	1.250
1973	1.250

Section 107. Federal-Aid Urban System.

This section would establish a new Federal-aid highway system, the Federal-aid urban system, in each urban area of 50,000 population or more. The urban system would be designed to facilitate the flow of traffic in urban areas and serve the goals and objectives of the community as determined by the responsible local officials. It would implement the urban transportation planning process required under section 134 of title 23. In addition, the urban system would include extensions of primary and secondary roads in these areas. Routes on the Federal-aid urban system would be selected by the appropriate local officials subject to the approval of the State and of the Secretary.

The funds authorized to be appropriated for the Federal-aid urban system would be apportioned to the States in the ratio which their population in urban areas of 50,000 or more bears to the nation's population in such areas. In addition to highway construction, these funds would be available to carry out the kinds of activities for which the discontinued TOPICS program was designed, for construction and development of fringe parking facilities, and for support of existing public transportation systems which new section 143 of Title 23 would authorize. The Federal share payable for projects on this system would be the same as for the ABC System—50 per centum.

Section 108. Elimination of Segments of the Interstate System Not to be Constructed.

This provision would insure the early completion of the presently designated Interstate System by requiring the States to submit to the Secretary by July 1, 1972 a firm schedule for the completion of segments on the Interstate System and to have brought these segments to the construction stage by July 1, 1975. Any segment not included in the schedule by 1972 or ready for construction by 1975 will remain as part of the Interstate System but would not be eligible for funding at the 90–10 ratio.

It is hoped that this provision would result in a careful reconsideration of a number of highly controversial and very expensive segments of the Interstate System which may not be essential to a fully connected system of Interstate and Defense Highways. At the present time, there are approximately 13 segments of the Interstate System representing some $4 billion based on present cost estimates which may have to be re-examined. Under the law, responsibility for inclusion of these projects on the Interstate System rests with the States and communities involved, and this language in no way is designed to require their elimination.

Section 109. Economic, Social, Environmental and Other Impact.

This section amends various provisions of Title 23 to insure proper consideration of economic, social, environmental and other impacts of highway construction.

The definition of "construction" and "highway" contained in Section 101 (a), Title 23, United States Code, would be expanded to require fuller consideration of these matters in the various stages of highway design and construction.

The Secretary is directed to issue guidelines for avoiding, minimizing and overcoming adverse economic, social, environmental and other impacts of Federal-aid highway projects.

After July 1, 1974, all plans and specifications for any future project would be required to include adequate measures to solve the impact problems identified in an analysis of the project. Among the problems which would be accounted for are:

(1) air, noise, and water pollution;

(2) destruction, or disruption of man-made and natural resources, aesthetic values, community cohesion, and the availability of public facilities and services;

(3) adverse employment effects, and tax and property value losses;

(4) injurious displacement of people, businesses, and farms; and

(5) disruption of desirable community and regional growth.

Subsection (b) would require soil erosion control plans for each highway project. Subsection (c) would require the Secretary to issue noise level standards for highways and to require that the appropriate standards would be applied to proposed highway projects.

Subsection (d) would authorize research programs designed to develop understanding of how to deal with adverse economic, social and environmental effects.

Section 110. Airport Access. This section would require the Secretary to give priority to projects which will provide adequate, direct and convenient access to public airports.

Section 111. Cost Reduction. The Secretary would be authorized to secure a value engineering or other cost reduction analysis of the plans, specifications and estimates for proposed Federal-aid highway projects when he determined such action advisable.

Section 112. Public Hearings. This section would strengthen the public hearing process. The two-hearing procedure, established by regulation after enactment of the Federal-Aid Highway Act of 1968, would be enacted into law. An additional hearing would be required on urban plans required under Section 134 of title 23 to afford citizens the opportunity to present their views as to the transportation systems which would best serve their needs. Responsibility for conducting the hearings would be placed with State and local officials designated by the Governor or the duly constituted State authority. The certification and transcript of the hearing now required by law would have to be accompanied by a report indicating the consideration given to the economic, social, environmental and other impacts of the plan, highway location and design and various alternatives raised at the hearings or otherwise considered by the highway department.

Amendments to the public hearings section would not change the basic legislative character of the hearing process. The purpose is to increase the ability of citizens to make their views known and to insure that the issues raised in a public hearing are given the consideration they deserve.

Section 113. Control of Outdoor Advertising. This section would authorize the use of up to $15 million of the funds authorized under paragraph (12) of section 106 for each of the fiscal years 1972 and 1973, for demonstration projects to determine the best means of accomplishing the control of outdoor advertising.

This provision is similar to the language of S. 1442, passed by the Senate during the First Session of the 91st Congress.

Section 114. Urban Planning. This section would amend Section 134, Title 23, United States Code to require consultation with local officials prior to the construction of highways in urban areas of 50,000 population or more.

Section 115. Fringe and Corridor Parking Facilities. This section would enact as a continuing program the demonstration fringe parking program provided by the 1968 Federal-Aid Highway Act. Funds for fringe and corridor parking facilities authorized under this section would be available from authorizations for the Federal-aid urban system.

Section 116. Equal Employment Opportunity. This section would authorize the Secretary to develop, conduct and administer highway construction-related training and skills improvement programs for the training of construction workers.

Section 117. Additional Authorizations in Chapter I. Three new sections are added to the end of Chapter I of Title 23, United States Code.

Section 142. Relocation Housing. This section would authorize the Secretary to approve as part of the cost of construction, the cost of acquiring, constructing, rehabilitating, or relocating housing as replacement housing for individuals and families who will be displaced by a project if such project on any Federal-aid system cannot proceed to actual construction because replacement housing required by law cannot otherwise be made available. This is a last resort authority to be used only when replacement housing is not available and the urban project involved is of such importance as to require its immediate construction. Based on information developed in connection with the planning and design of segments of the Interstate System in major urban areas, indications are that the cost of the relocation housing program would not exceed 3 per centum of the total construction cost for the Federal-aid highway program. This means approximately $130 million a year.

Section 143. Public Transportation. This section would authorize the Secretary to approve the use of portions of Federal-aid Urban System funds, by State or local public agency, for the operation of public transportation facilities when he determines that the use of these funds would reduce the need for additional highway construction and would improve the use of highway facilities of an urban area of 50,000 population or more.

This language is primarily directed to the maintenance and expansion of bus service—the major form of public transportation in the Nation—and is designed to focus the issue of the purposes for which highway funds may be legitimately used.

Section 144. Special Bridge Program. This section would establish a replacement program for bridges on any Federal-aid system which are no longer capable of safely handling traffic. A National priority inventory would determine which bridges should be replaced first. The priority would be based on safety and the economic importance of the structure to the area served. The Federal share payable for these projects would be up to 75 per centum, and $150 million would be authorized out of the Highway Trust Fund for each of the fiscal years 1971, 1972 and 1973 for this program.

Section 118. The Highway Safety Act of 1966 would be amended to provide that apportionment of safety funds to the States would be based on 75 per centum on the population and 25 per centum on the public road mileage in each State, but that no State would receive less than one-fourth of one per centum of the total apportionment.

Section 119. This section would provide for the establishment of a highway program for the Virgin Islands, Guam, and American Samoa. The Federal contribution to the cost of approved projects on this system would be 70 per centum, and $2 million for each territory is authorized out of the Highway Trust Fund for each of the fiscal years 1971, 1972 and 1973 for this purpose.

Section 120. This section would provide $100 million for the construction of the Darien Gap Highway, which would connect the Inter-American Highway with the Pan American Highway System of South America. Obligation and expenditure of funds would be on the same basis as the funding authorized for the Inter-American Highway.

Section 121. Relocation assistance payments for replacement housing would be expanded to include compensation for any increased rates of interest required for the financing of a replacement dwelling.

Section 122. This section would extend the time required for compliance by the States with certain provisions of Chapter 5 of Title 23, United States Code (Highway Relocation Assistance) until January 1, 1971, for those States which could not submit the required constitutional amendment for ratification prior to July 1, 1970.

Section 123. This section would authorize the President to enter into negotiations with Canada to reach an agreement authorizing paving and reconstructing a portion of the Alaska Highway.

TITLE II—PUBLIC WORKS AND FACILITIES ACT OF 1970

Section 201. Short Title. This title would create the Public Works and Public Facilities Act of 1970.

Section 202. This section would request the President to assist States in the development of a continuous, comprehensive, coordinated planning process to facilitate the enunciation by State authorities of the overall goals, objectives and priorities of the State with regard to a wide range of public policy determinations relating to conservation, energy production, education, water quality and water supply, air quality, resource utilization and preservation, community and residential development and the like. Enunciation of State objectives, goals and priorities with respect to these important subjects, together with the short and long range forecasts of State and community growth, would enable the State to better gauge its urban, suburban and rural development and to develop the public facilities and transportation services it believes necessary to meet the needs of its citizens.

Section 203. This section would require the President by July 1, 1972 to issue guidelines and procedures for the development of such plans.

Section 204. This section would require that statewide plans be coordinated with existing urban and economic development plans and such other Federal planning as may be required or authorized now or in the future.

Section 205. This section would make available to the States funds for carrying out the planning process in accordance with the provisions of Section 301 of the Public Works and Economic Development Act of 1965 and under the language of the section, no State could receive more than 10 per centum or less than one per centum of the aggregate planning funds.

Section 206. This section would provide that after July 1, 1974, every Federal agency which has jurisdiction over any public works program shall insure that the projects developed under those grant-in-aid programs are designed to implement the plan. With respect to direct Federal activities, Federal agencies would be required to conduct their activities in conformance with State plans unless the President determines that the paramount interests of the United States are to the contrary. Twenty-five million dollars for each of the fiscal years 1971 and 1972

would be authorized for this planning program.

This title is designed to increase the State's capability to rationalize the many Federal public works programs so that overall State goals and objectives will be met. While the Act would require that the planning be done in accordance with guidelines and procedures designed by the President, there is no Federal approval required once the plans are established. It would be assumed, however, that the President would direct Federal agencies to participate with the States in the development of the plans.

Mr. COOPER. Mr. President, on July 1, I introduced the administration highway bill, S. 4055, which I consider a very constructive bill. I have agreed to join as a cosponsor of the proposal of the chairman of the Committee on Public Works. Senator RANDOLPH is joining as a sponsor of the administration bill. In this way, both proposals will be before our committee for consideration as we work out our recommendation to the Senate.

Since that time, several members of the Committee on Public Works have expressed an interest in joining as sponsors of the administration bill, and a number are sponsoring both bills. This shows the broad interest of the members of the committee in developing an improved highway system.

Mr. RANDOLPH. Mr. President, will the Senator yield?

Mr. COOPER. I yield.

Mr. RANDOLPH. I wish to add to what the Senator from Kentucky has said. He is not only an able Senator in his own right, but also, I know that chairmen of committees, as I am, could never have a stronger arm for the purposes of such legislation than Senator COOPER.

I have joined Senator COOPER in his proposal, the so-called administration measure, and he has joined with other Senators in support of the general purposes of my proposal.

Mr. COOPER. I thank the Senator.

I have had an opportunity to study the bill that has been offered by the distinguished chairman. It has new initiatives in it. It has several new important programs, and I think that as it will finally come out of our committee, it will be a very great bill.

We all have learned to serve with our chairman in a nonpartisan way, and we all have profited by his leadership in the Committee on Public Works.

Mr. President, I ask unanimous consent that, at the next printing, the names of the following Senators be added as cosponsors of the administration highway bill, S. 4055: The Senator from West Virginia (Mr. RANDOLPH), the Senator from Delaware (Mr. BOGGS), the Senator from Kansas (Mr. DOLE), the Senator from Florida (Mr. GURNEY), the Senator from Oregon (Mr. PACKWOOD), the Senator from Ohio (Mr. YOUNG), the Senator from Virginia (Mr. SPONG), and the Senator from Indiana (Mr. BAYH).

The PRESIDING OFFICER (Mr. BELLMON). Without objection, it is so ordered.

CONFESSIONS OF A CONSERVATIVE SOCIOLOGIST

Mr. ALLOTT. Mr. President, a conservative in the field of social science is a rarity, particularly one in sociology. Edwin Harwood, an assistant professor of sociology at Rice University, happens to be one of those rarities. As such, he presents an interesting view on today's students in his article, "Confessions of a Conservative Sociologist."

According to Professor Harwood, giving up the leisured and rich campus life for a 9-to-5 job is anathema to many students. As they do not want to face the harsh routines of adult life, how can they expect others in society to accept them. Therefore, because they are guilty, they cannot stand up to the militants and since the good campus life cannot continue indefinitely, they are angry.

I believe this article, which was published in the August 12 issue of the Wall Street Journal, will be of interest to all my colleagues, and I ask unanimous consent that it be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

CONFESSIONS OF A CONSERVATIVE SOCIOLOGIST

(By Edwin Harwood)

Everyone knows sociologists are biased. While I was taking in the poolside sun at a Houston motel recently, the man lounging next to me asked how I liked the book I had just picked up and was about to start reading—Ladislas Farago's "Patton: Ordeal and Triumph." I said I liked it because Patton the man intrigued me. The conversation warmed up. He had come down from Chicago to root for the Cubs against our Astros. Asked what brought me to Houston, I told him I lived here and taught sociology at Rice. He gave me a puzzled look, his eyes roving back to the book. What, he wanted to know, did I think about the campus disturbances.

That was all the opening I needed. I launched into my hard-lining talk about permissive campus authorities, the illogic of blaming Columbia University's 1968 spring disorders on Agnew's rhetoric, and how the fatuous "we want to be liked by the kids" attitude of college faculties only insured that they would be scorned by the kids. Summing it up, I said the universities were becoming the cancer of our society far more than its conscience—if we disregarded the causes students and faculty claimed they stood for and looked instead at the way they were behaving.

My poolside friend liked it, every word. Now *that*, he confessed, was not what he expected any sociologist to say!

I have gone through this before with acquaintances from outside academia, but always with some mixed feelings about the effect of my words. Should I try to correct an image of my profession many people have that is sadly accurate for large numbers of us? The fact is we are biased and we have contributed to the mischief, and I would not want to think that any patch job I did would lessen the chance that some Middle American might write his Congressman in anger at what we are teaching his children.

THE TAXPAYER'S OBLIGATIONS

The Bill of Rights as both he and I interpret it says only that those committed to revolution have the rights of assembly and free speech. It does not say the taxpayer is obliged to underwrite them by paying their salaries while they throw a wrench into the machinery of our government. Middle Americans are hard to get worked up in the first place. Because they are tempted to let things slide and mind their own business, there is the danger that if they meet just one no nonsense conservative in sociology, they will feel at ease. No, I can only hope that they get to know some of the rest of us.

My only motive for wearing conservative convictions on my sleeve is to spare myself embarassment in encounters with these civil people who are trying to do a job and raise their children, and are at loggerheads wondering how to repair at home the damaged ethics and etiquette their kids bring back from college.

We always assumed that free public higher education would raise the sons and daughters of the less privileged into better jobs. Did we ever consider, as the economist Joseph Schumpeter pointed out over 30 years ago, that the expansion of mass higher education could lead easily to a deterioration in teaching, with the result that students would be psychologically prepared for elite occupations in the Establishment without getting the necessary training to enter those occupations? Colleges were not, Schumpeter emphasized, just a matter of money, if nature set limits to the number of good scholars and teachers she chose to furnish for the task.

Consequently, today there is a good chance that the young man who once would have been content to follow his dad into the plant or apprentice himself in his uncle's craft, will now—thanks to the deterioration of college education accompanying its rapid spread—become psychologically unemployable.

He finds he cannot become a doctor, a lawyer, a corporation executive or a professor, but he will not take some lowly salaried white-collar job that would subject him to the indignities of taking other people's orders and following a bureaucracy's routines. After having touched the great traditions of Western thought, that would be a "cop out." But neither can he go back to his dad's plant and work as an operative, a plumber or a maintenance man. He is in limbo.

College, with its well-tended lawns and gardens, plushly furnished student gathering rooms and library alcoves, sauna, squash and tennis facilities, theater and concerts has introduced him to an affluent life-style—I would say, to the upper middle class lifestyle. (Can you think of any country club more richly equipped than the ordinary state college campus?) To graduate from that will mean for many students to graduate down to something infinitely less desirable. It means, as one Rice senior explained his contempt for a nine-to-five job to me, giving up the leisured and rich campus life for the discipline that most lower middle class and working class Americans are subject to, of being an ordertaker and an early-riser.

It is not the strange paradox many think that the University of California at Santa Barbara—one of the loveliest, best situated and lavishly equipped schools in the California system—should have become the scene of some of the worst rioting, that included the precincts of the business community serving it. Nor is it odd that well-dressed, suntanned kids could be found moving between dorms and classroom buildings covered with Eldridge Cleaver's enraged visage. That campus has the affluent American life-style and more, a West Coast Waikiki with the difference that while some study is expected of the guests there are no hotel bills to be paid.

Yet students can see that others work in the adjoining business district, and that these others have to get up much earlier in the morning than they to serve their needs: To take their orders for books, clothing, food and whatever else the student needs.

Guilt at the "oppression" of a business routine afflicting others, that the student is being adjusted to reject, weakens his self-confidence. If he doesn't want to face the harsh routine of adult life, how can he expect the blacks to accept theirs, or any group in society that must toil from 8 to 5 in return for a two or three week vacation at the end of the year? Because he is guilty, he connot stand up to black militants. And he is

also angry because he knows that the good life on campus will not go on forever.

Students see that their professors can take off at any time of the day to run errands, and that instead of the one-and-a-half or two-day weekend, they can arrange a teaching schedule that will give them three or even four days. If an old friend comes to town and wants a tour or a conference beckons, classes can be cancelled or re-scheduled. Naturally many students would like to have the very same freedoms for themselves. Academic salaries being what they are today, the economic privations that used to insure that only dedicated scholars would want these freedoms are no longer available to stem the flood of seekers after academic positions. It is this factor, not the draft as is so often claimed, that explains why so many undergraduates want to continue in graduate school.

THE NEW LEISURED CLASS

Radicals, who once told us that the leisured classes of society were parasitical for taking goods while refusing to work, are now defending the abuses of the new leisured class, of students and ex-students and anyone else in rebelling against society. In "The Making of a Counter Culture," Theodore Roszak defends the college dropout's rejection of a job. Why, he asks, should hippies be expected to work, even when they continue to demand the services others must produce, if America has "an economy of cybernated abundance that does not need their labor, that is rapidly severing the tie between work and wages, that suffers from hard-core poverty due to maldistribution, not scarcity." Given these "facts" about the American economy, Roszak believes the college dropout's refusal to get a "good respectable forty-hour-week job" is just simple good sense.

In another book addressed to young people "dedicated to the possibility of radical change," a sociologist, also teaching in the California systems, tells us that since full automation is just one decade off, "If you wanted to lie on the bench and do nothing, you could obtain the necessities of life produced in abundance by machines . . . nobody would be forced by economic necessity to work for somebody else or take a job he did not like." Only if the person wants luxury goods will he have to work to earn the money for them. (Frank Lindenfeld "Work, Automation, and Alienation" in "Radical Perspectives on Social Problems." Macmillan.)

Just how those automated bicycles, shoes, radios and telephones—none of them luxury goods in the article's view—are to be packaged, marketed and brought down to the beach is unclear. This sociologist raises the important question only to dismiss it: "Would people work if they didn't have to? That this question can be raised seriously is a reflection on the pecuniary twist of our values."

Who can blame the Middle American for getting sore at us when his youngster comes home from college and confronts the folks with *that*.

VICE PRESIDENT AGNEW'S WARNING ON THE HIGH COST OF SURRENDER IN VIETNAM

Mr. DODD. Mr. President, yesterday Vice President SPIRO T. AGNEW, speaking before the Veterans of Foreign Wars Convention, warned the country that "there is no security in retreat" and called for the defeat of the Hatfield-McGovern amendment.

He said that the so-called "amendment to end the war in Vietnam," if it were carried, "will go down in history as the amendment that lost the war in Vietnam and destroyed the chances for freedom and peace in Southeast Asia for the balance of the century."

He warned that the amendment would deal a fatal blow to the Paris peace talks because it would deprive our representatives of any diplomatic leverage.

He also warned that the amendment, if it carried, would destroy our credibility around the world and result in the rapid erosion of the system of alliances we have so laboriously built up.

And, he warned that the Nonproliferation Treaty would become a dead letter as every nation rushed to develop its own defenses, in the conviction that America can no longer be counted on.

I applaud the Vice President for saying some things that badly needed saying.

Some of the language he used was harsh, and the Vice President was aware of this. But it is a situation that calls for harsh language, because the stakes involved are exactly as the Vice President described them.

I know that some of the Senators who espouse immediate withdrawal from Vietnam took angry issue with the Vice President this morning. That is their privilege.

But as one Senator, I want to say that I agree wholeheartedly with the Vice President's evaluation.

As long ago as May of 1969, I made a speech in the Senate which I deliberately captioned "Shall We Run Up the White Flag in Vietnam?"

In this speech, I made the point, as the Vice President has now done more forcefully, that the demand for an immediate pullout was really a demand that we run up the white flag and surrender.

I pointed out, as the Vice President has, that such a surrender would result in an early Communist takeover in all of Southeast Asia.

Beyond this, looking at the world as it is today, I think it is a virtual certainty that our humiliation in Vietnam would encourage Kim Il Sung, the lunatic dictator of North Korea, to launch a second war of aggression against South Korea; that it would greatly increase the prospect of Soviet-Arab extremists action against Israel; that it might move the Soviet Union to challenge us with a renewed blockade of Berlin; and that it would result in an early harvest of "wars of national liberation" throughout Latin America and the underdeveloped world.

Mr. President, I can understand the frustration of the Senators who today support the so-called amendment to end the war in Vietnam. But, with Vice President AGNEW, I cannot help asking whether they have stopped to consider the consequences that are almost certain to flow from the course they now advocate.

President Nixon is winding down our involvement in Vietnam at a rapid rate.

But he is attempting to do so in a carefully measured way that gives the South Vietnamese time to prepare themselves to take over the much greater burden of defense they will be called upon to carry.

In this effort, I believe that President Nixon is entitled to the unstinting support of the American people and the U.S. Congress.

Mr. President, I ask unanimous consent to have printed in the RECORD at this point the entire text of Vice President AGNEW's speech before the Veterans of Foreign Wars. I also ask unanimous consent to have printed in the RECORD the text of my Senate speech of May 8, 1969, captioned "Shall We Run Up the White Flag in Vietnam?"

There being no objection, the speeches were ordered to be printed in the RECORD, as follows:

AGNEW: "THERE IS NO SECURITY IN RETREAT"

(NOTE.—Following is the text of Vice President Spiro T. Agnew's address to the Veterans of Foreign Wars convention in Miami Beach.)

I would like to speak to you today of a rising threat to everything our servicemen have fought to accomplish in Southeast Asia—a threat embodied in the Hatfield-McGovern Amendment.

Should this proposed amendment become law, unless America declares war, President Nixon would be forced to end any military aid to Laos and to halt all military operations in South Vietnam—twenty weeks from today. Every American soldier, sailor, marine and airman would have to be out of Vietnam by June 30 of next year—ten-and-a-half months from today.

Hatfield-McGovern is a blueprint for the first defeat in the history of the United States—and for chaos and communism for the future of South Vietnam. The Washington Post was generous to call this amendment "reckless." It is worse than that; if adopted by the Senate and passed by the House, this publicized "Amendment to End the War" in Vietnam will go down in history as the amendment that lost the war in Vietnam and destroyed the chances for freedom and peace in Southeast Asia for the balance of the century.

Nothing less is at stake.

But, if this amendment, and any similarly irresponsible proposal which may be offered, can go down in humiliating defeat for its sponsors in the Senate—then this nation will not go down in humiliating defeat on the battlefields of Southeast Asia—I promise you that.

Today, I have a simple question. I am here to ask you, as fellow Americans, and fellow veterans—can the President of the United States count on your support?

"TRAGIC BLUNDER"

The charges I have already made here are among the strongest since I took office as Vice President. But no more dangerous proposal has been presented to the American Congress in those 19 months—or in 19 years for that matter. While I do not question the patriotism of the sponsors of this amendment—I do deeply question their wisdom, their judgment and their logic. They are horribly wrong—and if their grave error is enacted into law, generations of Asians and Americans will suffer for their tragic blunder.

Let us look at the inevitable consequences should Hatfield-McGovern be enacted.

First, the amendment would be a final lethal blow to the Paris peace talks. Any vestige of hope that the enemy will negotiate with Ambassador Bruce at Paris would disappear overnight—for the last incentives for the enemy to talk seriously would be gone. He would have gotten what he came to Paris to get—a fixed final timetable for all Americans to get out of South Vietnam. Why should the enemy offer concessions to the United States for something Senators Hatfield and McGovern and their allies will give him free of charge in four months?

Should this amendment become law, and all American military operations in Southeast Asia cease by December 31, the immense burden of this war would fall immediately and totally upon South Vietnam. The government and people there would confront, alone and all at once, the completion of the enormous tasks of creating a stable demo-

cratic society, promoting economic and social reform, fighting an internal war against guerrillas and defending their nation from invasion from three frontiers.

"BLOODBATH PREDICTED"

Though South Vietnam has made enormous strides in development in recent years—today she could not carry those burdens alone. No developing nation could.

Hence, the result of a unilateral, precipitous American abandonment of South Vietnam would be the collapse of the government, chaos in the country—and ultimately the kind of Communism that literally decimated the civilian population of Hue in the Tet offensive.

The Rand Corporation estimates that if Communism prevails in South Vietnam, 100,000 Vietnamese who placed their faith in us will die for that error in judgment. Douglass Pike, the nation's foremost expert on the Vietcong, estimates 3 million South Vietnamese could lose their lives in the blood bath following a Communist victory.

Assuredly, this is not what Senators Hatfield, McGovern, and those supporting them want—but that is what they are inviting.

They say their amendment will provide for transport and a refuge for Vietnamese who would fear for their lives when the Americans go. But how—and where? Do Senators Hatfield and McGovern have in mind opening up Oregon and South Dakota to resettle the refugees? Hardly. And the place for these men and women who believe so deeply in freedom that they will become exiles rather than submit to the Communist yoke is not Oregon or South Dakota—it is South Vietnam.

CONSEQUENCES OF COLLAPSE

It is clear from their mention of "provision" for refugees that Senators Hatfield and McGovern have considered that the collapse of South Vietnam will indeed be one consequence of their amendment. But have they considered the consequences of that collapse?

One wonders if they really give a damn.

If South Vietnam collapses then victory and success go to the hard-liners in Hanoi and Peking who counseled belligerence and war instead of peace and negotiation.

If South Vietnam collapses, then 285,000 Americans will have suffered and 43,000 will have died for nothing. An American Army, undefeated on the field of battle, will come home in humiliation because impatient pacifists in the Senate lost the war. What will be the reaction then when the American people wake up to learn that the thousands of lives and billions in taxes over a decade had been spent only to find national humiliation and disaster at the end of the road?

Will they then reward the blind impatient politicians who could not see the war through its final hours—and so snatched, for America, military defeat from the jaws of political victory?

If South Vietnam collapses, then Southeast Asia is gone. Those who do not believe in the Domino Theory, as the President has put it, have not talked to the dominoes. Already, Cambodia is half-occupied by North Vietnamese and VietCong. Laos is half-occupied by North Vietnamese and VietCong. Laos is half-occupied by North Vietnamese and Pathet Lao. Thailand is fighting its own Communist insurgency, aided and encouraged from without. Does any rational man believe these countries—or Malaysia and Singapore at the end of the peninsula—can survive if South as well as North Vietnam should come under the rule of militant Communists?

Have the isolationists in the Senate pondered the full consequences of America's defeat in South Vietnam—and freedom's defeat in Southeast Asia?

Looking down the road to the year 2000, we see most Asian nations on the threshold of technological maturity; we see an Asia that contains 60 per cent of all humanity; we see a world in which there are ten Asians for every American.

Are the isolationists content to let that Asia go by default to the Communists because they lacked the perseverence to see this through?

LOST CONFIDENCE

Well, we are not, my fellow Americans and my fellow veterans—and the President is not—and together we shall see this war through to an honorable end that will do justice to the sacrifices of all our sons.

Have the isolationists considered the impact of the abandonment of this one ally upon America's other allies around the world? Could any nation put trust in the word and capacity of the United States—if we slink home, defeated, from the battlefield of Southeast Asia?

The lessons for nations like Germany and Japan—even India—would be clear: The inescapable conclusion would be that the United States cannot be counted upon in the crunch and nations must depend upon themselves to survive. The non-proliferation treaty would be forgotten as every state rushed to develop its greatest possible deterrent. If collective security is a failure in Vietnam—who will place confidence in it in Europe or the Middle East?

As I stated moments ago, while I do not question the patriotism of the Senators I criticize, I do question their wisdom, their logic and their judgment—and I question also their sense of justice.

PRESIDENT'S RECORD

Some of the same Senators who bewailed a Democratic President's lack of power in foreign policy 10 years ago now contend that this newly installed Republican President has too much power.

Some of the same Senators who supported the "peace plank" at the Democratic National Convention in 1968 now condemn a President who has taken more risks for peace than that plank contained.

Some of the same Senators who were silent while a Democratic President sent 532,000 American soldiers to Vietnam are obstructing and undercutting a President who is bringing 265,000 Americans home.

What is there in the record of this President to justify the attitude and actions of these Senators?

When President Nixon took office there were 532,500 Americans troops in Vietnam. He did not send more troops in—he started bringing the boys home. He pledged in June of last year to bring home 25,000 troops; they have come home. He pledged in September to bring home 35,000 more; they have come home; he pledged in December to bring home 50,000 more; they have come home. Every promise he has made to the American people about the war in Asia, he has kept. American casualties are a third of what they were in 1968; time is now on the side of the allies, not the side of the enemy; and still they malign his policies and his performance.

"ACT OF COURAGE"

The President has turned the war over to the South Vietnamese as rapidly as they have become prepared to shoulder the burden.

To proceed slower than that is to break faith with the American people. But to move faster than security dictates is to risk the lives of our men and invite a victory for Communism that tens of thousands of our lads died to prevent.

And no matter what the McGoverns and Hatfields propose—the President is not going to take those risks with the lives of American men.

The Senate sponsors of Hatfield-McGovern cannot win this war; they cannot conclude an honorable peace, but they can lose this war—as well as guarantee the ultimate failure of the uneasy peace to follow—if they convince enough of their colleagues to support their amendment.

CAMBODIAN DECISION

They argue in the Senate that the Cambodian decision underscores the need to place limits and restrictions upon the President—to force upon him a timetable for withdrawal. I do not agree with that assessment. In my view, the President's decision to enter Cambodia and capture and destroy those tons of enemy arms and ammunition that would otherwise have been killing American men was an act of courage and the finest hour in the Nixon Presidency.

The Cambodian decision does not argue for putting shackles upon this President. It argues eloquently the case that the Senate should leave the President alone to exercise his Constitutional powers as Commander-in-Chief and determine what is necessary to protect the lives of American men.

Senator Fulbright now seeks a larger role for his committee in the conduct of foreign policy—but where the President decided and acted in a matter of hours to protect American lives—it took Mr. Fulbright and his colleagues seven weeks to decide on a simple amendment. His is a history of querulous "fuddy-duddying."

Many of the men in this great organization trace their military service to their country back to World War I. Yet, today, we see abroad in our land and in the halls of Congress the voices of that same shortsighted isolationism that lost the peace after World War I and helped to bring on World War II.

Let us not again forget the lesson that for the United States, there is no security in a retreat from the world. Let us not again force an American President to make in deepening despair the kind of statement that Woodrow Wilson made in St. Louis just 10 months after the armistice in France:

"If," he said, "(the Covenant of the League of Nations) should ever in any important aspect be impaired, I would feel like asking the Secretary of War to get the boys who went across the water to fight, together on some field where I could go and see them, and I would stand up before them and say,

" 'Boys, I told you before you went across the seas that this was a war against wars, and I did my best to fulfill the promises; but I am obliged to come to you in mortification and shame and say I have not been able to fulfill the promise. You are betrayed. You fought for something that you did not get.

" 'And the Glory of the Armies and Navies of the United States is gone like a dream in the night, and there ensues upon it, in the suitable darkness of the night, the nightmare of dread which lay upon the nations before this war came; and there will come sometime, in the vengeful Providence of God, another struggle in which, not a few hundred thousand fine men from America will have to die, but as many millions as are necessary to accomplish the final freedom of the peoples of the world.' "

Let us never force an American President to say that again.

[From the CONGRESSIONAL RECORD, May 8, 1969]

SHALL WE RUN UP THE WHITE FLAG IN VIETNAM?

Mr. DODD. Mr. President, I have not spoken on the subject of the Vietnam war since November of 1967. Because of recent developments, I now consider my duty to take up the subject again. And I do so with the hope that many Senators who cannot be present will at least read what I have to say.

I have listened with great interest to the remarks of the Senator from Tennessee.

There is no question that the great majority of the American people feel weary and

frustrated over the seeming endlessness of the Vietnam war and that they would like to see it concluded on acceptable terms at the earliest possible date.

It is clear, too, that this mood is reflected in Congress.

We would, of course, have peace tomorrow if we were prepared to throw in the sponge and withdraw on Vietcong terms. But the great majority of those who have been critical of our Vietnam involvement do not propose this. They would, on the contrary, strongly oppose the suggestion that we raise the white flag or that we scuttle and run in Vietnam.

Nor do they say that it should be none of our concern if the Communists take over in Vietnam and then proceed to massacre their opponents by the scores of thousands, as they have done in every country in which they have come to power.

Nor, do they go so far as saying that it is of no concern at all to our national security if the whole of Southeast Asia falls under Communist control.

Although there are countless nuances in the ranks of the opposition to this war, the majority of them convey the impression, although one could wish that they were more explicit on this point, that they, too, would like to see the war ended in an honorable manner, which protects the freedom of the South Vietnamese people to determine their own future and which does not undermine the security of free Asia and our own country.

The main thrust of their criticism is that the administration has not been doing enough to bring about a negotiated settlement in the Vietnam conflict.

No one can be blamed for being impatient over the Vietnam war. All of us want to see the killing stopped. Indeed, on the day President Johnson announced that he had ordered the bombing of North Vietnam stopped, I made a statement calling for an immediate across-the-board ceasefire, including the cessation of terrorist activities.

It has been a source of deep regret to me that we have not made the call for a total ceasefire our official position, from the beginning, in the Paris peace talks. It is a position that would have the support of all those who are committed to peace; and if the Communist delegations refused to go along with our proposal for a ceasefire, the onus for the continuation of the killing would clearly be on their shoulders.

But while we all wish to see the killing stopped as soon as possible, we must also be concerned over the possibility that too many public manifestations of impatience may give Hanoi the impression that the American will to resist has been broken, and that we are about to raise the white flag in Vietnam.

Needless to say, surrender is not the intention of most of those who have spoken impatiently, and particularly in recent weeks.

But when prominent and respected members of both parties and important private organizations and retired Government officials warn the Nixon administration that it has only a few months at the most to settle the Vietnam war, or when the call is made for an immediate, or almost immediate, withdrawal of American forces, the hard fact is that this is like telling the North Vietnamese Communists that if they hold on for just another few months, they will have us in a position where they can settle the war on their own terms.

Imagine the position our negotiators in Paris would be in if they implored the Communists to reach an agreement with us in a hurry, because the American people are increasingly impatient with the war and the Nixon administration will be in serious trouble if it does not end the war in two or three months.

If they said this, then the Vietnamese Communist delegation in Paris would simply sit back and wait for the American home front to collapse.

THE REDUCTION OF AMERICAN FORCES IN VIETNAM

Some of our ablest Vietnam experts are convinced that, even in the absence of an agreement with Hanoi, we can begin to withdraw some of our forces from Vietnam this year without adversely affecting the conduct of the war or our position in the peace negotiations. They believe that we could only gain from a carefully phased de-Americanization of the war, geared to the improved combat capabilities of the South Vietanamese forces, the state of the battle, and progress in the Paris peace talks.

A point of crisis was reached in 1964 and 1965 which made a massive entry of American forces imperative in order to prevent a Communist victory. This was so for a number of reasons.

First, we did not do as well as we might have done in the early stages because we lacked understanding of the nature of Communist political warfare.

Second, we failed to train and equip the South Vietnamese forces properly, so that until very recently they were at a serious disadvantage in competing with the superbly equipped Vietcong forces.

Third, we failed to use our influence to promote certain essential social and political reforms.

Finally, a massive American entry became essential when Hanoi decided to go for broke in South Vietnam by reinforcing the Vietcong with entire divisions of the North Vietnamese army.

The American buildup that took place after 1964 saved Vietnam from what appeared to be an almost certain Communist victory. This is its historic justification. But it inevitably had certain byproduct disadvantages.

It encouraged the Vietnamese people to regard the war more as an American conflict than as their own.

It produced widespread popular resentment, as the presence of large numbers of alien and affluent forces invariably does.

It played into the hands of the Vietcong propagandists by lending seeming authenticity to their charge that the Americans are imperialist invaders.

If we can now reverse the process and start de-Americanizing the war, most Vietnamese would welcome it, provided of course, that what is involved is an orderly and phased reduction in forces, and not a precipitate abandonment of the battlefield.

There are many reasons for believing that President Nixon has been thinking in terms of such an orderly reduction, even if there is no agreement with the Communists, and that there have already been discussions with our Vietnamese allies on the subject.

In an early press conference, President Nixon stated that he did not want to see a single American soldier in Vietnam for a day longer than was necessary. Since that time, President Thieu has announced that the expansion and improvement of the South Vietnamese forces will make it possible for them, at an early date, to take over a much larger share of the battle from their American allies.

But it does not help in this situation if President Nixon is publicly pushed and prodded to withdraw or reduce American forces.

The enemy could derive small comfort from a phased and orderly reduction of American forces, agreed upon with our Asian allies. The enemy, may however, become even more stubborn and inflexible if we give him the impression that the President has been compelled by mounting public criticism to embark on a complete pullout of American forces.

THE AMERICAN HOME FRONT

Actually, the picture of overwhelming popular opposition to our Vietnam commitment painted by the critics goes far beyond the facts.

The most recent Gallup Poll on the Vietnam war, published on March 22, 1969, showed that only 26 percent of the American people favored pulling out of Vietnam. A much larger group, 32 percent, said that they were in favor of going all out to win the war; 19 percent said that they favored a continuation of the present policy; while another 19 percent said that they were in favor of an end to the war as soon as possible, but did not demand a pullout or criticize the conduct of the war.

What this adds up to is that the administration can count on the backing of 70 percent of the American people if it calls for further patience and perseverance in honoring our Vietnam commitment.

Significantly, the Gallup report said that up to this point the public had not blamed President Nixon for any lack of progress in the Vietnam situation.

Despite the clamor and confusion which the critics have generated, the basic good judgment of the American people is once again manifested in these figures.

Certainly, these figures do not suggest that the American people are ready to raise the white flag in Vietnam, or that the Nixon administration will be in deep trouble if it does not find a solution in 2 or 3 months, as some people have suggested. When the critics make such dire predictions they are lapsing into the all-too-common error of identifying their own opinions with public opinion.

It has, of course, been Hanoi's belief for some time now that growing opposition in the United States to the Vietnam war would force us to withdraw on the Communist Vietnamese terms. Nor has Hanoi ever been bashful about stating this position publicly. Almost 4 years ago, when three Washington Post correspondents interviewed the Vietcong representative in Moscow, he made it clear to them that the National Liberation Front was counting on American public opinion rather than on military victory or on negotiations to force an American withdrawal.

In support of this contention, the Vietcong representatives flourished in front of the American correspondents a big batch of signed advertisements and appeals and speeches critical of American policy in Vietnam—see exhibit A.

In a recent article on "Vietcong Propaganda Abroad," Dr. Chester Bain, one of our foremost Vietnam scholars, said that the worldwide Communist propaganda effort on the Vietnam war is probably the largest and best coordinated campaign of its kind in history—see exhibit B.

Documents recently captured from the Vietcong show that, while they have been disappointed by the military failure of their recent offensive, the Communist leaders nevertheless believe that this offensive achieved its major purpose by encouraging the antiwar movement in the United States.

THE SEVERAL FACES OF THE VIETNAM CRITICS

There is a tiny minority in our country who have been particularly responsive to the Vietcong propaganda because their opposition to our Vietnam policy stems clearly from a commitment to the revolutionary overthrow of our Government. They do not oppose our involvement in Vietnam for pacifist or humanitarian reasons. They oppose our involvement because they frankly favor a Vietcong victory.

Some, but not all, of these extremist critics have made no effort to conceal their motivation.

For example, Prof. Eugene Genovese, of Rutgers, created nationwide indignation

when he said publicly in 1965 that he would welcome a Vietcong victory.

And, on the other side of the continent, at the University of California in Berkeley, Dr. Stefan Smale, one of the two chief organizers of the Vietnam Day Committee, told the press that he and his colleagues wanted the Vietcong to defeat the United States, because such a defeat would break American power elsewhere in the world and would also help to bring about revolutionary changes in the United States.

As small as the group represented by Smale and Genovese may be, they have nevertheless, played a role out of all proportion to their numbers in organizing and in giving leadership to the anti-Vietnam agitation in this country.

The fact that many of the leaders of the anti-Vietnam agitation are motivated not by pacifism, or by high ideals, but by a revolutionary anti-Americanism has become increasingly obvious. Indeed, many of the old-line pacifists and liberals who cooperated with the anti-Vietnam movement in its earlier stages, are gravely concerned over this development.

Mr. Philip Altbach, a Ford Foundation fellow at the University of Chicago and president of the Student Peace Union from 1959 to 1964, said early last year in the Socialist Party organ that a large part of the Vietnam protest movement is not a peace movement at all, but, on the contrary, wants to see a Communist military victory in the conflict. He complained about the strident chorus of anti-Americanism in the Vietnam peace movement, and said that it had the effect of presenting a one-sided view of the situation.

The revolutionary critics of our Vietnam policy have an unquestioned capacity for mischief and noisemaking, because they have all the zeal of the political fanatic.

To this revolutionary minority one cannot appeal for patience for the sample reason that they are ideologically committed both to a Vietcong victory and to the overthrow of our own Nation.

But the great majority of those who oppose the war have nothing in common with the revolutionary opponents of our Vietnam commitment. They would be unhappy about a Vietcong victory. But they nevertheless oppose our involvement in Vietnam either because they are pacifists, or because they believe we are overextended, or because they think that the Vietnam war is not the kind of war we should be involved in, or because they feel weary and frustrated and are disposed to regard the war as hopeless, or because they think it has not been properly managed or because they feel we are not moving fast enough to get the war concluded.

I can understand their position, and it is to these people that I am speaking today.

Since the honest critics of our Vietnam policy would unquestionably prefer to see an honorable settlement to a surrender, it should be possible to appeal to them for a limited measure of patience.

One cannot and should not ask them to forgo their criticism. I do not do so.

But surely it is not too much to ask that they weigh their statements carefully so that what they say cannot be exploited to undercut the position of President Nixon or of his representatives in Paris.

POLITICAL FACTORS FAVORING AN EARLY SETTLEMENT

At this point, some of those who are impatient with the Vietnam war will ask how long we must be prepared to wait while the war drags on and on.

Under other circumstances, it might be more difficult to venture an estimate. But within the past 8 months there has been a dramatic shift in the world situation which, in my opinion, militates against the indefinite prolongation of the Vietnam conflict and in favor of an honorable settlement at a relatively early date.

The Vietnam war would not have been possible without the massive assistance that Hanoi has been receiving from both the Soviet Union and Red China.

In order to make itself eligible for assistance from both sides, Hanoi has been playing an exceedingly delicate balancing act between Moscow and Peking. As tightrope walkers, indeed, the North Vietnamese Communists have shown themselves to be second to none in the world of politics.

However, a situation has now developed which will make this balancing act increasingly difficult. And even if Hanoi should succeed in maintaining a neutral stance between Moscow and Peking, the chances are that Hanoi's two chief suppliers will both be compelled to deescalate the scale of their military support.

Moscow's occupation of Czechoslovakia in August of last year and the political clampdown which it imposed on the Czechoslovakian Government last month have not by a long shot solved all of Moscow's problems in central Europe.

Despite the new controls, the Czechs continue to voice their defiance of the Soviet occupiers and the press continues to find ways of partially circumventing the censorship regulations.

The occupation, moreover, has resulted in widespread criticism and discontent throughout the world Communist movement, and the criticism has been particularly marked in the case of the European Communist Parties.

Elsewhere in central Europe, the cauldron of discontent continues to simmer despite the occupation of Czechoslovakia.

A press dispatch of March 4, for example, quoted a high-ranking Soviet Party official as saying that Moscow's great concern at the moment is the situation in Poland. This situation he described as roughly the same as the situation in Czechoslovakia at the end of 1966, that is, just before the overthrow of the conservative Novotny government—see exhibit E.

Apparently completely unintimidated by the Brezhnev doctrine and the numerous threats that have been made against them, Yugoslavia, Rumania, and Albania continue to hurl defiance at Moscow and to reject the concept of "limited sovereignty" which the Kremlin now seeks to impose on all other Communist nations.

And while all this is going on in central Europe, the growing accumulation of differences and tensions between Moscow and Peking has now erupted in an almost explosive intensification of the Sino-Soviet dispute.

There have, of course, been clashes before this along the Sino-Soviet frontier. But this is the first time that both sides have pulled out all the stops and moved to full-fledged propaganda and political warfare against each other. As a result of this outpouring of hate propaganda on both sides, there can be no doubt that both the Russians and the Chinese now hate each other with a genuine passion.

There can be no doubt, too, that this all-out hate propaganda has produced a much more precarious political situation and increased the probability of military conflict. There have been a number of indications that Moscow is seriously worried that Red China will be able to exploit the discontent of the tribal minorities in the border regions to stir up a Vietcong type guerrilla insurgency.

The Sino-Soviet dispute, if anything, is bound to intensify over the coming period; the trend has gone too far to be reversed.

Both governments will be under pressure to increase the already very large forces they maintain along the Siberian frontier.

Simultaneously, Moscow must confront the probability that its political position in central Europe will continue to deteriorate and that the intellectual revolt in the Communist countries will continue to grow.

All the evidence points to the conclusion that, as great as our own difficulties may be, both the internal and external difficulties faced by Peking and Moscow far exceed our own.

This does not mean that we can afford to relax our own guard on the assumption that the intensification of the Sino-Soviet conflict, by itself, will safeguard the Western World. Desperation always has a quality of unpredictability about it; and for this reason, the desperation and frustration which both Moscow and Peking must now feel may actually increase instead of decrease the danger to the free world.

Nevertheless, there is no question but that Moscow and Peking, both, will have to devote more of their energies and more of their resources over the coming period to their internal problems and to their problems with each other. To this extent it is reasonable to assume that Hanoi will not be able to count on the same degree of assistance from the Communist superpowers.

Besides, it is clear that North Vietnam is suffering desperately from the consequences of the war and that the North Vietnamese people are even more impatient and dissatisfied than the American people.

In a recent interview with an Italian journalist, General Giap, the North Vietnamese defense minister, conceded that the war had cost North Vietnam 500,000 dead. This is the equivalent of almost 7 million dead for a country the size of the United States.

On top of these incredible casualties, it is only reasonable to assume that Communist medical facilities have been utterly overwhelmed by the need to cope with the many hundreds of thousands of wounded, a large percentage of them maimed for life.

Remarkably enough, the figure of 500,000 dead, which was confirmed by General Giap, jibes almost exactly with our own estimates.

General Giap subsequently denied that he had made any such statement in the course of the interview. The Italian journalist replied that she had checked her notes carefully with the two friends, both Italian leftists, who accompanied her on her visit to Giap.

That General Giap subsequently denied the statement which he had made in an unguarded moment is not surprising. Hanoi's official position to this day is that there are no North Vietnamese forces serving in the South. In order to support this myth, Hanoi has had to organize one of the most remarkable campaigns of national deception in history.

Not merely does the North Vietnamese press make no mention of North Vietnamese activities and casualties in South Vietnam, but, to support this deception, the hundreds of thousands of servicemen who have been sent south have for all practical purposes become "non-people."

They are not permitted to write to their families.

They are not permitted any home leave.

And it is the ultimate inhumanity of this deception that even the tens of thousands of amputees and war-maimed are not permitted to return home, because this would give the lie away. What happens to these pitiful "non-people" is uncertain, but there are indications that they are detained in special centers in Laos and Cambodia and in secure areas of South Vietnam. They linger on in their awful suffering, cut off from their country and their families by a government that cannot admit their existence.

Those who are disposed to listen to the North Vietnamese Communists or to regard them as agrarian reformers, would do well to ponder the moral implications of the elaborate and inhuman facade that Hanoi

has erected to support the lie that it has not intervened in South Vietnam.

Not very surprisingly, there have been many evidences of division and discontent in North Vietnam and the North Vietnamese Communist Party and the Vietcong movement itself. How deep this discontent goes may be gaged from the fact that among those arrested by Hanoi have been a number of important party functionaries.

In North Vietnam during 1968 the Ho Chi Minh regime, already as ruthless as the Stalinist regime at its worst, introduced still further Draconian measures to deal with discontent and attempted subversion and sabotage. These measures were not kept secret. Their introduction was trumpeted aloud by press and radio, in an obvious effort to terrorize would-be resisters.

And in South Vietnam, at the same time as the will to resist is perceptibly weakening in America, the rate of defection from the Vietcong forces has soared to record levels. During the months of March and April, an average of 1,000 Vietcong defectors many of them officers and political cadres, have come over to the side of the government each week.

Recently captured documents reveal the grave concern of the Vietcong leaders over the growing defection rate. Vietcong unit commanders are warned that if any soldier shows himself particularly cooperative or willing to accept duties, he should be suspected of trying to set things up for his defection to the government side.

Captured documents also reveal concern over the general level of morale. They complain that too many Vietcong are keeping their eyes on the Paris negotiations instead of on the battlefield.

All of these facts strongly suggest that if we can show the stamina and courage to persist along the path of honor in Vietnam, Hanoi will in the not very distant future show a greater willingness than it does today to come to reasonable terms.

It is a situation that calls above all for patience, a situation which requires that all those who are impatient not only weigh the implications that will be read into their words but also weigh the consequences of an American defeat in Vietnam.

For let there be no mistake on this point: If we abandon Vietnam, or if we are defeated in Vietnam, or if we negotiate a settlement that paves the way for an early Communist takeover there, then it would mark the beginning of the end for American credibility and for America as a great nation.

I do not have much patience with those who say it does not make much difference who takes over there. I will say more about that later, but let me say right now that it makes a great deal of difference. If we have not learned that lesson from history, then we have a lot of catching up to do.

THE HIGH COST OF SURRENDER

President Johnson's historic announcement of March 31, 1968, led to widespread speculation that the American will to resist was nearing collapse. In the wake of the President's statement, Field Marshal Sir Gerald Templer, commander of the British Commonwealth forces that defeated the Communist insurgency in Malaya after World War II, warned of the consequences of an American pullout. He said:

"If the Americans pull out of Vietnam, the Communists will take over the whole of Southeast Asia—and Burma, India, right up to the Caspian Sea, would go. An American withdrawal would have absolutely disastrous effects, not only in the Far East but further afield."

These words deserve the most serious consideration, especially on the part of our antiwar critics, because they come from an Englishman who has a profound and intimate personal knowledge of Southeast Asia and of Communist guerrilla warfare.

Sir Gerald's word were echoed a few days later in a statement by Prime Minister Tunku Abdul Rahman of Malaysia, who is widely regarded as one of Asia's ablest democratic statesmen. Let me quote what the Malaysian Prime Minister said:

"If the Americans for some reason decided to give up this war in Vietnam and the North decided to take over the South, then it will be the end of us all."

Very similar statements have in the past been made by Prime Minister Souvanna Phouma of Laos, by Prime Minister Lee Kuan Yew of Singapore, and even by Prince Norodom Sihanouk of Cambodia. Their statements all coincided with the statement of the Malaysian Prime Minister on the essential point that an American defeat in Vietnam, or an American withdrawal from Vietnam, would be absolutely disastrous for the whole of Southeast Asia.

Let me also quote again the bitter words written by the well-known Filipino commentator, Vincente Villamin. He said:

"The abandonment of Vietnam, would be an indelible blemish on America's honor. It would reduce America in the estimation of mankind to a dismal third-rate power, despite her wealth, her culture, and her nuclear arsenal. It would make every American ashamed of his Government and would make every individual American distrusted everywhere on earth."

Similar opinions have been expressed by other Far Eastern anti-Communist leaders, ranging in their political views from conservative to neutralist to socialist—see exhibit F.

The high price of surrender has also been underscored by some of our best and wisest friends in Europe. The London Economist, which is generally regarded as free Europe's foremost political periodical, and which has also been stanchly pro-American through thick and thin, had this to say about the cost of a surrender in Vietnam, in words that should be noted and remembered:

"It is arguable that the cost of victory, in terms of bloodshed, is proving to be too great: but the cost of betrayal could be even greater. In the last analysis it is for Mr. Nixon to decide; it may yet become Nixon's war. The Americans have made considerable headway in the military field, and a modest degree of headway with their pacification program. If they have the endurance, they can still win the war, in the sense of definitely preventing a Communist takeover. After backing so many rickety regimes through thick and thin, it would be tragic if they were to ditch this much better government to let the Liberation Front in. It is an illusion to imagine that the United States can agree to a compromise peace that would amount to a sell-out and retain any credibility in Asia. Nor in Asia alone; for in this shrunken world credibility is indivisible."

The cost of defeat has also been underscored by American experts who are sensitive to the realities of international politics. Shortly before he became President, Mr. Nixon's principal foreign policy adviser, Dr. Henry M. Kissinger put the matter in these terms:

"The commitment of 500,000 Americans has settled the issue of the importance of Vietnam. For what is involved now is confidence in American promises. However, fashionable it is to ridicule the terms "credibility" or "prestige," they are not empty phrases; other nations can gear their actions to ours only if they can count on our steadiness. The collapse of the American effort in Vietnam would not mollify many critics; most of them would simply add the charge of unreliability to the accusation of bad judgment. Those whose safety or national goals depend on American commitments could only be dismayed. In many parts of the world—the Middle East, Europe, Latin America, even Japan—stability depends on confidence in American promises. Unilateral withdrawal, or a settlement which unintentionally amounts to the same thing, could therefore lead to the erosion of restraints and to an even more dangerous international situation."

So, let there be no illusion about the heavy price America will have to pay, in prestige and respect and credibility and world power, if it should seek to extricate itself from the Vietnam conflict under anything less than honorable conditions which assure the independence of South Vietnam.

THE TERMS OF PEACE

There are those who say that to talk in these terms is equivalent to demanding unconditional surrender by Hanoi.

My reply to this is that to talk in anything less than these terms should be equivalent to offering our own unconditional surrender to Hanoi.

The fact is that we do not demand an unconditional surrender.

We are already on record as favoring the inclusion of North Vietnam among the beneficiaries of the vast Mekong River plan. The experts who have worked on this plan tell us that it has a far greater potential for the entire region, that is, for Thailand, Laos, Cambodia, South Vietnam, and North Vietnam, than the TVA had for our Southern States. And the point has further been made that, economically, North Vietnam would gain far more from the peaceful cooperation with the rest of Southeast Asia within the framework of the Mekong River plan than it could ever hope to gain from the conquest of South Vietnam.

If Ho Chi Minh is really a Titoist, as some of the critics of the war pretend, the best way he could prove this would be to terminate the war, thus extricating himself from both the Red Chinese and the Soviet embrace, and to take his country into the Mekong River plan.

Moreover, the South Vietnamese Government has already made it abundantly clear that, while it opposes a coalition government, it is willing to promise a general amnesty when hostilities cease, to agree to free elections under international supervision, to assure the National Liberation Front of the right to participate openly in these elections on a non-Communist program, and even to enter into negotiations with the Vietcong in the interest of achieving a settlement.

This is conceding a good deal. In fact I do not know where people get the idea that our side is the inflexible one, and that we have refused to make any concessions to bring an end to the war.

Hanoi, therefore, can have peace in Vietnam on terms that do not represent an unconditional surrender for its side and which, indeed, would bring substantial benefits to it.

AGAIN THE NEED FOR PATIENCE

It is my judgment and prayer that this tragic and costly war will come to a close soon. It may not end in 3 months or 4 months; but then neither will it take 3 or 4 years.

But whether the war is terminated honorably or dishonorably depends in the final analysis on the patience and fortitude and unity we can display on the home front over the coming critical months.

Writing in the Washington Star on January 23, 1969, foreign editor Crosby S. Noyes said that "a demand in this country for quick results in the negotiations is a sure prescription for disaster." Mr. Noyes appealed for an abatement in the clamor for quick results. My own appeal for patience and solidarity is directed in the first place to those critics who until recently agreed that it was essential to the security of the free world to stop Communist aggression in Vietnam, but who now urge that we extricate ourselves on any conditions because the war is proving to

be longer and more costly than they anticipated.

This is a position which is difficult to understand.

THE MORALITY OF OUR VIETNAM COMMITMENT

If it was morally and politically right to come to the defense of South Vietnam to prevent a Communist takeover, then it does not cease to be right simply because the going has become tougher, or because the war is more costly.

Whether the cost of the Vietnam war is justifiable or unjustifiable depends in the final analysis, on one's estimate of the enemy.

If one believes that the Vietcong Communists are simple agrarian reformers, as many people believed about the Chinese Communists before they came to power, the Vietnam war would be difficult to justify.

The scales of justification give another reading, however, if one believes that the Communist system is just as totalitarian as the Nazi system; that it is equally contemptuous of human rights and human life; that the total volume of human suffering produced by this system even surpasses the volume of suffering under the Nazis, and that it is just as fanatically committed to the expansion of its empire, to the destruction of freedom, and, above all, to the destruction of the United States of America as the chief bastion of freedom.

That is the reading I get, and I think history is on my side in this estimate.

There are those who will reply to this that some Communist regimes today are less oppressive and some more oppressive, and that it is a mistake to lump them all together.

I have never lumped them altogether; my critics have sometimes thrown that bale of hay at me, but they will have trouble finding it in the record because it is not there.

While all Communist regimes are tyrannical, it has been true, historically, that some have been more bloody than others.

In the spectrum of bloodiness, however, the tyranny of Ho Chi Minh does not belong with the Dubcek regime in Czechoslovakia; it belongs, rather, with the bloodiest of all Communist regimes, the regimes of Stalin and Mao Tse Tung. That this is so should not be surprising in view of the fact that Ho Chi Minh himself is one of the small surviving band of original unreconstructed Bolsheviks.

Hanoi's aggression against South Vietnam must be resisted because it poses basically the same kind of danger to the freedom and security of the nations in the area, as did the Nazi regime. The only serious difference is that the Communists have refined the means of subversion and aggression to a point never dreamed of by the Nazis.

A Communist victory must also be resisted because, as Hanoi has repeatedly pointed out, such a victory would demonstrate America's complete inability to cope with "wars of national liberation" and would pave the way to more "wars of national liberation" in other parts of the world, especially in Latin America.

Finally, a Communist victory must be resisted on simple moral and humanitarian grounds.

Hoang Van Chi, a former North Vietnamese Government official, has estimated that more than 500,000 North Vietnamese were executed or killed in one way or another during the period when the Ho Chi Minh regime was consolidating its rule over North Vietnam. And this figure would unquestionably have been very much higher if it had not been for the fact that some 1 million North Vietnamese, out of their hatred of communism, took advantage of the Geneva Agreement to flee to South Vietnam.

There are many reasons for believing that the massacre that would take place in South Vietnam if the Vietcong were to come to power there would far exceed, in scale and ferocity, the massacre that characterized the establishment of Communist rule in the north.

It is common knowledge, for example, that the Vietcong have prepared long lists of political opponents whom they plan to massacre as soon as they take over. These lists include Government officials at every level, officers and noncommissioned officers in the army, religious leaders, labor leaders, and countless thousands of those who escaped from the north.

There are some who say that the number slated for execution by the Vietcong may run as high as several million. This estimate may be on the high side. But that the Vietcong execution lists are intended in earnest was demonstrated in the most gruesome manner during the Tet offensive of last year, when the Vietcong briefly occupied the city of Hue.

In Hue proper, when it was liberated from Communist control, the allies dug up from mass graves the bodies of more than 1,000 Vietnamese civilians who had been executed by the Vietcong. Many of them had been buried alive, with their hands tied behind their backs.

More mass graves containing the bodies of civilians executed by the Vietcong are being discovered all the time in the general vicinity of Hue. For example, a mass grave discovered about 12 miles southeast of Hue toward the end of March has thus far disgorged 134 bodies. Again, many of these had been buried alive. And this last April 7, another press report said that South Vietnamese soldiers had discovered a new mass grave about 3 miles north of the first one—see exhibit G.

Moreover, if the Vietcong should ever take power, the victims of their terror would not be limited to those who hold leadership positions and whose names appear on their execution lists. The incredible bestiality with which the Vietcong have fought the war makes it certain that a Communist victory would also be followed by mass killings of men, women, and children in areas that are considered unfriendly to them.

There could be no more dramatic evidence of the Vietcong capacity for indiscriminate massacre than what happened to the simple Montagnard people of the village of Dak Son in December, 1967.

Attacking the village by night, the Vietcong went with flame throwers from house to house, killing indiscriminately, at point-blank range, men, women, and children. When they were through with their flame throwers, 250 unarmed Montagnards, mostly women and children, had been killed; another 500 were missing, some of them dead, some of them kidnaped, some of them escaped; and scores more were suffering from ghastly burn wounds over much of their bodies.

Let no one, therefore, who now demands our immediate withdrawal from Vietnam plead innocence or ignorance if this agitation should in fact compel our withdrawal, and if, in consequence of this withdrawal, there takes place the frightful massacre of the innocents which has attended the establishment of Communist rule in every country.

In the accounting of history they will not be able to escape their responsibility for helping to make this massacre possible.

Nor will they be able to escape responsibility for the subjugation of other Southeast Asian countries by communism which would be bound to follow in the wake of an American capitulation in Vietnam. As the highly esteemed Institute for Strategic Affairs pointed out in a study last week, the validity of the domino theory can no longer be challenged.

When some of us talked about the domino theory a year or two or three ago, we were told, "That is old fashioned; that is a lot of bunk." Mr. President, it was not bunk then and it is not now. All you have to do to realize this is study history, look at the map, and think about the matter.

Referring to the Hanoi-backed Communist insurgencies in Laos and Cambodia, the institute's report said that these dominos were already ripe for tumbling, and that even Thailand's position was precarious.

The Vietnam war has been long and costly, in my judgment longer and costlier than it should have been because it has been so tragically mishandled.

The recognition that we have made errors, moreover, does not mean that we should now cut and run; it simply means that we must move as rapidly as possible to eliminate the errors, at the same time as we move to reduce and terminate the scale of hostilities.

To many people it no doubt appears that we have achieved nothing through our sacrifices. But despite the errors we have made, our efforts in Vietnam have served the cause of freedom well.

Through our sacrifices we have purchased precious time for the free nations of the Far East; and, with few exceptions, these nations have made good use of this time to strengthen their institutions and build up their economies.

Indonesia was saved from going Communist by a hair's breath; and it is probably no exaggeration to say that our Vietnam commitment made the difference between victory and defeat in this case, because, had another half dozen senior officers sided with the rebels, the Communists would almost certainly have emerged triumphant.

In the balance of history, therefore, our intervention in Vietnam has been anything but fruitless.

The American people have always carried themselves with exemplary fortitude in difficulties and crises.

By history and by temperament, they are not a people disposed to accept humiliation or to raise the white flag of surrender.

If the full facts on Vietnam were now put before the American people, the administration would have the backing of the overwhelming majority for a policy of continued firmness.

President Nixon must be given credit for doing everything in his power, for walking the extra mile and more, in an effort to put an end to the Vietnam war.

In this effort he needs and deserves the understanding and support of the American people. He deserves it all the more because no American President ever inherited a more difficult situation.

We are now closer to a settlement than we have ever been before.

As I have been speaking, the Communist-run National Liberation Front has issued in Paris a 10-point peace program of their own as a basis for a settlement in Vietnam. There has been no chance to analyze this proposal as yet. But it may signal the beginning of serious movement in the negotiations.

So I ask the honest critics of our Vietnam policy, the congressional critics in particular, to withhold their criticism for a while and let President Nixon and his representatives do the speaking for the United States, so that they can bring an end to this awful war.

I ask for patience because it is a fact that the President's position is undercut by calls for an immediate pull-out or by arbitrary deadlines for getting out of Vietnam.

Now, I am sure that the administration will not be misled by the clamor which comes from the misguided and from those who have lost hope and are now impatient.

Nor will the administration permit this clamor to reduce it to a suppliant posture in the Paris negotiations, because nothing could be more fatal to the outcome of the Vietnam war.

And, let us hope that the administration

will not allow this clamor to silence its voice at home or prevent it from reaffirming, in positive terms which every American can understand, the importance of Vietnam to the cause of freedom and the overwhelming moral and political justification for our presence there.

This is something, to my great regret, which the Johnson administration failed to do; and for this, it paid a very heavy penalty.

So let us all work to achieve a just and honorable settlement of the Vietnam conflict.

Let us constantly and repeatedly test the sincerity of the Communist negotiators by urging their acceptance of a total ceasefire.

Let us not say anything which might lead the enemy to believe that we are ready to surrender or put up the white flag.

And let us never repeat the folly of base appeasement because this will, as surely as day follows night, inevitably result in new aggression and new bloodshed under far more terrible circumstances.

Mr. President, I ask unanimous consent to have printed at the conclusion of my remarks several exhibits relating to what I have said today.

There being no objection, the items were ordered to be printed in the RECORD.

EXHIBIT A

Stephen R. Rosenfeld, Washington Post, May 28, 1965: "Flourishing a batch of American cartoons, signed advertisements, and speeches critical of American policy in Vietnam, the Front's new representative in Moscow made clear his reliance on American public opinion rather than on military victory or negotiations, to compel American withdrawal."

EXHIBIT B

Dr. Chester A. Bain, Foreign Service Journal, October, 1968: "The communists' worldwide propaganda effort on the Vietnam war is probably greater and better coordinated than any other propaganda campaign in history.

"Viet Cong and Hanoi propaganda directives point to groups upon whom to concentrate—pacifists, families of servicemen with the allies in Vietnam, student groups, church organizations. And they suggest means of encouraging dissent with American policy—anti-war demonstration, military desertions, and alienation of European countries from the United States. The echoes reverberate worldwide, produced and directed by an elaborate and sophisticated propaganda mechanism."

EXHIBIT C

Dr. Stefan Smale, the Oakland Tribune, October 29, 1965: "We want the Vietcong to defeat the United States for international reasons. If the U.S. is defeated in Southeast Asia, this will help break American power elsewhere in the world. This would give new impetus to revolutionary social change (wars of liberation) in such places as Africa and Latin America. And if surrounded by revolutionary changes, it will in turn make it easier to achieve radical change in the United States."

EXHIBIT D

Mr. Philip Altbach, New America, November 24, 1965: "There is a strong undercurrent in the protest movement which tends to view a Vietcong victory as a positive aim . . . The strident chorus of anti-Americanism has had the effect of presenting a one-sided view of the situation . . . A substantial part of the Vietnam protest movement is not a peace movement at all but rather supports the Communist side of the conflict."

EXHIBIT E

The New York Times, March 4, 1969: "An East European source asserted tonight that the apparent shifting in Communist tactics on Berlin in the last week reflected a division in the Politburo of the Soviet Communist party.

"The source, who said he was quoting an official of the Soviet party Secretariat who recently visited his capital, said it was significant that the Soviet leaders who had favored a conciliatory policy on Berlin in Presidium meetings were the ones who pleaded against an invasion of Czechoslovakia last year.

* * * * *

"The Soviet official was reported to have said that among Moscow's greatest concerns at the moment is the situation in Poland. The country is 'roughly the same as Czechoslovakia at the end of 1966,' the official was quoted as having said. That period was a year before President Antonin Novotny was ousted by the Czechoslovakia Politburo and replaced as party leader by Alexander Dubcek, an advocate of reform."

EXHIBIT F

STATEMENTS ON VIETNAM BY ASIAN LEADERS

Philippine President Ferdinand E. Marcos, Manila, 1966: "It is established beyond dispute that the war in Viet-Nam is not a civil war. It is a war on an international scale involving massive aggression from Communist North Viet-Nam with the active encouragement of Communist China."

Korean President Pak Chung Hui, Korea, 1966: "The forces which support and control the Viet Cong in Free Viet-Nam today are the same forces which 16 years ago supported and controlled the southward aggression of the Communist troops in Korea . . . the situation in Viet-Nam is more than a simple domestic problem of that country. It represents rather a confrontation of the free world with Communist tyranny."

Prince Norodom Sihanouk of Cambodia, May 9, 1967: "They launched these attacks because they want to create civil war. . . .

"If we fail in our operations against them and if the Khmer [Cambodian] Viet Minh emerge victorious, they can transform the nation into a Communist country. If not they must continue to accept independence and neutrality. . . .

"The masters of the Khmer Viet Minh are the Viet Minh and the Viet Cong."

Eisaku Sato, Premier of Japan, November 14, 1967: "I wish to express my deep respect to you, Mr. President [Johnson], for the great efforts being made by the United States under your able leadership to bring peace and stability to the world, particularly in Asia in this moment."

Rajmohan Gandhi, editor of Himmat magazine, February 1965: "There is dangerous thinking in the West . . . progressives of the West believe that Communism will win and the best that they can do is surrender peaceably to it . . . they are free to expound their ideas from remote positions. But there are millions of people in Southeast Asia and 450 million people of India who, in spite of the basic defects in the structure of their society, will not permit themselves to be traded in the drawing rooms and cabinets of the Western world . . .

"If America compromises on this vital issue of freedom in Asia, she will have to pay the price dearly. . . . It is alarming that [responsible commentators] of the West should talk so lightheartedly about leaving India's eastern flank open to the dangers of Chinese invasion.

"[The] counsel of retreat to the West is certainly not what Asians want. We want and need the presence of the West on Asia's land and sea. The West can provide the power of balance to contain Communist China until such a time as democratic nations like India and Japan can provide it."

Singapore Premier Lee Kuan Yew, May 6, 1965: "If the Communists are able to advance their frontiers to envelop South Viet-Nam it will be only a matter of time before the same process of emasculation by military and political techniques will overtake the neighboring countries."

Prime Minister of Laos, Prince Souvanna Phouma, November 2, 1967: "We were fully satisfied with the [1962] Geneva accords. We thought that the nightmare of internal subversion and foreign aggression was over. But, alas, our people were grievously deceived. The accords were immediately and shamelessly violated . . . the Pathet Lao . . . , valet of the Hanoi Government, continued its sabotage. War, instead of stopping, grew more intense. Today, five years after the signature of the Geneva accords, we can count about 40,000 North Vietnamese soldiers in our territory. They are fighting beside 15,000 Pathet Lao, armed, paid, trained and encadred by North Viet-Nam. Development of our country is paralyzed. Thousands of refugees stream into Governmental zones. Hundreds of villages are abandoned. Only half of the soil is cultivated. The Ho Chi Minh trail has become an active transit route for North Vietnamese forces . . . But, the most distressing aspect is to think that this useless, bloody, tragedy could not have occurred if some ideological, greedy nations had not come and interfered directly or indirectly in our internal affairs. By what right, what moral, do they assume the right to 'liberate' us?"

The late Prime Minister Harold Holt of Australia: "It is in Vietnam that aggressive communist pressure—the greatest political danger in Asia today—is most severe and direct, and it is in this area that we must, for the time being, concentrate much of our defense effort and resources. . . .

"Let me repeat, in simple terms, why we are in Vietnam:

"We are there because we believe in the right of people to be free.

"We are there because we responded to an appeal for aid against aggression.

"We are there because security and stability in South East Asia are vital to our own security and stability.

"We are there because we want peace, not war, and independence, not serfdom, to be the lot of the peoples of Asia.

"We are there because we do not believe that our great Pacific partner, the United States, should stand alone for freedom.

"We will continue to be there while the aggression persists because, as a free and independent nation, we cannot honourably do otherwise."

Prince Norodom Sihanouk of Cambodia: "The fact is that as long as the Americans are there, China cannot yet swallow Cambodia. And what prevents the Americans from swallowing Cambodia is precisely the fact that China is there."

New Zealand Foreign Minister, Keith Holyoke: "Nothing is more essential to the maintenance of peace than a recognition that so-called wars of national "liberation" must be successfully challenged. . . . Vietnam is a small nation, New Zealand is much smaller. And we have a particular interest to protect the right of all nations, however small, to work out their future free from the threat of aggresion and conquest."

Armed Forces Daily, Indonesia, October 24, 1967: "Regardless of one's views on the war, it is evident that U.S. forces in Vietnam are both a deterrent to communist attack and a shield against Communist expansion in Southeast Asia. If U.S. forces are withdrawn to Australia, it would be very easy for the Chinese communists to continue their aggression and expansion to the south."

Foreign Minister Thanat Khoman of Thailand: "Let us smaller and weaker nations

candidly face the facts and realize that the imminent dangers which may descend upon our nations are less likely to come from nuclear deployment—although that can never be ruled out—than from combinations of military and political ventures which their proponents euphemistically call "wars of national liberation," and which, for all intents and purposes, are hardly different from the one which Adolf Hitler launched against the Sudetenland nearly thirty years ago. Such undertakings nowadays may be more insidious but no less lethal to our free and healthy existence. . . .

"North Vietnam and its supporters in the communist world, as well as its Vietcong agents in South Vietnam, wanted the outside world to believe that the war of conquest they have been waging for many years against the small and independent country of South Vietnam is a genuine national uprising or, to use their current terminology, a 'war of national liberation.'"

"This travesty of the truth has convinced neither the South Vietnamese people nor those who live near the scene of the crime and who are directly or otherwise suffering from its nefarious consequences. Only those who are farther away whose minds are less perceptive of the existing realities, and those who are always liberal with other people's freedom or are prompted by less than altruistic reasons, allow themselves to fall victims of this crude propaganda.

"But if questions as to what they think of the conflict in Vietnam are directed to those Asians who have their feet firmly on the ground and whose vision has not been clouded by the outlandish ideology of the frustrated author of 'Das Kapital,' they would reply in unison that it is in effect an old-styled colonial conquest with only a few renovated outward trimmings. . . ."

Mr. K. K. Sinha, director, Political and Social Studies Institute, Calcutta: "You cannot help being involved; you are involved, whether you like it or not. Your present indifference is a factor favoring one side in the battle. So don't imagine that by your silence you can escape.

"I have gone through much of the literature on Vietnam and more is coming out. One thing I am already convinced of and that is that this struggle is local as well as universal. Its final result will be crucial both for that small country—flapping like a small side-pocket for coins in the jacket of a continent—as well as for the continent and the world. Vietnam is a world issue indeed."

EXHIBIT G

A SECOND GRAVE OF DEAD CIVILIANS FOUND NEAR HUE

The Evening Star, Washington, D.C., Monday, April 7, 1969:

"DA NANG, SOUTH VIETNAM (AP).—A second mass grave containing bodies of men and women executed by Communist troops during the 1968 Tet offensive was found near Hue today.

"Workers exhumed 20 bodies and are continuing to open the grave 10 miles east of Hue during the remainder of the week.

"Twelve days ago, a Vietnamese soldier on patrol tripped across a wire binding the hands of a buried man. As they uncovered that body, the authorities found the first mass grave and in the following days removed 134 bodies.

"That area was about 12 miles southeast of Hue. The new gravesite is three miles north of the first one.

"We have no idea how many bodies we will find in this new gravesite," said one U.S. advisor. He added that Vietnamese soldiers patrolling the area also are checking reports of additional gravesites."

AUTHORIZATION OF APPROPRIATIONS FOR MILITARY PROCUREMENT AND OTHER PURPOSES

The Senate continued with the consideration of the bill (H.R. 17123) to authorize appropriations during the fiscal year 1971 for procurement of aircraft, missiles, naval vessels, and tracked combat vehicles, and other weapons, and research, development, test, and evaluation for the Armed Forces, and to prescribe the authorized personnel strength of the Selected Reserve of each Reserve component of the Armed Forces, and for other purposes.

Mr. ALLOTT. Mr. President, tomorrow we will have a chance to complete the business we began here last week—approval of the orderly, prudent, limited expansion into phase II of the Safeguard ABM system.

We can complete this approval by defeating the pending amendment introduced by the distinguished junior Senator from Massachusetts.

Today, I want to explain some of my reasons for opposing the Brooke amendment.

I am frank to admit that it is not entirely clear to me what the proponents of this amendment intend it to do. But I am satisfied that, regardless of the intentions of the proponents, it will work in one of the following two ways. On the one hand, it may enable us to have less defense than the phase II proposal will give but at the full cost of the phase II proposal. On the other hand, it may enable us to have the same amount of defense as the phase II proposal would give, but at a greatly increased cost.

I am inclined to think that the real effect of the pending amendment would be the former—less defense for the same amount of money. Let me explain.

It is particularly difficult to interpret the effect that the Brooke amendment would have on the Safeguard deployment configuration. I think the most likely intention of the amendment is to approximate modified phase II in adding one more Safeguard site to be paid for by the proposed funding. Where this amendment works a significant revision of the proposal worked out by the Armed Services Committee is in requiring that the additional site be located somewhere in the Minuteman fields, either near Grand Forks Air Force Base, N. Dak., or near Malmstrom Air Force Base, Mont., that is, the significant effect of the Brooke amendment would be in preventing the proposed funds from being used for one of the purposes for which they are proposed—for a site in the area of Whiteman Air Force Base, Miss.

Mr. President, this significant revision is unwise and unacceptable for two reasons. First, it reduces the defense effectiveness that will be purchased with the proposed funds—funds which the pending amendment does not seek to reduce. Second, this revision would guarantee that we would face severe deployment schedule delays as we expand our interceptor force to counter the increase in Soviet offensive capability.

I want to consider these matters in reverse order, which is in the order of ascending importance.

First, consider the effect on deployment schedules.

If this amendment is adopted, then regardless which of the two phase I site areas is selected to receive the additional site, there will be severe deployment delays since the increasing Soviet offensive capability makes it imperative for us to expand to a site beyond the Grand Forks and Malmstrom fields—as provided for by the unamended phase II proposal.

Consider these facts. If we proceed with the unamended phase II proposal, the Whiteman site will be operational by mid-1975. But, if the proposed amendment is accepted, thereby denying permission to begin work on the Whiteman site, there will be a minimum delay of 1 full year in making operational the third site, which was to have been at Whiteman but was instead improvised around the Grand Forks or Malmstrom Minuteman fields. The reason for this delay is clear.

During early planning for an ABM system, the four Minuteman fields near Grand Forks, Malmstrom, Whiteman, and Warren Air Force Bases were determined to be most suitable for defense. Thus preliminary surveys were conducted to determine how to tailor the defense of each field. Separate surveys were needed for each field because the geographical configurations of these fields vary.

As a result of these crucial surveys, an optimum defense was tailored for each field. If this proposed amendment passes, thereby mandating the expenditure of funds for a hitherto unthought of second defense site at either Grand Forks or Malmstrom, then some hasty improvising will be required. But there are limits to how hasty it could be; that is, it will take 4 months to do the kind of survey and detailed analysis which has already been done for the Whiteman site. In addition, climatic conditions in North Dakota or Montana will cause an additional 8-month delay over the projected construction timetable for the Whiteman site. Thus there will be a 12-month deployment delay resulting from construction problems, and from the need for expensive new surveys and analyses which will be needed as a result of scrapping the Whiteman program for which expensive surveys and analyses have already been done.

Now consider the way the amendment's revision would damage defense effectiveness.

A second site at one of the phase I locations will effect two kinds of reductions in our capability to defend Minutemen: First, because of the shape of the Minuteman fields as just described, the number of Minuteman silos that could be protected by a third site at Grand Forks or Malmstrom would be a maximum of about 70 percent of the number that will be protected by the proposed site at Whiteman; second, for an equal cost program, fewer interceptors could be deployed effectively with the third site at Grand Forks or Malmstrom. This further reduction would limit the number of interceptors at Grand Forks or

Malmstrom to about 35 percent of the interceptors planned for the Whiteman site. This would be caused primarily by the necessity to compensate for the program stretchout costs resulting from the delayed availability of a third site at Grand Forks or Malmstrom.

Mr. President, there is a final consideration which we should consider in evaluating the effect of the Brooke amendment on our defense capability. This consideration is the definite reduction in the protection that can be provided to our other land-based deterrent—our strategic bomber force. The modified phase II defense of Minuteman also can provide protection for 15 to 20 percent of the strategic bomber force bases. But if defense of Minuteman is confined to Grand Forks and Malmstrom we will only be able to protect about 5 percent of the strategic bomber bases.

Once again we must bear in mind that the pending amendment does not propose to reduce funding. Therefore, once again we must emphasize that this amendment will purchase less defense for our money.

Mr. President, the reasons I have outlined are among the most important reasons for rejecting the proposed amendment. They all call attention to the fact that this amendment proposes a revision in an extremely complex technical program. This program has been carefully designed by numerous specialists and has been the subject of long and intensive hearing in the Senate.

This amendment has not been the subject of hearings. It would effect a precipitate, ill-considered, inefficient, costly, wasteful, and perhaps very dangerous improvisation in a matter of the utmost complexity. This is why the proposed amendment should be defeated.

Mr. President, before closing today, I would like to take issue with two points made by the distinguished junior Senator from New Hampshire (Mr. McINTYRE), when he announced his support for the Brooke amendment. Senators will find the Senator's statement on page 28690 of the RECORD for August 13.

The Senator said this:

> The amendment leaves intact every dollar recommended by the committee for work on ABM. It authorizes precisely the same rate of production on ABM components. It provides accordingly the full momentum of an on-going ABM program, and of a growing capability to expand the systems deployment should the Strategic Arms Limitation Talks fail.

Mr. President, I want to take issue with this statement on two grounds:

First, as I have argued today, the proposed amendment would only guarantee the spending momentum of ABM without guaranteeing the capability momentum. I have to think, Mr. President, that this fact will be clear to the Soviet military experts, including those who are advising the Soviet negotiators at SALT.

Second, the distinguished Senator is misunderstanding the prerequisite for making our ABM system useful to our SALT negotiators. That is, he suggests that we need only be able to manufacture the hardware for ABM, and not that we be continuing to deploy our defensive interceptors at a rate responsive to their deployment of offensive missiles. Of course, this is not true.

Mr. President, there is one other point I want to raise concerning the distinguished Senator's statement. He suggests that the Brooke amendment will be useful for "defense in depth" with Safeguard components, and that this program has the backing of "a number of experts." He does not tell us who these experts are and I can find no testimony, expert or otherwise, in the record of the hearings that supports this plan for what he terms "defense in depth" with Safeguard components.

It is easy to understand why such support is lacking. This plan of "defense in depth" is only required when the enemy is targeting more than one reentry vehicle for each missile silo. Since we are not yet faced with anything like this, "defense in depth" would be a wasteful redundancy.

Mr. BROOKE. Mr. President, I shall not detain the Senate with a lengthy speech at this point. But in anticipation of the vote tomorrow on the ABM, I believe it will be helpful to my colleagues to have in the RECORD a statement developing the technical arguments in favor of "defense in depth."

I ask unanimous consent that the text of a study, plus an editorial in today's New York Times, be printed at this point in the RECORD.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

TECHNICAL ADVANTAGES OF DEFENSE IN DEPTH UNDER AMENDMENT 821

The technical arguments for the Brooke amendment derive from the fact that the planned Safeguard defense of Minuteman sites is grossly inadequate in two respects: the radars are vulnerable and the number of Sprint interceptors is severely limited. If the Brooke approach is adopted, money not used for defense of Whiteman (and later Warren) Air Force Base could be used to accelerate work on a dedicated hard point defense (an option not discussed further here), or to strengthen the planned defenses at Malmstrom and Grand Forks. This can be done either by buying more Sprints and an extra Missile Site Radar or by buying many more Sprints and foregoing the extra radar.

If the former approach were adopted, it would be possible to have two radars at Malmstrom. If they were properly sited; i.e. far enough apart so that they both could not be destroyed by a single nuclear burst, yet close enough together so that either could control most of the Sprint interceptors at the base, there would be substantial advantage for the defense against heavy attacks. To negate the defense, the attacker would have to destroy *both* radars. The defense need defend only one. Thus, in effect, the defense would have to intercept only ½ of the warheads the attacker might deliver against the radars.

If radars were cheap, it would obviously be advantageous to have several at each base to be defended. However, since MSRs cost about $190 million each (including data processing systems), using two radars at Malmstrom implies buying many fewer Sprints. Thus, it is not obvious that one should deploy two radars for Malmstrom or buy more Sprints. It depends on the weight of the hypothesized attack.

To illustrate these points some simplified calculations have been made and the results are shown in Table I. The calculations are based on the following assumptions:

1. If the deployment recommended by the Armed Services Committee is pursued, the number of Sprints at Grand Forks, Malmstrom and Whiteman Air Force Bases will in each case be sufficient to intercept 60 arriving Soviet warheads.

2. Each Soviet arriving warhead is assumed to have a 100% probability of destroying its target, be it an MSR or a Minuteman missile. (A retargeting capability for Soviet ICBMs is implied in this arrangement.)

3. The effective radius of the Sprint missile is such that 100 Minuteman silos can be defended at each base if only a single MSR is used.

4. If the Spartans for Whiteman are not bought, it will be possible to buy enough additional Sprints to accomplish 50 additional intercepts.

5. If the MSR for Whiteman is not bought, it will be possible to buy Sprints to accomplish 80 additional intercepts.

TABLE I

	Minutemen surviving the arrival of N soviet warheads. N equals—				Number of arriving warheads to destroy all Minutemen
	700	800	1,000	1,200	
Case I: Defense of 3 bases (committee recommendation)	300	260	120	0	1,180
Options Under Brooke amendment:					
Case II: Defense of 2 bases, 1 MSR at each, plus added interceptors	300	200	155	100	1,310
Case III: Defense of 2 bases, 1 MSR at Grand Forks, 2 widely separated MSR's, at Malmstrom, plus added interceptors	300	277	153	30	1,230
Case IV: Defense of 2 bases, 1 MSR at Grand Forks, 2 closely spaced MSR's at Malmstrom, plus added interceptors	300	200	100	100	1,400

The intercept capabilities assumed are, of course, only approximate since the number of Sprints to be deployed at each base is not public and since kill probability against adversary warheads is unknown. However, the assumptions in this regard and also as regards tradeoffs between Sprints, Spartans and MSRs seem consistent with cost figures given by the Defense Department and assumptions used by them in analyses they have made.

Case I of Table I is for the deployment advocated by the Committee. The other three cases are all consistent with the Brooke proposal. They assume that the same level of funds as proposed for the Whiteman deployment is available to reinforce the defense at the first two sites. A number of observations can be made.

At the lowest attack level indicated, the same number of Minutemen (300) survive regardless of the defense. This is because the defense is irrelevant at these low attack levels. 700 Minutemen are undefended (by Sprints) in all cases. Therefor, if the Soviet Union could deliver only 700 warheads, it would presumably limit the attack to undefended Minutemen.

If the money saved from foregoing the Whiteman deployments were expended entirely for Sprints (case 2), it is seen that the defense is not as effective as that recommended by the Armed Services Committee against 800 delivered Soviet warheads, but *it is considerably better than the deployment recommended by the Committee if the Soviets can deliver 1000 warheads or more.*

Under these assumptions, if two MSRs are deployed at Malmstrom and if they are widely separated (case 3) so that essentially all of the Minutemen at that base are defended (instead of only half as would be the case with only 1 MSR per base), the number of Minutemen surviving is larger than with the Committee's recommended deployment at all attack levels (except, of course, at low levels where it is the same).

If 2 MSRs are deployed at Malmstrom and are sited so that each can control all the interceptors at its base (case 4), the number of surviving Minutemans is relatively low if the number of arriving Soviet warheads is 800–1000, but relatively high for heavier attacks. In this case the Soviets would have to deliver some 1400 warheads to destroy the Minuteman force, while only 1180 would be required if the system were spread more thinly at 3 bases.

The preferred outcomes for each Soviet attack level are indicated by underscoring. It is seen that deployment 3 is superior or at least as good as the Committee proposal at all levels of attack and that *deployment 4 is the preferred deployment for the heavier Soviet attack.* To repeat, these deployment options assume the same dollar level for all cases, including the Committee proposal.

The calculations are, of course, inexact because the actual numbers of Sprints are not public knowledge and other assumptions are open to some question.

In particular, the assumptions made regarding both Sprint and Soviet ICBM effectiveness, although consistent with those generally used by the Administration, are probably optimistic. Moreover, tactics other than simply exhausting U.S. Sprints, e.g. an attack based on saturating the U.S. defense capability, an attack based on a Soviet warhead leaking through the defenses, or an attack based on blackout bursts at successively lower levels might be used by the USSR.

However, different assumptions regarding numbers of Sprints, their effectiveness, or Soviet effectiveness and tactics could not change the general conclusion: *Defense in depth, as allowed by the Brooke approach, could provide a more effective defense of Minuteman than the Committee approach against a heavy Soviet attack and at least as good a defense against low levels of attack.*

A similar analysis has been made assuming, on the one hand, that under the Armed Services approach, Warren as well as Whiteman Air Force Base would be defended; and on the other, that with the Brooke approach the money for *both* Whiteman and Warren would be diverted to strengthening the two northern base defenses. The conclusions are qualitatively the same. *The Brooke approach provides a better defense at high levels of attack and at least as good a defense at low levels.*

SALT AND THE SENATE

From its origins in the Johnson Administration, the Safeguard ABM system has been a missile in search of a mission. The public rationale for anti-ballistic missile defense has been chosen, and repeatedly altered, in terms of what makes the best sales pitch to Congress.

This summer's curious rationale, just repeated at a White House press briefing in New Orleans, is that Safeguard expansion is the only way to get Russia to accept both a unilateral limitation of offensive SS–9 missiles and a mutual limitation of defensive ABM's at a low or zero level.

The immediate Presidential objective is to defeat in tomorrow's Senate vote the Brooke amendment, which seeks to suspend expansion of the Safeguard system beyond the two sites approved by a 50-to-50 tie vote last year. But the slight progress reported from Vienna in the strategic arms limitation talks (SALT), which have just adjourned until November, hardly bears out the Administration case.

Neither Safeguard, nor the deployment of multiple warhead MIRV missiles, nor any of the other measures explained as aiding "negotiations from strength," has hastened the still-lacking Soviet counterproposals needed to advance the SALT negotiations. But they probably have hastened countermeasures in Soviet weaponry, a likelihood that challenges the value of expanding Safeguard at this point as a supposed "bargaining chip" for SALT.

The Administration has defended its decision to seek a limited rather than a comprehensive halt in the nuclear missile race on the grounds that it would be better to halt expansion now of those weapons that can be halted easily in the growing nuclear arsenals of the two superpowers and to take up more difficult issues in a later phase of the talks.

The same argument was made, unfortunately, in 1963 for going ahead with a limited Soviet-American ban on testing nuclear warheads. Instead of accepting Premier Khrushchev's offer of two or three inspections a year to permit a comprehensive ban, including underground explosions, it was argued that continuous negotiations would achieve a comprehensive test ban later.

History has shown (1) that the proposal of two or three inspections a year, then seemingly few and risky, would arouse far less concern today, now that detection methods have improved; (2) that underground testing has permitted the weapons race to proceed at full speed, giving the world ABM and MIRV, which a comprehensive ban probably would have headed off; and (3) most important, that the limited test ban, by quieting world protest, has made it virtually impossible to achieve a comprehensive ban.

Whether a comprehensive rather than a limited halt in the missile race can still be achieved in the SALT talks now depends primarily on Moscow and the United States Congress.

If the Soviet Union really wants to halt the missile race and insists, in its counterproposals next fall, on banning MIRV and ABM, it is doubtful that the Nixon Administration can continue to demand on-site inspection and the other conditions it has advanced that make a comprehensive agreement impossible.

If the Senate still wants the comprehensive mutual halt in missile deployment it proposed by overwhelming vote last spring, it can begin to put teeth in its resolution by voting the Brooke amendment this week.

ORDER FOR RECOGNITION OF SENATOR MURPHY TOMORROW

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent, at the conclusion of the 1 hour set aside under the special order for tomorrow, under which the able majority leader and the able minority leader would be recognized, that the distinguished Senator from California (Mr. MURPHY) be recognized for not to exceed 20 minutes.

The PRESIDING OFFICER. Without objection, it is so ordered.

ORDER OF BUSINESS

Mr. BYRD of West Virginia. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

ORDER FOR ADJOURNMENT TO 9:30 A.M. TOMORROW

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that when the Senate completes its business today it stand in adjournment until 9:30 tomorrow morning.

The PRESIDING OFFICER. Without objection, it is so ordered.

ORDER FOR RECOGNITION OF SENATOR McGOVERN TOMORROW MORNING

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that immediately upon the disposition of the reading of the Journal of proceedings on tomorrow morning, the able Senator from South Dakota (Mr. MCGOVERN) be recognized for not to exceed 30 minutes, with the understanding that the pending question on the unfinished business, the amendment offered by the able Senator from Massachusetts (Mr. BROOKE), then be laid before the Senate at 10 tomorrow morning, and with the further understanding that the control of the time and the time for voting on the amendment offered by the Senator from Massachusetts (Mr. BROOKE) as agreed to yesterday still stand.

The PRESIDING OFFICER. Without objection, it is so ordered.

ADJOURNMENT UNTIL 9:30 A.M. TOMORROW

Mr. BYRD of West Virginia. Mr. President, if there be no further business to come before the Senate, I move, in accordance with the previous order, that the Senate stand in adjournment until 9:30 tomorrow morning.

The motion was agreed to; and (at 5 o'clock and 11 minutes p.m.) the Senate adjourned until tomorrow, Wednesday, August 19, 1970, at 9:30 a.m.

NOMINATIONS

Executive nominations received by the Senate August 18, 1970:

NATIONAL LIBRARY OF MEDICINE

The following-named persons to be members of the Board of Regents, National Library of Medicine, Public Health Service, for terms of 4 years from August 3, 1970:

James Chipman Fletcher, of Utah, vice Alfred Robert Zipf, term expired.

John Phillip McGovern, of Texas, vice Dr. Kathryn M. Smith, term expired.

INTER-AMERICAN SOCIAL DEVELOPMENT INSTITUTE

The following-named persons to be members of the Board of Directors of the Inter-American Social Development Institute for the terms indicated (new positions):

FOR A TERM OF 2 YEARS

Luis A. Ferre, of Puerto Rico.
John A. Hannah, of Michigan.

FOR A TERM OF 4 YEARS

John Richardson, Jr., of Virginia.
Charles W. Robinson, of California.

FOR A TERM OF 6 YEARS

Augustin S. Hart, Jr., of Illinois.
George Cabot Lodge, of Massachusetts.
Charles A. Meyer, of Pennsylvania.

EXTENSIONS OF REMARKS

YAF SPONSORS SEMINAR ON THE VOLUNTEER ARMY

HON. PHILIP M. CRANE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 18, 1970

Mr. CRANE. Mr. Speaker, on August 12, 1970, Young Americans for Freedom conducted a symposium on the voluntary military for a group of Congressmen. The symposium featured such outstanding speakers as Dr. Milton Friedman, Dean William Meckling, the Honorable BARRY GOLDWATER, the Honorable MARK HATFIELD, and Gen. Thomas Lane.

I would commend the remarks of these distinguished men to my colleagues and all interested Americans.

The articles follow:

SPEECH BY DR. MILTON FRIEDMAN

I have been connected with a great many controversial issues for quite a long time and the issue of the voluntary military has one characteristic that I have never observed in any other interest issue: that is, I have yet to see anybody who went carefully into the subject of the voluntary military, whatever his initial position, who has not increased his support for it. I have yet to see a single person who undertook to examine the evidence who moved, for example, from support for a voluntary military to support for the draft, not a single person. I have observed many people of various backgrounds and interests move the other way, and I think that speaks something for the evidence. I was particularly impressed with this in the connection with our Commission, the Gates Commission, of which I was honored to be a member. That Commission had people on it from a very wide range of backgrounds—some military people, some business people, academic people, and others. I would say at the outset when we met at our first meeting probably there was about a 50/50 split between pro-volunteer military and anti-volunteer military. By the time we completed our deliberations and after extensive examination of the evidence we had a completely unanimous report. There was not a single person on the other side. This was not an isolated experiment; I saw exactly the same thing happen at Draft Conference held in Chicago four or five years ago. I have seen it happen over and over again. The one thing I would really urge on anybody interested in this subject is to look at the facts, look at the evidence, because on the basis of my past experience, there is only one way you can move.

Now let me discuss the particular topic I was assigned, the economics of the volunteer military is to distinguish between the real cost to the country, the real economic cost of different methods of manning the armed forces in different ways on the one hand, and the budgetary impact of manning the army and armed forces in different ways on the other. To look at the real cost of the country, you want, for a moment, to pull away the veil of money which tends to conceal to some extent what's really going on. What are the real factors? It is the number of people who are involved in various activities, what they do with their time and with their efforts, and the amount of resources used trying to reach a certain degree of military effectiveness—and people can differ widely about that—but whatever degree of military effectiveness being sought, whatever degree of preparedness, the question arises: what is the most efficient way to reach preparedness from the point of view of the economic resources it absorbs.

Now one of the oldest findings from history is that slave labor is inefficient labor: forced labor is not efficient labor. You get far better service, far better and more efficient use of resources if people are voluntarily engaging in an activity. And that is no different for the military than it is for anything else.

In the first place, in order to man an armed force of a given size with a mixed force of conscripts and volunteers a larger total number of people is needed. Why? A man drafted for two years spends the first six months or so in training. The last three months of his service he is being processed for discharge. You are lucky if you get one year of service out of the man for two years that he is in the armed services. In addition there must be people on hand to train him, to move him about from one place to another, to process those papers for discharge and the like. The result is that, of a given total number of people in the armed forces, the number of people in an effective position is decidedly smaller in a mixed force of volunteers and conscripts than in a force of all volunteers. Now this shows up dramatically in the kind of figures the Gates Report produced and that Bill Meckling will talk about later.

To maintain a middle range mixed force of volunteers and conscripts, each year about 440,000 young men must be recruited for the enlisted forces leaving aside the officers corps. Under a completely volunteer army the number of people needed is 325,000. So each year there is an additional 115,000 people or so who have to be put through the mill of going into the service and coming out of the service. So clearly, just from the point of view of the military operation itself, a conscript force involves the use of more men more man-hours and thus waste resources for the same military effectiveness. But that is only part of the story. In addition to the waste of people in the excessive turnover in the military itself, there is the waste of people in the civilian side because of the activities young men and other people engage in as a result of the draft. As we said in our report there are not only draft-induced volunteers in the armed forces, there are draft-induced ministers, there are draft-induced graduate students, there are draft-induced deportees. Young men all over understandably, because of the existence of the draft, engage in activities they would not otherwise engage in. Employers are hesitant to recruit people for particular jobs because they may be subject to the draft and employers lose them. Consequently, you have inefficient use of the young men. You have the disturbance and the cost imposed on the college campuses. I think there is little doubt that a major source of the disruption on the campuses has been the draft. It has brought to colleges and universities hundreds of thousands of young men who would not otherwise be there. Their major interest has not been in education as a result they have denied places on the campuses to others who would have a stronger interest in education, and they have changed the character and the tone of the discussion. And moreover, because they felt guilty about being there while their friends were escaping they have tended to retreat to an irrational approach to great important issues. The issues of what our foreign policy should be is an extremely important issue, but it ought not to be considered in the kind of irrational, emotional tones that have dominated campus discussion, and I am sure a large part of that is indirectly a reflection of the existence of the draft.

So in terms of the real cost of the society, a volunteer military is a more efficient way of providing a given degree of effectiveness. It requires fewer people in the armed forces on the one hand, and it does less disturbance and harm to the rest of the society on the other. Now we turn from the real cost side to the budgetary cost. If you look at the problem of achieving a voluntary army, there is only one simple problem and that is, we are currently underpaying drastically people who are in the first term of service. A young man who is drafted in his first term of service receives on the average something like 60% of the income which he can earn in civilian life. I think it is an enormous tribute to the patriotism of our young people that so many people already volunteer under those circumstances no one is going to volunteer and enter the armed services for pay alone. But it certainly is true that bad pay can discourage a man from entering that might not otherwise enter. That is the fundamental problem.

The fundamental function of the draft is not to get men for the armed forces, make no mistake about that. The reason we have conscription is to reduce the tax load on tax payers in general, and instead impose a tax on the young people who serve. And nobody will put it that way. But if you look at it objectively, that is the essence of the situation. A young man who would be willing to serve in the armed forces for $5,000 a year who receives in the armed forces $2500 a year is paying a tax of $2500. However, it is a tax in kind. Its a kind of forced levy that we thought went out with the Middle Ages, the elimination of which was one of the great steps forward in the freedom of human beings from bondage. But that is what it is: a forced levy, forced service on people. A tax in kind. Our books are not kept well, our governmental books do not show as a receipt the tax in kind from the people who are serving compulsorily. Our governmental books do not show as an expenditure the true cost of manning the forces. If we were to adopt this procedure in general, we could reduce the book expenditures of the federal government very drastically.

If you simply drafted all people who are used in government construction or all of the civil servants who fill the buildings in Washington—if you required each and every one of them to serve at half his present pay, under penalty of being sentenced to jail if he didn't, recorded government expenditures would go down drastically. But I think no one would say that was a real saving. Well, that is the situation. Under present circumstances we are financing the armed forces in considerable part by a tax in kind on the young men who are required to serve and on those people who are induced to volunteer in order to avoid the draft. The essence of a shift to a volunteer armed force is a substitution of tax for a tax in kind. It does not, in fact, involve an increase in total government expenditures properly measured. It involves a reduction in total government expenditures properly measured. It involves a *reduction* in total government expenditures properly measured. But it does involve shifting from a tax in kind, shifting from requiring services through a forced levy, to a buying it on the market. And as a result, the *recorded* bookkeeping expenditures of the government will run higher. The estimates we made in the Gates Commission Report, and that Bill Meckling will perhaps develop further if anyone is interested were that the actual budgetary expense of shifting to a voluntary army force would be roughly of the order of something like 2½ billion dollars a year for a stable force mid range force of the side that is considered. And I may say, that that force is roughly that kind of force that is being contemplated, now that we are moving out of the Vietnam situation.

Now I have no doubt that from an immediate governmental point of view—from the point of view offered in the government—the need to spend 2½ billion dollars more. Out of pocket expenses that do have to be raised in cash taxes raises a problem, a political problem. You know there is the saying "an old tax is a good tax" in the sense that people get accustomed to it and any new tax is difficult tax. But it so happens that I think this political difficulty in the present instance a mixed one and much less serious in general and that is because the draft tax is so unpopular. It is hard to think of any other tax that we have that is not labeled a tax and has produced such a degree of taxpayer resistance. Maybe there are other taxes that are evaded to a greater extent. It is very hard to believe that there are.

It is hard to think of any other tax that costs so much to collect. In our report of the Gates Commission Report we made an estimate of the cost imposed on the rest of the community in order to get the dollar services collected in the tax in kind, it costs the country a dollar and a half to collect it. That is, a dollar and a half represented a rough estimate of the cost imposed on other people to evade the tax—the cost imposed on the people who went into one exempt occupation or activity or other for the purpose of evading the tax. So, in this case I think you have a situation where simultaneously a very bad tax can be repealed; in effect 2½ billion dollars more must be collected in dollar taxes in order to finance the budgetary outlay for this purpose. What you have is a shift of tax burden from the backs of the young men to the public at large.

Now, one other, most governmental expenditures that you consider are exhaustive expenditures; they involve using additional resources. If, for example, there is an extra $500 million voted to subsidize the SST, that will involve hiring engineers, using materials, in other ways reducing a volume of real resources available for other purposes. That is not true in this case. If in fact the Congress votes to have a volunteer military and this involves an additional dollar expenditures of 2½ billion dollars a year, that will be accompanied by a reduction in the amount of resources, manpower, and etc. that you absorb from the civilian economy. Because it is a rearrangement of the tax burden and not a net addition, this case, unlike the SST, will make more men available to the civilian economy, more material available because this will produce far more efficient use of the military. I have tried to stick so far as I could to the economics of it. I hope it will stimulate you to ask questions because it is much better to answer. Let me only close by saying that I think the basic issue involved in the voluntary army goes much beyond the economics of it, and I would not myself, although I am a professional economist I would not myself be so concerned with the issue if all involved were the economic resources. What is fundamentally involved is the fundamental principles and beliefs of this country and of this nation. We are free people. Then we should individually, as free people have control of our lives. It is fundamentally incompatible that a society of free men to have a system under which people are compelled to render specific services at penalty of incarceration and of imprisonment than it is perfectly feasibly, perfectly possible to hire those services on the open market to get voluntary arrangements that will serve that purpose. Thank you.

SPEECH BY DEAN WILLIAM MECKLING, DIRECTOR OF RESEARCH FOR THE GATES COMMISSION

Milton has suggested that I might correct David in regard to that last statement about my influence on the Commission report, and make it clear it was the facts that were responsible and not me that was responsible for the outcome. I had an interesting experience which I thought I would relate to you on the way down this morning on the plane that I think merits some attention. I was reviewing our Commission report on the way down and one of the stewardesses noticed I was looking at it and asked me what I was doing reading that book and I said I had some effect on what was written in those pages, and I have some interest in that. She was quite interested and said she and the other stewardess the night before had discussed the new Women's rights amendment and had suddenly discovered, or then felt they discovered that perhaps they'd be subject to the draft if the women's rights amendment really was enacted and they were quite concerned. So that I got attention all the way down from Rochester from the stewardesses this morning in an unusual way on an unusual subject. Now that is the first case that in the time we spent working with the Commission that I found young women really vitally interested in the draft issue in a direct sense, that is, they thought they might be affected by this.

I'd like to start from where Milton left off talking about the real reasons for objections to the use of conscription and it is basically a question of human freedom I think and not a question of economics. But much of the discussion that goes on about the draft involves questions which are essentially questions of fact and much of the Commissions staff effort in any rate went into trying to cover as much as we could about the fact with respect to the use of conscription. One of the major objections that occurred then and occurs now really revolves about the feasibility of a voluntary force. Many people say that an all volunteer force is not feasible. In regard that statement conviscates the issue because I think it is quite clear to most people if you ask whether at $50,000 a year for first-term servicemen we couldn't have a volunteer force. Most people, not all I might say, agree that at $50,000 a year for first-term servicemen we could have a volunteer force, and that the real issue is not of what we are going to have to pay that is the pay levels are going to have to be in order to achieve an all-volunteer force.

That is one of the things that the Commission spent a great deal of time on and a lot of people have raised questions on our estimates there, and those estimates are uncertain it is not possible to make certain estimates about that. I want to go back to that later, but I will say now that we made an honest effort to get the best kind of estimates we could for what it would take in terms of pay level to achieve terms of a transition problem. The feasibility question breaks down when you address it into two parts. One is I think a more extreme form of statement and that is that it is not feasible in the long run. Most people do not hold that position that is to say they will say that the all volunteer force is a good idea and that is what we should have in the long run but we can not have it now so that the issue results itself to one of the transition. And in fact, the staff of the Commission addressed itself not to just the long run problem but to the transition problem as well. I personally believe am convinced that the pay scales we suggested in the report would enable us to have an all-volunteer force. Even in the short run, that is to say, we can safely allow the present draft to expire next year, now that was not the position of the Commission on this was quite clear. The Commission members were concerned about precisely the problem that Mr. Teague mentioned, that is to say, that the President would find himself in a position where the draft would legally be abolished, and he had no alternative in terms of preserving the defense of the Nation. In fact, the steps we recommended were not as effected as we estimated they would be. So, the Commissions recommendations were directed to the question to the transition period as well as the long run stable situation. The Commission recommended the pay increase to be effected July 1, of this year precisely because they wanted a year of experience before the draft expires. So that the President and the Congress in a sense is not put in a box in the spring of next year where the law is extended and we don't have the information in terms of some experience with the new pay scales and the attempt to improve the conditions of service in the military so that an all volunteer force is possible. Let me get on to some of the data, about the feasibility issue because I think most people when they talk about the feasibility have, I think this is made perhaps most obvious and explicit case what Professor Friedman mentioned earlier, that when people begin to look at the facts on this question they always tend to move in the direction of being more favorably disposed to an all volunteer force.

On the feasibility issue one of the main facts, I think that is ignored generally is not understood is people making total objections about how difficult it would be to have a volunteer force they do not realize how many volunteers are in the military today. There are in the military today 1¼ million people beyond the first term of service, there can be no question that those people are true volunteers. That is, they are there because they chose to be there, they are not there because they are forced to be there by being provided the alternative of that or facing the judge. A million and a quarter people in the military today are volunteers, that was true in 1965, before the present rule. In addition to that, however, there are many volunteers in the first term of service. The number of not all those volunteers are true volunteers, some fraction of those people are induced to volunteer because they can get terms of service if they volunteer which they prefer to being drafted, that is to say, many of them prefer say three years in the Air Force as a technician, to two years in the ground forces in the Army is what is more likely they will find happen to them if they wait to be drafted. So they elect to enlist in order to avoid the draft. Because they have preference in terms of the service. We on two occasions had the military conduct surveys to look at the question of how many of those people volunteer are true volunteers. I might say it is not just those who volunteer it is also the inductees. We have done a survey with the first term servicemen to discover how first-term servicemen would have enlisted in the absence of the draft. In its estimates of the number of true volunteers the Commission used those studies.
